#### PROCEEDINGS AND DEBATES OF THE SIXTY-THIRD CONGRESS.

#### SECOND SESSION.

#### SENATE.

#### Monday, December 1, 1913.

The first Monday in December being the day prescribed by the Constitution of the United States for the annual meeting of Congress, the second session of the Sixty-third Congress commenced on this day.

The Senate assembled in its Chamber at the Capitol.

The VICE PRESIDENT (THOMAS R. MARSHALL, of Indiana) took the chair and called the Senate to order at 12 o'clock noon. The Chaplain, Rev. Forrest J. Prettyman, D. D., offered the

following prayer:

Almighty God, according to our ancient custom we come to Thee. Our fathers were men of prayer, and out of the resources Thee. Our fathers were men of prayer, and out of the resources of Thy grace they received wisdom to guide them in laying the foundation of this great Nation. In every time of stress and storm Thy people have gone to Thee for guidance, for protection, and for blessing. When the Nation was born, it was born in prayer. In the days of difficulty and mystery and darkness unceasing prayer was made, and in this larger day of peace and prosperity we still come asking that Thou wilt teach us how to follow the arts of peace with the same success as our fathers had the foundations of the Government and led us on to this laid the foundations of the Government and led us on to this moment.

We pray that in facing the increasing problems of this great Nation at the beginning of this new session of the Senate the conscious power and presence of God may be felt and that every Senator in this honorable body may realize that his first

and highest obligation is to God.

Bless us in all our life work, Bless our land and Nation with continued peace and prosperity. And we pray that onward we may go as an evangel among the nations of the earth, bringing everywhere to our sphere of influence peace and good will among men. For Christ's sake. Amen.

#### CALLING OF THE ROLL.

The VICE PRESIDENT. That it may be ascertained whether a constitutional number of Senators are present for the transaction of business, the Secretary will call the roll.

The Secretary called the roll and the following Senators answered to their names:

Ashurst Bacon Goff Gore Overman Smith, S. C. Owen Page Penrose Perkins Pittman Smoot Stephenson Sterling Gronna Hollis Hughes James Johnson Bankhead Bankhead Borah Bradley Bradley Brandegee Bristow Bryan Burleigh Stone Sutherland Poindexter Pomerene Ransdell Swanson Thomas Thompson Kenyon Kern La Follette Thornton Tillman Townsend Vardaman La Follette

Mr. SHEPPARD. My colleague, the senior Senator from Texas [Mr. Culberson], is unavoidably absent. He is paired with the Senator from Delaware [Mr. Du Pont]. This an-

Mr. WEEKS. I wish to announce that my colleague [Mr. Lodge] is absent on account of illness and to have this announcement stand for the day. He is paired with the junior Senator from Georgia [Mr. SMITH].

Mr. BRYAN. My colleague [Mr. Fletcher] is unavoidably absent. He is paired with the senior Senator from Wyoming [Mr. WARREN].

Mr. SMOOT. I desire to announce that the senior Senator from Delaware [Mr. DU PONT] is unavoidably detained from the Senate.

The VICE PRESIDENT. Eighty-one Senators have answered to the roll call. A quorum of the Senate is present.

LIST OF SENATORS.

The list of Senators by States is as follows: Alabama-John H. Bankhead. Arizona—Henry F. Ashurst and Marcus A. Smith.

Arkansas—James P. Clarke and Joe T. Robinson.

California—George C. Perkins and John D. Works.

Colorado—John F. Shafroth and Charles S. Thomas Connecticut—Frank B. Brandegee and George P. McLean. Delaware—Henry A. du Pont and Willard Saulsbury.
Florida—Nathan P. Bryan and Duncan U. Fletcher.
Georgia—Augustus O. Bacon and Hoke Smith. Georgia—Augustus O. Bacon and Hoke Shith.
Idaho—William E. Borah and James H. Brady.
Illinois—James Hamilton Lewis and Lawrence Y. Sherman.
Indiana—John W. Kern and Benjamin F. Shively.
Iowa—Albert B. Cummins and William S. Kenyon.
Kansas—Joseph L. Bristow and William H. Thompson.
Kentucky—William O. Bradley and Ollie M. James.
Iowisiana—Joseph E. Bansdell and John R. Thornton. Louisiana—Joseph E. Ransdell and John R. Thornton.

Maine—Edwin C. Burleigh and Charles F. Johnson.

Maryland—William P. Jackson and John Walter Smith.

Massachusetts—Henry Cabot Lodge and John W. Weeks.

Michigan William Michigan William No. Michigan—William Alden Smith and Charles E. Townsend.

Minnesota—Moses E. Clapp and Knute Nelson.

Mississippi—John Sharp Williams and James K. Vardaman.

Missouri—James A. Reed and William J. Stone. Montana—Henry L. Myers and Thomas J. Walsh. Nebraska—Gilbert M. Hitchcock and George W. Norris. Nevada-Francis G. Newlands and Key Pittman. New Hampshire-Jacob H. Gallinger and Henry F. Hollis. New Jersey—William Hughes and James E. Martine. New Mexico—Thomas B. Catron and Albert B. Fall. New York—James A. O'Gorman and Elihu Root. North Carolina-Lee S. Overman and F. M. Simmons, North Dakota-Asle J. Gronna and Porter J. McCumber. Ohio-Theodore E. Burton and Atlee Pomerene. Oklahoma-Thomas P. Gore and Robert L. Owen. Oregon-George E. Chamberlain and Harry Lane. Pennsylvania—George T. Oliver and Boies Penrose. Rhode Island-LeBaron B. Colt and Henry F. Lippitt. South Carolina-Ellison D. Smith and Benjamin R. Tillman. South Dakota—Coe I. Crawford and Thomas Sterling. Tennessee-Luke Lea and John K. Shields. Texas-Charles A. Culberson and Morris Sheppard. Utah-Reed Smoot and George Sutherland. Vermont-William P. Dillingham and Carroll S. Page. Virginia-Thomas S. Martin and Claude A. Swanson. Washington-Wesley L. Jones and Miles Poindexter. West Virginia—William E. Chilton and Nathan Goff.
Wisconsin—Robert M. La Follette and Isaac Stephenson. Wyoming-Clarence D. Clark and Francis E. Warren.

#### NOTIFICATION TO THE HOUSE.

Mr. BACON submitted the following resolution (S. Res. 223), which was read, considered by unanimous consent, and agreed to: Resolved, That the Secretary inform the House of Representatives that a quorum of the Senate is assembled and that the Senate is ready to proceed to business.

#### NOTIFICATION TO THE PRESIDENT.

Mr. KERN submitted the following resolution (S. Res. 224), which was read, considered by unanimous consent, and agreed to: Resolved, That a committee consisting of two Senators be appointed to join such committee as may be appointed by the House of Representatives to wait upon the President of the United States and inform him that a quorum of each House is assembled, and that Congress is ready to receive any communication he may be pleased to make.

The VICE PRESIDENT appointed as the committee Mr. KERN and Mr. GALLINGER.

HOUR OF DAILY MEETING.

Mr. KERN. Mr. President, I move the adoption of the following resolution.

The resolution (S. Res. 225) was read, as follows:

Resolved, That the hour of daily meeting of the Senate be 10 o'clock a. m. until otherwise ordered.

Mr. GALLINGER. Mr. President, I feel like appealing to the Senator from Indiana and his colleagues to let the sessions begin at the usual hour of 12 o'clock for the present. There does not seem to me to be any actual necessity for so early a meeting 10 o'clock at the present time—this week, for instance. think there will be no objection to having earlier sessions after a little while.

I will say to the Senator from Indiana that there has been no conference of the minority on this matter at all. I feel sure there is no disposition to obstruct the early passage of the currency bill, but it would be agreeable, I know, to some of us-it would be to me personally-if we could have the meeting at the usual hour for the present week.

Mr. KERN. Mr. President, in view of the urgent demands that are coming from all quarters that the business of the Senate should be hastened, it has been thought it would be better that we should have the daily sessions begin at 10 o'clock in the morning. It is true that there is a special order for this week, but the chairman of the Committee on Banking and Currency has already given notice that he desires to press the consideration of the banking and currency bill at all times during this week when the Senate is not occupied with the consideration of the Hetch Hetchy bill. An hour will be taken in the transaction of routine business, and it really means the meeting of the Senate at 11 o'clock.

While, of course, I would be glad to accommodate Senators on the other side, we have felt, and it seems to be the unanimous sentiment on this side, that the hour of meeting should be fixed at 10 o'clock

Mr. GALLINGER. Then, I will make a further suggestion to the Senator from Indiana. It is that the matter be compromised, and that for the present week the hour of meeting shall A Senator has a great deal of work to do, meetings of committees to attend, and correspondence that he must look after. I feel sure that if the Senators on the other side will accede to this, there will be no delay in the transaction of the public business

Mr. KERN. Mr. President, if it were a personal matter with myself, I might entertain the proposition of compromise which comes, I know, in the proper spirit from Senators on the other side, but I can not speak for myself in the matter, and until otherwise arranged I hope there will be no objection to the order as I have proposed it.

Mr. GALLINGER. Then I move to amend the resolution by

substituting 11 o'clock for 10 o'clock.

Mr. BACON. Mr. President, in order to avoid an issue of that kind I will take the liberty, with the consent of the Senator from Indiana, to inquire of the Senator from New Hampshire whether it is the purpose of Senators on the other side to hold a conference to-day? The Senator spoke of the fact that they

had had no opportunity for a conference.

Mr. GALLINGER. I will simply say that I feel sure that within a day or two the minority will have a brief conference. We have not had any conference, not knowing what the program was to be, and it was never stated to us until this morning.

Mr. BACON. As we do not desire to have an issue made here upon which there would be a line drawn, in view of the fact that the other side of the Chamber is not now prepared to hold a conference, I will suggest to the Senator that this order stand until they have a conference, and then such suggestion as the Senator may make as a result of the conference, of course, would come in an attitude that would entitle it to consideration.

Mr. GALLINGER. I think the usual custom ought to stand until there seems to be a necessity for a change. I am quite willing personally, and I think I speak for my associates on this side of the Chamber, that we should meet at 11 o'clock for the present, and the matter of meeting earlier can be considered

later on

Mr. ROOT. Mr. President-

The VICE PRESIDENT. Does the Senator from New Hamp-shire yield to the Senator from New York?

GALLINGER. I do.

Mr. ROOT. I wish to ask the Senator from Indiana whether it is a part of the purpose with which this order is proposed that there shall be no meetings of committees of the Senate? I ask this because it is manifestly impossible that the ordinary work of committees of the Senate shall proceed if the Senate

is to meet at 10 o'clock, and it will produce a very different result if the committees are not to meet. If we are to meet at 10 o'clock in order that the Members of the Senate may be in their places to proceed with the discussion of the currency bill or of other measures of importance, to have a real discussion in which there shall be argument addressed to the Members of the Senate as a deliberative body, that is one thing, and I for one am willing to put myself to personal inconvenience for the purpose of facilitating that procedure; but, sir, if we are to meet and have the Members of the Senate immediately after the session begins scatter to their respective committee rooms for the purpose of conducting the necessary business which is conducted in committees, leaving an array of empty seats and Senators speaking to the empty air, with no result of their speaking except that their words shall be printed in the RECORD nextthe result be that Senators shall absent themselves from the Senate Chamber and there shall be no discussion really addressed to their intelligence, to their conscience and the wisdom and public spirit of Senators, this is an idle form, and we ought not indulge in it.

Mr. BORAH. Mr. President, I was going to make another suggestion that possibly might be acceptable to Senators on the majority side. It is that this order be not formally presented until to-morrow. There has been no opportunity to know what the program is to be nor how it is to be acted upon. It might be that by to-morrow the matter could be adjusted without a long-continued controversy in regard to it.

Mr. SMOOT. Mr. President, I should like also to call attention to the fact that from the newspaper reports we understand there are a number of changes to be made in the currency bill that have been agreed upon by the Democratic caucus. None of the Senators on this side know what those amendments are. They have not had a chance to study them. I do not believe it is going to hasten the consideration of the bill one day to have a meeting at 10 o'clock before we have had time to examine the bill and the amendments.

Mr. BACON. The Senator will not overlook the fact that we have a unanimous-consent agreement for the consideration of a bill that is going to take up a large part of the time during this week.

Mr. SMOOT. I do not think that is going to take all the time this week, Mr. President. I was going to say to the Senator another thing. So far as I am concerned, there is not a Senator in this body who wants to vote upon the currency bill at an earlier date than I do. I feel the necessity of a measure the same as every other Senator in this Chamber. The business interests of the country want an early disposition of the bill, and if there is a disposition on the part of the majority of the Senate to give and take in this matter and let us have time to study the amendments, and whenever a Senator speaks let him speak directly to the point, I believe that the passage of the bill will be hastened. I hope Senators on the other side can grant, at least, the request that was made here by the Senator from New Hampshire.

Mr. BRANDEGEE. Mr. President-

Mr. GALLINGER. I yield to the Senator from Connecticut. Mr. BRANDEGEE. I rise for the purpose of making a parliamentary inquiry of the Chair. If I understood the Senator from Indiana correctly, he asked unanimous consent for the present consideration of the resolution?

Mr. GALLINGER. Yes.

Mr. KERN. And that request was granted. Mr. BRANDEGEE. I dislike to interpose an objection to unanimous consent at present to that kind of a resolution, and yet it is evident that it comes at a time when all Senators are not fully prepared to consider the question. I would like very much if the Senator would defer until to-morrow the presentation of his resolution, to which an amendment has already been offered by the Senator from New Hampshire [Mr. Gallinger].

Mr. KERN. Until to-morrow at 11 o'clock?

Mr. BRANDEGEE. At any time the Senator chooses to bring it up to-morrow. I think we would like some little conference upon this side, and, possibly, with Senators upon the other side.

Mr. KERN. Let the order go over under the rule until tomorrow, with a unanimous agreement that we meet at 11 o'clock to-morrow.

Mr. BRANDEGEE. I have no objection to that. Mr. KERN. I will ask the Senator from New Hampshire if he objects?

Mr. GALLINGER. I do not object to that at all.

Mr. BRANDEGEE. Then the Senator from Indiana withholds his resolution?

Mr. KERN. Let the resolution go over until to-morrow under the rule.

Mr. BRANDEGEE Very well.
Mr. GALLINGER. I was quite aware of the fact that objection could be made, which would send the resolution over, but thought if we could reach an agreement it might be as well. I think the suggestion of the Senator from Indiana that the resolution go over until to-morrow, and that by unanimous consent we agree to meet at 11 o'clock to-morrow, will be satisfac-

Mr. KERN. If a unanimous-consent agreement may be had that we meet at 11 o'clock to-morrow, the resolution may go

The VICE PRESIDENT. Is there any objection to the request of the Senator from Indiana that when the Senate adjourns to-day it adjourn to meet at 11 o'clock to-morrow?

Mr. GRONNA. Mr. President, personally I have no objection to the agreement; but, addressing myself to the purport of the resolution, I will say that it makes very little difference to me whether we meet at 10 o'clock or 12 o'clock. I wish to say, however, that some of us who are interested in this billand I know that every Senator on this floor is very much interested in it-will see that the bill is considered when a quorum of the Senate is present.

Mr. KERN. That is all right. Mr. SIMMONS. We expect that.

The VICE PRESIDENT. Is there objection to the request of the Senator from Indiana that when the Senate adjourns to-day it adjourn to meet to-morrow at 11 o'clock? The Chair hears none. The resolution goes over until to-morrow with the amendment of the Senator from New Hampshire [Mr.

GALLINGER] pending.

Mr. WILLIAMS. A parliamentary inquiry, Mr. President. The VICE PRESIDENT. The Senator from Mississippi will

state it.

Mr. WILLIAMS. What is before the Senate?

The VICE PRESIDENT. Nothing.

Mr. WILLIAMS. There is, then, a regular order that the Senate has itself prescribed to proceed to the consideration of the Hetch Hetchy bill to-day, and it seems to me that the regular order is to call that bill up.

The VICE PRESIDENT. The Senate is awaiting informa-

tion from the House of Representatives as to whether it has

yet been organized.

Mr. WILLIAMS. That does not keep us from going on with the regular order. When we get that information, all we have to do is to await a report from the committee appointed to inform the President we are in session, organized, and ready

Mr. GALLINGER. I dislike exceedingly to interpose a suggestion that we ought to waste a single moment, in view of the tremendous desire on the other side to transact the public business, but I will venture the suggestion that, inasmuch as we must hear from the House of Representatives and a committee has been appointed to wait upon the President, to take a recess

would be in order. That is what we have usually done.

Mr. WILLIAMS. It seems to me that all we have to do is to go ahead under the unanimous-consent agreement already entered into. There is no necessity for taking a recess. So far as that is concerned, if we had to wait until the House informed us that it was organized, think a moment of what, in certain contingencies, might follow. The Senator will remember that in the Thirty-fourth Congress Nathaniel P. Banks was not elected Speaker for, I believe, some six weeks. The House was waiting all that time to be organized, and could not pass the usual resolution.

Mr. GALLINGER. But it was doing business all the same.
Mr. WILLIAMS. Now, it seems to me that the sooner we
get the Hetch Hetchy bill out of the way, the better, and as the Senate has a unanimous-consent agreement to take that measure up at 12 o'clock on Monday, December 1, that hour and day having arrived and that being the regular order, if I am in order in doing so, I call for the regular order.

Mr. BRANDEGEE. But, Mr. President, is not morning busi-

ness still in order?

Mr. SMOOT. Morning business has not been concluded. Mr. WILLIAMS. I call for the regular order, whatever it is.

Mr. MYERS. Mr. President, a parliamentary inquiry.
The VICE PRESIDENT. The Senator from Montana will

state his parliamentary inquiry. Mr. MYERS. Do we not have the regular morning business

for the introduction of bills, resolutions, and so forth, this morning?

Mr. WILLIAMS. I believe I was mistaken about the unanimous consent. Under the agreement the Hetch Hetchy bill is to come up after the regular morning business.

Mr. BRANDEGEE. I call for the regular order.

Mr. WILLIAMS. I call for the regular order, which is morn-

Mr. MYERS. I will say that I was waiting for the morning business to be cencluded, when I will ask that the Hetch Hetchy bill be laid before the Senate in accordance with the unanimousconsent agreement.

Mr. SMOOT. I simply want to say that since I have been here it has always been the rule that the Senate has taken a recess to wait until they have received notice from the House of Representatives that it is in session and also a report from the committee appointed to wait upon the President. This is a session of Congress; it is not merely a session of the Senate; and by right we ought to know whether or not Congress is in session, and the only way to know that is to receive notification from the other House of its organization. I think that is the proper course to follow.

Mr. WILLIAMS. The Senator is mistaken, Mr. President. Usually that course is necessary, and I understand that precedent is followed on the meeting of a new Congress; but in this instance both Houses have organized and everybody knows it. This is the second session of this Congress, and all we have to do that I can see is to go ahead with the regular order. I call

for the regular order, and ask the Chair to state what it is.

Mr. SMOOT. I should like to have the Chair give a ruling, then, on what is the proper procedure for the Senate at this

The VICE PRESIDENT. The Constitution of the United States requiring the Congress of the United States to assemble upon the first Monday in December of each year, the Chair rules that the Congress of the United States is not assembled until both the Senate and the House of Representatives are in session with a constitutional quorum present for the trans-action of business, and that no legislative business can be transacted by the Senate of the United States until that time has arrived.

RECESS.

Mr. KERN. I move that the Senate take a recess until 2 o'clock.

The motion was agreed to, and (at 12 o'clock and 30 minutes p. m.) the Senate took a recess until 2 o'clock p. m.

At the expiration of the recess the Senate reassembled.

MESSAGE FROM THE HOUSE.

Mr. South, the Chief Clerk of the House of Representatives, appeared and delivered the following message:

Mr. President, I am directed by the House of Representatives to inform the Senate that a quorum of the House of Representatives has assembled, and that the House is ready for business.

Also, that a committee of three were appointed by the Speaker on the part of the House of Representatives to join with the committee on the part of the Senate to wait on the President of the United States and notify him that a quorum of the two Houses has assembled and that Congress is ready to receive any communication that he may be pleased to make, and that Mr. Underwood, Mr. Fitzgerald, and Mr. Mann were appointed such committee on the part of the House.

NOTIFICATION TO THE PRESIDENT.

Mr. Kern and Mr. Gallinger appeared, and
Mr. Kern said: Mr. President, on behalf of the committee
appointed to wait upon the President of the United States and inform him that the two Houses of Congress have organized and are ready to receive any communication that he may be pleased to make, I have the honor to report that the committee have performed that duty, and in response the President informed us that he will submit a communication in person to Congress to-morrow, December 2, at 1 o'clock p. m.

ORDER OF BUSINESS.

The VICE PRESIDENT. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated.

The Secretary. A bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. PENROSE. Mr. President, I rise to an inquiry. not morning business be permitted? Some Senators have bills to introduce. I do not suppose it is a matter of great importance, but I would expect the orderly procedure to be an oppor-

tunity for the transaction of morning business

Mr. BURTON. I will state in this connection that I desire to introduce a bill which is one of considerable importance, and with the consent of the Senate I should like to make a brief statement in connection with it.

The VICE PRESIDENT. Very well.

Mr. SMOOT. Why could not the Senator from Oklahoma ask that the unfinished business be temporarily laid aside?

Mr. OWEN. I ask that the currency bill be temporarily laid aside that Senators may present morning business.

The VICE PRESIDENT. There being no objection, that ac-

tion will be taken.

NAVAJO INDIAN RESERVATION, ARIZ. (H. DOC. NO. 298).

The VICE PRESIDENT. The Chair lays before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a report of conditions on the Navajo Indian Reservation in Arizona with respect to the necessity for constructing a bridge across Moenchopi Wash on that reservation, The communication is accompanied by illustrations, and it will be referred to the Committee on Printing for action.

Mr. SMOOT subsequently said: This morning the Presiding Officer laid before the Senate a communication from the Secretary of the Interior relative to the necessity for constructing a bridge across Moenchopi Wash on the Navajo Indian Reservation in the State of Arizona. Accompanying the communication were illustrations, which the Presiding Officer referred to the Committee on Printing for action. I report favorably from the Committee on Printing on the communication and accompanying illustrations and ask that they be printed.

The VICE PRESIDENT. Without objection, it is so ordered,

and the communication will be referred to the Committee on

Indian Affairs.

ANNUAL REPORT OF THE RECLAMATION SERVICE (H. DOC. NO. 297).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, the twelfth annual report of the Reclamation Service, which was referred to the Committee on Irrigation and Reclamation of And Lands and ordered to be printed.

INDIAN SCHOOL, PHOENIX, ARIZ. (H. DOC. NO. 292).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, recommending that the appropriation of \$12,000 for general repairs and improvements, including two steel water tanks, at the Indian school at Phoenix, Ariz., be increased to \$32,302.69, etc., which was referred to the Committee on Indian Affairs and ordered to be

DISTRESS AMONG INDIANS (H. DOC. NO. 328).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a report showing the expenditures for the fiscal year ended June 30, 1913, for food and other necessaries of life in cases of distress among Indians not having treaty funds, etc., which, with the accompanying paper, was referred to the Committee on Indian Affairs and ordered to be printed.

EMPLOYEES IN INDIAN SERVICE (H. DOC. NO. 334).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a report showing the diversion of appropriations for the pay of specified employees in the Indian service for the fiscal year ended June 30, 1913, which, with the accompanying paper, was referred to the Committee on Indian Affairs and ordered to be printed.

INDIAN MONEYS-PROCEEDS OF LABOR (H. DOC. NO. 327).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a report of expenditures of money carried on the books of the Interior Department under the caption "Indian moneys Proceeds of labor," for the fiscal year ended June 30, 1913, which, with the accompanying paper, was referred to the Committee on Indian Affairs and ordered to be printed.

INDIAN HOSTILITIES (H. DOC. NO. 296).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, stating, in compliance with the provisions of section 2100 of the Revised Statutes of the United States, that there have been no hostilities against the United States or its citizens during the fiscal year ended June 30, 1913, which was referred to the Committee on Indian Affairs and ordered to be printed.

INDUSTRY AMONG INDIANS (H. DOC. NO. 295).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a detailed report of expenditures made for the purpose of encouraging industry among Indians at various reservations during the fiscal year ended June 30, 1913, which, with the accompanying paper, was referred to the Committee on Indian Affairs and ordered to be printed.

INDIAN SCHOOLS AND AGENCIES (H. DOC. NO. 329).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a report showing the amounts expended at each Indian school and agency of the appropriation for construction, lease, bridges, repairs, and improvements of school and agency buildings, which, with the accompanying paper, was referred to the Committee on Indian Affairs and ordered to be printed.

INDIAN EDUCATION FUND (H. DOC. NO. 330).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a report relative to the expenditure of the general Indian education fund, showing the names of teachers, compensation allowed, location of school, and average attendance of each school, etc., which, with the accompanying papers, was referred to the Committee on Indian Affairs and ordered to be printed.

SURVEYS ON INDIAN RESERVATIONS (H. DOC. NO. 331).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a statement of the cost of all survey and allotment work on Indian reservations for the fiscal year ended June 30, 1913, which, with the accompanying papers, was referred to the Committee on Indian Affairs and ordered to be printed.

INDUSTRIAL WORK AND CARE OF TIMBER (H. DOC. NO. 335).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a statement of the expenditures from the appropriation for "Industrial work and care of timber" for the fiscal year ended June 30, 1913, which, with the accompanying paper, was referred to the Committee on Indian Affairs and ordered to be printed.

SIOUX INDIAN FUND (H. DOC. NO. 332).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a report of expenditures from the permanent fund of the Sioux Indian's during the fiscal year ended June 30, 1913, which, with the accompanying paper, was referred to the Committee on Indian Affairs and ordered to be printed.

IRRIGATION AND DRAINAGE, INDIAN SERVICE (H. DOC. NO. 299).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a tabulated statement relative to the distribution of moneys expended for irrigation and drainage, Indian Service, for the fiscal year 1913, which, with the accompanying paper, was referred to the Committee on Indian Affairs and ordered to be printed.

TONGUE RIVER INDIAN RESERVATION (H. DOC. NO. 294).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a detailed report of expenditures made for the purpose of encouraging industry among Indians on the Tongue River Indian Reservation during the fiscal year ended June 30, 1913, which, with the accompanying paper, was referred to the Committee on Indian Affairs and ordered to be printed.

SUBSISTENCE FOR INDIAN TRIBES (H. DOC. NO. 333).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, stating that no diversions or expenditures were made during the fiscal year ended June 30, 1913, under the provisions of the act approved March 1, 1907, authorizing the Secretary of the Interior to use any surplus that may remain in any of said appropriations for the purpose of subsistence for the several Indian tribes to an amount not exceeding \$25,000 in the aggregate to supply any subsistence deficiency that may occur, etc., which was referred to the Committee on Indian Affairs and ordered to be printed.

PETITIONS AND MEMORIALS.

The VICE PRESIDENT presented resolutions adopted at the Geologists and Mine Engineers' Convention, National Conservation Exposition, Knoxville, Tenn., September 19, 1913, favoring an increase in the appropriation for classifying the public domain, which were referred to the Committee on Appropriations.

He also presented resolutions adopted by Nordstjernan No. 136, of Minneapolis, Minn., favoring the enactment of legislation granting to the city of San Francisco the use of the waters of the Hetch Hetchy Valley, which were ordered to lie on the

He also presented a memorial of sundry citizens of College-ville, Ind., remonstrating against the passage of the so-called

Hetch Hetchy bill, which was ordered to lie on the table.

He also presented resolutions adopted by the Retail Merchants' Association of Washington, D. C., favoring the plan of

the Secretary of the Navy for the establishment of an armorplate plant in the District of Columbia or on some site adjacent thereto, which were referred to the Committee on the District of Columbia.

Mr. SHAFROTH presented petitions of sundry citizens of Pueblo and Denver, in the State of Colorado, praying for the enactment of legislation granting relief to persons who served in the Military Telegraph Corps of the United States Army during the Civil War, which were referred to the Committee on Military Affairs,

Mr. McCUMBER presented a petition of the Votes for Women League of Jamestown, N. Dak., praying for the enact-ment of legislation granting the right of suffrage to women,

which was ordered to lie on the table.

Mr. O'GORMAN presented petitions of sundry citizens of New York City and Buffalo, in the State of New York, praying for the enactment of legislation granting relief to persons who served in the Military Telegraph Corps of the United States Army during the Civil War, which were referred to the Committee on Military Affairs.

#### BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows

By Mr. PENROSE:

A bill (S. 3496) to define the true intent and meaning of section 48 of the act of August 28, 1894, levying taxes on distilled spirits, to regulate the business of reclaiming waste spirits from empty whisky barrels, and to define the status of persons engaged in such business; to the Committee on Finance.

A bill (S. 3497) granting relief to persons who served in the Military Telegraph Corps of the Army during the Civil War (with accompanying paper); to the Committee on Military

Affairs.

A bill (S. 3498) granting an increase of pension to Daniel Hilliard;

A bill (S. 3499) granting an increase of pension to John King;

A bill (S. 3500) granting a pension to Mary Irvin;

A bill (S. 3501) granting an increase of pension to Horace M. Marquet;

A bill (S. 3502) granting an increase of pension to John Gowland (with accompanying papers);

A bill (S. 3503) granting a pension to William N. Stewart

(with accompanying papers); and

A bill (S. 3504) granting an increase of pension to James H. Nale (with accompanying papers); to the Committee on Pen-

By Mr. SHAFROTH:

A bill (S. 3505) for the relief of Boon, Bostwick & Co.; to the Committee on Claims.

A bill (S. 3506) for the relief of Samuel Charles Hampton;

to the Committee on Naval Affairs.

A bill (S. 3507) to grant to women citizens of the United States the right to register and vote for Senators of the United States and for Members of the House of Representatives; to the Committee on Woman Suffrage.

A bill (S. 3508) granting an increase of pension to David

Walker; to the Committee on Pensions.

By Mr. MYERS:

A bill (S. 3509) for the relief of Orion Mathews; to the Committee on Military Affairs,

By Mr. OVERMAN:

A bill (S. 3510) to provide for the construction, maintenance, and improvement of post roads and rural delivery routes through the cooperation and joint action of the National Government and the several States in which such post roads or rural delivery routes may be established; to the Committee on Post Offices and Post Roads.

A bill (S. 3511) to authorize the Supreme Court to prescribe forms and rules and generally to regulate pleading, procedure, and practice on the common-law side of the Federal courts: to

the Committee on the Judiciary.

By Mr. POINDEXTER:

A bill (S. 3512) making appropriations for the printing and publishing of maps and reports relating to the kelp beds on the Pacific coast; to the Committee on Appropriations.

A bill (S. 3513) granting an increase of pension to Aaron B. Hartman; to the Committee on Pensions.

By Mr. McCUMBER: A bill (S. 3514) for the relief of John H. Howlett; to the Committee on Claims.

A bill (S. 3515) granting an increase of pension to Elmer Mulinex (with accompanying papers); and

A bill (S. 3516) granting an increase of pension to Irwin M. Hill; to the Committee on Pensions.

By Mr. MARTIN of Virginia:

A bill (S. 3517) for the relief of the trustees of Lynchburg College, of Lynchburg, Va.; to the Committee on Claims.

A bill (S. 3518) granting a pension to James D. Setliff; to the Committee on Pensions.

By Mr. BURLEIGH:

A bill (S. 3519) granting a pension to Adesta L. Kendall; to the Committee on Pensions.

By Mr. SHIVELY:

A joint resolution (S. J. Res. 85) authorizing the appointment of a board of examiners to make an examination of the Kankakee River at and in the vicinity of the boundary line between the States of Indiana and Illinois, relating to the necessity and practicability of removing obstructions from said river and straightening its channels, and for other purposes; to the Committee on Commerce.

#### BANKING AND CURRENCY.

Mr. BURTON introduced a bill (S. 3495) to incorporate the Federal reserve bank of the United States, establish banking districts, mobolize bank reserves, refund and retire a portion of the national debt, provide for an elastic currency, afford means for rediscounting commercial paper, establish more effective supervision of banking, and for other purposes, which was read twice by its title.

Mr. BURTON. Mr. President, with the consent of the Senate, I desire to submit a brief statement explaining the provisions of

The plan provides for the organization of a Federal reserve bank owned by the people and entirely controlled by the Government. The capital stock is placed at \$100,000,000, and is to be open to popular subscription for its full amount in shares of \$100 each, the stockholders to receive cumulative dividends at the rate of 5 per cent per annum. The control of the bank is vested in a board of seven directors to be appointed by the President, to be confirmed by the Senate, the terms of office of such directors to be 14 years. These men are to have absolute control over the affairs of the bank, and are to devote their whole time to their functions as such directors.

The bank itself is to have its main office in Washington with 12 branches to be located in various parts of the country. Each branch is to be managed by an executive committee of five men, who are all to be appointed by the board of seven, who will supervise and control all their actions. The number of the

branches may be increased.

The earnings of the bank are to be appropriated first to the payment of a 5 per cent dividend to the shareholders, then to the accumulation of a surplus of \$20,000,000, after which onehalf of the earnings is to go to the United States and one-half to increase the surplus to \$50,000,000, and thereafter the whole of the earnings, above, of course, the 5 per cent paid upon the stock, shall go to the United States to be devoted to the retirement of the public debt.

The business of the bank is to be conducted solely with the

United States Government, the national banks, and such State banks and trust companies as are permitted under appropriate restrictions to deposit their reserves therein. The bank will also act as fiscal agent and sole depository of the Government.

In general, the function of the bank will be to hold the re-serves of all national banks and of the State banks that make deposits, as well as all the funds of the Government except the 5 per cent redemption fund; to rediscount commercial paper for the member banks or depositors; to establish rates of discount for such rediscounting, which shall be uniform through-out the country and at all branches of the bank; to issue its notes as circulating medium; and to act as a national clearing The provisions for rediscounting paper are carefully prepared to cover bona fide agricultural, commercial, and industrial transactions, and are made to exclude stock-exchange or grain-exchange transactions.

With respect to the national-bank reserves, at least one-half and as much more as may be desired by the individual banks are to be on deposit with the Federal reserve bank. Incidentally the amount of such national-bank reserves is to be reduced to a uniform basis of 12 per cent of their net deposit liabilities, and all distinctions between country banks and reserve city banks

are eliminated.

The circulating notes of the bank are gradually to take the place of national-bank notes and are to be receivable at par for all taxes and other debts due to the United States, and also for all debts payable by the United States, except interest on the public debt.

The notes are protected by a reserve fund to consist of either 100 per cent of gold coin bullion or gold certificates or of 50

per cent of gold coin bullion or certificates plus 100 per cent of collateral security, which may consist of notes and bills accepted for rediscount and of the Government refunding notes, which are authorized in the bill. This special reserve to protect the circulating notes is to be kept separate and distinct from the general reserve of the bank, which is to be maintained at 50 per cent of its net deposit liabilities, and is to consist of gold coin, bullion, and other lawful money of the United States.

The circulating notes are made redeemable on demand at any office of the bank in gold or lawful money of the United States

at the option of the holder.

The national clearing-house function is made possible by a provision requiring the acceptance at par of all checks and drafts of the bank and any of its branches, and a further provision authorizing the various branches, subject to the approval of the central board, to determine and publish appropriate exchange and collection charges for the handling of all other

exchange or collection items.

The plan also proposes to effect a gradual retirement of all the 2 per cent bonds now outstanding. This is to be accomplished in two ways—first, by having the Government pay off through the medium of the Federal bank approximately one-half of the outstanding twos by an issue of Treasury 1-year renewable notes from time to time; and, second, by having the Secretary of the Treasury exchange not less than \$20,000,000 per year of the twos held by the national banks for an equal amount of Government a per cent bonds to run 20 years, but to be without any circulation privilege. In this way all the 2 percents would be retired at the end of 20 years, a result which is further insured by a provision that at the end of such period such bonds are to carry no interest.

As distinguished from the Owen-Glass bill, the bank notes are to be redeemed by the banks, and no Government liability is attached. While I have given a very considerable amount of attention to the bill, I frankly say that I am not altogether satisfied with all of its details, but I confidently believe that, whatever Congress may do upon the pending legislation, the general plan of a central banking institution will ultimately be adopted.

The VICE PRESIDENT. To what committee does the Senator from Ohio desire to have the bill referred?

Mr. BURTON. I think the bill should lie on the table, as I judge the Banking and Currency Committee has performed whatever duty it intends to perform in the consideration of a bill relating to banking and currency.

The VICE PRESIDENT. That action will be taken.

#### SAN FRANCISCO WATER SUPPLY.

The VICE PRESIDENT. Morning business is closed.

Mr. MYERS. Mr. President, I ask that House bill 7207, the Hetch Hetchy bill, be now laid before the Senate in accordance with the unanimous-consent agreement.

The VICE PRESIDENT. In accordance with the unanimousconsent agreement, the Chair lays before the Senate House bill

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes

Mr. MYERS. Mr. President, as chairman of the Committee on Public Lands of the Senate, which reported this bill favorably to this body, I feel it incumbent upon me to present the bill to the Senate with some remarks, giving the reasons which caused the committee to recommend the bill for passage. I also speak from personal conviction in consequence of a study of the subject and, so far as I had time, a hearing of all that has been said or offered by either side, a reading of the proceedings before the House committee, and hearing the discussions before the Senate committee relative to the matter. result of all this I am profoundly convinced that this bill is one of extraordinary merit, one which presents a pressing emergency to Congress, and that it ought to be passed without

This bill presents to Congress a question of most momentous importance, a question of the sustenance of human life, a question of the necessities of human life, a question of threequarters of a million people having an adequate water supply for the absolute necessities of life, for sanitary purposes, for municipal purposes, for cooking and other family and household purposes, and for consumption by individuals of the communities which are interested. I think it is one of the most important questions that has been presented before this body since I have been here, one that pertains to the conservation

of the very life of a large number of citizens of this country and of the people of a very large and important section of the country.

San Francisco needs the water; I believe there is absolutely no denial of that fact. The people of San Francisco are citizens of this country, and they need something which is necessary to their existence, both individually and as a municipality; they need something which it is in the power of this Government to give them and which is being put to no other purpose; and the

question is, Shall we give it to them?

In addition to the lack of an adequate supply of water, the people of San Francisco are not only suffering from the absolute want of water, but they are to-day paying the highest rates for what little water they do get of any city in the United States. They are in absolute distress, and they come to this body—the only body that appears to have it in its power to give adequate relief-and ask for the relief which we are in a position to give.

The proposition is to enable San Francisco and the other cities around the Bay of San Francisco, adjacent to San Francisco, which form one compact vicinity or section of country, to obtain sufficient water for municipal and individual purposes. That is the proposition which is presented to us. In order to get the proposition succinctly before Senators I will now read from the report of the House Committee on Public Lands, which unanimously reported in favor of this bill, which contains a statement of the case and a statement of what is asked for in the bill. That report reads:

statement of the case and a statement of what is asked for in the bill. That report reads:

The cities of San Francisco, Burlingame, San Mateo, Redwood, Palo Alto, Hayward, Alameda, Oakland, Pledmont, and Berkeley, which are to be organized into a municipal water district for development of the Hetch Hetchy water supply, form an almost continuous chain around the Bay of San Francisco. Their combined population at the present date is more than 700,000. Directly east of these bay cities the Coast Range Mountains form a low barrier between the bay cities and the San Joaquin Valley, one of the two great interior valleys of California, Through the middle of this valley the San Joaquin River flows north to the Carquinez Straits and thence into San Francisco Bay. On the east side of the valley the Slerra Nevada Range rises, reaching heights of over 12,000 feet at the summit. Down the western slopes of the Sierras the Tuolumne River winds in a general westerly direction to its confuence with the San Joaquin River. For the purpose of irrigating during the dry season the part of the valley floor which is normally drained by the Tuolumne River winds in a general westerly direction to its confuence with the San Joaquin River. For the purpose of irrigating during the dry season the part of the valley floor which is normally drained by the Tuolumne River winds in a general westerly direction to its confuence with the San Joaquin River, the Modesto and Turlock irrigation districts were formed, comprising 257,000 acres in extent. Conjointly they have built the La Grange diverting dam at the point where the Tuolumne leaves the foothills on its westward course, and divert its waters through irrigating canals to the extent of their needs. About 50 miles farther up the Tuolumne and about 165 miles due east from San Francisco the river flows through the Hetch Hetchy Valley, and about 9 miles distant lies Lake Eleanor, one of the numerous mountain lakes of the Sierras. A short distance west of Lake Eleanor the ground falls off into

In the bill presented for your consideration the city of San Francisco has set forth the rights which Congress must grant before the city can proceed with this great project. These rights are, briefly, as

can proceed with this great project. These rights are, briefly, as follows:

1. The right to construct a dam at the mouth of Hetch Hetchy, Lake Eleanor, and Cherry Valley and to flood said valleys to the height of their respective dams.

2. Rights of way through the Yosemite National Park and Stanislaus National Forest for tunnels, aqueducts, and water conduits, also for telephone, telegraph, and power transmission lines, roads, and trails,

3. Necessary power-house sites and diverting or storage dam sites.

4. The right to take stone, earth, and other materials for construction purposes from the land covered by the rights of way and adjoining land. The water which San Francisco has appropriated under the laws of California and expects to store and beneficially use by means of the above works is the storm water of the Tuolumne—the water which has been going to waste every year over the La Grange irrigation dam during the high-water months.

CONDITIONS TO WHICH SAN FRANCISCO CONSENTS.

CONDITIONS TO WHICH SAN FRANCISCO CONSENTS.

CONDITIONS TO WHICH SAN FRANCISCO CONSENTS.

In order that the Government and the public may be amply protected in the exercise of this grant, the bill proposes that all procedure thereunder shall be carefully regulated by the Secretary of the Interior. Maps are to be filed and approved before the city can proceed. Work is to be commenced within a reasonable time and prosecuted diligently. The usual charges are to be paid to the Government for timber taken and the bill fixes an annual rental to be paid the Government as compensation for the rights granted. Campers are to be restricted by only a few simple sanitary regulations, which are fully set forth and can never be amplified by the city. All regulations of the Department of the Interior and Bureau of Forestry shall be complied with by

the city. The city is prohibited from ever selling to private corpora-tions or individuals the right to sell water, thus protecting this grant from ever falling into the hands of speculators.

WHAT SAN FRANCISCO PROPOSES TO DO IN RETURN FOR THIS GRANT.

WHAT SAN FRANCISCO PROPOSES TO DO IN RETURN FOR THIS GRANT.

In return for this grant San Francisco proposes:
First, To adequately protect all existing irrigation rights to the waters of the Tuolumne with ample allowance for future requirements. This feature will be discussed more fully a little later.
Second. To build at its own expense a magnificent system of roads and trails which will make one of the most beautiful scenie parts of the Sierra, now reached only by tedious journeys afoot or on mule back, generally accessible to the public.
Third. To furnish stored water to the irrigationists over and above the amount to which they are now entitled at actual cost of storage, where the same can be spared from municipal use.
Fourth. To furnish electric power at cost to the Modesto and Turlock irrigation districts and to municipalities situated therein.

I believe those extracts state clearly to the Senate the nature of the bill that is under consideration. They are a succinct and concise statement of the case. The city of San Francisco and the adjacent cities which are interested come to Congress for this relief in their dire distress because it appears that Congress is the only authority that can give them the relief desired The Interior Department could, I and the powers asked for. take it, grant a permit for these requests, but that permit would necessarily be a revocable permit; it could not be made a permanent permit. One Secretary of the Interior might readily undo what a predecessor had done; there would be no permanency about it; there would be no certainty of the future about it.

These people desire to acquire an adequate water right for all time to come-at least for the remainder of this century-in order that they may feel safe and secure, that they may go ahead with their municipal improvements and feel that their cities are on a solid basis for one of the great necessities of

life-an adequate water supply.

It seems to me that it would be useless and futile to rely upon a permit to be granted by the Interior Department, when it might be at any time revoked; and so these people sensibly come to the Congress of the United States as the only power that can grant them permanent relief. They want something permanent when they get it, because the plan involves the expenditure of great sums of money; it means the issuance of large amounts of bonds, the selling of those bonds in the mar-ket, and the redemption of those bonds in due time; and the people do not want to be called upon to pay out their money and redeem bonds for something that may perhaps in the meantime have been revoked and taken away from them. So it seems to

me this is the only sensible course to pursue.

Mr. GALLINGER. Mr. President—

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from New Hampshire?

Mr. MYERS. I do, with great pleasure.

Mr. GALLINGER. I am not at all familiar with the matter that is under discussion, I regret to say, not having had time to familiarize myself with all the facts, but in the various communications, usually in the form of protests, which have come to me from my section of the country, it has been per-sistently stated that San Francisco can get an adequate water supply from several other sources than the Yosemite Valley. The Senator has given, I have no doubt, great study to this subject, and I should like to ask him at this point how much potency there is in that contention?

Mr. MYERS. Mr. President, I intend to reach that a little later and discuss it fully, but will say at this time that I think the showing made proves conclusively that San Francisco can not get a water supply elsewhere that would be in anywise adequate without the expenditure of at least \$20,000,000 more

than this water supply will cost.

Mr. WORKS. Mr. President—
The VICE PRESIDENT. Does the Senator from Montana

yield to the Senator from California?

Mr. MYERS. With great pleasure. Mr. WORKS. Leaving out of acco Leaving out of account the amount of water that is needed for the other cities, does the Senator know how much water would be required for the use of San Francisco in addition to what it already has?

Mr. MYERS. My recollection is that the report of the Army board deals with the needs of the entire aggregation of cities, but I do not remember having read in the report, which purported to cover every phase of the matter, just what extra supply the city of San Francisco alone would require.

Mr. WORKS. Does the Senator from Montana know whether the other cities which are mentioned have made any filings

on this stream?

Mr. MYERS. I have not read that the others have made any. The city of San Francisco, through its mayor, has attempted, or purported at least, to make filings. I have not read of any of the other cities doing so through their agents or officials.

Mr. WORKS. Does the Senator know whether, under the laws of California, the city of San Francisco can make filings and appropriate water for the use of other cities?

Mr. MYERS. I would apprehend that it could not, unless the right were granted by statutory enactment; and my reading of the documents on this subject would lead me to believe that unless there had been some such legislation very recently it could not do so.

Mr. WORKS. Does the Senator know of any such legislation?

Mr. MYERS. I do not.

Mr. WORKS. Then, by what right can the Government grant to the city of San Francisco facilities for furnishing water to

Mr. MYERS. By the provisions of this bill, granting these rights to the city of San Francisco and the other cities, jointly

and acting together.

Mr. WORKS. Does the Senator from Montana contend that the Government of the United States can grant water rights in California?

Mr. MYERS. I contend that the Government of the United States can grant whatever it has control over, and whatever it has possession of, and whatever is a proper subject of legislative enactment. Any attempted legislation beyond that would be null and void.

Mr. WORKS. Does the Senator contend that the National Government has control over the water flowing in the streams

in California?

Mr. MYERS. The National Government owns and has control over the lands in the Yosemite Park, of which the Hetch Hetchy Valley is a part, as I understand; and if it owns those lands, it certainly can do with them whatever it may please. It can dispose of them in any manner it may see fit. That disposal certainly would carry with it all appurtenances to the land. If the water which gathers in the park is appurtenant to the land, it would go with the land.

Mr. WORKS. Does the Senator understand that waters flowing in the streams in California are appartenant to the lands held by the National Government, so as to give the

Government control over those waters?

Mr. MYERS. I can not say as to California. Some authorities contend that the water flowing through lands owned by the United States is appurtenant to the lands, and is subject to the control of the United States in so far as attempted to be used on public lands. At an early day there was congressional legislation which purported to give to settlers on public lands in the Territory of Montana and certain other Territories the right to appropriate water from streams flowing through public lands for use thereon. I express no opinion as to the validity thereof.

From all that I can learn on this subject San Francisco's need is certainly very dire and great. It would appear that San Francisco to-day has no more than one-fifth of an adequate water supply, one-fifth of what would be a fair and liberal supply for all of its needs and uses. The surrounding cities, which are also intended to be benefited by this bill, appear likewise to be in great need of additional supplies of water.

The city of San Francisco is one of the great cities of this It and the cities which surround it, in the same vicinity, have more than three-fourths of a million of population. They are all growing rapidly; and unless hampered by some such dire calamity as a lack of the water actually necessary for cleanliness and drinking and household purposes and municipal purposes, they doubtless will continue to grow and make one of the most magnificent sections of this country.

Year after next we are going to have an international exposition in San Francisco. It has been sanctioned by the action of Congress. The right to hold it there has been granted by the Government. The Government has recognized and has given the stamp of its approval to that great world's fair. That great exposition is expected to bring hundreds of thousands, even millions, of visitors into the gates of that city and into that section of the country. It must be apparent to the Senate that this will immeasurably increase the necessity that exists in San Francisco to day for one of the commonest necessities of life—water; water to drink, water with which to cook, and

water for municipal purposes.
Mr. WORKS. Mr. President-

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from California?

Mr. MYERS. With great pleasure.
Mr. WORKS. Does the Senator understand that if this bill should be passed the water from the Hetch Hetchy Valley can be brought into San Francisco in time for the exposition?

Mr. MYERS. No; I do not claim that that can be done, be

cause it will take longer than that. It is merely one of the

incidents of the matter. It shows the dire necessities of San Francisco, and I only mention it to show the desperate condition of its citizens and what confronts them.

Mr. SMOOT. Mr. President

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Utah?

Mr. MYERS. With great pleasure. Mr. SMOOT. How many gallons of water per day does the Senator claim are required by every man, woman, and child in the city of San Francisco?

Mr. MYERS. I shall try to answer that question in a second,

Mr. President.

Mr. SMOOT. I will put the question in this way: Does the Senator think 100 gallons of water per day for every man, woman, and child in San Francisco is a sufficient amount?

Mr. MYERS. I believe some reports so estimate; yes. think the necessary amount is in the neighborhood of 100

Mr. PITTMAN. Mr. President-

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Nevada?

Mr. MYERS. I do, with pleasure.

Mr. PITTMAN. For the purpose of refreshing the Senator's mind with regard to that matter, I will state that in the report of the Army board the amount that is necessary is estimated on the basis of 130 gallons per day, exclusive of that which is required for irrigation inside of the city.

Mr. SMOOT. Most of the reports, as I have read them, have

held 100 gallons to be sufficient.

Mr. MYERS. There have been some estimates to that effect.

Mr. SMOOT. What I wanted to know was the Senator's idea, because, whatever his idea is, I shall figure upon the amount of water in gallons per day required by San Francisco. That is the reason I asked the Senator the question.

Mr. MYERS. Does the Senator exclude the adjacent and

outlying cities that are beneficiaries under this bill?

Mr. SMOOT. Of course, a principle is involved that will be discussed at great length before this bill is passed; but I will include all of the people adjacent to San Francisco as to the amount they need per capita. Of course, they will not need more than the people of San Francisco.

Mr. MYERS. No; I take it they will not. Mr. SMOOT. I think it is reasonable to say that 100 gallons per day for every man, woman, and child is a sufficient amount.

Mr. THOMAS. How much?
Mr. SMOOT. One hundred gallons per day.
Mr. THOMAS. Mr. President—
The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Colorado?

Mr. MYERS. With great pleasure.

Mr. THOMAS. I think that statement is perfectly true if its application is confined to the humid regions of the United States; but in the city of Denver, where I reside, 215 gallons per capita are necessary, and I think in the city of Pueblo the per capita consumption is still greater.

There may be some other conditions in San Francisco of which I am not aware; but in all the arid and semiarid regions of the United States the per capita consumption is necessarily greater than it is in regions like this, where there is consider-

able rainfall and generally a humid condition.

Mr. SMOOT. I will say to the Senator that I was taking the figures from a great many reports that have been made. All I wanted to know was whether or not the Senator from Montana accepted those estimates.

Mr. THOMAS. I apologize to the Senator for interrupting. I understood the question to be more general in its character.

Mr. WORKS. Mr. President

The VICE PRESIDENT. Does the Senator from Montana further yield to the Senator from California?

Mr. MYERS. I do.

Mr. WORKS. I understand that in all the calculations that have been made by the engineers in arriving at conclusions on this matter 100 gallons a day has been taken as a liberal allow-ance. I think there is no disagreement with respect to that matter. It is discussed in some of the reports that have been made. The amount actually used runs up from fifty-odd gallons to 100 gallons, and perhaps, as in the Senator's case, to 215. I never heard of that, however. But they have taken 100 gallons as the basis of all their calculations.

Mr. MYERS. Mr. President, I believe the condition of the people of San Francisco and the adjacent communities with regard to want of water is pretty generally known by the Members of this body. I believe there is no difference of opin-ion that the supply of water there must be increased from some source and in some way. The reports are all to the effect that there is actual suffering and dire distress to-day in that re-

spect. The city of San Francisco to-day has only about 40,-000,000 gallons of water daily, and it has twice the population of Denver, which has 200,000,000 gallons. From all accounts, San Francisco needs five times as much water as it has to-day; needs and ought to have right now at least as much as the city of Denver.

We can see here in the city of Washington what magnificent results a plentiful and liberal amount of water accomplishes for a city. We can see the clean streets and the fine condition in which this city is kept, largely from an adequate supply of water and a judicious use of it, even though the use of water here is not required in many respects in which it is required in the city of San Francisco, which is in a semiarid section of the country, and does not have nearly the rainfall that this section of the country has.

I believe it may be conceded, from all that has been shown in this case, that the present sources of supply of San Francisco and the adjacent communities can not be increased. The people must look elsewhere in order to get an adequate supply of water. I believe every engineering report and every investigation that has been made is practically clear to the effect that the present sources of supply can not be increased, and that the people must go elsewhere.

On that subject I wish to read from the report of the board of Army engineers which was appointed by the Government to investigate this whole subject. On page 15 of its report, after reciting the amount of water that is required by San Francisco

and the adjacent communities, the board says:

No such amount can be secured from existing sources, though the exact amount of their possible development is uncertain, as the supplies are largely underground. It does not appear essential for the purposes of the board that accurate figures should be secured, as it is only necessary to know that outside sources must be sought for and, in general, how much will be needed.

Mr. WORKS. Mr. President-

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from California?

Mr. MYERS. With great pleasure. Mr. WORKS. Does the Senator understand that in the quotation made the engineers were talking about 400,000,000 gallons of water per day that could not be obtained from other sources? Mr. MYERS. Yes; it says that 400,000,000 gallons daily must

be obtained.

Mr. WORKS. Has the Senator found in any of these reports any statement that a sufficient and adequate supply for the city of San Francisco alone could not be obtained from other sources?

Mr. MYERS. The report of the Army board treats of the entire aggregation of cities around San Francisco Bay. that all of these cities need water. If we were to legislate for San Francisco alone, and let these other people die or move out for want of water, the matter might present a different phase. But the Army board was instructed to investigate and report for this aggregation of communities, and the bill goes on the theory that they all need water.

Answering the question flatly, I can not just now say that I have read any report which says that an adequate supply for San Francisco alone could not be developed from existing sources, but I have read much literature and contention by the

people of San Francisco that it could not be done.

Mr. WORKS. If the Senator will examine the report of Mr. Wadsworth, who was delegated by the Army board to make a more specific investigation of the whole matter, I think he will find a statement that 100,000,000 gallons a day would be sufficient for San Francisco until the year 1955.

Mr. MYERS. That may be true.

Mr. CLARK of Wyoming. Mr. President—
The PRESIDING OFFICER (Mr. Walsh in the chair).
Does the Senator from Montana yield to the Senator from Wyoming?

Mr. MYERS. With pleasure,

Mr. CLARK of Wyoming. I wish to ask a general question, see the bill provides that the dam shall be at least 200 feet high; and, as I understand, the water to be impounded is the surplus water beyond the natural flow of the stream. Has the Senator any information as to how much of that surplus water

can be supplied by means of this dam?

Mr. MYERS. It is shown that more than 400,000,000 gallons

daily can be supplied.

Mr. CLARK of Wyoming. What does the Senator estimate, from his knowledge of the conditions, to be the necessary amount for San Francisco, and, as he says, these neighboring cities?

Mr. MYERS. At least 400,000,000 gallons daily.

Mr. CLARK of Wyoming. I am afraid I do not make myself understood. Will there be a development of a greater water supply than is necessary to supply these cities? That is what I am trying to get at.

Mr. MYERS. I think the reports and investigations fairly show that if the dam is put up the contemplated height, at certain seasons of the year, but not all the time, there will be more than that amount of water in the dam.

Mr. CLARK of Wyoming. But is not the very purpose of the dam to equalize the flow of the water?

Mr. MYERS. The purpose of the dam is to have that much water in it at all times of the year.

Mr. CLARK of Wyoming. Yes Mr. MYERS. And in order to have that much water at cer-

tain seasons it will be necessary to have more at other seasons.

Mr. CLARK of Wyoming. Does the Senator understand the

bill to mean that when there shall be a surplus of water that water shall become the property of San Francisco to dispose of for certain purposes and for certain amounts of money

Mr. MYERS. The city of San Francisco is required under the terms of the bill to let go of that surplus upon demand to irrigationists and payment of the cost price thereof.

Mr. CLARK of Wyoming. Then, as I understand it, the bill provides a method for the distribution of the water over and above that which is needed by the city of San Francisco?

Mr. MYERS. I will answer that by saying yes. It is my understanding of the bill that in order to have at all seasons of the year 400,000,000 gallons daily there will accumulate necessarily at certain other seasons of the year more than that quantity, and at such seasons when there is more the city of San Francisco is required and compelled, upon the application of irrigationists and others making showing of useful and beneficial purposes, to release that water and let them have it at

the exact cost of it. That is my understanding.

Mr. CLARK of Wyoming. Then, in short, the Senator answers my question in the affirmative, that if there shall be a surplus of water impounded in the dam over the needs of the city of San Francisco, Congress assumes the right to say how

that water shall be disposed of.

Mr. MYERS. Whenever more than that amount happens by the exigencies of the situation to accumulate there the city of San Francisco is denied the right to use it, and is compelled to let other people of California who may need it use it at

cost price.

Mr. CLARK of Wyoming. I want to say, Mr. President, that that is what I consider to be the crux of this whole question. I probably shall vote against this bill. If I vote against it, I shall vote against it on the ground that Congress is assuming the right of distributing and directing the appropriation of water lying wholly within the State of California; that Congress is directing the distribution when, in my belief, the law is plain that Congress has no such right, but that California has the right over the waters within her State either to direct how

they shall be appropriated or how they shall be distributed.

Mr. WALSH. Mr. President, with the permission of my colleague, I interrupt the debate here for the purpose of making a few remarks, which I trust will have a tendency to clarify the debate and prevent the injection into it of the question of the conflicting rights of the National Government and the States to the waters of the rivers within the States. I do not conceive that it is possible to confuse this question with the introduction of any such question as was obviously suggested by the inquiry addressed to the chairman by the esteemed Senator from California [Mr. Works] and now adverted to by the Senator from Wyoming [Mr. CLARK].

This bill, Mr. President, does not undertake to dispose of any water flowing in any river in the State of California. It is base, upon no such theory at all. If it were, unquestionably all of us on this side who have given any consideration to that subject would stand with the Senator from Wyoming and the Senator from California, who, as I take it, entertain the view

that the National Government has no such right.

That is not this bill at all, Mr. President and Senators. This bill simply grants to the city of San Francisco certain rights in public lands; that is all. It grants the right to flood certain public lands. The Government of the United States owns certain lands within the Hetch Hetchy Valley. The city of San Francisco owns certain lands within the Hetch Hetchy Valley. In order to flood the lands owned by the city of San Francisco it is also obliged to flood lands owned by the Government of the United States. In order to get that water out when it is dammed in the Hetch Hetchy Valley it is necessary to carry it over public lands to its destination. This bill is simply and solely a grant of the right to flood certain public lands and to carry the water impounded over the public domain to its place

Mr. BORAH. Mr. President— Mr. WALSH. Pardon me for a moment until I complete the statement. Then it is provided as a condition of that grant, simply in view of the grant made by the Government of that

easement, that after the city shall have been supplied with water it needs it is obliged to supply those who desire to make use of the water for irrigation and other purposes. No other possible construction can be given to the bill, and there is no other basis upon which a discussion of it can intelligently pro-

Now, I will be glad to reply to the Senator from Idaho if he

rose to ask me a question.

Mr. BORAH. Mr. President, the feature of the bill which leads to the discussion of the particular matter now before the Senate is found upon page 13, subdivisions B and C, and on pages 14 and 15. The bill says:

(b) That the said grantee shall recognize the prior rights of the Modesto irrigation district and the Turlock irrigation district as now constituted under the laws of the State of California, or as said districts may be hereafter enlarged to contain in the aggregate not to exceed 300,000 acres of land, to receive 2,350 second-feet of the natural daily flow of the Tuolumne River, measured at the La Grange Dam, whenever the same can be beneficially used by said irrigation districts, and that the grantee shall never interfere with said rights.

Does the Senator from Montana contend that that is a provision which the Congress of the United States has power to make?

Mr. WALSH. Mr. President, I do not undertake to say how far it may go, but I am sure the Senator from Idaho will agree with me that it is beyond the power of Congress to take away from those people any rights which they have already acquired, regardless of what the provisions of the bill may be.

Mr. BORAH. And it is beyond the power of Congress to put

any restraint or legal verity on anything which they have.

Mr. WALSH. Undoubtedly. Mr. BORAH. Then this is a misleading and deceptive proposition or it is a purely idle one.

Mr. WALSH. It is purely idle, so far as the point which-Mr. BORAH. It is the idle things about this bill which seem objectionable.

Mr. WALSH. That might be a reason why there should be some amendment touching that particular feature of the bill before us.

Mr. WORKS. Mr. President-

Mr. WALSH. Will the Senator from California pardon me just a moment, and then I will be glad to yield?

I wish to add, if the Government of the United States were not making any grant of rights in public lands by virtue of this act, if entirely separate and apart from the granting of an easement in public lands it were undertaking to distribute to anybody or under any conditions the natural flow in the rivers of the State of California, there would be no division with respect to the bill here at all, for we all assert that they have no such power. This bill simply makes disposition of certain easements in certain public lands, the grant being coupled with conditions by which the grantee must abide, and everybody will agree that the Congress of the United States may impose just exactly such conditions upon the acceptance of the grant as it may see fit. Now I will be glad to answer the Senator from California.

Mr. WORKS. Suppose that California were provided with a water commission, giving that commission complete control over the distribution and use of water, going to the extent of saying whether these districts, for example, shall use all that they are now receiving or less, in the interest of other claimants to the water-in broad terms giving them the power to control at all times the amount of water that shall be used by different takers of the stream-does the junior Senator from Montana believe that the Government of the United States can by an act of this kind, called a condition in this statute, control all the flow of water and the distribution of it as against the water com-

Mr. WALSH. Certainly not. That is perfectly obvious. The Senator asked some question as to whether Congress could authorize the city of San Francisco or adjacent cities to make an appropriation of water. Certainly not. If San Francisco does acquire any rights to the water that is to be impounded, or any right to any water flowing in streams within the State, it must acquire those rights by virtue of the laws of the State of California, and it must acquire them in conformity to the laws of the State of California

Mr. BORAH. Mr. President— Mr. WALSH. And if the laws of the State of California empower the water commissioner to regulate these matters San Francisco must exercise its rights to the water in subjection to those laws.

The VICE PRESIDENT. Does the Senator from Montana

yield to the Senator from Idaho?

Mr. MYERS. I do.

Mr. BORAH. I doubt very much whether anyone would disagree with the legal proposition as stated by the Senator from

Montana and stated with his usual clearness and conciseness. But the Senator from Montana must remember that we are dealing with a bill which undoubtedly purports to do things which the Senator from Montana does not think we have the power to do. The provision of the bill which I have read is followed by another statement.

That the said grantee whenever the said irrigation districts desire water in excess of that to which they are entitled under the foregoing—

Not under the laws of the State of California-

That the said grantee whenever the said irrigation districts desire water in excess of that to waich they are entitled under the foregoing, shall on the written demand of the said irrigation districts sell to the said irrigation districts from the reservoir or reservoirs of the said grantee such amounts of stored water as may be needed for the beneficial use of the said irrigation districts at such a price as will return to the grantee the actual total costs of providing such stored water—

And so forth.

That was put into this bill as I understand it as the result of an agreement between the Water Users' Association or the irrigation districts and the city of San Francisco, and by reason of inserting it in the bill the irrigation districts were contented, assuming that the Congress of the United States had power to protect their rights in that way. If the bill were drawn in accordance with the statements of the Senator from Montana and doing no more than the Senator from Montana says we have the power to do. I should feel like voting for it.

Mr. THOMAS. Mr. President—
The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Colorado?

Mr. MYERS. I do. Mr. THOMAS. I should like to inquire of the Senator from Idaho what his view of section 11 of the bill is, as affecting that part of the bill to which he has just called the attention of the Senator from Montana?

Mr. BORAH. Section 11, if it has any force or effect or virtue at all, of course nullifies these preceding sections. Section 11

savs:

That this act is a grant upon certain express conditions specifically set forth herein, and nothing herein contained shall be construed as affecting or intending to affect or in any way to interfere with the laws of the State of California—

A most gracious thing for the National Government to say, in view of the fact that it could not do anything else-

or in any way to interfere with the laws of the State of California relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the povisions of this act, shall proceed in conformity with the laws of said State.

I have no idea that the Senator from Colorado and I differ at all as to the effects of that, if it has any effect at all—that is, to nullify the preceding sections on which the irrigation districts of California were lulled to sleep as to their interests.

Mr. THOMAS. I should like to inquire whether the annul-

ment would be complete in the opinion of the Senator from Idaho—that is to say, whether the preceding provisions to which he called the attention of the Senator from Montana are in toto in opposition to or in conflict with the laws of the State of California?

Mr. BORAH. I beg the Senator's pardon; I did not catch

the drift of his question exactly.

Mr. THOMAS. My question in substance is this: Does the Senator from Idaho conceive that all of that part of the section to which he called the attention of the Senator from Montana is in conflict with the laws of the State of California?

Mr. BORAH. The portion to which I called attention?

Mr. THOMAS. Yes. Mr. BORAH. Of course, I am not familiar with all the details and all the provisions of the different statutes of California with reference to the use of water, but I do think that in the section to which I directed the attention of the Senator from Montana we are assuming something that we have no power to do, regardless of what the statutes of California may be, and it is toward that that my objections are directed, not to the legal proposition stated by the Senator from Montana.

Mr. WALSH. Mr. President, the Senator from Idaho will understand that I did not undertake in anything I said to seek

to justify any particular provision of the bill which might be attacked by an amendment addressed to that special feature. I was simply arguing that the bill as a whole did not present the question which seemed to be troubling the minds of some

Senators

Mr. SMOOT. Mr. President-

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Utah?

Mr. MYERS. I do. Mr. SMOOT. I think the Senator from Montana [Mr. Walsh] has stated the law very clearly, indeed. I doubt very

much whether any Senator acquainted with the laws governing the acquisition of water rights within a State will question what he said. But it does seem to me that the position the junior Senator takes does not conform to the position that the senior Senator took a few moments before. In an answer to the Senator from Wyoming [Mr. CLARK] the senior Senator from Montana [Mr. Myers] stated that the water in excess of 400,000,000 gallons daily was to be sold by San Francisco to the water users at the actual cost of producing that water.

I want to call the attention of the senior Senator from Montana to the fact that 400,000,000 gallons capacity of water daily is enough water for 4,000,000 of people. Now, the position which the senior Senator from Montana takes is that if San Francisco and adjacent cities around San Francisco, as mentioned in the bill, use only 200,000,000 gallons of water daily, no one has a right to make an appropriation of the water over and above the 200,000,000 gallons daily, even if there is 400,000,000 developed; or, in other words, outside of the 300,000 acres of land provided with water in this bill, it would make no difference if there were 500,000 acres of land lying adjacent to it and there were 200,000,000 gallons of water daily going to waste and San Francisco could not make use of it; the position taken by the Senator is that there could not be an appropriation made of the water going to waste. I do not believe that the junior Senator from Montana will undertake to defend that kind of a proposition.

Mr. MYERS. Mr. President, I believe I will take the floor and answer that question to the best of my ability, and then

proceed with what little argument I have to make.

I do not think there is any manner of doubt about the correctness of my statement that the bill provides that any water stored in a dam or reservoir in excess of 400,000,000 gallons daily shall be sold upon demand by San Francisco to other water users.

Mr. SMOOT. There is no question about it.
Mr. MYERS. I think the bill itself shows whether I am right about that or not. I can only refer the Senator from Utah to the bill

Mr. SMOOT. I did not deny that. That is the very state-

ment I made.

Mr. MYERS. I am going on to answer. I can not answer it all in one phrase or one sentence. If the Senator thinks that that is too much water to be stored there, it is his privilege to offer an amendment cutting down the amount. It is the privilege of any Senator to offer any amendment which he thinks will subserve the ends of justice. I do not know that this bill will pass the Senate, if it passes at all, absolutely as it is, without the dotting of an "i" or the crossing of a "t." From my inspection and study of it, I am emphatically for the bill as it stands; but if any Senator differs from me about the provisions of it, it is his privilege to offer an amendment to it.
Mr. GALLINGER. Mr. President—

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from New Hampshire?

Mr. MYERS. I yield. Mr. GALLINGER. The Senator has been exceedingly kind in yielding, and if he does not wish to yield further-

Mr. MYERS. I yield with great pleasure to the Senator from New Hampshire. I merely wanted to make the answer which I have made.

Mr. GALLINGER. I asked a question a little while ago, the answer to which will have a very important bearing on my vote on this bill. If I can be made to believe that the welfare of the people of San Francisco requires this grant and this expenditure, I certainly shall cast my vote on the side of humanity, rather than on the side of any legal technicality. What I asked was whether there was any adequate supply of water available otherwise?

Now, will the Senator permit me very briefly to call attention to a report which I have on my table from George S. Nickerson, consulting engineer. I do not know who Mr. Nickerson is; I have had a great many communications on this subject, but I know very little about this matter. Mr. Nickerson, I assume, is a competent authority, and I want, in a very few words, to present what Mr. Nickerson says. He says that the South Eel River and the Putah Creek watersheds will furnish 450,000,000 gallons a day and that the Snow Mountain aqueduct will furnish 450,000,000 gallons a day, as against 400,000,000 from the Hetch Hetchy; that the cost of the Eel River and Putah Creek watershed would be \$38,500,000 and that the cost of the Snow Mountain aqueduct would be \$38,500,000, as against \$77,400,000 as the cost of the Hetch Hetchy.

He goes on further to say that the irrigation interests will be better subserved by getting the water from either one of these two other sources, and argues that San Francisco can be adequately supplied from either the Eel River and Putah Creek watershed or the Snow Mountain watershed. If that be so, I should vote against the Hetch Hetchy bill. If it could be made to appear that there is no other available water supply, it would be a determining factor so far as my vote is concerned.

Mr. THOMAS. Mr. President-

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Colorado?

Mr. MYERS. I yield to the Senator from Colorado. Mr. THOMAS. I do not know who Mr. Nickerson is, but my information is that he was employed on the 10th day of November to make this examination and report. If that be true, then it is certainly a most remarkable thing, and he is the most remarkable and competent engineer not only in the United States but in the entire world, when you come to consider the various details of that report as set forth in this document.

Mr. GALLINGER. The Senator from Colorado will remember that I said I did not know anything about Mr. Nickerson, and I am very glad to have the Senator give the information which he now gives.

Mr. THOMAS. That is the reason, Mr. President, that I

volunteered to interrupt the Senator.

Mr. PITTMAN. Mr. President, will the Senator yield to me? The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Nevada?

Mr. MYERS. I yield with pleasure.
Mr. PITTMAN. In answer to the Senator from New Hampshire [Mr. Gallinger], I will state that I have some information here with regard to the gentleman who presented this document to the Senate. You will notice that it is submitted by Mr. Henry M. McDonald to the Members of the United States Senate. I have some correspondence here signed by Mr. Henry M. McDonald. I suppose some of the other Senators have, too.

Mr. THOMAS. Does the Senator from Nevada have reference

to the correspondence with the engineer who preceded?

Mr. PITTMAN. I have. Mr. THOMAS. I have some of that correspondence.

Mr. PITTMAN. I desire that it shall be read by the Secretary to the Senate.

The VICE PRESIDENT. Is there objection to the request of the Senator from Nevada? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

[From the San Francisco Chronicle, Nov. 16, 1913.]

HIS INTEREST PATRIOTIC ONLY?—LETTERS OF STOCKTON MAN GIVE MORE LIGHT ON ADDRESS HE MADE BEFORE CLUB—H. M. M'DONALD WRITES—OPPONENT OF THE HETCH HETCHY REFERS TO MONEY FROM AN MORE LIGHT IRRIGATION DISTRICT.

In view of the fact that Henry M. McDonald, of Stockton, was reported as stating to the members of the San Francisco Center, at its meeting at the St. Francis Hotel on November 6, that he had none but a "sociological, disinterested, patriotic interest" in the Eel River source as a water supply for San Francisco in place of the Hetch Hetchy, the following letters and telegram which were made public yesterday are somewhat confusing.

They are as follows:

[Henry M. McDonald, bonds and investments, suite 35, San Joaquin Building, Webber Avenue and San Joaquin Street. Specialty, irrigation-district bonds. Stockton, Cal.]

SAN FRANCISCO, October 6, 1913.

Mr. R. R. CZEIKOWITZ,

Brown Street, Corner Third, Napa, Cal.

Dear Sir: Owing to the fact that the United States Senate yesterday determined to defer further action on the Hetch Hetchy bill until December 1 next, I have concluded to proceed at once with the field work about which I talked with you.

I make you the following proposition, viz: I will pay you \$200 for one month's services, together with your expenses, provided you keep the field expenses, in the way of wages, etc., as low as possible. In addition, if I sell whatever interest I may acquire in the proposition to the city of San Francisco or the bay cities I will pay you \$200 additional when I receive payment on account of such sale.

I wish you, if possible, to take your instruments with you when you go to Winters on Friday afternoon, 10th instant, since I wish you to start out with the field work the following Monday morning. I should like to have you arrange to have your assistant, whom you mentioned to me, join you at Winters Saturday afternoon. Your term of service would begin on Saturday, the 11th instant.

When you have finished the Winters section work I should desire you to at once go to Ukiah, in order to take up the Eel River watershed work and from there to the lower end of Clear Lake, in order to cover the section leading from Clear Lake to Putah Creek. I should hope that the entire field work could be done in about three weeks.

Please at once write me at 698 Monadnock Building, San Francisco, advising whether the above arrangement is acceptable.

Very truly, yours,

WESTERN UNION TELEGRAM, (9 SF 10 11w.)

SAN FRANCISCO, CAL., 10.

R. R. CZEIKOWITZ,

Brown Street, corner Third, Napa:

Desire you surely meet me Winters to-night with compass and rod.

H. M. McDonald. 11.30 a. m.

WANTS CHECK HELD.

Under the above letterhead the following:

SAN FRANCISCO, CAL., November 7, 1913.

Mr. R. R. CZEIKOWITZ, Care D. A. Judy, Winters, Cal.

DEAR SIR: Please do not deposit my check till next Tuesday, as I am unable to get my money from the Modesto irrigation district till that day.

I expect to be in a position to pay you your month's salary next

Very truly, yours,

H. M. MCDONALD.

Mr. THOMAS. Mr. President-The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Colorado?

Mr. MYERS. I do. Mr. THOMAS. I wish to add, in reference to that interesting correspondence, that I received a letter this morning from Mr. McDonald, who informs me that his sole purpose in going to this expense was to prevent the Democratic Party from making a serious blunder. His devotion to the welfare of that party is so great that he feels it incumbent upon him to make this protest; and if any of the Senators desire to see photographic copies of that correspondence with Mr. Czeikowitz, I have photographic copies here for their inspection.

My information, as I said before, is that after the check to Mr. Czeikowitz was held up, Mr. Nickerson was employed to

make this examination and report.

Mr. BORAH. Do I understand that Mr. McDonald wrote to the Senator from Colorado that his sole object was to prevent

the Democratic Party from committing a blunder?

Mr. THOMAS. I am not giving the exact language. I intend to refer to this episode in what I shall have to say on the day after to-morrow; but the substance of his letter is that his purpose in calling the attention of the Senate to this matter is his interest in the welfare of the Democratic Party-a very worthy purpose, indeed, as the Senator from Wyoming [Mr. Clark] so kindly sotto voce suggests.

Mr. BORAH. Yes; it is a worthy purpose. Mr. GALLINGER. And a very necessary purpose, too.

Mr. THOMAS. Not in this particular. It may be that the Democratic Party will strike shoals, but they will not be the shoals of the Hetch Hetchy.

Mr. MYERS. Mr. President, referring to the statement made by the Senator from New Hampshire, I will say that the document submitted by Mr. Henry M. McDonald has just this day been laid on my desk, and I have had no opportunity to examine it or to learn what it contains. Doubtless others will examine it and refer to it in their arguments.

Mr. WORKS. Mr. President-

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from California?

Mr. MYERS. With pleasure. Mr. WORKS. I should like to say that I know Mr. Mc-Donald very well, and he is a very sincere, earnest, and active

Mr. THOMAS. Mr. President, I am glad to hear something in his favor.

Mr. MYERS. That is the only good thing I have ever heard of him, and I have heard a number of allusions made to him

Mr. BORAH. It is doubtless true also that he is a very ambitious man, as he has started out to do what he said he was

Mr. THOMAS. All Democrats are ambitious.

Mr. POINDEXTER. Mr. President—
The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Washington?

Mr. MYERS. With pleasure.

Mr. POINDEXTER. The Senator from Montana says he has heard a great deal that is uncomplimentary about Mr. McDonald. Is it not true that he has heard a great many uncomplimentary statements about the motives of everybody who has opposed the Hetch Hetchy bill?

Mr. MYERS. Yes; and I have also heard some uncomplimentary statements about the motives of those who are supporting the bill; in fact, about both sides. I think there has been much misrepresentation and distortion of motive in this I think the measure ought to be considered on its matter. merits.

Mr. POINDEXTER. The Senator from Idaho [Mr. Borah] a few days ago called the attention of the Senate to publications in which he, myself, and everybody, in fact, who was not willing to agree to the passage of this bill were charged with being in the employ of water-power companies and receiving pecuniary consideration for opposing the bill. The fact of the case is that the statements of interested parties against Mr. McDonald have very little weight with me in this matter; the motives are too obvious. I do not know anything about Mr., McDonald except what I have learned from statements in a very recent correspondence, but I do not think that we can determine this question upon the opinion of people whose feelings are evidently very much wrought up over matters in which they are deeply concerned. So far as Mr. McDonald is concerned, he ought to be judged, I think, rather by the merits of the argument that he makes. The statement can be examined, and if it is not true in fact its untruth can be shown.

Mr. THOMAS. Mr. President—
The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Colorado?

Mr. MYERS. With pleasure. Mr. THOMAS. The purpose I had in view in first interrupting was to inform the Senator from New Hampshire of the possible incompleteness or superficiality of the report of Mr. Nickerson and not for the purpose of casting, at that time at least, any reflection upon anybody. I have heard also, as has the Senator from Washington [Mr. POINDEXTER], all sorts of bad motives imputed to men, both on this floor and elsewhere, interested for or against this measure. I think, like all matters of similar importance, there is basis in some directions for the existence of these things, but, generally speaking, they are the result of passion, suspicion, and strife. Personally, I have heard nothing that affected me a particle with reference to my judgment of this matter, except in so far as the statements are not founded in fact; and I think when there are such statements or reports that the motive has a great deal to do with the question of their truth or their falsity, or, at least, should influence us in determining the extent to which our judgment should be affected.

So far as the Senator from Washington [Mr. Poindexter], the distinguished junior Senator from California [Mr. Works], the Senator from Idaho [Mr. Borah], and all Senators are concerned—I speak particularly of these Senators because I think their names were mentioned—they are so far above the possibility of suspicion that nothing that may come in could in any way, I think, affect the judgment of the Senate one way or the other. The only thing I have ever heard against the three Senators that seemed to be any sort of reflection upon their standing is that they do not belong to the Democratic Party.

Mr. McCUMBER. Mr. President——

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from North Dakota?

Mr. MYERS. With pleasure.

Mr. McCUMBER. Will the Senator from Montana allow me to ask him a question concerning the merits of the case rather than concerning Mr. McDonald?

Mr. MYERS. With pleasure.

Mr. McCUMBER. I agree entirely that the Senator from Montana has not overstated the power of the Government in fixing any conditions it sees fit in granting the right to flood this particular section of the valley; but, assuming that the Government has the power to fix those conditions and that it may forfeit the right of San Francisco if the conditions are not carried ont, no matter what the law of the State of California may be, is it a proper policy for this Government to pursue? Is it not far better, if the Congress finds that this section of the valley ought to be flooded for the benefit of the citizens of the State of California, that it should simply allow them to fleod that section and then allow the State of California to determine what shall be done with the water, leaving the State of Califormia to deal equitably with her own citizens? That is the principal objection that I find to the bill; and I should like to have the Senator's opinion whether we can not safely trust the people of the State of California to determine the distribution of the water after we have allowed the State the privilege of flooding a few thousand acres for that purpose.

Mr. MYERS. Mr. President, if any of the provisions of this bill are in contravention of the rights of the State of California, they are null and void; and if not in contravention of those rights, I think it a most humane and laudable thing for the Government of the United States to provide the manner in which the people of San Francisco may secure for themselves

an adequate supply of water.

Mr. McCUMBER. Does not the Senator think, Mr. President, that the State of California can look after its own people, and will look after them, with the same jealous care that the Congress can look after their interests, and with a greater knowledge than we could possibly have of the subject matter?

Mr. MYERS. Within the sphere of its rights it is just as much the duty of this Government to accord to the citizens of San Francisco their rights as it is the duty of the State of understand that the city of Denver has a water supply of California, if the two are not in contravention. I am a believer 200,000,000 gallons daily. With more than double that popula-

in the Federal Government doing what may legitimately be done in the interest of life and humanity.

Mr. PITTMAN. Mr. President-

Mr. MYERS. I yield to the Senator from Nevada.

Mr. PITTMAN. I offered those letters in evidence, not for the purpose of attacking Mr. McDonald particularly, but for the purpose of discrediting that report. The letter dated the 7th of November, that has been laid before the Senate, refers to another engineer, who evidently did not make any report. Since the 7th day of November Mr. Nickerson, who has made this report, was employed, which goes to show how carelessly the report must have been compiled and submitted, the engineer, as I have said, having been employed only since the 7th day of November.

It took the Government engineers months to estimate the amount of water flowing in those streams and the cost of the proposed water system, and yet there is placed on our desks a report by this man McDonald, which was made inside of ten days or two weeks, and in which he undertakes to set forth

statements as to other supplies of water.

I want to say also that I believe we are justified in questioning the credibility of any witness before this body. Mr. Mc-Donald has submitted himself as a witness before this body. He has submitted to this body a report in writing. His interest can be considered. In the letter of November 7 he admits that if he receives a commission on the sale of this very water right to the city of San Francisco he will give this engineer a part of that commission.

Mr. MYERS. Mr. President, I will make one statement that I believe can not be controverted by any Member of this body. That is that the less I am interrupted the sooner I will get through, and I want to get through. I do not know whether the others want me to get through or not, but I want to get through. I will say, however, that I cheerfully yield to all reasonable and pertinent inquiries, suggestions, and comments. because I want this matter thrashed out on its merits and not on prejudice. I want the merits and the facts of the matter brought out, and I want it voted upon after a full and complete discussion.

A number of questions have been put to me and I did not get a chance to answer them all in full, but I will make one

or two comments on each as I go along.

In further answer to the Senator from North Dakota [Mr. Mc-CUMBER], of course it is patent to the Senator from North Dakota that the State of California could not grant to the city of San Francisco a right to construct this dam and reservoir in the Yosemite National Park. It could not grant a right of way across public lands. It could not grant a right to take from public lands timber, stone, or earth, or to do many things the right to do which can be granted only by the Federal Government. If the Senator thinks the bill goes a little too far, it is in his power to offer an amendment to it.

As to the Senator from Washington [Mr. POINDEXTER], I wish to say what is probably no news to him, that I do not share in the aspersions that have been made upon his motives or upon his character, or those of the Senator from Idaho. I suppose that is no news to either of them. I was not a party to any such aspersions and have no faith or belief in them.

As to the pamphlet which was brought to my attention by the Senator from New Hampshire, as I started to say a moment ago, it has just been laid on my desk. I understand from others sitting around me that it purports to be the report of an engineer who claims to have made within a few days some wonderful discovery, whereby he can furnish a better and cheaper water supply to the city of San Francisco than any other yet Until I get a chance to rend it I shall say no more known. about it than this: The Holy Writ tells us that God created the earth and everything that is in it in seven days; and I should not be at all surprised to see some civil engineer, if he had a motive, say that he could create the whole thing in a half day.

Mr. GALLINGER. Mr. President, I should like to correct the Senator from Montana. I believe it was six days instead of

seven. [Laughter.]

Mr. MYERS. Six days; that is true. I thank the Senator from New Hampshire for setting me right; but my memory does not extend quite so far back as does his, nor am I so learned in the Scriptures as is he.

Mr. GALLINGER. I trust the Senator did not mean to

insinuate that my memory went back to that time?

Mr. MYERS. No; but the Senator can remember further back than I can, and evidently is a better Bible student. From his long and consistent career as a Republican I am only sorry that he does not profit more by his study of the Scriptures.

As to the last suggestion made by the Senator from Utah, I

tion I believe that the people of San Francisco and the surrounding cities are reasonably entitled to twice as much as the

city of Denver.

Mr. President, I wish to call the attention of Mr. SMOOT. the Senator to one fact. In Denver all of the lawns, trees, and all of the city lots are watered from its city water supply, amounting to 215 gallons per day per capita.

Mr. THOMAS. And almost everything they drink.

Mr. SMOOT. And, as the Senator from Colorado suggests,

almost everything they drink.

Mr. MYERS. Such would be the case in San Francisco also. Oh, no; not at all. In San Francisco they Mr. SMOOT. do not use for irrigation the amount of water that they do in Denver, nor do they use it there for irrigating lawns, trees, and city lots as much as they do in many of our western cities. Therefore the comparison is not a fair one when we take into consideration the amount of water used in a dry, arid country as compared with a wet country like San Francisco.

Mr. MYERS. That may be. I have understood that San Francisco is very dry and arid in the summer time; but another feature of the matter is that this bill is not intended alone to supply the people of San Francisco and the adjacent communities with just enough water for a day, but to give them an adequate supply for 50 or 75 years to come. They must lay up something against the future. They must provide for the future

and not for to-day only.

Mr. SMOOT. Mr. President, may I ask the Senator another question?

Mr. MYERS. With pleasure. Mr. SMOOT. Is the Senator's real object in supporting this bill to give San Francisco sufficient water for her domestic pur-

Mr. MYERS. Yes; for many years to come. Mr. SMOOT. Then why does not the Senator offer an amendment to the bill granting San Francisco the right to pass over the public lands and to construct a dam, and let San Francisco secure whatever rights she has in the water by appropriation and use through the State law, as every other person, corporation, or the Government itself must do?

Mr. MYERS. They have already taken steps to appropriate a

large proportion of this water.

Mr. SMOOT. Would the Senator be satisfied with a bill that would grant to San Francisco simply a right of way over the

public domain and for the construction of a dam?

Mr. MYERS. No. If the city of San Francisco floats bonds and goes to the enormous expense of constructing this reservoir, I think it ought to have its reasonable needs satisfied out of it in the way of a water supply.

Mr. SMOOT. Of course San Francisco ought to have that; but the only way in which San Francisco can have her needs supplied is under the laws of California. San Francisco can make appropriations of the water, and I understand she has already done so. If she has made those appropriations, all that prevents her from going on with the project is that she must have an act of Congress authorizing her to construct a pipe line over the public domain and build a reservoir. Such a bill, as that can be written in 2 sections, instead of 11 sections extending over some 30 or 40 pages.

I can not see why the Senator insists upon anything more than that, nor do I see why San Francisco should insist upon anything more. That will give her all the rights Congress can give her. It will give her a right of way to enable her to use every drop of water to which she is entitled. She is not entitled to a gallon of water she has not appropriated under the laws of California, no matter how many bills we pass in Con-

gress purporting to grant her more.

Mr. MYERS. If the city of San Francisco should issue bonds in an amount sufficient to construct this dam and reservoir, does the Senator from Utah think those bonds would be salable unless there were some definitely established way in which San

Francisco could get the use of the water in the reservoir?

Mr. SMOOT. Why, Mr. President, that is just what I should wish San Francisco to have, and that is just what I think the bill ought to give her, and nothing more. If San Francisco is granted a right of way over the public domain and a right to construct a reservoir, that is all she can ask of Congress, and that is all Congress has the power to grant to her.

Mr. NORRIS. Mr. President, will the Senator from Montana

yield for a question?

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Nebraska?

Mr. MYERS. With pleasure. Mr. NORRIS. All that the S All that the Senator from Utah says we ought to do we have done in the bill; but we have done more, and, as I understand, that is what he objects to. Mr. SMOOT. That is true.

Mr. NORRIS. The additional matter was put in by the House of Representatives-I should like to be corrected if I am wrong-because of the insistence of the irrigationists that it should be put in. The city of San Francisco did not ask that it should go in; but in order to be in harmony with the irrigationists and to satisfy them the provision in regard to giving water to the irrigationists was put in the bill.

Certainly I do not believe it adds anything to the bill, and the Senator himself admits that it does not hurt it any when he says that it can not have any legal effect. It was put in to harmonize the very men that the opponents of the bill are trying to see get all their rights. They wanted it in, and it was put in to satisfy them, and the bill went through the House of

Representatives in that way.

Now, at this late hour, when the matter has been postponed and put over and delayed, a proposition comes in to take out of the bill what the opponents of the bill demanded should be

I do not think it hurts anything, although I concede it does not do any good. If I were writing the bill I should not put it in, and if we were considering it here first, I think I should vote in favor of an amendment to strike it out. But it only means delay; and there are a great many people and interests opposed to this legislation that are willing to delay it, if they can not defeat it outright, and then to-morrow we will have another yellow book on our desks. Some new thing will spring up; some new discovery will be made; some new engineer will have made an investigation while we slept the night before, and will have discovered some new supply, and then a delay will be demanded on that account.

Mr. SMOOT. The Senator thinks it is not going to hurt anything to put a great many unnecessary provisions in this bill. This is what it will do, Mr. President, if nothing else: It will give San Francisco at least a chance to bring a lawsuit against any citizen of the United States who undertakes to make a filing upon the waters of the Tuolumne River.

basis for such action.

Mr. NORRIS. Does the Senator contend that anyone who might make a filing on this water at a date subsequent to the date at which San Francisco had filed would have any legal right?

Mr. SMOOT. If there is more water than is required by San Francisco, any citizen of the United States has a perfect right to make a filing; and there is not a court in San Francisco that would not grant him that right.

Mr. NORRIS. What difference does that make, under the particular provision to which the Senator is objecting? He

could do that anyway.

Mr. SMOOT. Yes; but this would give San Francisco a basis for bringing a suit against a man making a filing.

Mr. WORKS. Mr. President-

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from California?

Mr. MYERS. With pleasure.

Mr. WORKS. A good deal has been said here about the agreement made between the irrigation districts and the city of San Francisco. San Francisco did not desire to make any agreement of that kind. She wanted a straight grant, and she is entitled to it if she is entitled to anything. On the other hand, the water users in those districts sent a delegation on here with instructions to oppose this bill. When they got here, instead of opposing it they entered into this agreement with San Francisco. The water users, who were the real parties in interest, protested against it at the time; and now 99 per cent of them are protesting against the passage of this bill and the action of the delegates who were sent here in making the com-But aside from that there are 200,000 acres of land in the rich San Joaquin Valley that are not affected or protected by this agreement at all; and, as the Senator from Utah says, every landowner in the valley has a right to file upon this stream, no matter whether this bill is passed or not. If there is any surplus water left there, they are entitled to take it up in that way and appropriate it to their use.

There is one thing the passage of this bill will accomplish, however, if nothing else. It will make a fine crop of lawsuits where there are conflicting claims under the Federal law and under the State law. One of the misfortunes to San Francisco is that if this grant is made upon these conditions, and if San Francisco is unable to carry out those conditions under the laws of California, the Federal Government has a right to forfeit the grant, no matter how much money San Francisco has ex-

pended upon it.

Mr. SMOOT. Before the Senator takes his seat, I should like to ask him if the directors of the irrigation association interested in this bill who sent a representative down here to appear for the association have not been removed and new ones put in their places?

Mr. WORKS. Yes; they have been removed because of this compromise that was made, and made in opposition to the wishes of the property owners themselves.

Mr. NORRIS. Mr. President, if the Senator is through want to make one suggestion, if the Senator from Montana will permit me to do so.

Mr. MYERS. With pleasure.

Mr. NORRIS. While I believe there has been a great controversy going on there, and somebody doubtless has been removed from office, as the Senator has said, let us see what a

fine play that would be if it were kept up.

According to the argument of the Senator from Utah, the men who made the agreement to put these obnoxious things into the bill for their own benefit have been removed from office, in order to get another delay, and somebody else has been put in their place. They come here now, after former representatives have gotten in the bill what they wanted, and say: "Take that out. We have got another set of fellows here." That would delay the bill; and the next step probably would be that they in turn would be removed, if some other scheme should not develop to delay it, and their successors would say: "Put it back in again," or something similar to that. "We have removed these fellows now, and they do not represent us any more."

There is no doubt that this agreement was made in the best of faith. I know the men on the other side. I have seen in the RECORD telegrams from irrigationists showing that at mass meetings men now in Congress were directed to support this bill just as it is here now. Representatives of those irrigation districts have been here, among them a former Member of Congress.

I objected to these things as a member of the committee of the Senate when the bill came over here, and told one of these gentlemen that I did not like the provisions. He said: "If those things are stricken out of the bill, we are going to fight it. We insist that they shall go in. In good faith we have made an agreement that we would cease our opposition if those provisions were put in the bill, and we want them to remain in the bill." If the people out there now change their minds, remove these men, and put others in their places, I do not know where we are going to end if we change every time they do.

Mr. THOMAS. Let me suggest to the Senator from Nebraska, also, that the bill as it came here received the undivided sup-

port of the entire California delegation in the House.

Mr. NORRIS. Yes.
Mr. WORKS. Mr. President—
The VICE PRESIDENT. Does the Senator from Montana further yield to the Senator from California?

Mr. MYERS. With pleasure. Mr. WORKS. The Senator from Nevada and the Senator from Nebraska are mistaken in saying that the people out there have changed their minds. They have not. The men who are using the water have always opposed this bill. The delegation that came on here acted in violation of the instructions they

had when they came here.

Mr. NORRIS. Then I should like to ask the Senator the meaning of the telegrams that are in the hearings in which at meetings of these irrigation districts Members of Congress were

instructed to support this identical bill.

Mr. WORKS. I should like to see those.

Mr. NORRIS. They have been printed. The Member of the
House of Representatives who represents the district where these irrigation districts are located read into the record letters and telegrams from those citizens asking that he support this I do not dispute it; in fact, I believe with the Senator bill. that there are a great many other people there who are opposed to it. They never showed up, however, in their opposition until the bill had passed the House. After the hearings there and the bill had come to the Senate and been taken up by the Committee on Public Lands of the Senate and the hearings closed, when we were ready to vote on the bill, for the first time the matter was brought up. I want to ask the chairman if that is not true, because if I am mistaken I would like to be corrected. I think he attended every meeting of the committee. I ask him if it was not at the very meeting where we were just ready to vote on reporting out the bill that for the first time these people appeared in opposition to the bill?

Mr. MYERS. The Senator is absolutely correct.
Mr. SMOOT. But was there a single hearing of the Public

Lands Committee of the Senate before that time?

Mr. NORRIS. Yes; there was a hearing, and both sides were there and agreed what should be done. They agreed to Neither side objected to it, and their briefs were filed and printed.

Mr. SMOOT. I think I happened to be at the meeting the Senator speaks of, and it developed at that meeting that the

representative of the Water User's Association was lukewarm. He had nothing to say at all. He did not care whether he was heard or not. The Water Users' Association of California did not understand the situation until he returned home, and they did protest just as soon as they found out the true situation

here. They protested by wire and by letter.

Mr. NORRIS. I am not disputing that, but I want to ask
the Senator if it was not admitted by their representative the first time anybody ever did appear and represent them that every right they had under the California law was protected

by this bill.

Mr. THOMAS. And more.
Mr. NORRIS. I ask the Senator if it is not true that it was admitted there at that time that this bill protected every legal right they had under the State of California?

Mr. THOMAS. And more, because—

Mr. BORAH. Mr. President—

Mr. THOMAS. Pardon me just a moment. It appeared that the capacity of the distributing ditches was less than the appropriation, but the entire appropriation was allowed in the bill, plus 4,000 second-feet during the flood season of every year.

Congress has no right to do that.

I will not discuss that now. I simply want Mr. THOMAS. I will not discuss that now. to make the statement as emphatic as possible that at the time these gentlemen got what they demanded, and very much more, after which for some reason they became disinterested.

The VICE PRESIDENT. Does the Senator from Montana

yield to the Senator from Idaho?

Mr. MYERS. With pleasure. Mr. BORAH. We are constantly saying here that the farmers got all they were entitled to and more. The farmers could not get anything under this bill, and there is where the deception is. The farmers must depend alone for their rights on the laws of California.

Mr. THOMAS. I suppose—— Mr. BORAH. They had a right to rely on the fact that Congress would not undertake to do what it has no constitutional

Mr. MYERS. This bill recognizes those rights. It does not

contravene them.

Mr. THOMAS. If the Senator from Idaho means that what the bill provides for is beyond the power of Congress to provide, then he is correct. What my statement refers to is the negotiation, the agreement.

Mr. BORAH. I have no doubt of that.

The result of various conferences afterwards Mr. THOMAS. embodied in the bill,

Mr. BORAH. I have no doubt the Senator is correct about

Mr. THOMAS. I think it was Mr. Le Hane, a very intelligent and worthy gentleman, who appeared before our committee and who presented the case before us for the water users. He was unable to say that the people he represented did have anything more than a moral right to the waters of the San Joaquin Valley beyond the appropriation that had been recognized and provided for in the bill.

Mr. WORKS. Does the Senator believe that they had nothing more than a moral right? Do they not have a legal right to file

upon a claim if there is any surplus?

Mr. THOMAS. If the waters of the stream had been exhausted by previous appropriation, then they had not even a moral right.

Mr. WORKS. Certainly not; but if it had not been appro-

priated they had a legal right,
Mr. THOMAS. If there is any water there above and beyond the amount of water taken by San Francisco under this appropriation, then, of course, these gentlemen have a legal right, as any citizen of California has.

Mr. WORKS. What does the Senator mean by a moral right

to file upon water?

Mr. THOMAS. I am simply stating the ethics. I did not pretend to define what I meant. I want to know if the Senator recognizes any

Mr. WORKS.

such right as that?

Mr. THOMAS. To the water, no. Consequently I thought that the statement itself defeated any claim these gentlemen had to make before our committee. I want to say that as one member of that committee, if it had been brought to our attention that any provision made previous to the appropriation of San Francisco had not been included or provided for I would have fought it, for inasmuch as the bill assumed to provide for some it ought to provide for all.

Mr. MYERS. Mr. President, I will not comment upon all

the statements that have been made. I will say in regard to

the suggestion made by the Senator from Wyoming [Mr. CLARK] a while ago, from which we have gotten away, that if the necessities of the condition of San Francisco be consulted, the construction of this dam will result in the storing of more than 400,000,000 gallons daily, and that is more than San Francisco Then the bill recognizes the fact that San Francisco has no right to such surplus, and it will go to others, to anybody who files demand and pays the cost of it. It belongs to the people of California, to anybody who is willing to use it for beneficial purposes, and to reimburse the city of San Francisco for the actual loss and expense of causing the water to be brought It does not belong to San Francisco at all, and it is recognized that it goes to whoever may show a right thereto for beneficial uses.

There has been a great deal said and there is going to be a great deal said in this discussion about whether or not this is the most available water supply. The city of San Francisco has been looking for an adequate water supply for 12 years. It has had its city engineers and the most competent engineers that it can employ outside of the city for 12 years hunting for an adequate water supply. The result of it all is that this is the cheapest and best and most feasible water supply that it can get.

Not satisfied with its own exertions, or not relying entirely upon them, the Government of the United States, through the Department of the Interior, ordered a board of three Army engineers to thoroughly investigate the sources of supply from a wholly disinterested standpoint-from the standpoint of the Government. The record of that investigation by a board of Army engineers, which gave personal attention to the matter, is that this source of supply is reported to be the most feasible, the most adequate, the most natural, and that none other can be obtained without an expenditure of at least \$20,000,000 more than the cost of this contemplated supply.

The report of the Army board, at page 16, says on that sub-

In one important respect the situation in California requires special consideration. In eastern cities, where there is little consumption of water except for municipal supply, it may be safely assumed that if at any future time additional water is needed the existing sources will usually be available as at present. In California all water has great value. Due to the large extent of arid and semiarid land that can be made fertile by the use of water, irrigation is assuming great importance; due to lack of coal and the opportunity for economical water-power development, the use for the latter purpose will surely be greatly extended. In a relatively few years practically all available water will doubtless be appropriated for one or the other purpose, and it will then be possible to obtain it for municipal use only at great cost and damage to existing communities and industries. It is, therefore, necessary to-day for the cities of California to look further ahead than in most other parts of the country, and to take such steps that in the future when they may need the water they shall have the right to it. For this reason it is believed that in making provision for the future supply of San Francisco and other bay cities a source should be selected, if possible, that is capable of supplying the needs of the communities for the balance of this century. Such a course would seem both wise and reasonable, provided it involves no sacrifice of economy.

Mr. SMOOT. Do I understand the Senator to claim that San

Mr. SMOOT. Do I understand the Senator to claim that San Francisco or any other city can file upon the waters of the State with a view to the quantity that will be consumed by them a hundred years hence and hold it against the appropriation of any other citizen of the United States who wants to put it into use immediately?

Mr. MYERS. I believe that the common law of water appropriation is that water may be appropriated for a beneficial use or purpose to the extent which is the most reasonable, being necessary therefor, and that it may be used to the extent to which it is needed. If the Senator thinks that 400,000,000 gallons daily would be too much for immediate use and would not be too much 50 or 75 years hence, then he could offer a proper amendment that the city could have only 300,000,000 gallons for the next 50 years, 350,000,000 gallons for 10 years after that, and 400,000,000 after that, but it would be folly to allow San Francisco to engage in the undertaking of merely providing an adequate water supply for its use to-day without looking to the future, however the estimate of this board of Army engineers report as to what the population of this community will be in 50 or 75 years from now.

Mr. SMOOT. The estimate that is given by the Army engi-

neer is that in the year 2000—that is, 87 years from now will be required for San Francisco and all the adjoining territory only 540,000,000 gallons daily. Mr. THOMAS. Mr. President—

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Colorado?

Mr. MYERS. I yield.
Mr. THOMAS. I want to ask the Senator from Utah this question: Does he think the city of San Francisco has the power to appropriate only so much water as is necessary for its immediate uses?

Mr. SMOOT. I would not go that far, Mr. President, because I think that it has the right to make an appropriation for not only the immediate use, but for a reasonable length of time. I think that has been held in all the States, and I will say to the Senator, in my own State it has been decided definitely by

Mr. THOMAS. As a municipality?

Mr. SMOOT. As to all appropriations of water, whether it is the Government, whether it is a municipality, or any other appropriator, the length of time is four years.

Mr. NORRIS. Will the Senator from Montana permit me to ask the Senator from Utah a question?

Mr. MYERS. With pleasure.
Mr. NORRIS. I should like to ask the Senator from Utah on this question of the immediate and the future use of water, does he contend that if this bill is passed and there is more water impounded than San Francisco needs now it can not be used for irrigation or for any other purpose?

Mr. SMOOT. I believe this, Mr. President, that if anyone made an appropriation of the water, San Francisco would

fight it.

Mr. NORRIS. This bill does provide for it. It would be true, according to the Senator's own contention, if it did not use this water now, or had no immediate use for it, it would be subject to the laws of California for use other than beneficial purposes.

Nobody will contend otherwise.

Mr. SMOOT. I think myself that is the correct position, but that is not the position the Senator from Montana takes. say again to the Senator that I think the understanding of the Senator of Montana is the understanding not only in San Francisco but the people generally of California. If there is an appropriation made, I have no doubt but that there will be a If there is an lawsuit started by San Francisco against the appropriator, and the result will be an endless litigation. If this bill passes as reported to the Senate, I want everyone to remember the words made by the junior Senator from California to-day in relation to litigation that will ensue.

Mr. NORRIS. I could not say, I want to say to the Senator, there would not be litigation started; but suppose we struck it out of the bill, where is there any assurance that there will be no litigation then between men or municipalities contending

for the use of the water?

Mr. SMOOT. There will be no further litigation, Mr. President, than we find among the appropriators of waters in all the States. Of course there will be litigation, but it will be litigation based upon the laws of the State and not an act of Con-

Mr. NORRIS. This litigation, if it comes, according to the Senator's own contention, will be upon the laws of the State, If this law is passed and San Francisco should refuse to comply with the terms of the act and refuse to give water or power that she herself was not using and some one claimed that right and commenced a suit against San Francisco, he would probably commence it under the State law, and it would not make any difference. It would be a lawsuit just the same, whether commenced under the State law or under this law.

Mr. SMOOT. There is another question involved that I have not spoken of, nor have I heard anyone else speak of it. It is not only a grant for the use of water by San Francisco, but it is a grant for the use of water for power purposes. San Francisco may use all the 400,000,000 gallons for the development of water power and not more than 100,000,000 gallons for domestic pur-

Mr. NORRIS. But the Senator must see this point, it seems to me, that the use of water for power does not decrease the water. The water is there and it can be used for drinking purposes or for irrigating purposes after it has gone through the

water wheel.

Mr. MYERS. I think the Senator from Nebraska has answered that very correctly. It is the only answer that could be given. I understand that the right to use water for power purposes is only incidental. I do not see how the water could be consumed for power purposes. The water is there for power

purposes as well as other uses.

The Senator from Utah has correctly stated that it is estimated that 87 years from now the people of this district will need 540,000,000 gallons daily, and I think we ought to be allowed to look 87 years ahead. I do not think that is an un-reasonable time. I understand the law of water appropriation is that if a man appropriates water for use on a piece of land he may appropriate so much as may be necessary now or at any reasonable time in the future. The water may be needed some time upon the land, and while 87 years might be a long time to look ahead for an individual appropriation of water on land, I do not think it is too long to look ahead for

the safety of people who constitute a population of three-quarters of a million to-day and who are growing rapidly.

Getting back to the proposition that this is the only feasible and reasonable source from which to get this water, on page 12 of the report of the Board of Army Engineers the following statement is made:

During the summer of 1911 the board personally visited the Spring Valley water system, the Hetch Hetchy and Lake Eleanor reservoir and dam sites, Lake Vernon, Cherry Creek, the principal reservoirs on the Mokelumne River, the suggested reservoirs on the Yuba, the Sacramento, and the San Joaquin Rivers.

During August, 1912, the board inspected the People's Water Co.'s plant for supplying Oakland and the other transbay cities, the Hetch Hetchy reservoir and dam site a second time, the Tuolumne Meadows and other camping sites in the Tuolumne watershed, and the Turlock-Modesto Irrigation district. One member of the board inspected the McCloud watershed and the Feather River watershed.

After that explanation setting forth in detail what the board did, it comes to these conclusions:

did, it comes to these conclusions:

The project proposed by the city of San Francisco, known as the Hetch Hetch project, is about \$20,000,000\$ cheaper than any other feasible project for furnishing an adequate supply. The only exception is the filtered Sacramento project, which in actual cost is about \$30,000,000\$ greater than the Hetch Hetchy project, but by discounting to 1914 becomes only \$13,000,000\$ greater.

The Hetch Hetchy project has the additional advantage of permitting the development of a greater amount of water power than any other.

The best available sources, outside of the Tuolumne River, appear to be the filtered Sacramento, the McCloud, a combination of the Lake Eleanor-Cherry-Stanislaus and Mokelumne, and a combination of the American-Cosumnes-Stanislaus and Mokelumne. For a smaller supply the Eel River or the Yuba River could be used, but they do not lend themselves economically to combination with other sources, and are therefore to that extent not available.

I believe the Eel River is the one set forth in the pamphlet by Mr. Henry M. McDenald, who has suddenly and with such amazing rapidity discovered what other people, who have been looking and hunting for 12 years, could not find.

From the statement of Mr. John R. Freeman, in the hearing beginning November 25, before the Secretary of the Interior, it appears that the city, in case of being denied the Hetch Hetchy, will desire to use the Lake Eleanor-Cherry-Stanislaus-Mokelumne combination. In the report of Mr. Freeman of January 30, 1913, the cost of this project is largely in excess of either the McCloud or the Sacramento River projects.

The board is of the opinion that the use of the Hetch Hetchy a reservoir site is necessary if the full flow of the upper Tu to be conserved.

as a reservoir site is necessary if the full flow of the upper Tuolumne is to be conserved.

The board further believes that there will be sufficient water if adequately stored and economically used to supply both the reasonable demand of the bay communities and the reasonable needs of the Turlock-Modesto irrigation district for the remainder of this century.

The valley of the San Joaquin has less rainfail and less run-off from its rivers than the valley of the Sacramento. The Tuolumne River could if not used for city supply be used to irrigate a large amount of fertile land, as could almost any river in the valley of California if means are found economically to store the water.

The board telleves that on account of the fertility of the lands under irrigation and their aridness without water the necessity of preserving all available water in the valley of California will sconer or later make the demand for the use of Hetch Hetchy as a reservoir practically irresistible. The board does not think that a delay of a few years in transforming the Hetch Hetchy Valley into a reservoir is of importance, and therefore does not think it necessary to require delaying construction of this reservoir until the Lake Eleanor and Cherry sources have been fully developed.

The board believes that the regulations proposed by the city will be found sufficient to protect the waters from pollution, and that these regulations will tend toward the protection of campers and others using the park and will not be onerous upon them. It recommends, however, that the permit to the city require the city take other means, such as filtration, to purify its water supply if these regulations are ever deemed insufficient.

The construction of reservoirs, especially the Hetch Hetchy, will destroy a few camping grounds in the park. The construction of the protect the number of camping places within the park is large.

In those conclusions, it is clearly shown that the Reard of

In those conclusions it is clearly shown that the Board of Army Engineers believe that this source of supply is the most feasible, the most available, the most proper, and is cheaper to the extent of \$20,000,000 than any other that can be had anywhere. The sum of \$20,000,000 is a vast sum of money to require the people of San Francisco to absolutely throw away and waste if they can get a supply of water from this source for \$20,000,000 less than anywhere else; and to deny them that right and to force them to absolutely throw away that immense amount of money would be unreasonable, absurd, and unjust, in my opinion. With \$20,000,000 the city of San Francisco could make many improvements for the welfare of its citizens; it could engage in many undertakings that would make life more endurable and better for the masses of the people of that city. It would be, I repeat, an absolute waste to require them to divert that vast sum of money from some useful purpose to which it might be put and which would confer upon people benefits not now enjoyed, and to require them to squander it by spending it where no good could be derived from it; for, if it is spent in acquiring a water supply no

tained for \$20,000,000 less, that vast sum of money would be

absolutely wasted and devoted to no good purpose.

Mr. NORRIS. Mr. President—

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Nebraska?

Mr. MYERS. With pleasure.

Mr. NORRIS. I would like to suggest to the Senator from Montana that, in addition to the fact of its being the cheapest, this water supply is practically the only one, or at least the best one, for the development of power—

Mr. MYERS. By far. Mr. NORRIS. And that by means of that development the cost of the entire project can be ultimately repaid, besides giving cheap power and cheap light in the meantime.

Mr. MYERS. That is one of the greatest benefits to be conferred upon the people of California in close proximity to this project. Most of the sources of supply that will cost \$20,000,000 or more in excess of this source of supply would furnish no facilities whatever for electrical power—not a particle—and the money to the amount of \$97,000,000 or more would furnish only water and absolutely no electrical power. Where is the person who will say that the cheap generation of electrical power is not one of the greatest blessings that is conferred upon mankind to-day, one of the greatest improvements in the condition

of things that have occurred in generations?

Take the Sacramento River water supply, for instance, which the board says will cost \$30,000,000 more than this source of supply will cost, and it will furnish no facility whatever for electrical power. The sum of \$107,000,000 or more would be spent for water only. It has its drawbacks, too, because the board calculates that in years to come, by reason of the increased use of water from the Sacramento River for irrigation purposes along the course of the river, the supply of water in the river will be so diminished that the salt water of the ocean will be very likely to extend up to where the pumping station might be placed. An investigation of the Army board report shows most conclusively that Hetch Hetchy is not only the cheapest, but the best, the most available, and reasonable source of supply, and the only one that ought to be considered. This source, as I have said, does not only apply to present-day needs, but it may be safely calculated upon to provide for 80 or 100 years to come, when the population of these communities shall have increased vastly beyond what it now is.

This proposition is not to take one drop of water out of the Tuolumne River that is now flowing in it, but to erect a dam there and create a reservoir on land owned in part by San Francisco and in part by the United States which will impound water which for ages has been going to waste and flowing on to the sea, is going to waste and flowing on to the sea now, and will continue to do so, nobody knows how long, if this privilege is not granted. If this privilege is granted and if the city avails itself of it, it will make use of millions of gallons of water daily that flows on to the sea and does nobody any good whateverneither irrigationists nor agriculturists nor cities nor individ-The passage of this bill will simply enable the city of San Francisco to avail itself of wasted water that now flows on to the ocean and does nobody any good; and I can not see that that interferes with the rights of anybody or gives any reason-

able ground for complaint.

The city has taken every step that is permitted under the law to vest itself with the rights desired, and only asks for the permission of Congress to do such things as may be granted only by the Federal Government; and my understanding is, if other provisions are put in the bill, they were put in by express agreement and at the request of representatives of the irrigationists and of the agricultural districts that will be affected.

The city of San Francisco has spent nearly \$2,000,000--I understand more than a million and a half dollars—in acquiring land and water rights and other privileges in connection with this proposed enterprise. It has voted \$45,000,000 of bonds to inaugurate this work, which will be of such vast and incalculable benefit to its citizens and to the people of the adjacent country. The city of San Francisco now owns two-thirds of the floor space of the Hetch Hetchy Valley, acquired years ago from private owners. It owns other lands in the Stanislaus Forest Reservation, and proposes to exchange its lands in the Stanislaus Forest Reservation for Government lands in the basin of the Hetch Hetchy Valley, in order that it may own all of the floor of the Hetch Hetchy Valley that will be covered by the water to be impounded there.

San Francisco has gone to millions of dollars of expense in preparatory work, has spent 12 years in investigation, has bought land and issued bonds and paid money for land, and better than this water supply, if this water supply can be ob- now, at this late day, come in some eleventh-hour-and-fifty-

ninth-minute eugineers to say that in a minute almost, or overnight, they have discovered a more feasible source than that shown by the report of the board of Army engineers-disinterested parties who hired expert aid and who were appointed and commissioned by the Government to represent neither side, neither the city of San Francisco, nor the water owners of pres ent systems, nor the owners of proposed systems, nor people interested in other sources of supply. The Army engineers were interested in no manner whatever in the case, and after a long and exhaustive study of the subject the board gives the Government its advice to the effect that this is the best and most feasible source of supply and that the city ought to be allowed to avail itself of it.

If the dam is erected and the reservoir created, only 1,400 acres of the basin of Hetch Hetchy Valley will be submerged, so that the project need not be held up before the people of the country as a scarecrow, with a view of frightening them about the destruction of a vast and marvelous asset of this country.

The bill has been recommended by the Interior Department of the Government after careful and painstaking investigation; it has been recommended by the Agricultural Department after an equally careful and painstaking investigation; and it has been recommended by the Legislature of California, which seems to realize that it is better to look to the Federal Government to take steps in this matter rather than requiring San Francisco to rely wholly on State aid for relief in the matter. After all of these years of investigation; after the Government has interested itself in this matter to the extent of causing to be made an independent investigation of its own by disinterested employees of the Government, who are supposed to have no motive whatever for misrepresenting anything in this connection, after all of the preliminary work, all of the expenditure and all of the acquisition of preliminary rights by the city of San Francisco, and after an incontrovertible showing of the need of an increased water supply, why should not this source be granted in so far as it is within the power of the Federal Government to grant it? Why not? Only two objections have been urged that I have heard. One is from a class of people who term themselves "nature lovers," who appear to think the earth and everything in it was made for their especial benefit, in order that they may perpetually regale their vision on the beauties of nature and satisfy their esthetic tastes by gazing upon anything that may suit their fancy, regardless of other uses to which it may be put. The "nature lovers," as they call themselves, object to spoiling this little plot of ground, and would rather have three-quarters of a million people in these communities, yea, would rather have the millions of people who will inhabit those communities in coming generations, go without sufficient water-they would rather have the babes of the community suffering anguish and perishing for want of sufficient water than destroy something that they may go once in many years and gaze upon in order to satisfy their esthetic and exquisite taste for natural beauty. Not one-tenth of 1 per cent of the people of the United States will ever see the beauties of nature there.

The other objection comes from irrigationists in the San Joaquin Valley under the Turlock and Modesto districts and some other districts there which have recently been organized. I will first advert to the objections of the irrigationists, because, as to the first class of objectors, I consider that there is absolutely nothing in their objections; their objections are not worth while; they are not worthy of consideration, and therefore I address myself first to the objections of those who seem to be opposed to the bill on apparently more serious grounds.

In regard to any objection that may come from the Turlock-Modesto irrigation district, the report of the Board of Army Engineers in its conclusion, on page 50, says:

The board further believes that there will be sufficient water if adequately stored and economically used to supply both the reasonable demand of the bay communities and the reasonable needs of the Turlock-Modesto irrigation district for the remainder of this century.

That is the conclusion of the fair and competent men who have investigated the subject, and if we are not to accept their conclusion, why not? On what are we to overthrow that conclusion, drawn from a careful, painstaking, and disinterested investigation by competent men? If those men were not competent to arrive at that conclusion, then whom shall we trust? Shall we trust somebody who springs up overnight and discovers something that months and years of careful and painstaking investigation have not revealed to the most competent men for that class of work in this country?

The bill recognizes-I will not use the word "protects." some objection is made to that-all vested rights in and to the waters that flow in the river at the present time, and that have the land in the district that probably can be brought under irri-

been taken by prior appropriators and put to useful and beneficial purposes. While it is true that it is beyond the power of this measure or of the Government to disturb them, the bill wisely recognizes and sets them forth, so that there can be no contention over the spirit and intent of the bill. It shows plainly that the spirit and intent of the bill is to recognize, without disturbance and without litigation and without contravention or question, all vested rights that heretofore have been acquired in and to the waters of the Tuolumne River. It would, if possible, make them more secure; but if that can not be done, it certainly does not make them less secure.

So far as I have seen there is no manner of spirit or intent or disposition on the part of the promoters of this bill and the people who are interested in it, and who will be its beneficiaries, to question or to disturb one iota of the rights of anybody else who has rights in and to the waters of this river. The only object is to store other waters, that now are doing no good to anybody and have been flowing on to the sea these many thousands of years, and to put them to the most beneficial use of all purposes to which water can be put-the preservation of human life and sanitation of human habitations.

On that topic, the rights of the irrigators of the Turlock-Modesto irrigation district, I shall not be content with reading merely the conclusion of the board of Army engineers, but I shall read briefly some of the reasons and facts on which that conclusion is based. Beginning on page 34, it says:

The area of the existing Turlock-Modesto district is 402 square miles, The board does not content itself with saying that the people

who already are cultivating that quantity of land, 402 square miles, are protected, undisturbed, and unquestioned in their rights, but it goes ahead and takes cognizance of all the land in that section of the country which may be irrigated.

that section of the country which may be irrigated.

The area of the existing Turlock-Modesto district is 402 square miles. The board estimates that 60 per cent additional could well be added thereto, making a total of 643 square miles. In a recent map issued by the United States Department of Agriculture, in cooperation with the conservation commission of California, the total area of irrigable land in this region is given as about 690 square miles. Therefore 643 square miles of land actually to be irrigated within probable districts would seem liberal. It is not claimed, however, that all possible irrigable land is included in this map. There may be, especially in the foothills, additional land to which water might be well applied.

Based on water being actually supplied to 85 per cent of the 643 square miles—a duty of 2½ feet and losses of 23 per cent—the quantity of water needed is estimated by the board at 1,132,000 acre-feet per year.

ar.

The Turlock-Modesto district claims to need for its present district one 1,042,043 acre-feet. This is stated to be based on 90 per cent of 2 square miles, a duty of 2.75 feet with losses of 39 per cent. These ures are considered extreme and those stated by the board would

figures are considered extreme and those stated by the board would seem ample.

In the hearing before the Secretary on November 25, much stress was laid on the use of the Tuolumne River water for irrigation at other points of the San Joaquin Valley, especially directly across the San Joaquin River. There has been, as far as known, no exhaustive study made of the irrigable lands of the San Joaquin Valley and the conservation and use of all available water.

The San Joaquin Valley is relatively less well provided with water than the Sacramento Valley, both as to rainfall and as to run-off of rivers. The demands of the valley for complete irrigation are in excess of the water available. At times of low water the San Joaquin above the mouth of the Merced is usually practically dry, all the water being taken for irrigation. Very little storage has been attempted up to the present except for power purposes.

There can be no question but that a large portion, if not all, of the flow of the Tuolumne could be used for irrigation if stored. While the cost of placing the water on the land, especially when necessary to be pumped and carried to long distances, may be more burdensome than the land can at present stand, the increase in value will doubtless in the future warrant such expenditures. It seems quite certain that to irrigate the southern part of the San Joaquin Valley would be less expensive from the Tuolumne than from streams farther north, such as the Stanislaus, Mokelumne, and American. As above stated, no general project has as yet been made for such use of the water of this valley and there are therefore no estimates available.

For the purposes of this report the board, however, assumes the irrigation of the Turlock-Modesto district only, increased as above stated.

The determination of the amount of water flowing in the Tuolumne

irrigation of the Turlock-Modesto district only, increased as above stated.

The determination of the amount of water flowing in the Tuolumne has been mainly deduced from records at the La Grange Dam, the point of diversion for the Turlock-Modesto district. This was gauged from 1878 to 1884 by the State of California, and by the United States Geological Survey from 1895 to date. Rainfall records at La Grange date from 1878. There are few records for the upper watersheds. The upper Tuolumne has been gauged by the city for only three years. As this is such a short period, the results obtained by applying to other years the same proportion of run-off for upper and low watersheds as is indicated by the three-year record can not be considered conclusive. At the same time this is all the direct evidence available. In order to assist further in the estimation of this important result, the records of the upper and lower Stanislaus, from 1905 to date, have been used for comparison. These records are necessarily incomplete, and therefore to that extent unsatisfactory, but would seem sufficient to arrive at general conclusions. On the calculations made from these records it is estimated that with a storage of 750,000 acre-feet, the necessary 400,000,000 gallons daily can be taken to San Francisco, while usually glying the full reasonable requirements of 640 square miles of the irrigation district.

Not only the 402 square miles now under irrigation, but all

Not only the 402 square miles now under irrigation, but all

gation-640 square miles. The board says there will be sufficient water to supply all of it. Mr. WORKS. Mr. President-

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from California?

Mr. MYERS. With pleasure.
Mr. WORKS. I think the Senator should note, in that connection, that although an additional acreage of land was brought in the amount of water was not increased.

Mr. MYERS. Certainly; but the board claims, after careful investigation, that additional land to the extent of 640 square miles may be taken up and still there will be impounded a sufficient quantity of water for San Francisco and the neighboring cities and all the cultivators of this land.

Mr. GRONNA. Mr. President-

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from North Dakota?

Mr. MYERS. With pleasure.

Mr. GRONNA. The Senator from Montana has been interrupted so much that it is with some hesitancy that I interrupt

Mr. MYERS. I am glad to yield to the Senator. Mr. GRONNA. I am quite sure the Senate Committee on Public Lands wants to do justice to all the people of California before this bill is passed.

Mr. MYERS. Certainly.
Mr. GRONNA. Referring to the provision on page 13 of the bill, under section 9, subsection (b), the provisions of the bill do recognize the rights of the water users in the districts of Turlock and Modesto. I wish, however, to ask the Senator from Montana, who has given this bill very careful study, if there is not a limitation placed upon the use of the water on page 18 of the bill, under subsection (j). Speaking about the flow of the water, it says:

That by "the flow," "natural daily flow," "aggregate daily natural flow," and "what is naturally flowing," as are used herein, is meant such flow as on any given day would flow in the Tuolumne River or its tributaries if said grantee had no storage or diversion works on the said Tuolumne watershed.

Does not that mean that the water users in these irrigation districts may have the amount of water that is the natural flow of the Tuolumne River, but that they will be deprived of any of the storage waters in Lake Eleanor or in Lake Cherry?

Mr. MYERS. Oh, I do not think so. I do not think there is any room for that construction. The terms in paragraph (j), on page 18, are mere definitions. On page 15, in sub-division (d), it is clearly stated that the irrigation districts have rights in impounded waters after the needs of San Francisco are supplied to a certain extent. I regard what is found on page 18 as mere definition, not in any wise contradictory of what appears on page 15. The two must be read together. Section (d), on page 15, is clearly placed where it is for the purpose of providing that after San Francisco's needs for a certain amount are supplied the surplus of the stored and impounded water belongs to the irrigationists and others who are entitled to it under the laws of California. I do not think there is any doubt about that.

Mr. GRONNA. Is not the provision on page 18, under subsection (j), really a limitation upon the impounded waters?

Mr. MYERS. I do not think so at all. I think it is a mere

matter of definition, and does not apply to what is said in subdivision (d), on page 15. It clearly refers to another thing altogether, namely, to stored and impounded waters. That is my conception of the matter. I do not think there is any room for difference of opinion about it.

I was about to finish my quotation from the report of the Board of Army Engineers. I stopped simply to draw attention to the fact that they make provision for 640 square miles of irrigated land in this district, which is about 50 per cent more than is now under irrigation; and in their opinion the waters may be provided therefor and at the same time for the actual needs of San Francisco.

Resuming there, I read:

Of this 750,000 acre-feet storage, about 560,000 acre-feet would be necessary for the city to obtain 400,000,000 gallons daily and the remainder for irrigation. Some years the water supply for irrigation would have been short, as for example in 1898, 40 per cent; in 1908, 14 per cent; and in 1912, 14 per cent. With a storage capacity of 900,000 acre-feet there would have been sufficient water for irrigation, except in 1898. For the latter year a storage capacity of 1,400,000 acre-feet would have been required and would be practically impossible to obtain economically. economically.

I read that in full to show why the Board of Army Engineers draws the conclusion that in all reasonable probability there will be at all times sufficient water stored and impounded in this reservoir for the use of San Francisco and adjacent cities, and and conflicting contentions were laid before those committees.

also for irrigation in these districts. Of course, as is stated here, once in a long time there might be a year when there would be a little shortage for one or the other; but we have dry years everywhere all over the country. We are all more or less affected by the amount of rainfall, even in the semiarid sections of the country, and absolute precision may not be had in these matters. It is clearly the opinion of the board, however, that a sufficient amount of water may be impounded for both purposes; and the city is to supply this surplus water at cost to the people who are entitled to it.

Who will doubt that the city of San Francisco, under a gigantic plan and expenditure such as this bill contemplates, can store and impound these waters and provide them for parched lands cheaper and at less cost than may be done by

individual efforts or by the irrigationists themselves?

I think it admits of no difference of opinion or controversy that on a wholesale plan, on a large scale, such as we have provided here, the irrigationists will get water cheaper and at less cost than if each individual or each association of individuals in a district were to go to work and try to store the waters and put them on their lands themselves, by individual effort or by

the efforts of a small association of people.

I believe the irrigationists will be benefited by that provision. I believe the irrigationists will be benefited by this project if carried to its conclusion. I believe it will mean money to them, money in their pockets, as well as water to the

people of San Francisco.

The matter of electrical power, of which some mention has been made, is an item in this bill that I think should not be overlooked. The reports show that a vast amount of electrical power may be developed by the city of San Francisco and those interested in this bill and applied to beneficial uses in many lines. It is a matter that ought not to be overlooked. The production of electrical power is being encouraged everywhere. The Government is encouraging in every way the production of electrical power, because it is recognized by everybody as one of the greatest agencies and instrumentalities for the benefit of mankind which has been brought to bear upon human affairs for many ages.

I believe that a fair reading and consideration of all these documents and the reports of these boards of investigation shows that this is the proper source of supply for these people for the future, in order to give them an adequate water supply for their use. I believe there is no manner of doubt that there is no other system that is in any wise to be compared to it, and that the irrigationists interested will be cared for. Yet even if there are lands vacant in that section of the country which are not now tilled or cultivated, and which are not settled upon or put to beneficial uses, for which the owners, if they are privately owned, have not appropriated water and put the water to use on the land, even though there be some land that will go dry as a result of carrying this project to materialization, who is there who will claim that the putting of water on land is of higher use or benefit to mankind than the sustenance of life itself and giving people plenty of water for drinking and cooking and household and municipal purposes?

The preservation of life itself must be the first consideration, and even if there is some land that may go dry, which I do not concede, if the people of San Francisco and adjacent communities are furnished with sufficient water, supplied from this source, I do not believe that the cultivation of land and the creation of wealth as a result thereof ought to be compared in the same breath with the preservation of human life and the sanitation of dwellings for people. I do not believe that they are in the same class or that there should be any conflict be-

tween the two.

I believe the people of San Francisco have a right to appropriate this water and a right to have facilities granted therefor by the Government, and that it is a higher and superior right to the mere cultivation of land, which merely puts more dollars in the pockets of somebody, which produces more wealth, and which puts wealth in this matter as against the preservation of human life.

Are we to put wealth in this country against furnishing men, women, and children with sufficient water for drinking and cooking purposes and for the preservation of human life? I believe the Government owes it to its citizens to see that they shall have, so far as it is within its power, the facilities for the preservation of human life, and then let them acquire wealth by the cultivation of land, leaving the acquisition of wealth to come afterwards.

I believe that the Committees on Public Lands of the House and Senate heard all sides of this matter. All these various

There has been nothing new, so far as I can learn, that has come out since the hearings were had; and when those committees, after hearing all that has been said on the subject, reported in favor of the passage of this bill, I believe that it is entitled to some weight as against the protests of people who come in here at the last moment with something grand and new that has been wholly overlooked by everybody who has heretofore investigated this subject. I know of nothing new that affects my opinion that I acquired when this matter was considered by the Senate Committee on Public Lands. I believe the Senate committee had facilities for hearing all that was worth while on the subject, and when it decided to recommend the bill favorably I believe it did so advisedly and wisely and

in the interests of humanity.

In regard to the chimerical objection of people who call themselves nature lovers, I can not see anything in their contention to appeal to reason or a sense of justice or humanity. Their contention that these waters if impounded would no longer gurgle on to the sea and make beautiful soothing sounds which might be listened to by a few hundred campers who go once in many years to that section of the country, and that for the benefit of people who love that brand of beauty-a mere handful, a few hundred, one-tenth of 1 per cent, perhaps, of the population of the United States-this water must be allowed to run on to the Pacific Ocean and be put to no beneficial or useful purpose is, to my mind, too absurd to merit any

discussion.

These people seem to think themselves the direct agents of God Almighty to tell us what is best for us in the preservation of our resources, and they would put the æsthetic above the useful. As far as I am concerned I am a utilitarian and not an idealist. I believe that the earth and everything in it was put under the dominion of mankind for some useful purpose, that it was intended to be put to some use for the daily wants of mankind, and whatever is the most useful purpose so far as it is in our power to consent, I think is the purpose to which all the resources of this country ought to be put. I believe in the doctrine of the greatest good to the greatest number, and the impounding of this water and feeding the famishing and perishing people of San Francisco and adjoining communities with it and giving them sustenance and life and courage will do more good than to let these waters run to the sea for future ages and thousands of years in order that the birds may sing there and the waters may murmur and that a few æsthetic individuals may go there once in many years and be regaled with these delights. I think the water ought to be put to the purpose which does the greatest good to the greatest number.

These people seem to think that it is a mighty outrage that

water which was put on the earth by the Almighty for the benefit of mankind is actually to be put in the stomachs of people. They seem to think it is an outrage that water is to be put in use so that it may be drunk by people to preserve life. They would have us believe that that is one of the greatest outrages of the age, but I do not believe that those arguments

for one second will appeal to anyone in this body.

I believe we all recognize the principle of the greatest good to the greatest number, and we all realize that the people of this country are entitled to have the affairs of this country administered upon the principle that the resources of this country were given to us in trust by the Creator and ought to be so handled and disposed of and administered as to give the

greatest good to the greatest number.

I think there has been a great deal of misrepresentation in this matter, not only of motive but of fact. Some of the nature lovers claim that the beauties of the Hetch Hetchy would be utterly destroyed by making a lake in the basin of that valley. I believe that a reading of the reports of the investigations will convince any fair-minded and reasonable person that the beauties of that valley will be enhanced by putting a beautiful lake in the basin of that valley. The lake can in nowise disturb the granite walls of that basin nor the waterfalls which are referrred to as one of the chief beauties of that spot. I believe that making a lake there will make it more beautiful; and the only thing the lake will do otherwise than to enhance the beauties will be to prevent the use of the basin for camping purposes. The report of the investigation shows that it is very little used for camping purposes and that there are many other places that offer fully as good facilities in that section for campers.

I believe when this reservoir is constructed and filled with pure water it will make one of the grandest spots in the United States, not only grand in beauty and sublimity, but grand in the uses which it will serve to mankind and the people of that

section of the country.

There are many things that the people of San Francisco are to do in return for these concessions, if granted. They are to spend hundreds of thousands of dollars in constructing roads in this park and in that section of the country in order that visitors and campers who visit there to enjoy the beauties of nature, and who are seeking recreation and health, may have better facilities for getting around and viewing these beauties of nature of which we hear so much. For the first 10 years San Francisco is to spend \$15,000 per year, for the next succeeding 10 years \$20,000 per year, and forever thereafter until relieved by Congress the sum of \$30,000 per year in roads and improvements in that section of the country. I believe that those expenditures will take a section of the country which is now resorted to with comparative infrequency and convert it into and make it one of the most attractive and best patronized resorts for health and beauty and recreation to be found in this whole country. I believe that with the facilities it will open for the enjoyment of the beautles of nature, that rare spot of attraction will draw more people to that beauty spot in each and every year when so improved than would go to it in 50 years as it is now, in its raw and unimproved and almost inaccessible condition. I believe this beauty spot of nature, instead of being destroyed or marred or injured, will be made one of the most beautiful and useful spots for health and recreation and beauty to be found in the whole United States.

The people of San Francisco, after offering to comply with all these requirements, will confer what I believe to be an equal benefit upon the Government of the United States to the benefits that they will receive, and they ask that they be granted this privilege. I believe it is the duty of our Government, so far as in its power lies, to meet every reasonable want of its citizens. Its citizens are children of this country, and they are expected in times of war and distress to give to this Government not only their services and their property, but their life's

blood.

The people of the city of San Francisco have been a suffering people. They have had the nand of caramity land the them. Their fair city has been devastated by earthquake and They have had the hand of calamity laid heavily upon fire, and it is reported on credible authority that one of the greatest causes of the devastation of that fair city by fire after the earthquake of 1906 was the lack of an adequate water supply—the very thing that they are seeking to get to-day at a cost of millions of dollars to the taxpayers. If we can aid them in any way, I believe it is the duty of this Government to grant them every facility and privilege that is within its power in

order to achieve that worthy object,

The people of San Francisco and vicinity have shown themselves to be a brave and courageous people. They have risen in their might when the visitations of calamity have been laid upon them to an extent rarely equaled in the history of the civilized world outside of warfare. They have built a better city, a greater city, than before the hand of calamity was laid upon them so distressingly. They appeal to us not only in a most laudable undertaking, but in one which is an absolute necessity for the preservation of the lives of that great and courageous and deserving citizenship, and I am, for one, in favor of doing whatever may be legitimately and lawfully and constitutionally done under the powers of the Government to grant them their demands. I would rather give them a cup of cold water to drink, if in my power, than to take them out and show them all the beauties of all the landscapes of the country. I believe it would do them more good and would be more in accord with the dictates of humanity. I do not think they should come here and ask for water to drink and have to go away and say that we denied them. Water is one of the greatest gifts of God to mankind. I believe this is one of the simplest requests that can be made, and let it not be said that they asked us for water and we gave them a stone.

am heartily in favor of this bill. I see no valid or insurmountable objection to its passage. It has passed the House of Representatives. The emergency, the urgency, and the distress are dire, and I hope that after going this far those people will not be turned away by this body when almost within the goal of

what they desire.

Mr. WORKS. Mr. President, I gave notice that I would address the Senate upon this bill upon Thursday. I desire now to withdraw that notice and to give notice that I will address the Senate to-morrow, immediately after the morning business, in order that we may expedite this measure as rapidly as we can.

The VICE PRESIDENT. The bill is before the Senate as in Committee of the Whole and open to amendment.

Mr. SMOOT. I should like to ask the Senator from Indiana whether he intends to have a night session; and if so, how soon he would desire the Senate to take a recess?

Mr. KERN. The purpose is that at 6 o'clock we will take a recess until 8 o'clock.

Mr. SMOOT. I do not know whether there is any other Senator who desires to proceed with the pending bill at this time, as it is now only 40 minutes before 6 o'clock.

Mr. OWEN. Mr. President, if there is no Senator prepared to discuss the Hetch Hetchy bill now, I would suggest that it might be laid aside, so that we may take up the banking and currency bill.

Mr. GALLINGER. I make the point that there is no quorum present, if I may be permitted to do so.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hughes	Perkins	Smoot
Bacon	James	Pittman	Sterling
Bankhead	Johnson	Poindexter	Stone
Borah	Kenyon	Pomerene	Swanson
Brady	Kern	Ransdell	Thomas
Bryan	La Follette	Reed	Thompson
Chamberlain	Lane	Robinson	Thornton
Chilton	Lewis	Saulsbury	Tillman
Clapp	Martin, Va.	Shafroth	Vardaman
Clarke, Ark.	Martine, N. J.	Sheppard	Walsh
Colt	Myers	Sherman	Warren
Cummins	Newlands	Shields	Weeks
Dillingham	Norris	Shively	Williams
Gallinger	O'Gorman	Simmons	Works
Gore	Overman	Smith, Ariz.	1) Ozna
Gronna	Owen	Smith, Ga.	
Hollis	Page	Smith, S. C.	

Mr. GALLINGER. The Senator from Kansas [Mr. Bristow] has gone to his home on account of illness.

Mr. BRYAN. My colleague [Mr. Fletcher] is unavoidably absent from the Senate Chamber. He is paired with the Senator from Wyoming [Mr. WARREN].

The VICE PRESIDENT. Sixty-five Senators have answered to the roll call. There is a quorum present. The bill is in the Senate and open to amendment.

Mr. WORKS. Mr. President, I suppose a vote will not be insisted upon on the Hetch Hetchy bill to-day. There have been at least two notices given of the intention of Senators to speak upon the bill. I have advanced my time of speaking in order to expedite the discussion of the bill, but I shall not be able to go on to-night. I have to gather together some documents to be used for that purpose. I think the Senate realizes that this is a very important question as affecting the State of California, and it ought not to be forced to a vote without ample time to discuss it.

Mr. WILLIAMS. Discuss it now.
Mr. WORKS. Of course, if the Senate insists upon it, speeches can be made here to take up the time, but that would be useless. I therefore ask that the matter may be delayed until to-morrow morning, so that the discussion may proceed in an orderly way

Mr. PITTMAN. Mr. President, having the bill in charge by direction of the chairman of the committee, I will state that it is not the intention to force it to a vote at all, and that we are perfectly willing to consent that the bill be temporarily laid aside until to-morrow morning.

Mr. WILLIAMS. Mr. President, if the bill is temporarily laid aside to-night, then I suppose it would be in order to bring up the banking and currency bill and go on with its consideration.

Mr. OWEN. I would make that motion if the pending bill were laid aside.

Mr. WILLIAMS. Unless that were understood, I should

object to the request.

Mr. PITTMAN. I understood the bill was to be temporarily laid aside by reason of the notice given by the Senator from California [Mr. Works] that he would address the Senate on the bill to-morrow morning and that there is no other Senator who desires to address himself to the bill at the present time; and there being no other, the Senator in charge of the currency bill desires to proceed with the consideration of it at this time.

Mr. GALLINGER Mr. President, the reading of the unanimous-consent agreement will develop the fact that the Senate

has agreed to vote upon the Hetch Hetchy oill next Saturday; so I think no Senator need be apprehensive that a vote will be forced before that time. It can not be done.

#### BANKING AND CURRENCY.

Mr. OWEN. I move that the Senate proceed to the consideration of House bill 7837.

The VICE PRESIDENT. The Chair understands that, unanimous consent, House bill 7207, being the Hetch Hetchy bill, is temporarily laid aside. The Senator from Oklahoma moves that the Senate proceed to the consideration of House bill 7837.

The motion was agreed to, and the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting com-mercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. OWEN. I ask for the reading of the bill.

The VICE PRESIDENT. The Secretary will read the bill.

The Secretary proceeded to read the bill.

Mr. WARREN. Mr. President, a parliamentary inquiry.

The VICE PRESIDENT. The Semtor from Wyoming will

state his parliamentary inquiry.

Mr. WARREN. I wish to ask if the bill which is now being read is the one which appears on the desks of Senators as an amendment?

The VICE PRESIDENT. It is not. It is the House bill reported by the Senator from Oklahoma without amendment,

Mr. OWEN. It is the House bill which is being read. Mr. WARREN. Then, may I ask, Does the amendment cover what is proposed to take the place of the House bill?

Mr. OWEN. It is not an amendment at all; it is simply the House bill which is being read now for the first time at length.

An amendment will be proposed to the bill after it has been read. Mr. WARREN. What I want to know is this: I was told that

the amendment on our desks in some fifty-odd pages contained all of the matter that was in the original House bill that has been adopted by the committee having it in charge, or, I might say, by the caucus.

Mr. OWEN. There is a print including the House bill as proposed to be amended; but I thought it was in better order to have the House bill first read.

Mr. WARREN. It will contain some matters not contained in the amended print?

Mr. OWEN. Yes.

The VICE PRESIDENT. The Secretary will proceed with the reading of the bill.

The Secretary resumed the reading of the bill.

Mr. KERN. I ask that the reading be suspended while I make a motion. I move that when the hour of 6 o'clock shall have arrived the Senate take a recess until 8 o'clock to-night.

Mr. PENROSE. On that motion I call for the year and nays. The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. WARREN (when his name was called). I announce mr. pair with the senior Senator from Florida [Mr. Fletcher].

The roll call was concluded.

Mr. KERN (after having voted in the affirmative). On account of my pair with the Senator from Kentucky [Mr. Bradley], I withdraw my vote.

Mr. CHAMBERLAIN. I have a general pair with the junior Senator from Pennsylvania [Mr. OLIVER]. In view of his ab-

sence, I withhold my vote.

Mr. CHILTON. I have a general pair with the junior Senator from Maryland [Mr. Jackson]. In his absence I withhold my vote, unless it be necessary to make a quorum.

Mr. SMOOT. I desire to announce that the senior Senator from Kansas [Mr. Brisrow] is unavoidably detained from the

Mr. STONE (after having voted in the affirmative). like to inquire whether the Senator from Wyoming [Mr. Clark] has voted?

The VICE PRESIDENT. The Chair is informed that he has not.

Mr. STONE. Having a general pair with that Senator, I withdraw my vote.

Mr. MYERS (after having voted in the affirmative). I if the Senator from Connecticut [Mr. McLean] has voted?

The VICE PRESIDENT. The Chair is informed that he has not

Mr. MYERS. As I have a pair with that Senator, I withdraw my vote.

Mr. SMITH of Arizona (after having voted in the affirmative). In view of what has been said regarding pairs, and in view of the provisions of the pair I have with the Senator from New Mexico [Mr. Fall], I feel that under that pair I ought to withdraw my vote.

Mr. CLARKE of Arkansas (after having voted in the affirma-ve). I did not hear read the name of the junior Senator from Utah [Mr. SUTHERLAND] among those who voted.

The VICE PRESIDENT. The Senator from Utah, as the Chair is informed, has not voted.

Mr. CLARKE of Arkansas. Then I withdraw my vote, as I have a standing pair with that Senator.

The result was announced-yeas 53, nays 5, as follows:

	YE	AS-53.	
Ashurst Bacon Bankhead Borah Brady Bryan Clapp Colt Gore Hollis Hughes James Johnson Kenyon	La Follette Lane Lewis Martin, Va. Martine, N. J. Newlands Norris O'Gorman Overman Owen Perkins Pittman Poindexter Pomerene	Ransdell Reed Robinson Saulsbury Shafroth Sheppard Sherman Shields Shively Simmons Smith, Ga. Smith, S. C. Smoot Sterling	Swanson Thomas Thompson Thornton Tillman Townsend Vardaman Walsh Weeks Williams Works

Bradley Brandegee Bristow Burleigh Burton Catron Chamberlain Chilten Clark, Wyo. Clark, Ark.	Crawford Culberson Dillingham du Pont Fall Fletcher Goff Hitchcock Jackson Jones	Kern Lea Lippitt Ledge McCumber McLean Myers Nelson Oliver Root	Smith, Ariz. Smith, Md. Smith, Mich Stephenson Stone Sutherland Warren

So Mr. KERN's motion was agreed to.

Mr. GALLINGER. Mr. President, I believe the Secretary was reading the bill.

The VICE PRESIDENT. Yes.

The reading of the bill was resumed, beginning with section 3, page 4, line 2, and continued to the end of section 7, on page 13.

The VICE PRESIDENT. The hour of 6 o'clock having arrived, the Senate takes a recess until 8 o'clock p. m.

#### EVENING SESSION.

The Senate reassembled at 8 o'clock p. m.

#### BANKING AND CURRENCY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes,

Mr. SMOOT. Mr. President, I dislike to call for a quorum of the Senate, but this morning when the Senate met there were only eight Senators in the Chamber, and I notice but two Senators on the majority side of the Chamber now. I suggest the

absence of a quorum.

The VICE PRESIDENT. The Chair thinks the suggestion is eminently appropriate. The Secretary will call the roll.

The Secretary called the roll, and the following Senators

answered to their names:

Bacon	Gallinger	Nelson	Sheppard	
Bankhead	Goff	O'Gorman	Shively	
Borah	Kenyon	Overman	Smith, Ariz	
Brady	Kern	Owen	Smith, Ga.	
Bryan	Lane	Page	Smoot	
Chilton	Martin, Va.	Pomerene	Thomas	
Clark, Wyo.	Martine, N. J.	Reed	Tillman	
Clarke, Ark,	Myers	Robinson	Townsend	

The VICE PRESIDENT. Thirty-two Senators have answered

to the roll call. There is not a quorum present.

Mr. KERN. I move that the Sergeant at Arms be directed. to request the attendance of absent Senators.

Mr. SMOOT. The first thing to be done is to call the names of the absentees. Mr. KERN. Very well.

The VICE PRESIDENT. The Secretary will call the names of absent Senators.

The Secretary called the names of absent Senators, and Mr. Hughes, Mr. Simmons, Mr. Smith of South Carolina, Mr. Sterling, Mr. Stone, Mr. Swanson, Mr. Thompson, Mr. Thompson, Mr. Thompson, Mr. Vardaman, and Mr. Walsh answered to their

names when called. Mr. Clapp, Mr. Lewis, Mr. Johnson, Mr. Weeks, Mr. Saulsbury, Mr. Hollis, Mr. Ashurst, Mr. Colt, and Mr. Shafroth entered the Chamber and answered to their names.

The VICE PRESIDENT. Fifty-one Senators have answered to the roll call. There is a quorum present. The Secretary will proceed with the reading of the bill.

The Secretary resumed the reading of the bill at section 8, on page 13, and concluded the reading.

Mr. OWEN. Mr. President, I offer an amendment, and ask that it be read to the Senate.

Mr. WEEKS. I should like to ask the Senator from Oklahoma which bill he is offering as an amendment—the one that is printed in parallel columns or the last print?

Mr. OWEN. It is the last print, the one of December 1, printed this morning. It is the print which appeared in parallel columns, with some few changes made, a copy of which is on the desks of Senators.

Mr. WEEKS. May I inquire of the Senator from Oklahema what his purpose is in regard to the substitute?

Mr. OWEN. Merely to have the amendment read, after which I shall not ask to detain the Senate further to-night.

Mr. WEEKS. I should like to make a parliamentary inquiry. If the substitute is read as an amendment, and then the Senate adjourns, will it leave the original bill, the House bill, open to amendment, using the changes contained in what is known as the Hitchcock amendment?

Mr. OWEN. Either one or the other will be in order, as I understand the parliamentary rule, either to propose amendments to the House bill or to propose amendments to the amend-

ment which I offer.

Mr. WEEKS. If that is the shape in which the matter is to be left, I have no objection that the reading shall proceed.

Mr. OWEN. That is my understanding of the parliamentary

Mr. GALLINGER. Am I correct in assuming that the Senator from Oklahoma proposes to move this as a substitute for the bill that has been read?

Mr. OWEN. Yes.

Mr. GALLINGER. Abandoning the bill or substitute that was reported some days ago from the section of the committee of which the Senator from Oklahoma is chairman?

Mr. OWEN. It is practically the same, with a few minor

Mr. GALLINGER. This, then, will take the place of the House bill for consideration?

Mr. OWEN. Yes. It is practically the House bill, with the amendments proposed by the section of the committee with which I am associated.

Mr. GALLINGER. Then it will be proper for any Senator to offer an amendment either to the substitute bill er to the original House bill?

Mr. OWEN. That is my understanding of the parliamentary

Mr. GALLINGER. Yes; that is correct. Mr. SMOOT. Mr. President, I should like to ask the Senator from Oklahoma whether he has had printed the House bill showing the amendments to it according to the print that was reported this morning?

Mr. OWEN. Such a print has been ordered, but it has not we may supply the country. There is a very large demand from bankers to know just what the bills are.

Mr. SMOOT. Does the Senator mean 20,000—

Mr. SMOOT. Twenty thousand of each of these prints.

Mr. SMOOT. Twenty thousand copies of the print that is some light a print that is

now lying upon the table?

Mr. OWEN. The print that the Senator has in his hand,

the one that does not show the parts of the House bill struck out, and the same showing where changes are made in the House bill.

Mr. SMOOT. I do not think it is necessary to have both of them printed, but I do think we ought to have one or the other of them. I believe a print of the House bill with the proposed amendments, showing where the text is stricken out, would be far better, not only for the Senate but for the country.

Mr. OWEN. I ask that 20,000 copies be printed.
Mr. SMOOT. Very well.
The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

The order as agreed to was reduced to writing, as follows:

Ordered, That there be printed 20,000 copies of the House print of H. R. 7837, to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes, showing the amendment thereto as proposed by the substitute offered by Mr. Owen December 1, 1913.

Mr. NELSON. Mr. President, I should like to inquire what it is that is proposed to be read?

Mr. OWEN. The amendment which I offer.

Mr. NELSON. Does the Senator offer as a substitute for the

Glass bill the entire bill that he reported?

Mr. OWEN. I offer that as a substitute, and after it has been read either the House bill or this proposed substitute will be open to amendment, as I understand the parliamentary status.

Mr. NELSON. The Senator proposes that this amendment

shall be read to-night?

Mr. OWEN. Yes.

Mr. NELSON. After it has been read, then what, to-night?

Mr. OWEN. If no Senator desires to address the Senate, I shall then move that the Senate adjourn.

Mr. NELSON. Very well.

The VICE PRESIDENT. The Secretary will read the amendment proposed by the Senator from Oklahoma.

The Secretary. It is proposed to strike out all after the enacting clause and to insert:

That the short title of this act shall be the "Federal reserve act." Wherever the word "bank" is used in this act, the word shall be held to include State bank, banking association, and trust company, except where national banks or Federal reserve banks are specifically

held to include State bank, banking association, and trust company, except where national banks or Federal reserve banks are specifically referred to.

The terms "national bank" and "national banking association" used in this act shall be held to be synonymous and interchangeable. The term "member bank" shall be held to mean any national bank, State bank, or bank or trust company which has become a member of one of the reserve banks created by this act. The term "board" shall be held to mean Federal reserve board; the term "district" shall be held to mean Federal reserve district; the term "reserve bank" shall be held to mean Federal reserve bank.

#### FEDERAL RESERVE DISTRICTS.

nean Federal reserve district; the term "reserve bank" shall be held to mean Federal reserve bank.

SEC. 2. As soon as practicable the Secretary of the Treasury and not less than two other members of the Federal reserve board hereinafter provided for, to be assigned by the President, acting as "the reserve bank organization committee," shall designate not less than 8 nor more than 12 cities to be known as Federal reserve cities, and shall divide the continental United States, including Alaska, into districts, each district to contain one, and only one, of such Federal reserve cities. The determination of said organization committee shall not be subject to review except by the Federal reserve board when organized: Provided, That the districts shall be apportioned with due regard to the convenience and customary course of business and shall not necessarily be coterminous with any State or States. The districts thus created may be readjusted and new districts may from time to time be created by the Federal reserve board, not to exceed 12 in all. Such districts shall be known as Federal reserve districts and may be designated by number. A majority of the organization committee shall constitute a quorum, with authority to act.

Said organization committee shall be authorized to employ counsel and expert aid, to take testimony, to send for persons and papers, to administer oaths, and to make such investigation as may be deemed necessary by the said committee in determining the reserve districts and in determining the cities within such districts where such Federal reserve banks shall be severally located. The said committee shall supervise the organization, in each of the cities designated, of a Federal reserve bank shall include in its title the name of the city in which it is situated, as "Federal Reserve Bank of Chicago."

Under regulations to be prescribed by the organization committee, every national banking association within that district shall be required and every eligible bank is hereby authorized, to signi

thereof in addition to the amount subscribed, whether such subscriptions have been paid up in whole or in part, under the provisions of this act.

Any national bank falling to signify its acceptance of the terms of this act within the 60 days aforesaid shall cease to act as a reserve agent, upon 30 days' notice, to be given within the discretion of the said organization committee or of the Federal reserve board.

Should any national banking association in the United States or trust company engaged in commercial banking in the District of Columbia now organized fail, within one year after the passage of this act, to become a member bank under the provisions hereimbefore stated, or fail to comply with any of the provisions of this act applicable thereto, all of the rights, privileges, and franchises of such association granted to it under the national-bank act, or under the provisions of this act, shall within the discretion of the Federal reserve board be thereby forfeited. Any noncompliance with or violation of this act shall, however, be determined and adjudged by any court of the United States of competent jurisdiction in a suit brought for that purpose in the district or territory in which such bank is located, under direction of the Federal reserve board, by the Comptroller of the Currency in his own name before the association shall be declared dissolved. In cases of such noncompliance or violation, other than the failure to become a member bank under the provisions of this act, every director who participated in or assented to the same shall be held liable in his personal or individual capacity for all damages which said bank, its shareholders, or any other person shall have sustained in consequence of such violation.

Such dissolution shall not take away or impair any remedy against such corporation, its stockholders or officers, for any liability or penalty which shall have been previously incurred.

Should the subscriptions by banks to the stock of said Federal reserve banks or any one or more of them

required therefor, then and in that event the said organization committee may, under conditions and regulations to be prescribed by it, offer to public subscription at par such an amount of stock in said Federal reserve banks, or any one or more of them, as said committee shall determine, subject to the same conditions as to payment in and stock liability as provided for member banks.

No individual, copartnership, or corporation other than a member bank of its district shall be permitted to subscribe for or to hold at any time more than \$10,000 par value of stock in any Federal reserve bank. Such stock shall be known as public stock and may be transferred on the books of the Federal reserve bank by the chairman of the board of directors of such bank.

Should the total subscriptions by banks and the public to the stock of said Federal reserve banks, or any one or more of them, be, in the judgment of the organization committee, insufficient to provide the amount of capital required therefor, then and in that event the said organization committee shall allot to the United States such an amount of said stock as said committee shall determine. Said United States stock shall be paid for at par out of any money in the Treasury not otherwise appropriated, and shall be held by the Secretary of the Treasury and disposed of for the benefit of the United States in such maner, at such times, and at such price, not less than par, as the Secretary of the Treasury shall determine.

Stock not held by member banks shall not be entitled to voting power in the hands of its holders, but the voting power thereon shall be vested in and be exercised solely by the class C directors of the Federal reserve bank in which said stock may be held, and who shall be designated as "voting trustees." The voting power on said public stock shall be limited to one vote for each \$15,000 par value thereof, fractional amounts not to be considered. The voting power on said public stock shall be interested as the provisions governing the transfers of s

BRANCH OFFICES.

SEC. 3. Each Federal reserve bank shall establish branch offices within the Federal reserve district in which it is located and also in the district of any Federal reserve bank which may have been suspended, such branches to be established and conducted at places and under regulations approved by the Federal reserve board.

FEDERAL RESERVE BANKS.

irict of any Federal reserve bank which may have been suspended, such branches to be established and conducted at places and under regulations approved by the Federal reserve board.

FEDERAL RESERVE BANKS.

SEC. 4. When the organization committee shall have established Federal reserve districts as provided in section 2 of this act, a certificate shall be filed with the Comptroller of the Currency showing the geographical limits of such districts and the Federal reserve city designated in each of such districts. The Comptroller of the Currency shall thereupon cause to be forwarded to each national bank located in each district, and to such other banks declared to be eligible by the organization committee which may apply therefor, an application blank in form to be approved by the organization committee, which blank shall contain a resolution to be adopted by the board of directors of each bank executing such application, authorizing a subscription to the capital stock of the Federal reserve bank organizing in that district in accordance with the provisions of this act.

When the minimum amount of capital stock prescribed by this act for the organization of any Federal reserve bank shall have been suscribed and allotted the organization bank organization explications and allotted the organization certificate which shall specifically state the name of such Federal reserve bank, the territorial extent of the district over which the operations of such Federal reserve bank are to be carried on, the city and State in which said bank is to be located, the amount of capital stock and the number of shares subscribed by each, and the fact that the certificate which shares into which the same is divided, the name and place of doing business of each bank executing such ertificate, and of all banks which have subscribed or may thereafter subscribe to the capital stock of such Federal reserve bank, to avail themselves of the advantages of this act.

The said organization certificate which shall become a body correct of the co

Eighth. Upon deposit with the Treasurer of the United States of any bonds of the United States in the manner provided by existing law relating to national banks, to receive from the Comptroller of the Currency circulating notes in blank, registered and countersigned as provided by law, equal in amount to the par value of the bonds so deposited, such notes to be issued under the same conditions and provisions of law which relate to the issue of circulating notes of national banks secured by bonds of the United States bearing the circulating privilege.

visions of law which relate to the issue of circulating notes of national banks secured by bonds of the United States bearing the circulating privilege.

But no Federal reserve bank shall transact any business except such as is incidental and necessarily preliminary to its organization until it has been authorized by the Comptroller of the Currency to commence business under the provisions of this act.

Every Federal reserve bank shall be conducted under the supervision and control of a board of directors.

The board of directors shall perform the duties usually appertaining to the office of directors shall perform the duties usually appertaining to the office of directors of banking associations and all such duties as are prescribed by law.

Said board shall administer the affairs of said bank fairly and impartially and without discrimination in favor of or against any member bank or banks and shall, subject to the provisions of law and the orders of the Federal reserve board, extend to each member bank such discounts, advancements, and accommodations as may be safely and reasonably made with due regard for the claims and demands of other member banks.

Such board of directors shall be selected as hereinafter specified and shall consist of nine members, holding office for three years, and divided into three classes, designated as classes A, B, and C.

Class A shall consist of three members, who shall be chosen by and be representative of the stock holding banks.

Class B shall consist of three members, who at the time of their election shall be actively engaged in their district, respectively, in commerce, in agriculture, and in some other pursuit.

Class C shall consist of three members, who shall be designated by the Federal reserve board.

No director of class B or of class C shall be an officer, director, employee, or stockholder of any bank.

Directors of class A and class B shall be chosen in the following manner:

The chairman of the board of directors of the Federal reserve bank

Class C shall consist of three members, who shall be designated by the Federal reserve bond.

No director of class B or of class C shall be an officer, director, employee, or stockholder of any bank.

Directors of class A and class B shall be chosen in the following many control of the district in which the bank is situated shall classify the member banks of the district into three general groups or divisions. Each group shall contain, as nearly as may be, one-third of the aggregate number of the member banks of the district, and shall consist, as nearly as may be, one-third of the aggregate number of the member banks of the district, and shall consist, as nearly as made by number by the chalman.

At a requisity called meeting of the board of directors of each members has a district reserve elector and shall certify his name to the chalman of the board of directors of the Federal reserve bank of the district. The board of directors of the Federal reserve bank of the district. The board of directors of the Federal reserve bank of the district. The board of directors of the federal reserve bank of the district. The list to each elector in each group.

Every elector shall, within 15 days after the receipt of the said list, excitly to the chalman his first, second, and other choices upon the list, upon a preferential ballot, on a form furnished by the chalman of the close of the said list, excitly to the chalman his first, second, and other choices upon the list, but shall not vote more than one choice for any one candidate.

Any candidate having a majority of all votes cast in the column of a state choices for a director of class A and for a director of class B, but shall not vote more than one choice for any one candidate. Any candidate then have a majority of the electors withing the declared elected. If no choices for a director of class A and for a director of class B, but shall not vote more than one choice for any one candidate. In the third column for other choices shall be declared elected. If no class I,

before provided shall hold office for a term of three years. Vacancies that may occur in the several classes of directors of Federal reserve banks may be filled in the manner provided for the original selection of such directors, such appointces to hold office for the unexpired terms of their predecessors.

STOCK ISSUES; INCREASE AND DECREASE OF CAPITAL

of their predecessors.

STOCK ISSUES; INCREASE AND DECREASE OF CAPITAL.

SEC. 5. The capital stock of each Federal reserve bank shall be divided into shares of \$100 each. The outstanding capital stock shall be increased from time to time as member banks increase their capital stock and surplus or as additional banks become members, and may be decreased as member banks reduce their capital stock of surplus or cease to be members. Shares of the capital stock of Federal reserve banks on the transferable, nor be hypothecable. In case a member bank increase its capital stock or surplus or cease to be members. Shares of the capital stock of surplus or cease to be members, and may be decreased as member banks shall not be transferable, nor be hypothecable. In case a member bank increase its capital stock or surplus or cease to be members, and increase its capital stock or surplus of the Federal reserve bank of its district equal to 6 per cent of the said increase, one-half of said subscription to be paid in the manner herein-before provided for original subscription, and one-half subject to call of the Federal reserve bank at any time after the organization thereof must subscribe for an amount of the capital stock of the Federal reserve bank supplies of the for an amount of the capital stock of the Federal reserve bank shall have been increased either on account of the increase in the number of member banks, the board of directors shall cause to be executed a certificate to the Comptroller of the Currency showing the increase in capital stock, the amount paid in, and by whom paid. In case a member bank reduces its capital stock it shall surrender a proportionale amount of its holdings in the capital stock of said Federal reserve bank, and in case a member bank goes into voluntary liquidation it shall surrender all of its holdings of the capital stock of said Federal reserve bank shall be canceled and such member bank so have been paid to the receiver appointed therefor, the stock held by it in said Federal reserve ban

to be executed a certificate to the Comptroller of the Currency showing such reduction of capital stock and the amount repaid to such bank.

DIVISION OF PARNINGS.

SEC. 7. After all necessary expenses of a Federal reserve bank have been paid or provided for, the stockholders shall be entitled to receive an annual dividend of 6 per cent on the paid-in capital stock, which dividend shall be cumulative. One-half of the not earnings, after the aforesaid dividend claims have been fully met, shall be paid into a surplus fund until such fund shall amount to 40 per cent of the paid-in capital stock of such bank, and of the remaining one-half, for per cent shall be paid to the United States as a franchise tax, and 50 per cent shall be paid to the United States as a trustee for the benefit of depositors in failed national banks, the money to be kept in and losses from failures to be paid from it as a depositors' insurance fund under a division of the Treasury to be constituted and managed under such regulations as may be prescribed by the Secretary of the Treasury. All net earnings derived by the United States from Federal reserve banks shall be applied to the reduction of the outstanding bonded indebtedness of the United States under regulations to be prescribed by the Secretary of the Treasury. Should a Federal reserve bank be dissolved or go into liquidation, any surplus remaining, after the payment of all debts, dividend requirements as hereinbefore provided, and the par value of the stock, shall be paid to and become the property of the United States and shall be similarly applied.

Every Federal reserve bank incorporated under the terms of this act, the capital stock and surplus therein and the income derived therefrom shall be exempt from Federal, State, and local taxation, except in respect to taxes upon real estate.

Sec. 8. Any bank incorporated by special law of any State or of the United States, or organized under the general laws of any State or of the United States, or organized under the provisions of the

#### STATE BANKS AS MEMBERS. .

SEC. 9. Any bank incorporated by special law of any State, or organized under the general laws of any State or of the United States, may make application to the reserve bank organization committee, pending organization, and thereafter to the Federal reserve board for the right to subscribe to the stock of the Federal reserve bank organized or to be organized within the Federal reserve district where the applicant is located. The organization committee of the Federal reserve board, under such rules and regulations as it may prescribe, subject to the provisions of this section, may permit the applying bank to become a stockholder in the Federal reserve bank of the district in

which the applying bank is located. Whenever the organization committee or the Federal reserve board shall permit the applying bank to become a stockholder in the Federal reserve bank of the district, stock shall be issued and paid for under the rules and regulations of this act provided for national banks which become stockholders in Federal reserve banks.

shall be issued and paid for under the rules and regulations of this act provided for national banks which become stockholders in Federal reserve banks.

The organization committee or the Federal reserve board shall establish by-laws for the general government of its conduct in acting upon applications made by the State banks and banking associations and trust companies for stock ownership in Federal reserve banks. Such by-laws shall require applying banks not organized under Federal law to comply with reserve and capital requirements and to submit to the examination and regulations prescribed by the organization committee or by the Federal reserve board. No applying banks shall be admitted to membership in a Federal reserve bank unless it possesses a paid-up unimpaired capital sufficient to entitle it to become a national banking association in the place where it is situated, under the provisions of the national banking act.

Any bank becoming a member of a Federal reserve bank under the provisions of this section shall, in addition to the regulations and restrictions hereinbefore provided, be required to conform to the provisions of law imposed on the national banks respecting the limitation of lability which may be incurred by any person, firm, or corporation to such banks, the prohibition against making purchase of or loans on stock of such banks, and the withdrawal or impairment of capital, or the payment of uncarned dividends, and to such rules and regulations as the Federal reserve board may, in pursuance thereof, prescribe.

Such banks, and the officers, agents, and employees thereof, shall also be subject to the provisions of and to the penalties prescribed by sections 5211 and 5212 of the Revised Statutes, and shall be subject to the penalties prescribed by sections 5211 and 5212 of the Revised Statutes, and shall be subject to the penalties prescribed by section 5213 for the failure to make such report.

If at any time it shall appear to the Federal reserve board that a banking association or trust c

to the penalties prescribed by section 5213 for the failure to make such report.

If at any time it shall appear to the Federal reserve board that a banking association or trust company organized under the laws of any State or of the United States and having become a member bank has failed to comply with the provisions of this section or the regulations of the Federal reserve board, it shall be within the power of the said board, after hearing, to require such banking association or trust company to surrender its stock in the Federal reserve bank; upon such surrender the Federal reserve bank shall pay the cash-paid subscriptions to the said stock with interest at the rate of one-half of 1 per cent per month, computed from the last dividend, if carned, not to exceed the book value thereof, less any liability to said Federal reserve bank, except the subscription liability not previously called, which shall be canceled, and said Federal reserve bank shall, upon notice from the Federal reserve board, be required to suspend said banking association or trust company from further privileges of membership, and shall within 30 days of such notice cancel and retire its stock and make payment therefor in the manner herein provided. The Federal reserve board may restore membership upon due proof of compliance with the conditions imposed by this section.

FEDERAL RESERVE BOARD.

conditions imposed by this section.

FEDERAL RESERVE BOARD.

Sec. 10. A Federal reserve board is hereby created which shall consist of seven members, including the Secretary of the Treasury, who shall be a member ex officio, and six members appointed by the President of the United States, by and with the advice and consent of the Senate. In selecting the six appointive members of the Federal reserve board, not more than one of whom shall be selected from any one Federal reserve district, the President shall have due regard to a fair representation of the different geographical divisions of the country. The six members of the Federal reserve board appointed by the President and confirmed as aforesaid shall devote their entire time to the business of the Federal reserve board and shall each receive an annual salary of \$10,000, together with actual necessary traveling expenses. Of the six members thus appointed by the President at least two shall be persons experienced in bunking or finance. One shall be designated by the President to serve for one, one for two, one for three, one for four, one for five, and one for six years, and thereafter each member so appointed shall serve for a term of six years unless scener removed for cause by the President. Of the six persons thus appointed, one shall be designated by the President as governor and one as vice governor of the Federal reserve board. The governor of the Federal reserve board, subject to its supervision, shall be the active executive officer. The Secretary of the Treasury for the use of the Federal reserve board. Each member of the Treasury for the use of the Federal reserve board. Each member of the Federal reserve board shall within 15 days after notice of appointment make and subscribe to the oath of office.

The Federal reserve board shall have power to levy semiannually upon the Federal reserve board shall have power to levy semiannually upon the Federal reserve board shall within 15 days after notice of appointment members of the Federal reserve board

sent of the Senate, to fill such vacancy, and when appointed he shall hold office for the unexpired term of the member whose place he is selected to fill.

The President shall have power to fill all vacancies that may happen on the Federal reserve board during the recess of the Senate, by granting commissions which shall expire at the end of the next session of the Senate.

Senate.

Nothing in this act contained shall be construed as taking away any powers heretofore vested by law in the Secretary of the Treasury which relate to the supervision, management, and control of the Treasury Department and bureaus under such department, and wherever any power vested by this act in the Federal reserve board or the Federal reserve agent appears to condict with the powers of the Secretary of the Treasury, such powers shall be exercised subject to the supervision and control of the Secretary.

The Federal reserve board shall annually make a full report of its operations to the Speaker of the House of Representatives, who shall cause the same to be printed for the information of the Congress.

Section 324 of the Revised Statutes of the United States shall be amended so as to read as follows: "There shall be in the Department of the Treasury a bureau charged with the execution of all laws passed by Congress relating to the issue and regulation of national currency secured by United States bonds and, under the general supervision of the Federal reserve board, of all Federal reserve notes, the chief officer of which bureau shall be called the Comptroller of the Currency and shall perform his duties under the general directions of the Secretary of the Treasury."

SEC. 11. The Federal reserve board shall be authorized and expended.

SEC. 11. powered: The Federal reserve board shall be authorized and em-

Sec. 11. The Federal reserve board shall be authorized and empowered:

(a) To examine at its discretion the accounts, books, and affairs of each Federal reserve bank and of each member bank and to require such statements and reports as it may deem necessary. The said board shall publish once each week a statement showing the condition of each Federal reserve bank and a consolidated statement for all Federal reserve banks. Such statements shall show in detail the assets and liabilities of the Federal reserve banks, single and combined, and shall furnish full information regarding the character of the money heid as reserve and the amount, nature, and maturities of the paper and other investments owned or held by Federal reserve banks.

(b) To permit or require Federal reserve banks to rediscount the discounted paper of other Federal reserve banks at rates of interest to be fixed each week or oftener by the Federal reserve board.

(c) To suspend for a period not exceeding 30 days, and from time to time to renew such suspension for periods not exceeding 15 days, any reserve requirement specified in this act: Provided, That it shall establish a graduated tax upon the amounts by which the reserve requirements of this act may be permitted to fall below the level hereinniter specified, such tax to be uniform in its application to all Federal reserve banks and to member banks, required to keep the same reserves.

(d) To supervise and regulate through the bureau under the charge of the Comptroller of the Currency the issue and retirement of Federal reserve notes, and to prescribe rules and regulations under which such notes may be delivered by the comptroller to the Federal reserve agents applying therefor.

(e) To add to the number of cities classified as reserve and central reserve interesting law in which national banking associations are subject to the reserve requirements set forth in section 20 of this act; or to reclassify existing reserve and central reserve bank, the cause of such removal to be forthwith communi

possession thereof and administer the same during the period of suspension.

(1) To require bonds of Federal reserve agents, perform the duties, functions, or services specified or implied in this act, and to make all rules and regulations necessary to enable said board effectively to perform the same.

(1) To exercise general supervision over said Federal reserve banks.

(k) To anthorize member banks to use, as reserves. Federal reserve notes, or bank notes based on United States bonds, to the extent that said board may find necessary.

(1) To grant by special permit to national banks applying therefor, when not in contravention of State law, the right to act as trustee, executor, administrator, or registrar of stocks and bonds under such rules and regulations as the said board may prescribe.

#### PEDERAL ADVISORY COUNCIL.

SEC. 12. There is hereby created a Federal advisory council, which shall consist of as many members as there are Federal reserve districts. Each Federal reserve bank by its board of directors shall annually select from its own Federal reserve district one member of said council, who shall receive such compensation and allowances as may be fixed by his board of directors subject to the approval of the Federal reserve board. The meetings of said advisory council shall be held at Washington, D. C., at least four times each year, and oftener if called by the Federal reserve board. The council may select its own officers and adopt its own methods of procedure, and a majority of its members shall constitute a quorum for the transaction of business. Vacancies in the council shall be filled by the respective reserve banks, and members selected to fill vacancies shall serve for the unexpired term.

The Federal advisory council shall have power, by itself or through its officers, (1) to confer directly with the Federal reserve board on general business conditions; (2) to make oral or written representations concerning matters within the jurisdiction of said board; (3) to call for information and to make recommendations in regard to discount rates, rediscount business, note issues, reserve conditions in the various districts, the purchase and sale of gold or securities by reserve banks, openmarket operations by said banks, and the general affairs of the reserve banking system.

#### POWERS OF FEDERAL RESERVE BANKS.

POWERS OF PEDERAL RESERVE BANKS.

SEC. 13. Any Federal reserve bank may receive from any of its member banks, and from the United States, deposits of current funds in lawful money, national-bank notes, Federal reserve notes, or checks and drafts upon solvent banks of the Federal reserve system, payable upon presentation; or, solely for exchange purposes, may receive from other Federal reserve banks deposits of current funds in lawful money, national-bank notes, or checks and drafts upon solvent member or other Federal reserve banks, payable upon presentation.

Upon the indorsement of any of its member banks, with a walver of demand notice and protest by such bank any Federal reserve bank may discount notes, drafts, and bills of exchange arising out of actual commercial transactions; that is, notes, drafts, and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes, or the proceeds of which have been used, or are to be used, for such purposes, the Federal reserve board to have the right to determine or define the character of the paper thus eligible for discount, within the meaning of this act. Nothing in this act contained shall be construed to prohibit such notes, drafts, and bills of exchange, secured by staple agricultural products, or other goods, wares, or merchandise, from being eligible for such discount; but such definition shall not include notes, drafts, or bills covering merely investments or issued or drawn for the purpose of carrying or trading in stocks, bonds, or other investment securities, ex-

cept bonds and notes of the Government of the United States. Notes, drafts, and bills admitted to discount under the terms of this paragraph must have a maturity at the time of discount of not more than 90 days.

Any Federal reserve bank may discount acceptances which are based on the importation or exportation or domestic shipment of goods and which have a maturity at time of discount of not more than three mouths, and indorsed by at least one member bank. The amount of acceptances so discounted shall at no time exceed one-half the paid-up capital stock and surplus of the bank for which the rediscounts are made.

acceptances so discounted shall at no time exceed one-nair the paid-up capital stock and surplus of the bank for which the rediscounts are made.

The aggregate of such notes and bills bearing the signature or indorsement of any one person, company, firm, or corporation rediscounted for any one bank shall at no time exceed 10 per cent of the unimpaired capital and surplus of said bank; but this restriction shall not apply to the discount of bills of exchange drawn in good faith against actually existing values.

Any national bank may accept drafts or bills of exchange drawn upon it and growing out of transactions involving the importation, exportation, or domestic shipment of goods having not more than six months slight to run; but no bank shall accept such bills to an amount equal at any time in the aggregate to more than one-half its paid-up capital stock and surplus.

Section 5202 of the Revised Statutes of the United States is hereby amended so as to read as follows: No association shall at any time be indebted, or in any way liable, to an amount exceeding the amount of its capital stock at such time actually paid in and remaining undiminished by losses or otherwise, except on account of demands of the nature following:

First. Notes of circulation.

Second. Moneys deposited with or collected by the association.

Third. Bills of exchange or drafts drawn against money actually on deposit to the credit of the association, or due thereto.

Fourth Liabilities incurred under the provisions of this act.

The Federal reserve board may authorize the reserve bank of the district to discount the direct obligations of member banks, secured by the pledge and deposit of satisfactory securities; but in no case shall the amount so loaned by a Federal reserve bank of any bills receivable and of domestic and foreign bills of exchange and acceptances shall be subject to such restrictions, limitations, and regulations as may be imposed by the Federal reserve bank may, under rules and regulations

#### OPEN-MARKET OPERATIONS.

mposed by the Federal reserve board.

OPEN-MARKET OPERATIONS.

Sec. 14. Any Federal reserve bank may, under rules and regulations prescribed by the Federal reserve board, purchase and sell in the open market, at home or abroad, either from or to domestic or foreign banks, firms, corporations, or individuals, cable transfers and bankers' acceptances and bills of exchange of the kinds and maturities by this act made eligible for rediscount with or without the indorsement of a member bank.

Every Federal reserve bank shall have power:

(a) To deal in gold coin and bullion at home or abroad, to make loans thereon, exchange Federal reserve notes for gold, gold coin, or gold certificates, and to contract for loans of gold coin or bullion, giving therefor, when necessary, acceptable security, including the hypothecation of United States bonds or other securities which Federal reserve banks are authorized to hold;

(b) To buy and sell, at home or abroad, bonds and notes of the United States, and bills, notes, revenue bonds, and warrants with a maturity from date of purchase of not exceeding six months, issued in anticipation of the collection of taxes or in anticipation of the receipt of assured revenues by any State, county, district, political subdivision, or municipality in the continental United States, such purchases to be made in accordance with rules and regulations prescribed by the Federal reserve board;

(c) To purchase from member banks and to sell, with or without its indorsement, bills of exchange arising out of commercial transactions, as hereinbefore defined;

(d) To establish from time to time, subject to review and determination of the Federal reserve bank for each class of paper, which shall be fixed with a view of accommodating commerce and business;

(e) To establish accounts with other Federal reserve banks for exchange purposes and, with the consent of the Federal reserve board, to open and maintain banking accounts in foreign countries, appoint correspondents, and establish agencies in such count

#### GOVERNMENT DEPOSITS.

SEC. 15. The moneys held in the general fund of the Treasury, except the 5 per cent fund for the redemption of outstanding national-bank notes and the funds provided in this act for the redemption of Federal reserve notes may, upon the direction of the Secretary of the Treasury, be deposited in Federal reserve banks, which banks, when required by the Secretary of the Treasury, shall act as fiscal agents of the United States; and the revenues of the Government or any part thereof may be deposited in such banks, and disbursements may be made by checks drawn against such deposits.

No public funds of the Philippine Islands, or of the postal savings, or any Government funds, shall be deposited in the continental United States in any bank not belonging to the system established by this act: Provided, however, That nothing in this act shall be construed to deny the right of the Secretary of the Treasury to use member banks as depositories.

SEC. 16. Federal reserve notes, to be issued at the discretion of the Federal reserve board for the purpose of making advances to Federal reserve banks through the Federal reserve agents, as hereinafter set forth and for no other purpose, are hereby authorized. The said notes shall be obligations of the United States and shall be receivable for all taxes, customs, and other public dues. They shall be receivable for gold on demand at the Treasury Department of the United States, in the city of Washington, D. C., or in gold or lawful money at any Federal reserve bank.

Any Federal reserve bank may make application to the local Federal reserve agent for such amount of the Federal reserve notes hereinbefore provided for as it may require. Such application shall be accom-

panied with a tender to the local Federal reserve agent of collateral in amount equal to the sum of the Federal reserve notes thus applied for and issued pursuant to such application. The collateral security thus offered shall be notes and bills accepted for rediscount under the provisions of section 13 of this act, and the Federal reserve agent shall each day notify the Federal reserve board of all Issues and withdrawals of Federal reserve notes to and by the Federal reserve bank to which he is accredited. The said Federal reserve bank and thorized at any time to call upon a Federal reserve bank for additional security to protect the Federal reserves in gold or lawful money of not less than 35 per cent against its deposits and its Federal reserve notes in actual circulation, but the amount of gold in the Federal reserve hank, together with the amount deposited by it with the Treasury, shall be at least equal to 335 per cent of the Federal reserve notes issued to said bank and in actual circulation and not offset by gold or lawful money deposited with the Federal reserve bank whose lawful reserves bank may notify any Federal reserve bank whose lawful reserves shall be below the amount required to be maintained to make good such reserve, and if such bank shall fail for 30 days thereafter so to make good its lawful reserve, the Federal reserve bank and administer the same during the period of suspension. Notes so paid out shall bear upon their faces a distinctive letter and serial number, which shall be assigned by the Federal reserve bank and administer the same during the period of suspension. Notes so paid out shall bear upon their faces a distinctive letter and serial number, which shall be assigned by the Federal reserve board to each Federal reserve bank through which they were originally issued. No Federal reserve bank through which they were originally issued. No Federal reserve bank through which they were originally issued. No Federal reserve bank through which they were originally issued.

The Federal

as may be established by the Federal reserve board, and the amount of such Federal reserve notes so Issued to any such bank shall, upon delivery, become a first and paramount lien on all the assets of such bank.

Any Federal reserve notes by depositing with the Federal reserve notes to depositing with the Federal reserve notes, gold, gold certificates, or lawful money of the United States. Federal reserve notes so deposited shall not be reissued, except upon compliance with the conditions of an original issue.

The Federal reserve agent shall hold such gold, gold certificates, or lawful money available exclusively for exchange for the outstanding Federal reserve notes when offered by the reserve bank of which he is a director. Upon the request of the Secretary of the Treasury the Federal reserve board shall require the Federal reserve agent to transmit so much of said gold to the Treasury of the United States as may be required for the exclusive purpose of the redemption of such notes.

Any Federal reserve bank may, at its discretion, withdraw collateral deposited with the local Federal reserve agent for the protection of its Federal reserve board.

In order to furnish suitable notes for circulation as Federal reserve hords, the Comptroller of the Currency shall, under the direction of the Secretary of the Treasury, cause plates and dies to be engraved in the best manner to guard against counterfeits and fraudulent alterations, and shall have printed thereform and numbered such quantities of auch notes of the denominations of \$1, \$2, \$5, \$10, \$20, \$50, \$100, as may be required to supply the Federal reserve banks. Such notes shall be in form and tenor as directed by the Secretary of the Treasury, or in the subtreasury or mint of the United States nearest the place of business of each Federal reserve bank, and shall be held for the use of such bank subject to the order of the Comptroller of the Currency for their delivery, as provided by this Act.

The plates and dies to be precured by the Comptroller of the Curr

appropriated for the purpose of furnishing the notes aforesald: Prosided honcever. That mothing in this section contained shall be construed as exempting national banks or Federal reserve banks from their liability to relimburse the United States for any expenses incurred in printing and issuing circulating notes.

Every Federal reserve bank shall receive on deposit from member banks or from Federal reserve banks checks and drafts drawn by any depositor in depositor and drafts drawn by any depositor and drafts drawn by any depositor and drafts drawn by any depositor and said depositor in said reserve hank of the construed as prohibiting a member bank from making reasonable charges for checks and drafts so debited to its account, or for collecting and remitting funds, or for exchange sold to its patrons. The Federal reserve board may, by rule, fix the charges to be collected by the member banks from its patrons whose checks are cleared through the Federal reserve board may, by rule, fix the charges to be collected by the member banks from its patrons whose checks are cleared through the Federal reserve bank and their properties of the federal reserve banks and their branches, and may at its discretion exercise the functions of a clearing house for such Federal reserve banks, or may designate a Federal reserve bank to exercise such functions, and may also require each such bank to exercise such functions, and may also require each such bank to exercise such functions, and may also require each such bank to exercise such functions, and may also require each such bank to exercise such functions, and may also require each such bank to exercise such functions, and may also require each such bank to exercise such functions, and may also require each such bank to exercise such functions, and may also require each such banks of the federal reserve banks and their branches, and section 50 ft he act of June 20, 1874, and section 8 of the act of July 12, 1882, and of any other provisions of existing statutes, as require th

BANK RESERVES.

Sec. 19. Demand liabilities within the meaning of this act shall comprise all liabilities maturing within 30 days, and time deposits shall comprise all deposits payable after 30 days.

When the Secretary of the Treasury shall have officially announced, in such manner as he may elect, the establishment of a Federal reserve bank in any district, every subscribing member bank shall establish and maintain reserves as follows:

(a) A bank not in a reserve or central reserve city as now or hereafter defined shall hold and maintain reserves equal to 12 per cent of the aggregate amount of its demand liabilities and 5 per cent of its time deposits, as follows:

In its vaults for a period of 24 months after said date four-twelfths thereof.

thereof.

In the Federal reserve bank of its district for a period of 6 months after said date, two-twelfths, and for each succeeding 6 months an additional one-twelfth, until five-twelfths have been so deposited, which shall be the amount permanently required.

For a period of 24 months after said date the balance of the reserves may be held in its own vanits, or in the Federal reserve bank, or in banks in reserve or central reserve cities as now defined by law.

After said 24 months' period said reserves, other than those hereinbefore required to be held in the reserve bank, shall be held in the vanits of the member bank or in the Federal reserve bank, or in both, at its option.

(b) A bank in a reserve city, as now or hereafter defined, shall hold

at its option.

(b) A bank in a reserve city, as now or hereafter defined, shall hold and maintain reserves equal to 15 per cent of the aggregate amount of its demand liabilities and 5 per cent of its time deposits, as follows:

In its vaults six-eighteenths thereof.

In the Federal reserve bank of its district for a period of 6 months after the date aforesaid at least three-fifteenths, and for each succeeding 6 months an additional one-fifteenth, until six-fifteenths have been so deposited, which shall be the amount permanently required.

After said 24 months' period all of said reserves, except those hereinbefore required to be held permanently in the Federal reserve bank, shall be held in its vaults or in the Federal reserve bank, or in both, at its ontion.

(c) A bank in a central reserve city, as now or hereafter defined, shall hold and maintain a reserve equal to 18 per cent of the aggregate amount of its demand liabilities and 5 per cent of its time deposits, as follows.

In its vaults six-eighteenths thereof.

In the Federal reserve bank for a period of six months after the date foresaid at least three-eighteenths, and permanently thereafter sixeighteenths.

For a period of 24 months after said date the balance of said re-rves shall be held in its own vaults or in the Federal reserve bank

serves shall be held in its own that tis option.

After said 24 months' period all of said reserves, except those herein permanently required to be held in the Federal reserve bank, shall be held in its own vaults or in the Federal reserve bank, or both, at its

permanently required to be held in the Federal reserve bank, shall be held in its own vaults or in the Federal reserve bank, or both, at its option.

Any Federal reserve bank may receive from the member banks as reserves, not exceeding one-half of each installment, eligible paper as described in section 14 properly indorsed and acceptable to the said reserve bank.

If a State bank or trust company is required by the law of its State to keep its reserves either in its own vaults or with another State bank or trust company, such reserve deposits so kept in such State bank or trust company, such reserve deposits in a national bank in a reserve or central reserve city for a period of three years after the Secretary of the Treasury shall have officially announced the establishment of a Federal reserve bank in the district in which such State bank or trust company is situate. Except as thus provided no member bank shall keep on deposit with any nonmember bank a sum in excess of 10 per cent of its own paid-up capital and surplus. No member bank shall extend directly or indirectly the benefits of this system to a nonmember bank, except upon written permission of the Federal reserve board, under penalty of suspension.

The reserve carried by a member bank with a Federal reserve bank may, under the regulations and subject to such penalties as may be prescribed by the Federal reserve board, be checked against and withdrawn by such member bank for the purpose of meeting existing liabilities: Provided, however, That no bank shall at any time make new loans or shall pay any dividends unless and until the total reserve required by law is fully restored.

United States may remain nonmember banks, and shall in that event maintain reserves and comply with all the conditions now provided by law regulating them; or said banks, except in the Philippine Islands, may, with the consent of the reserve board, become member banks of any one of the reserve districts, and shall, in that event, take stock, maintain reserves, and be subject

BANK EXAMINATIONS.

Sec. 21. Every member bank shall be examined by the Comptroller of the Currency at least twice in each calendar year and as much oftener as the Federal reserve board shall consider necessary. The Federal reserve board may authorize examinations by the State authorities to be accepted in the case of State banks and trust companies, and may at any time direct the holding of a special examination. The person making the examination of any member bank shall have power to call together a quorum of the directors of such bank, who shall, under oath, state to such examiner the character and circumstances of such of its loans or discounts as he may designate. The Federal reserve board shall fix the salaries of all bank examiners and make report thereof to Congress. The expense of the examinations herein provided for shall be assessed by authority of the Federal reserve board upon the banks examined in proportion to assets or resources held by such banks upon the dates when the various banks are examined.

In addition to the examinations made and conducted by the Comptroller of the Currency, every Federal reserve bank may, with the approval of the Federal reserve agent or of the Federal reserve board, provide for special examination of member banks within its district. Such examination shall be so conducted as to inform the Federal reserve bank under whose auspices it is carried on of the condition of its member banks and of the lines of credit which are being extended by them. Every Federal reserve bank shall at all times furnish to the Federal reserve board such information as may be demanded by the latter concerning the condition of any member bank within the district of the said Federal reserve bank.

No bank shall be subject to any visitorial powers other than such as are authorized by law or vested in the courts of justice, or such as shall be or shall have been exercised or directed by Congress, or either House thereof, or any committee thereof.

The Federal reserve board shall, at least once ea

shall be or shall have been exercised or directed by Congress, or either House thereof, or any committee thereof.

The Federal reserve board shall, at least once each year, order an examination of each Federal reserve bank, and upon joint application of 10 member banks the Federal reserve board shall order a special examination and report of the condition of any Federal reserve bank.

Sec. 22. No member bank or any officer, director, or employee thereof shall hereafter make any loan or grant any gratuity to any examiner of such bank. Any bank officer, director, or employee violating this provision shall be deemed guilty of a misdemeanor and shall be imprisoned not exceeding one year or fined not more than \$5,000, or both; and fined a further sum equal to the money so loaned or gratuity given. Any examiner accepting a loan or gratuity from any bank examined by him or from an officer, director, or employee thereof shall be deemed guilty of a misdemeanor and shall be imprisoned not exceeding one year or fined not more than \$5,000, or both; and fined a further sum equal to the money so loaned or gratuity given; and shall forever thereafter be disqualified from holding office as a national-bank examiner. No national-bank examiner shall perform any other service for compensation while holding such office for any bank or officer, director, or employee of a member bank and other than a reasonable fee paid by said bank to such officer, director, or employee, or services rendered to such bank, no officer, director, employee, or attorney of a member bank shall be a beneficary of or receive, directly er indirectly, any fee, commission, gift, or other consideration for or in connection with any transaction or business of the bank. No examiner, public or private, shall disclose the names of borrowers or the collateral for loans of a member bank to other than the proper officers of such bank

without first having obtained the express permission in writing from the Comptroller of the Currency, except when ordered to do so by a court of competent jurisdiction, or by direction of the Congress of the United States, or either House thereof, or any committee thereof. Any person violating any provision of this section shall be punished by a fine of not exceeding \$5,000 or by imprisonment not exceeding one year,

fine of not exceeding \$5,000 or by imprisonment not exceeding one year, or both.

Except so far as already provided in existing laws this provision shall not take effect until 60 days after the passage of this act.

Sec. 23. The stockholders of every national banking association shall be held individually responsible for all contracts, debts, and engagements of such association, each to the amount of his stock therein, at the par value thereof in addition to the amount invested in such stock. The stockholders in any national banking association who shall have transferred their shares or registered the transfer thereof within 60 days next before the date of the failure of such association to meet its obligations, or with knowledge of such impending failure, shall be liable to the same extent as if they had made no such transfer, to the extent that the subsequent transferee fails to meet such liability but this provision shall not be construed to affect in any way any recourse which such shareholders might otherwise have against those in whose names such shares are registered at the time of such failure.

#### LOANS ON FARM LANDS.

Sec. 24. Any national banking association not situated in a reserve city or central reserve city may make loans secured by improved and unencumbered farm land, situated within its Federal reserve district, but no such loan shall be made for a longer time than five years nor for an amount exceeding 50 per cent of the actual value of the property offered as security. Any such bank may make such loans in an aggregate sum equal to 25 per cent of its capital and surplus.

The Federal reserve board shall have power from time to time to add to the list of cities in which national banks shall not be permitted to make loans secured upon real estate in the manner described in this section.

#### FOREIGN BRANCHES.

Sec. 25. Any national banking association possessing a capital and surplus of \$1,000,000 or more may file application with the Federal reserve board, upon such conditions and under such regulations as may be prescribed by the said board, for the purpose of securing authority to establish branches in foreign countries or dependencies of the United States for the furtherance of the foreign commerce of the United States and to act, if required to do so, as fiscal agents of the United States. Such application shall specify, in addition to the name and capital of the banking association filing it, the place or places where the banking operations proposed are to be carried on and the amount of capital set aside by the said banking association filing such application for the conduct of its foreign business at the branches proposed by it to be established in such place or places. The Federal reserve board shall have power to approve or to reject such application if, in its judgment, the amount of capital proposed to be set aside for the conduct of foreign business is inadequate or if for other reasons the granting of such application is deemed inexpedient.

Every national banking association which shall receive authority to establish foreign branches shall be required at all times to furnish information concening the condition of such branches to the Comptroller of the Currency upon demand, and the Federal reserve board may order special examinations of the said foreign branches at such time or times as it may deem best. Every such national banking association shall conduct the accounts of each foreign branch independently of the accounts of other foreign branches established by it and of its home office, and shall at the end of each fiscal period transfer to its general ledger the profit or loss accruing at each branch as a separate item.

Sec. 26. All provisions of law inconsistent with or superseded by

nome office, and shall at the end of each fiscal period transfer to its general ledger the profit or loss accruing at each branch as a separate item.

Sec. 26. All provisions of law inconsistent with or superseded by any of the provisions of this act are to that extent and to that extent only hereby repealed. Nothing in this act contained shall be construed to repeal the parity provision or provisions contained in an act approved March 14, 1900, entitled "An act to define and fix the standard of value, to maintain the parity of all forms of money issued or coined by the United States, to refund the public debt, and for other purposes," and the Secretary of the Treasury may for such purposes, or to strengthen the gold reserve, borrow gold on the security of United States bonds or for one-year notes bearing interest at a rate of not to exceed 3 per cent per annum, or sell the same if necessary to obtain gold. When the funds of the Treasury on hand justify, he may purchase and retire such outstanding bonds and notes.

Sec. 27. The provisions of the act of May 30, 1908, authorizing national currency associations, the issue of additional national-bank circulation, and creating a National Monetary Commission, which expires by limitation under the terms of such act on the 30th day of June, 1914, are hereby extended to June 30, 1915, and sections 5153, 5172, 5191, and 5214 of the Revised Statutes of the United States, which were amended by the act of May 20, 1908, are hereby reenacted to read as such sections read prior to May 20, 1908, subject to such amendments or modifications as are prescribed in this act.

Sec. 28. If any clause, sentence, paragraph, or part of this act shall for any reason be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder of this act, but shall be confined in its operation to the clause, sentence, paragraph, or part hereof directly involved in the controversy in which such judgment shall have been rendered.

Sec.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Oklahoma.

Mr. OWEN. Mr. President, several Senators have expressed a desire to speak to-morrow on this matter, and I shall ask that it be temporarily laid aside now; but I should like to say that when we come to consider it I hope that Members of the Senate who desire to express themselves upon it will be prepared to go on with it, because I shall feel obliged to ask for a vote, section by section, as we come to it, and I desire that Senators sha'l be prepared to offer amendments if they wish to do so.

Mr. GALLINGER. The Senator will not forget that we have a unanimous-consent agreement which takes precedence to-

Mr. OWEN. Of course I understand that. I do not intend to interfere at all with the unanimous-consent agreement with regard to the Hetch Hetchy bill.

The VICE PRESIDENT. The question is on the amendment

proposed by the Senator from Oklahoma.

Mr. OWEN. If no Senator is ready to discuss the matter, I ask that it be laid aside for the present.

The VICE PRESIDENT. Is there objection? The Chair

hears none.

Mr. OWEN. I move that the Senate adjourn.

The motion was agreed to, and (at 9 o'clock and 18 minutes p. m.) the Senate adjourned until to-morrow, Tuesday, December 2, 1913, at 11 o'clock a. m.

#### HOUSE OF REPRESENTATIVES.

#### Monday, December 1, 1913.

This being the day designated by the Constitution for the annual meeting of Congress, the Members of the House of Representatives assembled in their Hall for the second session of the Sixty-third Congress, and at 12 o'clock noon were called to order by the Speaker.

#### PRAYER.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

"Our soul waiteth for the Lord; He is our help and shield. For our heart shall rejoice in Him, because we have trusted in His holy name. Let Thy mercy, O Lord, be upon us according as we hope in Thee."

cording as we hope in Thee."

May we realize, O God, that somehow our soul is touched from every angle by Thy soul; that to consciously live in Thee, through Thee, for Thee is life eternal. Under the dispensation of Thy providence we stand here to-day upon the threshold of the regular session of the Sixty-third Congress, confronted by great economical, social, and psychological problems, which involve the welfare of the individual, the home, the Government, and our religious aspirations. Hence we pause and pray most fervently that Thy wisdom may guide and Thy strength sustain these Thy servants in their deliberations.

Especially be with the Speaker of this House that with clear vision and firm hand he may guide to the best results. Be Thou the counselor of our President and his associates that the affairs of State may be wisely and amicably adjusted. May Thy judgments be the judgments of the judiciary that justice tempered with mercy may obtain. That we may grow in everything that pertains to the welfare of not only our people but of all peoples and peace and righteousness more and more abound. To the glory and honor of Thy holy name. Amen.

#### CALL OF THE ROLL BY STATES.

The SPEAKER. The Clerk will call the roll by States.

The Clerk called the roll by States, when the following Members responded:

George W. Taylor. S. Hubert Dent, jr. Henry D. Clayton. Fred L. Blackmon. J. Thomas Heflin.

Richmond P. Hobson. John L. Burnett. Oscar W. Underwood. John W. Abercrombie. ARIZONA.

The SPEAKER. Three hundred and forty-three Members have answered to their names; a quorum.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed the following resolutions:

Resolved, That the Secretary inform the House of Representatives that a quorum of the Senate is assembled and that the Senate is ready to proceed to business.

Also:

Resolved, That a committee, consisting of two Senators, be appointed to join such committee as may be appointed by the House of Representatives to wait upon the President of the United States and inform him that a quorum of each House is assembled, and that Congress is ready to receive any communication he may be pleased to make.

In compliance with the foregoing, the Vice President appointed as said committee Mr. Kern and Mr. Gallinger.

The message also announced that the Senate had passed with-

out amendment the following House concurrent resolution:

House concurrent resolution 24.

Resolved by the House of Representatives (the Senate concurring), That the two Houses of Congress assemble in the Hall of the House of Representatives on Tuesday, the 2d day of December, 1913, at 1 o'clock in the afternoon, for the purpose of receiving such communications as the President of the United States shall be pleased to make them.

NOTIFICATION TO THE PRESIDENT.

Mr. UNDERWOOD. Mr. Speaker, I move the adoption of the resolution which I send to the Clerk's desk.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House resolution 322.

Resolved, That a committee of three be appointed by the Speaker on the part of the House of Representatives to join with the committee on the part of the Senate to wait on the President of the United States and notify him that a quorum of the two Houses is assembled and that Congress is ready to receive any communication that he may be pleased

The question was taken, and the resolution was agreed to.
The SPEAKER. The Chair appoints the gentleman from Ala-

bama [Mr. Underwood], the gentleman from New York [Mr. FITZGERAID], and the gentleman from Illinois [Mr. MANN].

NOTIFICATION OF THE SENATE,

Mr. FITZGERALD. Mr. Speaker, I offer the following resolution.

The SPEAKER. The Clerk will report the resolution offered by the gentleman from New York.

The Clerk read as follows:

House resolution 323.

Resolved, That a message be sent to the Senate to inform that body that a quorum of the House of Representatives is assembled and that the House is ready for business.

The SECALERY

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. Watson, for one week, on account of sickness.

To Mr. Pepper, indefinitely, on account of serious illness.

To Mr. Gerry, indefinitely, on account of serious illness. To Mr. Walker, indefinitely, on account of serious illness.

INSERTION OF ADDRESSES IN THE RECORD.

Mr. HENRY. Mr. Speaker, I ask unanimous consent to insert in the RECORD three addresses by Judge Sam A. Lindsey, of Texas, one entitled "The building of a State," the other "Our rural life and farm problems," the other "The cooperative agricultural plan."

Judge Lindsey is chairman of the Texas Farm Life Com-

mission, and these documents are of great value.

The SPEAKER. The gentleman from Texas [Mr. Henry] asks unanimous consent to extend his remarks in the Record

by inserting three speeches made by Judge Lindsey, of Texas.

Mr. BARNHART. Mr. Speaker, some time ago I announced
on the floor of the House that, as chairman of the Committee on Printing, I felt it my duty to object to the insertion of all sorts of miscellaneous speeches and newspaper articles in the

CONGRESSIONAL RECORD. I am more firmly convinced than ever that it is the duty of some one to take that position now, because of some wholly superfluous and expensive publications that have been inserted by the unanimous-consent method since that time. While I do not want to offend anyone and do not desire to appear presumptuous in the matter at all, I feel it is the duty of some one to attempt economies in the matter of the public printing, and I give notice now that unless speeches and addresses made elsewhere than on this floor and offered for insertion in the RECORD are delivered by Members of Congress and have reference to public questions in hand, I shall henceforth object, and I object [Applause.] now.

Mr. MANN. Will the gentleman from Indiana [Mr. BARN-

HART] withhold his objection for a moment?

Mr. BAKNHART. I will; yes.

Mr. MANN. As I understand it, these speeches were delivered by one of the commission that went to Europe?

Mr. HENRY. They were.

Mr. HENRY. They were. Mr. MANN. The Senate has printed, by order of the Senate, as Senate documents, a number of speeches and articles upon the subject of rural credits, some of them by members of this

commission. I have taken the trouble to read those with a good deal of interest and, I hope, with some profit. I think it would be desirable to print these things, not in the RECORD, where nobody reads them in the fine print, but as documents, in a limited number, so that the Members of the House who have not had an opportunity to study this subject could get the benefit of the knowledge of these men who went abroad to study it.

Mr. BARNHART. That explanation puts an entirely different phase on the matter, but I shall still object to printing them

in the RECORD.

Mr. HENRY. Mr. Speaker, then I ask that these speeches be

printed as a House document.

The SPEAKER. The gentleman from Texas changes his request and asks that these speeches be printed as a House docu-

Mr. MURDOCK. Mr. Speaker, I ask that the gentleman from Indiana [Mr. BARNHART] withhold his objection, so that I may make an inquiry

The SPEAKER. The gentleman from Indiana [Mr. BARN-HART] has not objected, as the Chair understands it, to these

being printed as a document.

Mr. MURDOCK. Then I ask that the gentleman from Texas [Mr. Henry] withhold his request for a moment. The gentle-man from Indiana [Mr. BARNHART] has made an important pronouncement. It has been made before by men who intended to carry it out, and I am among the number. Now, I would like to ask the gentleman from Indiana if he intends to live up to this resolution?

Mr. BARNHART. That is my intention.

Mr. FOSTER. Swear him!

Mr. MURDOCK. Does the gentleman from Indiana [Mr. BARNHART] intend to keep extraneous matter out of the Rec-

orn, except that which takes place in debate?

Mr. BARNHART. Yes; but with the assistance of gentlemen like the gentleman from Kansas [Mr. MURDOCK] and others. It would be too much for any one Member to alone assume the responsibility of keeping the Congressional Record clear of superfluous and extraneous matter. It is the duty of every Member of this House, as I look at it, to help prevent the printing of all sorts of "junk," relevant and irrelevant, in the Rec-ORD, and if Members want important documents printed they should introduce resolutions providing therefor in the regular way, and I guarantee that they shall have prompt and courteous consideration by the Committee on Printing.

Mr. MURDOCK. Yes; but every Member of the House does

not do it, and nobody does, as a matter of fact.

Mr. MANN. A statement like this is always made, according to my recollection, at every session of Congress.

Mr. BARNHART. I shall do my best at this session to perform my duty in that respect, and ask other Members familiar with public-printing abuses to help me.

Mr. MURDOCK. Yes; this statement is made every year,

but nobody lives up to the proposition.

Mr. FITZGERALD. Why does not the gentleman himself live up to it?

Mr. MURDOCK. I did not have the nerve, I will say to the

gentleman from New York. [Laughter.]

The SPEAKER. The gentleman from Texas [Mr. HENRY] modifies his request and asks that these three speeches by Mr. Lindsey, of Texas, be printed as a House document. Is there objection?

Mr. FOSTER. Mr. Speaker, I would like to inquire of the gentleman from Texas as to how many copies of this document under the rules will be printed?

Mr. ELDER. Mr. Speaker, I object. Mr. MANN. Under the rules there will be printed the usual number; about 1,200 or 1,400.

The SPEAKER. The gentleman from Louisiana [Mr. Elder] objects.

Mr. ELDER. Mr. Speaker, I hope the gentleman from Texas will change that request so that the documents will go to the folding room. I made a statement some time ago of the advantage of having them go to the folding room instead of putting them in the document room.

The SPEAKER. What is the request of the gentleman from

Mr. HENRY. It is immaterial, Mr. Speaker, whether they go to the document room or to the folding room. I want to accommodate the Members.

Mr. MANN. If the gentleman from Texas will yield—Mr. HENRY. Yes—

Mr. MANN. If the House should order them to go to the folding room, they would all, as a fact, go to the superintendent of documents in the Printing Office for sale, because under the usual number there are not enough copies printed to give every. Member of the House a copy, and under the law, when that is the case, the surplus goes to the superintendent of documents, so that we would not get any.

Mr. FINLEY. Mr. Speaker, will the gentleman yield?

The SPEAKER. Does the gentleman from Texas yield to the gentleman from South Carolina?

Mr. HENRY. I yield to the gentleman for a question.

I reserve the right to object, Mr. Speaker. Mr. FINLEY.

The SPEAKER. The gentleman from South Carolina reserves the right to object.

Mr. FINLEY. I suggest to the gentleman from Texas that he introduce this resolution in the usual form and let the matter go to the Committee on Printing.

Mr. HENRY. This is not an unusual request.
Mr. FINLEY. I suggest that the gentleman let the matter

go through the usual form.

Mr. HENRY. I will introduce a resolution to print an additional number if the gentleman wishes it. But here are these addresses, made by a gentleman who was a delegate to Europe and who has brought back valuable information. The Senate has printed a number of these documents, and I see no reason why the Members of the House should not have the benefit of these most important views. We can print these addresses in

the shape of a document,

Mr. FINLEY. If the gentleman from Texas will pardon me, my suggestion was not with a view to procuring any number of these documents for myself. But I happen to have some little knowledge relating to printing for Congress, and it is the regular order of business, and it is the rule whenever you come in here with a proposition for printing without investigation by a committee to refer it to the Committee on Printing. Of course, the gentleman from Texas states facts to the House, but the usual course has been-it was so in the last Congress and in preceding Congresses—the rule and the practice have been that such matters go to the Committee on Printing.

Mr. HENRY. Mr. Speaker, Mr. Fletcher, the Senator from Florida, has caused to be printed a number of these documents,

and-

Mr. FINLEY. Mr. Speaker, if the gentleman will permit-Mr. HENRY. If the gentleman wishes to object to receiving these valuable statements here, throwing light on farm life and upon conditions for better farming and better farm life, of course I shall not obtrude them upon his attention, and before I would have objection made to such a valuable document as this would make, I would prefer to withdraw my request.

Mr. FINLEY. Mr. Speaker, I decline to permit the gentle-

man from Texas to place me in any such position.

Mr. HENRY. But I shall place the gentleman there if he desires to object.

Mr. FINLEY. I object, then.

The SPEAKER. The gentleman from South Carolina [Mr.

Mr. RAGSDALE. Mr. Speaker, at the last session of Congress, as a member of the Banking and Currency Committee, I tried repeatedly to have hearings before the Banking and Currency Committee in order to get certain information to work on. We were then informed that this body did not have sufficient information to prepare a bill, and-

The SPEAKER. The Chair will suggest to the gentleman

that there is not anything before the House.

Mr. RAGSDALE. I am going to bring up this very matter, Mr. Speaker.

The SPEAKER. The gentleman will have to make a motion

or submit a request.
Mr. RAGSDALE. I request, then, Mr. Speaker, that this letter and these publications be inserted in the Congressional RECORD, and I do it, Mr. Speaker-

Mr. HARDWICK. Mr. Speaker, that is not in order under

the rules.

Mr. RAGSDALE. I will ask the gentleman from Georgia to withhold that for a moment.

The SPEAKER. The gentleman objects.

Mr. RAGSDALE. He can not object to my motion. I am not asking unanimous consent. I am making a motion.

The SPEAKER. The motion is not privileged.

Mr. RAGSDALE. But he does not make the point of order. He simply objects.

The SPEAKER. He has objected under his right. There is an easy way of getting the thing before the House, and that is to introduce it through the basket.

#### COMMITTEE ON AGRICULTURE.

Mr. LEVER. Mr. Speaker, I ask unanimous consent for the present consideration of the following resolution.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House resolution 321.

Resolved, That the Committee on Agriculture of the House be granted permission to hold meetings during the sessions of the House.

The SPEAKER. Is there objection?

Mr. MANN. Mr. Speaker, reserving the right to object, does the gentleman from South Carolina know how many committees have already been granted this privilege?

Mr. LEVER. I do not, Mr. Speaker. This is the customary

resolution, as I understand it.

Mr. MANN. I believe it is the customary resolution. The rules provide that no committee of the House, except the Committee on Rules, shall sit during the sessions of the House. It has been customary for nearly every committee to ask for that privilege. I believe the only conspicuous exception is the Committee on Interstate and Foreign Commerce, which has transacted more business than any other committee in the House and which never has asked for that permission. Now we are told that practically all of the committees propose to ask for it, and that it is proposed to have a great many investigations going on, which will take a lot more Members from the House during the sessions of the House; and I am wondering whether it will be possible during this session, as it has not been possible durthe session which just closed, to keep enough Democratic Members of the House to make an attendance of respectable size during the session of Congress.

Mr. FOSTER. Democratic attendance is always respectable.

Mr. MANN. I said respectable in size.

Mr. HANN. I said respectable in size.

Mr. FITZGERALD. Mr. Speaker, the gentleman from Illinois need not worry. There will be enough Democrats here at all times, whenever it is sufficiently important that they be present, to vote for legislation beneficial to the country, which will be bitterly antagonized by gentlemen on that side under the lead of the gentleman from Illinois. [Applause on the Demo-

cratic side.]

Mr. MANN. I suppose the gentleman from New York did not consider it important to have a quorum here when he vainly tried for days to get the deficiency appropriation bill passed. [Applause on the Republican side.] Having been absent himself ever since, he now endeavors to tell how many Democratic Members have been here. The gentleman from New York is here so seldom that he does not know. [Laughter.]

Mr. FITZGERALD. Mr. Speaker, the country would not have suffered any-although Members might have been greatly relieved-if the gentleman from Illinois had disappeared for the past two or three months. [Applause and laughter on the Democratic side.]

Mr. MANN. "The gentleman from Illinois" did not disappear, because Congress was in session, and the gentleman from Illinois was where he belonged, where the gentleman from New York was not—present at the meetings of the

Mr. FITZGERALD. Mr. Speaker, there was a conspicuous occasion when the gentleman from Illinois was not present, and that was upon the final passage of the tariff bill, when the conference report was brought into this House. [Applause on the Democratic side.]

The SPEAKER. Is there objection to the request of the gentleman from South Carolina [Mr. Lever] for the present

consideration of the resolution?

There was no objection. The resolution was agreed to.

IMPROVEMENT AND DEVELOPMENT OF WATERWAYS.

Mr. GOLDFOGLE. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing an address delivered by our associate, Hon. J. Hampton Moore, of Pennsylvania, on the subject of the improvement and development of the waterways, and the resolutions adopted by the Atlantic

Deep Waterways Association.

Mr. LAFFERTY. Mr. Speaker, reserving the right to object, I ask the indulgence of the House to say just a word upon this question which has been raised this morning, of printing matter in the RECORD. I, as one Member of this House, have not depended, and will not depend in the future, upon the press of this country for the information that I desire to communicate to my constituents. For that reason I personally deprecate the sentiment that has cropped out here, expressed by some Members, in favor of curtailing what I consider the efficiency of the Congressional Record. I deprecate the objection that was made to the publication as a House document of the three addresses of the gentleman from Texas who was on the agricultural commission. I have inquired, and I find that the publication of House documents is cheaper than printing in the CONGRESSIONAL RECORD.

Mr. UNDERWOOD. Mr. Speaker, I demand the regular order. The SPEAKER. The regular order is, Is there objection to the request of the gentleman from New York?

Mr. LAFFERTY. I do not object, Mr. Speaker. The SPEAKER. Is there objection?

Mr. MURDOCK. Mr. Speaker, reserving the right to object-

Mr. MADDEN and others. The regular order! The SPEAKER: The regular order is, Is there objection to the request of the gentleman from New York?

Mr. CANDLER of Mississippi. Mr. Speaker, I would like to

ask the gentleman what is his request?

The SPEAKER. The gentleman from New York asks unanimous consent to print in the RECORD the speech of Hon. J. HAMP-TON MOORE on the subject of the intercoastal canal. Is there objection?

There was no objection.

#### ADJOURNMENT.

Mr. UNDERWOOD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 7 minutes p. m.) the House adjourned until to-morrow, Tuesday, December 2, 1913, at 12 o'clock noon.

#### EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of the Interior, transmitting statement of the fiscal affairs of Indian tribes for the fiscal year ended June 30, 1913, as required by law (H. Doc. No. 328); to the Committee on Indian Affairs and ordered to be

2. A letter from the Secretary of the Interior, transmitting statement of expenditures for the fiscal year 1913 from the appropriation "Indian school and agency buildings, 1913," act of March 3, 1911 (H. Doc. No. 329); to the Committee on Indian

Affairs and ordered to be printed.

3. A letter from the Secretary of the Interior, transmitting statement of expenditures for the fiscal year 1913 from the appropriation "Indian schools, support" (H. Doe. No. 330); to the Committee on Indian Affairs and ordered to be printed.

4. A letter from the Secretary of the Interior, transmitting statement of cost of survey and allotment work, Indian Service, for fiscal year 1913 (H. Doc. No. 331); to the Committee on Indian Affairs and ordered to be printed.

5. A letter from the Secretary of the Interior, transmitting statement of expenditures for the fiscal year 1913 from the appropriation "Industrial work in care of timber, 1913" (H. Doc.

No. 335); to the Committee on Agriculture and ordered to be

6. A letter from the Secretary of the Interior, transmitting a detailed statement of expenditures made for the purpose of encouraging industry among the Indians on the Tongue River Indian Reservation during the fiscal year ended June 30, 1913 (H. Doc. No. 294); to the Committee on Indian Affairs and ordered to be printed.

7. A letter from the Secretary of the Interior, transmitting a detailed report of expenditures for the purpose of encouraging industry among the Indians at various reservations during fiscal year ended June 30, 1913 (H. Doc. No. 295); to the Committee on Indian Affairs and ordered to be printed.

8. A letter from the Secretary of the Interior, transmitting report that there were no Indian hostilities against the United States during the fiscal year ended June 30, 1913 (H. Doc. No. 296); to the Committee on Indian Affairs and ordered to be printed.

9. A letter from the Secretary of the Interior, transmitting a report on the investigation of the conditions on the western Navajo Indian Reservation in Arizona, with respect to the necessity of constructing a bridge across the Moencopi Wash, on said reservation, etc. (H. Doc. No. 298); to the Committee on Indian Affairs and ordered to be printed.

10. A letter from the Secretary of the Interior, transmitting a report that there have been no diversions in appropriations for the several Indian tribes for the fiscal year ended June 30, 1913, act approved March 1, 1907 (34 Stats. L., 1015-16) (H. Doc. No. 333); to the Committee on Indian Affairs and ordered to be

11. A letter from the Secretary of the Interior, transmitting report showing the expenditures for the fiscal year ended June 36, 1913, as required by act approved March 3, 1885 (H. Dec. No. 336); to the Committee on Indian Affairs and ordered to be printed.

12. A letter from the Secretary of the Interior, transmitting report of the expenditures from the permanent fund of the Sioux Indians during fiscal year ended June 30, 1913 (H. Doc. No. 332); to the Committee on Indian Affairs and ordered to be printed.

13. A letter from the Secretary of the Interior, transmitting report showing the diversion of appropriations for the pay of specified employees in the Indian service for the fiscal year ended June 30, 1913 (H. Doc. No. 334): to the Committee on

Indian Affairs and ordered to be printed.

14 A letter from the Secretary of the Interior, transmitting report showing distribution of moneys expended for irrigation and drainage, Indian service, fiscal year ended June 30, 1913. (H. Doc. No. 299); to the Committee on Indian Affairs and ordered to be printed.

15. A letter from the Secretary of the Interior, transmitting report of expenditures of moneys carried as "Indian moneys-Proceeds of labor," during the fiscal year ended June 30, 1913. (H. Doc. No. 327); to the Committee on Indian Affairs and

ordered to be printed.

16. A letter from the Secretary of the Interior, transmitting supplementary estimate of appropriation for support and education of 700 Indian pupils at the Indian school at Phoenix, Ariz. (H. Doc. No. 292); to the Committee on Indian Affairs and ordered to be printed.

17. A letter from the Secretary of the Interior, transmitting the Twelfth Annual Report of the Reclamation Service (H. Doc. No. 297); to the Committee on Irrigation of Arid Lands and

ordered to be printed.

18. A letter from the Acting Secretary of Labor, transmitting detailed report of expenditures under the appropriation Miscellaneous expenses, Division of Naturalization, 1913." (H. Doc. No. 293); to the Committee on Appropriations and ordered to be printed.

#### CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Invalid Pensions was discharged from the consideration of the bill (H. R. 9297) granting an increase of pension to Nelson L. Belle Isle, and the same was referred to the Committee on Pensions.

#### PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memo-

rials were introduced and severally referred as follows:

By Mr. BALTZ: A bill (H. R. 9573) to reapportion and rearrange the judicial districts of Illinois, and for other purposes;

to the Committee on the Judiciary.

By Mr. ADAMSON: A bill (H. R. 9575) to amend section 20 of the act to regulate commerce approved February 4, 1887, as amended by subsequent acts; to the Committee on Interstate and Foreign Commerce.

Also, a bill (H. R. 9576) to provide for a commercial directory and the regulation of transactions of individuals, partnerships, and corporations engaging in interstate commerce; to the Com-

mittee on Interstate and Foreign Commerce.

Also, a bill (H. R. 9577) to authorize common carriers in interstate commerce to contract with newspapers for publication of schedules and other information, and issue receipts good for payment of transportation; to the Committee on Interstate and Foreign Commerce.

By Mr. PARK: A bill (H. R. 9578) for the reduction of postage on first-class matter to 1 cent per ounce; to the Committee

on the Post Office and Post Roads.

By Mr. McANDREWS: A bill (H. R. 9579) providing for a building for post office and other purposes at Cicero, Ill.; to the Committee on Public Buildings and Grounds.

Also, a bill (H. R. 9580) providing for a site for public building for post-office purposes and other Government offices at Maywood, Hl.; to the Committee on Public Buildings and Grounds.

By Mr. HINEBAUGH: A bill (H. R. 9581) to provide for a site for a public building for post-office purposes at Morris, Ill.; to the Committee on Public Buildings and Grounds.

By Mr. FERGUSSON: A bill (H. R. 9582) to provide for the disposition of grazing lands under the homestead laws, and for other purposes; to the Committee on the Public Lands.

Also (by request), a bill (H. R. 9583) to authorize the allowance and patenting of certain soldiers' additional claims purchased in good faith, relying upon the records of the General

Land Office; to the Committee on the Public Lands.

By Mr. HAMILL: A bill (H. R. 9584) to authorize the Secretary of the Treasury of the United States to sell the present old

post office and the site thereof in the city of Jersey City, N. J.; to the Committee on Public Buildings and Grounds,

Also, a bill (H. R. 9585) to authorize the Secretary of the Treasury of the United States to acquire additional land for the site and make further additions to the post-office building at Jersey City, N. J.; to the Committee on Public Buildings

and Grounds.

By Mr. LAFFERTY: A bill (H. R. 9586) to provide additional entries for certain homestead entrymen in the States of Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, North Dakota, Oregon, Utah, Washington, and Wyoming; to the Committee on the Public Lands.

By Mr. MAHAN: A bill (H. R. 9587) authorizing a preliminary

examination and survey of the breakwater in the harbor of Stonington, Conn.; to the Committee on Rivers and Harbors.

By Mr. STOUT: A bill (H. R. 9588) to increase the cost, to authorize the enlargement, extension, or remodeling of the public building at Billings, Mont.; to the Committee on Public Buildings and Grounds.

By Mr. GRIEST: A bill (H. R. 9589) authorizing the Secretary of War to donate to the Grand Army post of Manheim, Pa., two bronze or brass cannon or fieldpieces; to the Commit-

tee on Military Affairs.

By Mr. FRENCH: A bill (H. R. 9590) to provide for the survey of certain lands in the State of Idaho; to the Committee

on Appropriations.

By Mr. PALMER: A bill (H. R. 9591) to permit the manufacture of denatured alcohol by mixing domestic and wood alcohol while in process of distillation; to the Committee on Ways and Means.

By Mr. HENRY: A bill (H. R. 9592) to amend the antitrust laws of the United States; to the Committee on the Ju-

By Mr. ANTHONY: A bill (H. R. 9593) to provide for the monthly payment of pensions, and for other purposes; to the Committee on Invalid Pensions.

By Mr. REILLY of Connecticut: A bill (H. R. 9594) to grant

compensation to post-office employees injured in the performance of their duties; to the Committee on the Post Office and Post Roads.

By Mr. ESCH: A bill (H. R. 9595) to amend an act entitled "An act to amend an act entitled 'An act to regulate commerce,' approved February 4, 1887, and all acts amendatory thereof, and to enlarge the powers of the Interstate Commerce Commission," approved June 29, 1906; to the Committee on Interstate and Foreign Commerce.

By Mr. MADDEN: A bill (H. R. 9596) to reclassify the clerks and messengers of the mobile army and promote their efficiency; to the Committee on Military Affairs.

By Mr. CANDLER of Mississippi: A bill (H. R. 9597) to re-fund to lawful claimants the cotton tax collected for the years 1863, 1864, 1865, 1866, 1867, and 1868; to the Committee on War Claims

Also, a bill (H. R. 9598) to grant to the several States all the public lands therein for common-school purposes when the same shall become less than 50,000 acres in such State; to the Committee on the Public Lands.

Also, a bill (H. R. 9599) to increase the compensation of rural letter carriers; to the Committee on the Post Office and Post

By Mr. CARTER: A bill (H. R. 9600) to authorize certain changes in homestead allotments of the Choctaw and Chickasaw

Indians in Oklahoma; to the Committee on Indian Affairs.

By Mr. KENNEDY of Connecticut: A bill (H. R. 9659) to amend the act approved September 18, 1913, relating to the free importation of articles to be exhibited at the Panama-Pacific Exposition; to the Committee on Ways and Means.

By Mr. SINNOTT: Concurrent resolution (H. Con. Res. 25)

authorizing and directing the Secretary of War to appoint two members of the project board of consulting engineers of the War Department to assist and cooperate with the committee appointed by the State of Oregon to investigate and examine The Dalles power project on the Columbia River; to the Committee on Rivers and Harbors.

By Mr. HOBSON: Joint resolution (H. J. Res. 152) proposing an amendment to the Constitution of the United States; to the

Committee on the Judiciary.

By Mr. GRAY: Joint resolution (H. J. Res. 153) to provide for the invitation, reception, and entertainment of members of the parliaments and national legislative bodies of the world, and to authorize an assembly of such members to secure the immediate suspension of increased naval construction by international agreement to be entered into by such assembly; to the Committee on Foreign Affairs.

#### PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADAIR: A bill (H. R. 9601) granting an increase of

pension to Sarah A. Purdy; to the Committee on Invalid Pen-

Also, a bill (H. R. 9602) granting an increase of pension to Samuel Ginger; to the Committee on Invalid Pensions.

By Mr. BOOHER: A bill (H. R. 9603) granting a pension to

Caroline Grimm; to the Committee on Invalid Pensions.

By Mr. BROWN of West Virginia; A bill (H. R. 9604) granting an increase of pension to Andrew Werner; to the Committee on Invalid Pensions,

By Mr. CAMPBELL: A bill (H. R. 9605) granting a pension to Edmon Boydstun; to the Committee on Pensions.

Also, a bill (H. R. 9606) granting an increase of pension to Frank E. Bales; to the Committee on Pensions.

Also, a bill (H. R. 9607) granting an increase of pension to John H. Scott; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9608) granting an increase of pension to Jefferson Hurst: to the Committee on Invalid Pensions.

Also, a bill (H. R. 9609) granting an increase of pension to Solomon Lawler; to the Committee on Invalid Pensions. By Mr. COPLEY: A bill (H. R. 9610) granting a pension to

Julia and Katherine Sherwood; to the Committee on Pensions. Also, a bill (H. R. 9611) granting an increase of pension to Edgar H. Sampson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9612) granting an increase of pension to Phebe Ann Bissett; to the Committee on Invalid Pensions.

By Mr. DONOHOE: A bill (H. R. 9613) to correct the military record of James Barton; to the Committee on Military

tary record of Benjamin F. Richardson; to the Committee on Military Affairs.

Also, a bill (H. R. 9616) granting a pension to Thomas P. Lee; to the Committee on Invalid Pensions.

By Mr. ESTOPINAL: A bill (H. R. 9617) granting an honorable discharge to Phillip Saint Seve, alias Phillip Sanzaebel; to the Committee on Military Affairs.

Also, a bill (H. R. 9618) granting an honorable discharge to

Joseph L. Galle; to the Committee on Military Affairs. By Mr. FERGUSSON: A bill (H. R. 9619) granting an increase of pension to Alcaria Bowles; to the Committee on Invalid Pensions.

By Mr. FRENCH: A bill (H. R. 9620) granting relief to the heirs of Elizabeth Broocks; to the Committee on Claims.

By Mr. HARDWICK: A bill (H. R. 9621) granting a pension

to Horace Hudson; to the Committee on Pensions.

By Mr. HELGESEN: A bill (H. R. 9622) providing for the relief of the heirs of Waldo M. Potter, deceased; to the Committee on Claims.

By Mr. HENSLEY: A bill (H. R. 9623) for the relief of the heirs of James Knight, deceased; to the Committee on War Claims.

By Mr. KENNEDY of Rhode Island: A bill (H. R. 9624) granting a pension to Charles H. Bascombe; to the Committee on Pensions.

By Mr. KIESS of Pennsylvania: A bill (H. R. 9625) granting a pension to Jennie Fritz; to the Committee on Invalid Pen-

By Mr. LAFFERTY: A bill (H. R. 9626) granting an increase of pension to Joseph Brown; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9627) granting an increase of pension to Chester W. Lynds; to the Committee on Invalid Pensions.

By Mr. LEWIS of Maryland: A bill (H. R. 9628) to refund

to the corporate authorities of Frederick City, Md., the sum of \$200,000 exacted of them by the Confederate Army under Gen. Jubal Early, July 9, 1864, under penalty of burning said city; to the Committee on War Claims.

By Mr. McGILLICUDDY: A bill (H. R. 9629) for the relief of Nathan Lawrence Meands; to the Committee on Naval

Affairs.

By Mr. MOORE: A bill (H. R. 9630) to place the name of

ex-Capt. Shreve Ackley upon the unlimited retired list of the Army; to the Committee on Military Affairs.

By Mr. MORGAN of Oklahoma: A bill (H. R. 9631) authorizing the President to nominate and, by and with the advice and consent of the Senate, appoint Elsworth Wilson, a first lieutenant in the Medical Reserve Corps of the United States Army,

a first lieutenant in the Medical Corps on the retired list, and increasing the retired list by one for the purposes of this act; to the Committee on Military Affairs.

By Mr. PATTON of Pennsylvania: A bill (H. R. 9632) granting an increase of pension to Andrew J. Duryae; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9633) granting an increase of pension to

Mary A. Andrews; to the Committee on Invalid Pensions.

By Mr. RAINEY: A bill (H. R. 9634) granting a pension to Sarah M. Sullens; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9635) granting a pension to Mary McKee; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9636) granting a pension to Rachel Millert;

to the Committee on Invalid Pensions.

Also, a bill (H. R. 9637) granting a pension to Walter L. Hart; to the Committee on Pensions. Also, a bill (H. R. 9638) granting a pension to Samantha

Buvinger; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9639) granting a pension to Carl L. Austin; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9640) granting a pension to Eliza Browning; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9641) granting an increase of pension to Peter Burns; to the Committee on Pensions,
Also, a bill (H. R. 9642) for the relief of Capt. Richard Hulett; to the Committee on Claims.

Also, a bill (H. R. 9643) correcting the military record of A. P. Armstrong; to the Committee on Military Affairs.

Also, a bill (H. R. 9644) to remove the charge of desertion from the record of Luther Cline; to the Committee on Military Affairs

By Mr. REILLY of Connecticut: A bill (H. R. 9645) to remove the charge of desertion from the military record of the late Page Lucas; to the Committee on Military Affairs.

By Mr. RUSSELL: A bill (H. R. 9646) granting a pension to Henrietta M. Majors; to the Committee on Invalid Pensions.
By Mr. SMITH of Maryland: A bill (H. R. 9647) granting a pension to Anna Dora Carlson; to the Committee on Pensions. Also, a bill (H. R. 9648) granting an increase of pension to Thomas C. Helmling; to the Committee on Pensions.

Also, a bill (H. R. 9649) for the relief of the estate of George

Forbes; to the Committee on War Claims.

By Mr. STEVENS of Minnesota: A bill (H. R. 9650) granting an increase of pension to Louis Westhauser; to the Committee

By Mr. THOMAS: A bill (H. R. 9651) granting a pension to

Samuel Burgess; to the Committee on Pensions.

By Mr. WHITACRE: A bill (H. R. 9652) granting a pension to Robert D. Patterson; to the Committee on Invalid Pen-

Also, a bill (H. R. 9653) granting an increase of pension to John McCane; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9654) granting an increase of pension to Daniel Ruff; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9655) granting an increase of pension to Chalkley Milbourne; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9656) granting an increase of pension to Robert R. Van Tine; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9657) granting an increase of pension to John A. Sapp; to the Committee on Invalid Pensions.

Also, a bill (H. R. 9658) granting an increase of pension to Invalid Pensions.

Jesse W. Shaw; to the Committee on Invalid Pensions.

# PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid

on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Petitions of the members of the St. Louis Clearing House Association, favoring amendments to the banking and currency bill; to the Committee on Banking and Currency.

Also (by request), petition of the National Federation Retail Merchants, of Lexington, Mo., favoring passage of bill to regulate mail-order houses; to the Committee on Ways and Means.

By Mr. ALLEN: Memorial of the Cincinnati Chamber of Commerce, favoring plan to suspend naval construction for one year; to the Committee on Naval Affairs. By Mr. ASHBROOK: Petition of Metzler & Robinson and 11

other merchants of Coshocton, Ohio, favoring the passage of legislation compelling concerns selling goods direct to the consumer by mail to contribute their portion of the funds for the development of the local community, county, and State; to the Committee on Ways and Means,

By Mr. BURKE of Wisconsin: Petition of merchants and business men of Horicon, Columbus, Cedarburg, Watertown, Jefferson, Fort Atkinson, Pardeeville, Cambria, Lowell, Schleisingerville, Crafton, and Rio, Wis., all in the second congressional district of Wisconsin and all favoring the passage of House bill 5308, compelling concerns selling goods direct to the consumer by mail to contribute their portion of the funds for the development of the local community, county, and State; to the Committee on Ways and Means.

Also, petition of Manufacturers' Association of Sheboygan, Wis., protesting against the passage of the seamen's bill; to the

Committee on the Merchant Marine and Fisheries.

Also, evidence in support of bill (H. R. 7907) granting a pension to Anna Windmeister; to the Committee on Invalid Pensions.

## SENATE.

## Tuesday, December 2, 1913.

The Senate met at 11 o'clock a. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D. DUNCAN U. FLETCHER, a Senator from the State of Florida, HENRY F. LIPPITT, a Senator from the State of Rhode Island, and John Walter Smith, a Senator from the State of Maryland appeared in their seats to-day.

The Journal of yesterday's proceedings was read and approved.

REPORTS OF SECRETARY OF THE SENATE.

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Senate, transmitting, pursuant to law, a full and complete statement of the receipts and expenditures of the Senate and the condition of the public moneys in his possession from March 14, 1913, to June 30, 1913 (S. Doc. No. 252), which, with the accompanying paper, was ordered to lie on the table and be printed.

He also laid before the Senate a communication from the Secretary of the Senate, transmitting, pursuant to law, a full and complete account of all property, including stationery, belonging to the United States in his possession on the 1st day of December, 1913 (S. Doc. No. 248), which, with the accompanying paper, was ordered to lie on the table and be printed.

## REPORTS OF SERGEANT AT ARMS.

The VICE PRESIDENT laid before the Senate a communication from the Sergeant at Arms, transmitting, pursuant to law, a statement of the receipts from the sale of condemned property in his possession since March 16, 1913 (S. Doc. No. 250), which, with the accompanying paper, was ordered to lie on the table and be printed.

He also laid before the Senate a communication from the Sergeant at Arms, transmitting, pursuant to law, a full and complete account of all property belonging to the United States in his possession on December 1, 1913 (S. Doc. No. 249), which, with the accompanying paper, was ordered to lie on the table and be printed.

### REPORTS OF FREEDMEN'S HOSPITAL.

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a report of the expenditures for salaries, etc. (H. Doc. No. 346), at the Freedmen's Hospital, Washington, D. C., which, with the accompanying paper, was referred to the Committee on Appropriations and ordered to be printed.

He also laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a statement of receipts and expenditures on account of pay patients received into the Freedmen's Hospital, Washington, D. C., during the fiscal year ended June 30, 1913 (H. Doc. No. 344), which, with the accompanying paper, was referred to the Committee on Appropriations and ordered to be printed.

GOVERNMENT HOSPITAL FOR THE INSANE (H. DOC. NO. 342).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, the annual report of the superintendent of the Government Hospital for the Insane for the fiscal year ended June 30, 1913, which, with the accompanying paper, was referred to the Committee on Appropriations and ordered to be printed.

EXTENSION OF CAPITOL GROUNDS (S. DOC. NO. 251).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a statement of receipts from rentals of properties acquired for the extension of the Capitol Grounds, which, with the accompanying paper, was referred to the Committee on Appropriations and ordered to be printed.

REPAIRS OF BUILDINGS, DEPARTMENT OF THE INTERIOR (H. DOC. NO. 349).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, an itemized statement of expenditures made and charged to the appropriation "Repairs of buildings, Department of the Interior, 1913," for the fiscal year ended June 30, 1913, which, with the accompanying paper, was referred to the Committee on Appropriations and ordered to be printed.

CONTINGENT EXPENSES, DEPARTMENT OF THE INTERIOR (S. DOC. NO. 348.)

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, an itemized statement of expenditures made and charged to the appropriation "Contingent expenses, Department of the Interior, 1913," for the fiscal year ended June 30, 1913,

which, with the accompanying paper, was referred to the Committee on Appropriations and ordered to be printed.

#### PETITIONS AND MEMORIALS.

Mr. ROOT. I have received a telegram in the nature of a memorial relative to the Hetch Hetchy bill, which I send to the desk and ask that it may be read.

There being no objection, the telegram was read and ordered to lie on the table, as follows:

NEW YORK, December 2, 1913.

Hen. ELIHU ROOT, United States Senate, Washington, D. C.:

I wish to add a very emphatic protest in my own name and on behalf of three-quarters of the members of the Sierra Club, of San Francisco, against despoiling the Yosemile National Park for a municipal water supply which can perfectly well be obtained elsewhere. The park belongs to every citizen of the United States and it belongs to posterity. It is our duty to protect this glorious pleasure ground for the people who are to come after us.

Mr. ROOT presented a memorial of members of the Institute of Arts and Sciences of Columbia University, New York, N. Y., remonstrating against the passage of the so-called Hetch Hetchy bill, which was ordered to lie on the table.

Mr. WEEKS presented a memorial of the Massachusetts State Federation of Woman's Clubs, remonstrating against the passage of the so-called Hetch Hetchy bill, which was ordered to lie on the table.

He also presented petitions of the congregations of the Evangelical Church of Indian Orchard; of the First Methodist Episcopal Church of Warren; of the First Congregational Church of West Springfield; of the Methodist Episcopal Church of Florence; of the Ladies' Aid Society of the Faith Church of Springfield; and of the Auxiliary to the Woman's Home Missionary Association of Granby, all in the State of Massachusetts, praying for the passage of the so-called antipolygamy bill, which were referred to the Committee on the Judiciary.

Mr. WEEKS (for Mr. Lodge) presented a petition of the Massachusetts State Branch, American Federation of Labor, praying for the enactment of legislation granting to the city of San Francisco the right to use the waters of the Hetch Hetchy Valley, which was ordered to lie on the table.

He also (for Mr. Lodge) presented a memorial of the Massachusetts State Federation of Woman's Clubs and the memorial of George L. Farley, superintendent of schools, and sundry other citizens of Brockton, Mass., remonstrating against the enactment of legislation granting to the city of San Francisco the use of the waters of the Hetch Hetchy Valley, which were ordered to lie on the table.

Mr. McLEAN presented a memorial of sundry citizens of Southington, Conn., remonstrating against the passage of the so-called Hetch Hetchy bill, which was ordered to lie on the

Mr. LA FOLLETTE presented a petition of the Wisconsin conference of the Evangelical Association, praying for the enactment of legislation compelling the observance of Sunday as a day of rest in the District of Columbia, which was referred to the Committee on the District of Columbia.

He also presented a petition of sundry citizens of Elm Grove and Waterford, in the State of Wisconsin, praying for the enactment of legislation granting applicants the right to settle upon and purchase from the United States, for the sum of \$2.50 per acre, the land which they applied to purchase from the Oregon and California railroad companies, and the same be decreed or declared to be forfeited to the United States, etc., which was referred to the Committee on Public Lands.

He also presented a memorial of sundry citizens of West Allis, Wis., and a memorial of sundry citizens of Hillside, Wis., remonstrating against the passage of the so-called Hetch Hetchy bill, which were ordered to lie on the table.

He also presented a petition of the National Woman's Christian Temperance Union, praying for the enactment of legislation providing for the closing on Sunday of the gates to the Panama Canal Exposition, which was referred to the Committee on Interoceanic Canals.

## RILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. PENROSE:

A bill (S. 3520) to grant an honorable discharge to C. Wilson

Walker; and A bill (S. 3521) for the relief of George W. Parker; to the

Committee on Military Affairs.

A bill (S. 3522) granting an increase of pension to E. A. Whitney;

A bill (S. 3523) granting an increase of pension to Hiram Focht (with accompanying paper); and

A bill (S. 3524) granting a pension to Nelson Dimick (with accompanying papers); to the Committee on Pensions.

By Mr. BRANDEGEE:

A bill (S. 3525) for the relief of Pay Inspector F. T. Arms, United States Navy; to the Committee on Naval Affairs.

By Mr. JOHNSON:

A bill (S. 3526) granting a pension to Helen M. Perkins (with accompanying papers); to the Committee on Pensions.

By Mr. McLEAN: A bill (S. 3527) granting an increase of pension to Mary

Macer (with accompanying papers); and A bill (S. 3528) granting an increase of pension to Frances A. Couch (with accompanying papers); to the Committee on Pensions.

By Mr. SHIVELY:

A bill (S. 3529) to change the location and straighten the course of the channel of the Grand Calumet River through the lands of the Gary Land Co. and the Indiana Steel Co., and for other purposes; to the Committee on Commerce. By Mr. CHAMBERLAIN:

A bill (S. 3530) granting an increase of pension to Charles Duggan (with accompanying papers); to the Committee on Pensions.

By Mr. LA FOLLETTE:

A bill (S. 3531) granting an increase of pension to Hiram Kibbey; and

A bill (S. 3532) granting an increase of pension to Adda A. Benson (with accompanying papers); to the Committee on

By Mr. CLAPP (for Mr. Jones):
A bill (S. 3533) to authorize the Secretary of Commerce to lease a portion of Ediz Hook Lighthouse Reservation, Wash.; to the Committee on Public Lands.

## ADMINISTRATION OF LAND LAWS.

Mr. CLARK of Wyoming. I submit a resolution which I ask may be read and lie over.

The Secretary read the resolution (S. Res. 226), as follows: Resolved, That the Secretary of the Interior be directed to furnish to the Senate the cost and expense of administering the land laws of the United States for the fiscal years 1908, 1909, 1910, 1911, and 1912, respectively, including rents, salaries of officers in Washington and elsewhere, and salaries, expenses, and subsistence of all agents, servants, and employees wherever and whenever employed, together with all and every expense incurred in or on behalf of the administration, supervision, care, and disposal of the public lands of the United States during the years mentioned.

The VICE PRESIDENT. The resolution will lie over under the rule.

## SAN FRANCISCO WATER SUPPLY.

I send to the desk an editorial from yesterday's Mr. MYERS. edition of the Washington Times, on the Hetch Hetchy proposition, and ask that it be read.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

## THE HETCH HETCHY ISSUE.

The Secretary read as follows:

THE HETCH HETCHY ISSUE.

Whenever a municipality starts out to establish publicly operated utilities, special interests always work underground to defeat it. Just at present San Francisco is striving to end a 12-year effort to procure a municipal water supply. Whether the desire will be fulfilled rests with the Senate of the United States.

The Hetch Hetchy water bill is to be finally acted upon this week. The House passed the bill in September, and since that time hydroelectric power interests, working through insulated political conduits, have sought to short-circuit the grant to the city.

All over the country there has been an editorial and typewritorial voltage directed at the Senate, and this extraordinary current has been solely directed at the electric-power possibilities in San Francisco's project.

The development and use by municipalities of more than 100,000 horsepower would certainly be a shock to the owners of corporations engaged in selling juice at practically their own rates.

Secretary of the Interior Lane and Gifford Pinchot suggest openly and unequivocally that the hydroelectric power companies are the most interested opponents of the bill.

The nature lovers, who protest so vigorously, apparently have been overwrought and stimulated by some powerful interest that seeks to use a laudable and patriotic sentiment for an ulterior and profitable purpose. Many Senators have raised a question mark as to the expense of the anti-Hetch Hetchy propaganda, and the query is also made: "Who is paying the bills for the thousands and thousands of circulars sent from New York and Boston to the women's organizations and individuals throughout the country?" Surely the Society for the Preservation of National Parks, with only 200 members, is not capable of financing such a far-reaching crusade.

Twenty years ago the Geological Survey found the Hetch Hetchy Valley and reported that it would make a proper and ideal source for a water supply for San Francisco. Twelve years ago San

Mr. WORKS. May I ask from what newspaper the editorial is taken?

The VICE PRESIDENT. It was announced by the Senator from Montana when it was sent to the desk for reading that it came from the Washington Times.

### BANKING AND CURRENCY.

Mr. REED. Mr. President, I desire to announce that on Thursday, at the convenience of the Senate, I will address the Senate on the banking and currency bill. I made this announcement for an earlier date, but an opportunity was not afforded.

Mr. SWANSON. I desire to give notice that on Monday, December 8, immediately following the routine morning business, I shall address the Senate upon House bill 7837, the pending currency bill.

### PRESIDENTIAL APPROVALS.

A message from the President of the United States, by Mr. Latta, executive clerk, announced that the President had approved and signed the following acts:

On November 27, 1913: S. 2779. An act to authorize the conveyance of the steel bridge over the Snake River between Lewiston, Idaho, and Clarkston, Wash., to the States of Idaho and Washington or local subdivisions thereof.

On December 1, 1913: S. 3397. An act to amend section 2324 of the Revised Statutes of the United States, relating to mining claims.

### HOUR OF DAILY MEETING.

The VICE PRESIDENT. The Chair lays before the Senate a resolution coming over from a preceding day, which will be read.

The Secretary read Senate resolution 225, submitted yesterday by Mr. KERN, as follows:

Resolved, That the hour of daily meeting of the Senate be 10 o'clock antemeridian until otherwise ordered.

Mr. NORRIS. I offer a substitute for the resolution. The VICE PRESIDENT. The substitute will be read. The Secretary read as follows:

Resolved, That before adjournment on the legislative day of Saturday, December 20, 1913, the Senate will vote upon any amendments that may be pending, any amendments that may be offered, and upon the bill H. R. 7837, a bill to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes, through the regular parliamentary stages to its final disposition, and that until the final disposition of such bill the hour of daily meeting of the Senate shall, unless otherwise ordered, be 11 o'clock a. m.

Mr. GALLINGER. Mr. President, I make the point of order that, under our rules, we can not by resolution fix the time to vote upon any bill. Debate can not be curtailed in that way; it requires unanimous consent to fix a time to vote.

Mr. NORRIS. In reply to the Senator I will say that, even that being true, it would not go to the offering of the resolu-tion or its consideration, but it would require a unanimous vote to adopt it. I do not myself see why it is not in order and could not be adopted the same as any other resolution. Assuming, however, for the moment that the Senator's point of order is correct, it would not make the resolution out of order, but would simply mean that it would require unanimous consent in order to adopt it.

Mr. BACON. With the permission of the Senator, I would suggest that the resolution is out of order because it proposes a change of the rules.

Mr. GALLINGER. Certainly.
Mr. BACON. And a change of the rules can not be proposed

Mr. NORRIS. I should like to ask the Senator from Georgia the original resolution offered by the Senator from Indiana [Mr. Kern], which is similar to a great many that have been offered and adopted, does not likewise change the rule by fixing the hour of meeting of the Senate?

Mr. BACON. By no means. There is no rule, Mr. President-

Mr. NORRIS. Pardon me—
Mr. BACON. The Senator was asking me a question. Permit me to make a reply.

Mr. NORRIS. Certainly. Mr. BACON. There is no rule of the Senate which fixes the hour of meeting; that is a matter for the determination of the Senate each day, if it sees proper to do so. It is now the rule of the Senate that no time shall be fixed for the close of debate. If the Senator from Nebraska desires to change the rule in that particular, he will have to proceed in the way that the rules point out for the amendment of the rules.

Mr. NORRIS. Will the Senator from Georgia kindly point out the particular rule that this resolution infringes?

Mr. BACON. Any new rule is a change of the rules; and this resolution proposes a new rule. No new rule can be proposed, whether it amends a former rule or not, which does not change the rules and which is not subject to the rule which requires that one day's notice in writing must be given of a purpose to make such a motion.

Mr. NORRIS. But the Senator from Georgia says this changes a rule of the Senate.

Mr. BACON. Yes. Mr. NORRIS. Of course I am not disputing the statement, for the Senator has been here a great many years and is an authority on the rules; but I have asked him to kindly point out a rule that this resolution infringes.

Mr. BACON. I have endeavored to reply. I repeat that any

addition to the rules is a change of the rules.

Mr. NORRIS. Well, if that be true-and that makes this resolution objectionable, and there is no specific printed rule on the subject—then it seems to me that the resolution originally offered by the Senator from Indiana changes the same kind of a rule; not written, it is true, in the law, but one that has been followed for a great many years and that has been changed time and again, both recently and in the days that are past, by resolutions similar to the one which the Senator from Indiana has

Mr. SHAFROTH. Will the Senator from Nebraska yield to me?

Mr. NORRIS. I yield to the Senator.

Mr. SHAFROTH. I should like to call the Senator's attention to the fact that his resolution is practically a cloture rule. We have no cloture in the Senate. What I think the Senator ought to do is to ask unanimous consent for this proposition, for I am heartily in favor of the motion being consented to unanimously. That is the rule, however, that is proposed to be broken by the Senator's resolution. It proposes to limit debate, and that can not be done in the Senate without unanimous con-Therefore, whenever a Senator desires to close debate, he asks unanimous consent to close it at a certain time.

Mr. NORRIS. Mr. President, it is true that usually when a Senator desires to close debate he asks unanimous consent to do it, but it does not follow because that is done that this kind of a resolution would be out of order; it does not follow because that has been done in the past that it can not be done differently. If there is no rule to the contrary, it seems to me that the resolution is in order and that the Senate has a right to pass

on it the same as they do on any other resolution.

Mr. President, if it be said that indirectly, as the Senator from Colorado [Mr. SHAFROTH] has said, it is a cloture rule, then I can answer that by saying that indirectly the original resolution offered by the Senator from Indiana is a cloture rule, for it certainly is. The only difference is that in one case we would have a reasonable consideration of the proposition and in the other we would have to insist on such hours and such times for the meeting of the Senate that it would be a matter of physical endurance only as to when debate should cease.

Mr. GALLINGER. Will the Senator from Nebraska yield

Mr. NORRIS. I yield.

Mr. GALLINGER. It seems to me that the difference between the original resolution and the resolution of the Senator from Nebraska is very marked and very wide. In place of limiting debate or adopting a cloture rule by indirection, the resolution offered by the Senator from Indiana extends debate to an extent that some of us think is somewhat cruel. The difference is so marked that I think the Senator will not insist that there is

similarity between the two resolutions.

While I am on my feet, Mr. President, I will say that it is a well-established custom of the Senate—it certainly has the force of a rule, for we have no previous question here—that we can not close debate until the Senate is ready to close it. Adopting a resolution of this kind, which does propose cloture, must be in contravention not only of the custom but of the rules of the Senate, and I hope the Senator from Nebraska will not insist upon it. The Senator from Nebraska rather gave away his contention when he said that it would require a unanimous vote; yet, if it were put to a vote, we would have a certain number of yeas and a certain number of nays, and the resolution would

fail in that way.

Mr. NORRIS. The Senator puts me in a false position when he says that I gave the matter away by saying that it required a unanimous vote. I have not made that contention, but I assume that, for the purposes of the point of order that was made against it, that that would be true; and if that were true, still the resolution would be in order, because it would be possible, at least we might assume that for the purposes of it, that it would be passed unanimously; that there would be unanimous consent.

Mr. GALLINGER. Just one word more—

Mr. NORRIS. I want first to answer the Senator a little bit further.

The Senator contends-and I understand that is the contention of all the Senators who are opposed to the resolution—that it violates a precedent of the Senate, that it violates something that has been going on for years, which has been the custom of the Senate, that debate should cease only by unanimous consent. At the same time every Member of this body knows that the Senate of the United States has for a great many years—so far, I suppose, that the memory even of the Senator from New Hampshire would not run to the contrary—been meeting regularly at 12 o'clock noon. It is conceded that the Senate can change that hour of meeting, and it is said, in answer to my argument, that there is no rule of the Senate that fixes 12 o'clock as the hour of meeting. Then you say as against this-Mr. WILLIAMS. Mr. President——

Mr. NORRIS. Just a moment. You say, as against the adoption of this resolution, that there is no rule allowing cloture, therefore this proposition changes the custom, and consequently is out of order.

Mr. GALLINGER. Mr. President— The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Mississippi?

Mr. GALLINGER. I addressed the Chair some time ago. Mr. NORRIS. I will first yield to the Senator from New

Hampshire.

Mr. GALLINGER. Mr. President, I only desire to add one suggestion to what I have already said, and that is that, if the resolution offered by the Senator from Nebraska is in order, at any time when we are considering a measure, however important it may be, a majority of the Senate by resolution can close debate.

Mr. NORRIS. A resolution has first to be adopted.

Mr. GALLINGER. Certainly; by a majority vote.
Mr. NORRIS. By a majority vote; which resolution would be debatable.

Mr. GALLINGER. So that a majority of the Senate at any time under a resolution can adopt a cloture rule. I submit to the Senator from Nebraska that, upon careful consideration, I believe he will not think that that will be a wise custom or a wise rule to inaugurate.

Mr. OWEN. Mr. President-

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Oklahoma?

Mr. NORRIS. I yield first to the Senator from Mississippi [Mr. WILLIAMS], who addressed the Chair some time ago.

Mr. WILLIAMS. Mr. President, I wanted merely to make this suggestion to the Senator from Nebraska: The object of all of us, I take it, is to speed consideration of the currency bill. If so, then the very worst thing that can possibly be done is for him to offer this resolution, because it is a resolution to change the rules of the Senate. The rules themselves fix precisely how the rules can be changed, and they can not be changed in any other way.

Mr. NORRIS. The Senator does not contend that there is

any rule of the Senate that says there shall not be cloture,

does he?

Mr. WILLIAMS. Absolutely. There never was a parlia-mentary body in the world in which it was not admitted that there was a right of debate which could be put an end to only by an affirmative rule of cloture. That was the case in the British House of Commons until an affirmative rule of cloture was adopted; it was the case in every parliamentary body with whose history I am acquainted until an affirmative rule of cloture was adopted; it was the case in the House of Representatives until then, and this is, so far as I know, perhaps the only parliamentary body now existing where such a rule has not been adopted. Our rules provide as to how the rules themselves can be changed.

But what I was coming to was this, if the Senator will pardon me: The object of all of us is to speed consideration of the currency bill. I undertake to say that a debate upon the proposition offered by the Senator from Nebraska, involving what it does involve, would require a longer debate at the hands of this

body than will the banking and currency bill.

Mr. GALLINGER. There is no doubt of that at all. Mr. WILLIAMS. There are men here who would rather see the banking and currency bill or any other bill go to the wastebasket than to see a cloture rule adopted in the Senate, and your proposed cloture rule could not apply to the debate on the proposition to change the rules. Besides that, under the rule your resolution must go to the Committee on Rules. There is a positive rule to that effect. It seems to me that if the Senator really wants to speed consideration the best thing to do is to withdraw the resolution. It can do no good now.

Mr. KERN. And ask unanimous consent. Mr. WILLIAMS. And the Senator can get the matter before the Senate, or the substance of it, by asking unanimous consent,

Mr. NORRIS. I understand that, and I am going to do that if the Chair rules the resolution out of order, I will say to the

Mr. WILLIAMS. But the Senator from New Hampshire [Mr. Gallinger] has made a point of order against the reso-WILLIAMS. But the Senator from New Hampshire

Mr. NORRIS. But the Chair has not ruled that it is out of order, and personally I do not believe it is out of order.

Mr. WILLIAMS. Let the Chair rule.

Mr. NORRIS. I want to say right here that the object of this resolution is to end debate on the currency bill. If the time I have fixed is too short, it can be extended. I am not particular about that. I think it is time enough. The two branches of the Committee on Banking and Currency have agreed on a large majority of the matters in the bill. There are only two or three divisions. They are important, it is true, but it seems to me that practically two weeks' debate would be amply sufficient.

Mr. WILLIAMS. Mr. President-

Mr. NORRIS. Just a moment. I want to call the Senator's attention to the fact that the resolution of the Senator from Indiana, having, as he says, the same object in view, provides only for a meeting of the Senate at 10 o'clock a. m.; but it is intended, as has been announced here by the Senator, that that session shall run until 6, and then a recess shall be taken until 8, and that the night session shall run until 11 o'clock. Now. I submit that to keep that up for two or three weeks is not a good way to bring about good legislation; is is not a fair way to bring about good legislation; and we will not get the best results from Senators here after they have been in session from 10 a. m. until 11 o'clock at night.

There will necessarily drop into the debate a great many things that would otherwise be eliminated. It seems to me that if we were to fix the time indicated, which it seems to me is ample-and if the Senate thinks otherwise the time could be extended—and go on in the regular way, meeting at 11 o'clock, running perhaps until 6, or at least as long as any Senator wanted to speak upon the question, we would reach a result that would be a great deal more satisfactory to the Senate and to the country and bring about better legislation than though we tried to wear each other out by sitting here from

12 to 16 hours a day.

Mr. WILLIAMS. If the Senator from Nebraska will pardon me another interruption-

Mr. WILLIAMS. I have no doubt at all that what the Senator from Nebraska has just said is well said, but there is only one way under the rules of this particular body to arrive at the desired result, and that is to ask unanimous consent. The Senator is right in saying that we contemplate meeting at 10 a. m., recessing from 6 to 8 p. m., and continuing in session until 11 p. m.; but the object of it is to induce and persuade a unanimous-consent agreement.

Mr. NORRIS. Well, the object of it is to wear men out. Mr. WILLIAMS. Absolutely; and there is no other way of

Mr. NORRIS. That is like going to war when we ought to

have arbitration.

Mr. WILLIAMS. Well, it does not make much difference what the Senator calls it. We have found in this body that there never was any way of inducing a unanimous consent to quit debate except by wearing the body out, and whenever we wanted to do that upon any great question, whether the other side was in power or this side, we have resorted to early morning meetings and night sessions, and that is the only possible practical way of doing it.

I am willing to go further than is the Senator and ask unanimous consent-and I am satisfied it would be agreed to upon this side-to take a vote upon the day fixed by the Senator, and then, as a reward to the Members of the Senate for having been unprecedentedly reticent in debate, to extend the Christmas holidays from that time on to the usual date, instead of adjourning as usual, about the 19th of December, so that all of us may go home and have a bit of rest. That would add a week more to the Christmas holiday recess, and the rest would be deserved

and needed.

Mr. OWEN. Mr. President-

Mr. NORRIS. I want to say to the Senator that I am not particularly anxious

The VICE PRESIDENT. Does the Senator from Nebraska

yield to the Senator from Oklahoma?

Mr. NORRIS. In just a moment I will yield to the Senator from Oklahoma. I want first to say a word in reply to the

Senator from Mississippi. I am not particularly anxious myself about the Christmas holiday recess. I would just as lief stay here and work. The Senator knows, and we all know, that every one of us has a great deal to do besides what we do here in the Senate. If we meet at 10 o'clock in the morning, it means that the standing committees of the Senate can not be at work, and if we stay here until 11 o'clock at night it means that we can not attend to our ordinary routine business; it is a physical impossibility

Mr. WILLIAMS. That will make us all the more willing to

terminate the debate.

Mr. NORRIS. It is not a fair way to terminate debate. I

now yield to the Senator from Oklahoma.

Mr. OWEN. Mr. President, I have been trying for 15 minutes to suggest a way how to do it, and the debate continually proceeds upon how not to do it, which seems to be characteristic of the United States Senate; and because of this ancient and archaic rule of no cloture, the Senate being the only civilized parliamentary body on earth that has not got it, the obvious necessity for it is apparent.

Mr. President, I simply wanted to suggest to the Senator that if he would omit the term "resolution" from the head of his proposal and suggest a unanimous-consent agreement it would

not be obnoxious to the rule.

Mr. NORRIS. I want to say to the Senator that, as I originally prepared the resolution last night, I drew it in the form of an order instead of a resolution. As I heard read the resolution of the Senator from Indiana yesterday I thought it said "ordered," but when I looked at the RECORD this morning I discovered that it was in the form of a resolution, and inasmuch as this was a substitute for that I used the word "resolution" the same as he did, as I thought it would not properly be a substitute unless I did so.

Mr. OWEN. I ask the Senator if he will not consent to change the form of the resolution to a unanimous-consent agreement to take a vote on the 15th of December, so that we may dispose of the matter through the conference and have it settled before the Christmas holidays, because I venture to say to the Senator that the Members on this side have determined not to have any Christmas recess, except one day, unless we can dispose of

this bill.

Mr. NORRIS. I want to say to the Senator that I rather approve of that course. I have believed for a good many years that when Congress convenes here on the first Monday in December and just gets fairly to work, it ought not to adjourn for two or three weeks for Christmas holidays and be crowded to death at the other end of the session. I myself personally believe in that procedure. I think, if it has been determined not to have any Christmas holiday recess, you are entitled to congratulations on that proposition.

Mr. OWEN. It has been determined by this side.

Mr. NORRIS. I would be willing to change it, but I submit to the Senator that that would make the time rather short. We have two bills that have the right of way over this bill, and they will take almost all of the time.

Mr. OWEN. The Alaska railroad bill will be laid aside after

it has been taken up.

Mr. NORRIS. If we pass this bill on the 20th of December, then if the Senate wants to take its recess and the House wants to take it they can do so. There will be time enough then to take it.

Mr. REED. Mr. President, I rise simply to suggest that if we continue to debate over this technicality a little longer we will arrive at the point of physical exhaustion, which appears to be so feared by the Senator from Nebraska, and we also will have reached Christmas without acting on anything.

Mr. WEEKS. Mr. President, I think the resolution offered by the Senator from Nebraska is out of order, and the point against it should be sustained; but it has accomplished one good result, and that is it has elicited a declaration from a responsible leader on the other side that we are to have legislation by exhaustion rather than as a result of reason and consideration.

Mr. WILLIAMS. It will not be the first time we have had it in that way, by a great deal.

The VICE PRESIDENT. The resolution offered by the Senator from Indiana [Mr. Kern] simply proposes to fix the hour of meeting of the Senate of the United States—a matter which has always been within the discretion of the Senators. The amendature is a proposed theoretic is one the rejucible of which the Chair. ment proposed thereto is one the principle of which the Chair believes has been correctly stated by the Senator from Missis-sippi [Mr. Williams], that in all legislative bodies, if there is to be a cloture, it must be by a direct rule of the body. The Chair therefore rules that the amendment proposed by the Senator from Nebraska [Mr. Norris] is not in order.

Mr. WILLIAMS. Mr. President, I wish to offer an amendment to the resolution proposed by the Senator from Indiana, to insert after the word "antemeridian" the following:

And that the Senate shall on each day at 6 o'clock p. m. take a recess until 8 o'clock p. m., and adjourn at 11 o'clock p. m.

The VICE PRESIDENT. The question is on the amendment

proposed by the Senator from Mississippi.

Mr. CLARK of Wyoming. I should like to ask the Senator from Mississippi whether, in the event of a condition such as existed last evening, his amendment would not prevent us from adjourning before 11 o'clock? We adjourned last evening at about half past 9 owing to the fact that there was nothing to remain here for.

Mr. WILLIAMS. Yes: this amendment would prevent us from adjourning before 11 o'clock, until after the passage of the banking and currency bill. If we had no quorum we could not

do anything. We could not even adjourn.

Mr. CLARK of Wyoming. We could adjourn if we did not

adopt this rule.

Mr. NORRIS. Mr. President, I should like to submit a request, if the Senator from Indiana will permit me. It probably would be out of order while his resolution is pending, but with his permission I should like to ask unanimous consent for the adoption of the order which has been read to the Senate changing the word "resolved" to "ordered."

Mr. KERN. I will say to the Senator that if such a unani-

mous-consent agreement can be reached, I will withdraw the

Mr. NORRIS. Then I ask unanimous consent for the adoption of the order.

Mr. GALLINGER. Let it be read.

VICE PRESIDENT. The Secretary will read as re-The quested.

The Secretary. The Senator from Nebraska asks unanimous consent that before adjournment on the legislative day of Saturconsent that before adjournment on the legislative day of Saturday, December 20, 1913, the Senate will vote upon any amendments that may be pending, any amendments that may be offered, and upon the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes, through the regular parliamentary stages to its final disposition, and that until the final disposition of such bill the hour of daily meeting of the Senate shall, unless otherwise ordered, be 11 o'clock a. m.
The VICE PRESIDENT. Is there objection to the proposed

unanimous-consent agreement?

Mr. BORAH. Mr. President, I dislike very much to object to the suggestion made by the Senator from Nebraska, and I am quite in favor of proceeding with all due dispatch to the final disposition of the bill, but the result of adopting this unanimousconsent agreement would be that the debate here would proceed in the absence of the Senate. In my judgment, we will likely dispose of this bill under the rule proposed by the Senator from Indiana at a date as early as that, if not earlier.

Mr. NORRIS. Will the Senator from Idaho yield to me?

Mr. BORAH. Yes. Mr. NORRIS. The Senator says the debate would proceed without a quorum. The same opportunities for getting a quorum would exist if the order were adopted as though we did not adopt it.

Mr. BORAH. If the resolution offered by the Senator from Indiana is adopted, the majority side will be interested in keeping a quorum as well as ourselves, and we will all be here. think the debate on this subject ought to be in the presence of a Senate as full and complete as we can have it. Whatever de-bate we have, let us have a real debate, one in harmony with the tremendous subject before us. Therefore, Mr. Prseident, I object to the unanimous-consent agreement.

The VICE PRESIDENT. The question recurs on the amendment proposed by the Senator from Mississippi [Mr. Williams] to the resolution of the Senator from Indiana [Mr. Kern].

Mr. KERN. I accept the amendment, Mr. President. Mr. REED. What is the amendment? Let us have it stated. Mr. BRANDEGEE. I ask that the resolution be stated as it would read if amended by the amendment of the Senator from Mississippi.

The Secretary read the resolution, as follows:

Resolved, That the hour of daily meeting of the Senate be 10 o'clock a.m., and that the Senate shall on each day at 6 o'clock p. m. take a recess until 8 o'clock p. m. and adjourn at 11 o'clock p. m. until otherwise ordered.

Mr. SMOOT. Mr. President, I wish to ask the Senator from Mississippi if it would not be just as well not to have an adjournment from 6 until 8?

Mr. WILLIAMS. We think not. We do not want to go into this woman-suffragette starvation-threat business in the Senate. We have got to have time to eat dinner, and so we thought it would be well to take a recess from 6 to 8.

Mr. SMOOT. We get time to take our lunch without ad-

journing.

Mr. WILLIAMS. We do not wish really to punish Senators physically. We merely wish to stay in session until we get through talking.

Mr. NORRIS. If the Senator from Utah is through, I should like to ask the Senator from Mississippi a question. Would be be willing, instead of recessing from 6 to 8, to continue in with the session during those two hours and then adjourn at 9?

Mr. WILLIAMS. No; because that would interfere with every man's dinner hour and every man's family.

Mr. NORRIS. The whole thing interferes with dinner hours

and family hours.

Mr. WILLIAMS. And it would substantially force every Senator to go out and make new arrangements for getting dinner.

Mr. NORRIS. We can get dinner downstairs.

Mr. WILLIAMS. No; we have thought it out carefully, and we want to take a recess from 6 to 8 so that Senators may go home and get their dinners and have a smoke and rest and come back and then stay here until 11. Eleven o'clock is a reasonable hour to go to bed. Then Senators can go home and go to bed. There will be no physical suffering connected with it.

Mr. NORRIS. If the Senator from Mississippi wants Sena-

tors to go home and go to bed, why does he not include that in

his resolution? [Laughter.]

Mr. WILLIAMS. All it amounts to is that we say to Senators who want to speak upon the bill that whenever there is a vacuum in the speaking they must come in and speak. Instead of standing up here in the time-honored way of the Senate and saying, "Mr. President, I propose to make a few remarks, but I am not prepared now, though I will be prepared to-morrow or day after to-morrow," we say that they shall either go on unprepared or let it go.

As far as the practical debating of the Senate is concerned, the man who has to wait to prepare hardly ever adds much to the subject matter. If he does not know enough about it already, he is hardly going to learn it by next morning.

Mr. GALLINGER. Mr. President, no Senator is more anxious

to vote on the currency bill than I am. I shall be prepared to vote on it at any time. I think, however, it would be rather unfortunate to bind ourselves to stay here until 11 o'clock. Last evening at 8 o'clock there were just two Senators present on the Democratic side.

Mr. BACON. I will ask the Senator if he does not think the language of the amendment simply means that we shall

not sit longer than 11?

Mr. GALLINGER. I hope so. If it will be so arranged, I have no objection.

Mr. BACON. Is that not what it necessarily means?

Mr. GALLINGER. This body can not be held in session until 11 o'clock if there is not a quorum present. A motion to adjourn undoubtedly would be in order then. To say that we journ undoubtedly would be in order then. bind ourselves to stay here until 11 o'clock is a mistake, and the matter ought not to be put in that form.

Mr. BACON. Does the Senator think the resolution does

that?

Mr. GALLINGER. The terms of the amendment state precisely that.

Mr. BACON. But does not that necessarily mean that the Senate will be automatically adjourned at 11 if it does not adjourn prior to that time?

Mr. GALLINGER. If that is its meaning, it is entirely agreeable to me; but if that is not its meaning, it is a mistake to put it into the resolution-

Mr. WILLIAMS. That is the meaning of it, undoubtedly.
Mr. GALLINGER (continuing). For the reason that we can
not be held here until 11 o'clock when there is not a quorum

Mr. WILLIAMS. It says "and adjourn at 11 o'clock p. m." Mr. GALLINGER. Yes; "and adjourn at 11 o'clock." Mr. WILLIAMS. And the Senate can not remain in session

any longer.

Mr. GALLINGER. No; but we are compelled to remain that long, are we not?

Mr. WILLIAMS. Yes.

SEVERAL SENATORS. Oh, no.

Mr. GALLINGER. You can not keep us here unless there is a quorum present. Last night this side of the Chamber furnished the quorum that enabled us to do business. Mr. WILLIAMS. Mr. President-

Mr. CLARK of Wyoming. I ask for the regular order. Mr. WILLIAMS. If the Senator means whether the Senate would have power to adjourn, yes; but I thought he was asking what we proposed. We do not propose to adjourn before 11.

Mr. BACON. Mr. President, the Senator from New Hampshire is a parliamentarian. I do not think he can possibly have any doubt about the fact that that means simply what I suggested-that at 11 o'clock the Senate would be automatically adjourned; that we could not sit longer than that if we desired

Mr. GALLINGER. The doubt does not lodge in my mind, but I think it would lodge in the minds of a great many Senators, and they would think an attempt was made to keep us in session until 11 o'clock at night, whether we had any business to transact or not.

Mr. WILLIAMS. It simply indicates the purpose to stay until 11; but it does not take away from the Senate the power to adjourn before 11 if it sees fit to do so.

Mr. GALLINGER. That is precisely the way I look at it.

Mr. CLARK of Wyoming. I call the attention of the Senator from Georgia to the fact that, in response to my direct inquiry of the mover of this resolution, he said the purpose was to keep us here until 11

Mr. WILLIAMS. That is our purpose. Do not misunderstand our purpose. I got confused. I thought the Senator was asking our purpose: but that does not go to the power of the Senate. Of course the Senate may adjourn at 10 if you can get a majority to vote in favor of adjournment; but we of the majority party, hoping that we will be the majority, announce to you and to the country that we do not propose to adjourn before 11.

Mr. GALLINGER. Allow me to suggest to the distinguished Senator from Mississippi that if the resolution simply provided that we would take a recess until 8 o'clock we would come in here at 8 o'clock, and the majority could keep us here until 11 o'clock, if there were a quorum present, instead of specifying that we should stay here until then.

Mr. WILLIAMS. But we have preferred to express our pur-ose in this way. If at any time a majority of the Senate pose in this way. should want to adjourn, notwithstanding our purpose, the majority of the Senate could override that purpose.

Mr. GALLINGER. Mr. President, I have no doubt that this is the result of caucus action, and I am not going to combat it. because I know how futile it would be; so I have said all I care to say on the subject.

Mr. BRISTOW. Mr. President, of course the purpose of this resolution is to prevent a fair and free discussion of the bill that is to be up for consideration. The design is to prevent Senators from having an opportunity to present their views as to the measure by creating conditions which will make it physically impossible for them to do so.

I do not blame the majority for seeking to prevent a discussion of the bill, which would attract to it the attention of the country, because it will not stand such analysis. The attention that has already been attracted to the bill since it was referred to the Committee on Banking and Currency has resulted in material changes which have improved the bill. If, at the demand of the chairman, the Committee on Banking and Currency had proceeded to report the bill back with a few amendments which he suggested and it had been passed by the 15th of October, as he announced in the paper he desired to have it

Mr. OWEN. Mr. President—
The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Oklahoma?

Mr. BRISTOW. I do.

Mr. OWEN. I remind the Senator from Kansas that if the requests of the chairman of the committee had been heeded by himself and others the committee would have had nearly two menths more of active work on the bill.

Mr. BRISTOW. I can not understand just what the Senator from Oklahoma means by "two months more of active work on the bill." I think the work on the bill was forced from the chairman of the committee over his protest, and amendments which the public sentiment of the country demanded have been forced into it over his protest.

Mr. OWEN. Mr. President, I remind the Senator from Kansas that he was unwilling to have the committee proceed while the tariff matter was under discussion, and protested against it so vigorously that the matter was postponed largely on his account.

Mr. BRISTOW. This is the first time I had any knowledge of that fact. I was under the impression that when the tariff bill was before the Senate it was the duty of Senators to give attention to that legislation. We were called into extraordinary session for that purpose. The hearings on the banking and

currency bill began before the tariff bill had been passed, and I uttered a protest against the hearings being conducted when the tariff bill was being considered and amendments voted upon by the Senate. It was impossible for Senators to be in both places at the same time.

As I was saying, the purpose of this resolution is to force through this legislation, good or bad, as early as possible. I realize that the majority are responsible for the legislation that They have the right to fix the hours of meeting, and it is the business of the minority to conform as nearly as possible to the rules which the majority prescribe. It has been the practice of the Senate in the past, and I think to the credit of the body, that when a great measure affecting the fortunes of the people of the United States was up for consideration there should be full and free debate upon all the features of the bill. It has been to the credit of the Senate of the United States for at least a quarter of a century that it has been the body which shaped the final form in which the legislation of our country should be passed.

Mr. WILLIAMS Mr. President-

The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Mississippi?

Mr. BRISTOW. I do. Mr. WILLIAMS. May I ask the Senator to tell me in what manner the passage of this resolution could possibly interfere with full and free debate? It merely gives more time for ittwo more hours in the morning, and three more hours at night.

Mr. BRISTOW. The Senator has already said on the floor of the Senate this morning that the purpose of the resolution is to exhaust the Senate so that it can not debate the bill.

Mr. WILLIAMS. To make it talk itself out, yes; to make it go to talking early, and talk late, and get through talking; but it does not interfere with its talking.

Mr. BRISTOW. That is the Senator's view. The purpose, as I have said, is to prevent an intelligent and a fair discussion of this bill. That is the object of the majority, and it is the object of the majority because the bill, since it left the House of Representatives, has been one that could not stand an intelligent discussion before the people of the United States. I want to say that it is to the credit of certain members of the Committee on Banking and Currency on the majority side of this Chamber that they have forced some deliberation in the consideration of this measure and by virtue of their action the bill has been materially improved.

Those gentlemen have been criticized from one end of this country to the other because they saw fit to exercise some individual judgment in regard to legislative matters. The administration in power and those who stand for it owe to them a debt of gratitude they can never repay, because it was due to their efforts that the bill has been amended so that it possibly is workable. As it came to this body it was not workable, as every Senator in this Chamber knows who has given intelligent study to the subject.

As I said, the purpose of this resolution is to prevent fair and open debate. It is to so exhaust the minority Members who seek to amend the bill as to make it physically impossible for them to discuss it with the facility that they would desire, for all men know that 13 hours per day in this Chamber will exhaust the physical endurance of any man who undertakes to conform to such a requirement. This resolution is not for the purpose of promoting the intelligent consideration of the bill but of preventing its intelligent consideration by this body.

I am making these remarks because I want the people of the United States to know that that is the design and the purpose of the majority, and it is the first time in the history of the United States when the Senate has lost sight of its dignity and mission as one of the legislative bodies of this great Nation. It has been the mission of the Senate to bring to bear full, free, and untrammeled debate upon every great question that comes before it and which affects the fortunes of the American It is the first time in the history of our country that the method of the legislative ruffian has been employed in the Senate of the United States. This has been a place where intellectual discussion has been invited from its Members, a place where mental attainment and wide information have been at a premium and not a place where physical endurance is to be tested. This is not the place to test the physical powers and endurance of men. The prize ring and other places of similar recreation are more fitting places than here.

But it seems to be the desire of the present membership of the majority party in this body to change the character of the Senate and to take from it its glory, for I say that the glory of the United States Senate in the past has been that in this body a full, free, fair, and open discussion of every public question has been untrammeled. One or two Senators standing alone on this floor in the past have prevented legislation that was unwise. Standing alone they have discussed public measures and called to the attention of the people of the United States the imperfections and at times iniquities of measures that were before the body. The weaknesses of those measures have been exposed, and as the years went by those debates have borne fruit in the public thought of our country. If the methods now proposed had been in force then, the country would have been deprived of the services of those men which have been of inestimable value to the Nation. But it seems to be the desire of the majority to deprive Senators of the opportunity which they have had in the past and which has been so useful to the American people in the development of public opinion and the crystallization of public policies, and since they have the power to enforce their will I feel that I must voice my protest against such methods.

Mr. SHAFROTH. Mr. President, I want to call the attention of the Senate to the fact that it was the 24th day of June this year when the message of the President was read in the House of Representatives calling for action upon the banking and currency question. Soon after that the Committee on Banking and Currency met for the purpose of taking some action and considering the question of hearings, and it was at that time the Senator from Kansas himself grose and said that inasmuch as debate in the Senate on the tariff bill was of great importance he desired to be upon the floor of the Senate during all that time. I reminded the Senator from Kansas of the fact that in ordinary legislation during regular sessions hearings before committees often took place during the sittings of the Senate, and it seemed to me that we ought to expedite matters. But in deference to the Senator from Kansas and at his earnest plea that he desired especially to be present on the floor of the Senate there was a general consensus of opinion that we should let considerable time elapse.

Again the matter was broached and again the same condition was presented, and thereby we lost time from the 24th day of June until the 2d day of September for the purpose of letting Senators attend the debates before the Senate on the tariff bill, when, as a matter of fact, at a regular session such hearings are generally conducted during the sessions of the Senate.

Mr. WEEKS. Mr. President—
The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Massachusetts?
Mr. SHAFROTH. Yes, sir; I yield.
Mr. WEEKS. I do not think the Senator from Colorado should leave the impression that the delay in commencing hearings was due entirely to the wish of the Senator from Kansas. He was simply representing the views of other members of the committee who desired to attend to their duties at that time in connection with the tariff bill.

Mr. SHAFROTH. I think probably it is true that he was also

voicing the sentiment of some other members of the committee.

On the 2d day of September we began the hearings, and they did not close until the 25th day of October. The parties who were opposed to speedy action, at least reasonable action, with relation to these hearings were reminded of the fact that the investigation as to the monetary question and as to banking had been before the people and before the Senate for four years; that the National Monetary Commission had given extensive hearings, and they proceeded in a very deliberate manner, and their hearings had extended for many months; and also that there had been hearings in the House and a debate in the House. It seemed to us that there ought to be a closing of this matter. Yet we could not close.

Mr. O'GORMAN. Mr. President-

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from New York?

Mr. SHAFROTH, I yield. Mr. O'GORMAN. Is the Senator from Colorado aware that Mr. O'GORMAN. there never was a single hearing in the House of Representa-tives on the House bill reported to the Senate? Not a single hearing was ever had.

Mr. SHAFROTH. I am aware that at the last session of Congress the Pujo committee occupied fully six weeks in investigating this same question, in which were involved the question of a monetary trust and the question of banking.

Mr. O'GORMAN. Mr. President—

The VICE PRESIDENT. Does the Senator from Colorado yield further to the Senator from New York?

Mr. SHAFROTH. I do. Mr. O'GORMAN. The Senator does not answer the question that I ventured to submit to him, and that is whether he is not aware that there never was a single hearing on the concrete proposition contained in the so-called Glass bill, and that the first opportunity the bankers and business men of the United other members. I have no criticism for my associates upon the

States had to express a judgment upon its provisions was when the Senate committee, against the protest of certain Members, afforded the people of the country an opportunity to come forward and declare their views and submit their advice as to the unwisdom of many of the provisions that certain people in public life in Washington were willing to adopt without reason or without justification.

I can not sit here and listen without protest to the suggestion made now and again that there has been needless delay in the consideration of this currency bill. The country owes much to the committee, which insisted upon intelligent deliberation respecting the provisions of the measure. The bill did not come from the House into the Senate until the 18th day of September, and by the 25th day of the following month, a little over five weeks, the business men of the country had been given an opportunity to come before the committee and advise and confer with the committee; and in consequence of the advice obtained in that way by the committee many manifestly unwise and injudicious features of the House bill were by common consent eliminated, with the result that to-day of the two measures now before the Senate a little over 40 per cent of the House measure is found in either one of the reports submitted to this body.

Yet there were those on the 18th day of September who advised, who urged, who recommended that this House bill be passed as a matter of form; that it was a perfect measure, when no intelligent man in public life to-day will now assert that it was a wise or a judicious measure. Every critic who has had an opportunity to examine it is agreed that it would bring about as great a calamity to this country as ever visited the United States if that bill had not been subjected to the acid test of improvement, correction, and elimination, with the result as has been stated here several times in recent days.

We have two bills, both good measures, but in my judgment the bill proposed by the majority side is the better of the two

and the bill that should be adopted.

Mr. SHAFROTH. Mr. President, there can be no question that there has been a study of this subject and an examination of witnesses in relation to this banking and currency matter for the last five years. The hearings that were held before the National Monetary Commission cover practically every point of importance of this bill. We published 33 volumes of the hearings.

Mr. SMITH of Arizona. And they were easily obtainable. Mr. SHAFROTH. They were easily obtainable by any person who wanted to investigate the subject. The recent hearings have been largely repetitions of what testimony was given before the National Monetary Commission.

Mr. WEEKS. Mr. President—
The VICE PRESIDENT. Does the Senator from Colorado
yield to the Senator from Massachusetts?
Mr. SHAFROTH. I should like to get in a word edgeways

here, if I have the floor. But go ahead.

Mr. WEEKS. I want to call the attention of the Senator from Colorado to the fact that the Monetary Commission gave substantially no hearings in this country. The hearings which the Monetary Commission had were in other countries almost entirely. Substantially all the information which has been submitted to our committee during the past month is new and had never before been submitted, in my judgment, to any committee of either House of Congress.

Mr. SHAFROTH. I differ with the Senator there. mony was taken in a great many cities of the United States. Mr. Warburg's testimony was taken here. Of course, a great many of them took the form of essays or statements, but there were any number made, it seems to me, in this country. ever, the examination that we wanted to make, which involved the hearings before the committee in the last few weeks, has been largely as to the practice of European banks and as to the modes that they adopt, because the rediscount principle is one that is well developed in Europe.

Now, when we are perfectly willing to have debate without limit, having long sessions each day, to say that that is attempting to throttle any debate, it seems to me, can not be

sustained.

Mr. REED. Mr. President, it seems to me to be rather a useless thing to pause at this time and debate the question whether the members of the committee acted wisely or unwisely when they took time to hear evidence upon and to analyze and consider the banking and currency bill. I regret that the question has been raised. But since it has been injected into the debate, I will refer to it in the briefest possible way

committee who were contented to vote upon it without hearings. I think they should have no criticism for those who desired to move with what they conceived to be proper care.

Mr. SHAFROTH. I will state to the Senator that it was in answer to the Senator from Kansas that the bill had not had the deliberation-that he wanted more deliberation-that I made the remark

Mr. REED. Mr. President, I repeat that as a direct and immediate result of the hearings, changes of the most important character have been made in the bill. These changes were still being made no later than the blessed Sabbath just passed. On that day a radical amendment was added at the immediate solicitation of the Secretary of the Treasury.

Many of the amendments to the bill were concurred in by all of the members of the committee without regard to politics and were subsequently ratified by the Democratic conference. There is no member of the committee who will rise from his seat and dispute the statement I have made. If the assertion is ever going to be challenged, let it be here and now. I pause for the challenge. I have waited, and silence has been the answer.

If, then, these amendments were radical, important, vital, they constitute a complete justification of the hearings; nay, more, the demonstration is absolute that those who insisted upon hearings were right in their insistence. It goes, however, without saying that if these radical and important amendments had not been made the bill would have contained errors of a grave nature. What man is there who dares assert that a bill full of errors should be passed, and its imperfections discovered after the injury is done?

Mr. President, it has been asserted that for five years evidence has been taken upon the currency bill. I utterly and emphat-

ically deny that statement.

Evidence was taken upon the general question of currency reform. It was all grouped and concentered about what is known as the Aldrich plan. Evidence was taken with reference to the 'Aldrich bill, but the Aldrich bill was not this bill. was in all its great essentials in complete opposition to this measure as it is now framed. The evidence taken upon the Aldrich bill, therefore, could not be pertinent to this bill in its

I repeat what already has been said, that there never was a hearing upon this particular bill until it was granted by the Senate committee.

But now, Mr. President, hearings have been held, hearings that apply to this particular bill. Along with the bill, we have laid before the Members of the Senate all of the evidence taken. There has therefore been afforded the Members of the Senate abundant opportunity to examine the pending measure. The question we are now debating is merely how many hours a day the Senate shall remain in session.

It has been asserted that the Democratic side of the Chamber proposes to throttle debate. This I emphatically deny. Democrats do not propose to deny to any Senator upon either side the fullest opportunity to express his views. We have not undertaken to say to any man in the Chamber "You shall not have the opportunity to speak." Neither have we sought to curtail the length of his remarks. We say to the Senators upon the other side, "You shall have the most abundant opportunity to tell us all you know about this bill, all you imagine about this bill, all you fear will result from this bill." We say to them, "All that your intellect can possibly conceive you shall have the opportunity to bring forth." What we ask, and all we ask, is that the Senate shall remain in session from 10 o'clock in the morning until 11 o'clock at night. night. We simply propose to breach the union rules in the matter of hours. We ask you to come here at night; to forego the theaters; to deny the grace of your presence at parties and balls. We only ask you to stay here and work and speak until

you have had your say.

Mr. President, rightly or wrongly, the business of the country is halting, awaiting the enactment of this law. The fact has been recently developed that the banks hesitate to loan money because they are yet uncertain what demands may be made upon them by the law we are about to enact. Under these circumstances the least we can do is to forego our own pleasure and to work a few hours longer for the next succeeding 10 or I hope that the Senators upon the other side will be disposed to agree upon an early date to vote; or, if they can not do that, that they will at least agree to sit here from 10 in the morning until 11 o'clock at night to the end that all shall have full opportunity to express their opinions and at the same time that the business of the country may be relieved from its

occasion from expressing my views in reference to the value of the hearings which have been had before the Committee on Banking and Currency. I entirely coincide with the views expressed by the Senators from New York and Missouri. It would have been a most dangerous thing to have passed the currency bill as it came from the House without any change or amendment; it would have been a great menace and danger to the commerce and finance of this country; and it would certainly, beyond any doubt, have wrecked the Democratic Party.

No greater evidence, Mr. President, can be found of the imperfections of the Glass bill, so called, or the House bill, than the fact that even my friends on the other side-and I am speaking of my friends on the committee-have in the main outlines coincided with our section of the committee in agreeing that the bill in many important particulars needed change and amendment.

Senators have expressed the idea that there was no occasion for these hearings, because the Pujo committee and the Monetary Commission had had hearings. None of them had hearings on any measure of the kind that this bill is, either in its original form or as it is now presented to the Senate in the two substitute bills.

What was the subject of the investigation of the Pujo committee? It was an investigation to reach the so-called Money Trust, the matter of interlocking directorates, and things of that kind. There is nothing in the pending bill or the proposed amendments to it relating to that subject. If you want to remedy the evils which became apparent as the result of that investigation, you must have legislation other than any that is found in any of these bills, either the Glass bill, the Owen bill, or what I may call the Hitchcock bill.

As for the Monetary Commission, it proceeded on entirely different lines than the system outlined in the currency bill. There never were, as the Senator from New York has said, any hearings in the other House on the currency bill, and when that bill came before our committee, with the exception of possibly two or three members on the committee, we were all in accord that the bill needed important and material amendment.

Most of us felt that, however wise and learned we were, it was possible for us to secure information from the bankers and the business men of the country in reference to this measure. So we proceeded, as intelligent legislators ought always to proceed, to give hearings; and, speaking for myself, Mr. President, I will say that it has been one of the best schools in all my expe-While I have read many of the reports and the documents, more or less, of the Monetary Commission, and all other books I could find on the subject, yet I got more of value, more instruction, and more information from the hearings to guide me in this matter than I did from any of the books.

While some of the men who appeared before the committee gave us testimony of little value, yet there were others, great masters of finance, who supplied us with the most valuable information. Some of the greatest men among the bankers of the country came before us and in a most candid spirit acceded to some of the merits of the bill. I never shall forget one remark that Mr. Vanderlip made before our committee that impressed me above everything else. There was a question in regard to compelling one regional bank, against its will, to discount paper for another regional bank. What was Mr. Vanderlip's reply to that? "Why," said he, "obnoxious as it is, it is absolutely necessary to that system; you have got to pipe the reserves from one regional bank into another." He was the first of the great bankers, to my recollection, who admitted that truth in such plain and clear terms.

Mr. President, what the Senator from Missouri and the Senator from New York have said so well is absolutely true. Those hearings have been of great value, and as a result of them you have before you, even from the other side of the Chamber, a bill much more perfect and workable than the bill which came from You Democrats on the other side owe a debt of the House. gratitude to the Democratic members of the committee for taking pains to perfect the Glass bill in the manner in which they have done. We do not think they have gone far enough; they have not gone to the extent that we should like; but, after all, they have done good work and made great progress, and you gentlemen, instead of criticizing your committee, ought to be thankful that you had Democratic members on that committee who were willing to give hearings, willing to consider the bill in detail, to amend it, and present it in a more workable shape than that in which it came to this body.

Mr. STONE. Mr. President-

The VICE PRESIDENT. Does the Senator from Minnesota yield to the Senator from Missouri?

present strain of uncertainty.

Mr. NELSON. Mr. President, I am unwilling to take up the time of the Senate unnecessarily, but I can not refrain on this lution, I will not address the Senate.

Mr. STONE. I understand the Senator from Minnesota has yielded the floor. If, however, we can take a rote on the resolution, I will not address the Senate.

The VICE PRESIDENT. The question is on the resolution offered by the Senator from Indiana [Mr. Kern].

Mr. GALLINGER. There are two amendments pending to the resolution, Mr. President.

Mr. GOFF. Mr. President, conceding, as we will, that the resolution offered by the other side of the Chamber will ultimately pass, because it is the irrevocable decree of the caucus, nevertheless may we not pause for a moment and ask whether it is not regrettable that it should be boldly, even exultantly, proclaimed upon this floor that the idea of the resolution is simply to wear out the Senate and to force it by physical disability to submit to that which many Senators and many of the people of this country believe to be inimical to their interests? Is it not also regrettable that the caucus should at all consider a measure of this kind? When the President of the United States gave his reasons to the country and to the Congress why a financial bill should be passed, there was almost a universal desire that it should be nonpartisan in character; and, as the hearings proceeded before the committee, the idea was given out from the recesses of its chamber that such was to be the character of the bill offered.

Many changes were made in the bill; continuously, by the hundreds were they made, and we are told to-day by the other side that those changes have made the bill what it is, have made it proper to submit it to the consideration of the Senate for final action. Have these changes made it a party matter? Hardly. Has that which was to have been nonpartisan been made the subject of caucus action? What change came over the spirit of the dreams of those in charge of it? As the investigations and hearings proceeded, this, that, and the other elements of weakness and of strength, of desirability and nondesirability appeared, but still no caucus was called. Weeks, months, passed by after the passage of the tariff act—an act which we were told would result most beneficially to the country immediately after the President had signed it with his gold diamond-tipped pen. But we all know that was a mistaken prophecy. Has the high cost of living been reduced, or is the high cost of living higher to-day than it was when that bill passed? Everyone knows that the cost of living has increased; everyone knows that all along the line our industries have been seriously interfered with, that our manufacturers have been compelled to discharge laborers by the thousands, aye, by tens of thousands; that the nonfiling of orders for 1914 deliveries has produced instability everywhere and caused commercial confusion.

Now we are told that the disaster overshadowing us is that the financial bill has not been passed. That for that reason the banks are in doubt and know not how to regulate loans and dis-counts, hence financial distress. Therefore the necessity for the caucus. Because of this the power controlling the caucus issued his edict that the financial bill must be passed before the Christmas helidays. So it seems that the necessities of our friends on the other side of this Chamber called for the iron rule of King Caucus concerning a matter that was to have been

and should be nonpartisan,
Mr. O'GORMAN. Mr. President—
The VICE PRESIDENT. Does the Senator from West Virginia yield to the Senator from New York?

Mr. GOFF. I do.

Mr. O'GORMAN. It may perhaps not be of much importance, but, for the accuracy of the narrative, I desire to advise the Senator from West Virginia that the junior Senator from New York was the humble instrument that moved in the Democratic conference the resolution which has been offered in the Senate to-day by the Senator from Indiana [Mr. KERN]. For the information of the Senator from West Virginia and for the information of the Senate, I will say that there was no soul on earth who knew that I was going to introduce the resolution when I did, and it was not inspired by any person, least of all by the Executive.

Mr. GOFF. I have to say, in reply to that, "Well done, thou good and faithful servant." [Laughter.] I am glad that the [Laughter.] I am glad that the Senator from New York anticipated the motion that most undoubtedly would have been made by one of his colleagues, and I may take this occasion to say that I have followed with interest and approval much that the distinguished Senator from New York did in the Committee on Banking and Currency, as well as in the caucus.

Mr. President, I have tried to account in my humble way for the reason of this change from a nonpartisan bill to a caucus bill; I have endeavored to show why this resolution has been offered, and why it is necessary to endeavor, at least, to show the country that the condition of affairs among our manufac-turing institutions, in our banking institutions, and in all of our commercial activities, is not because of the failure of the tariff bill from the viewpoint of our friends on the other side,

but because the Republican side of the Senate is preventing the passage of the financial bill. Will anyone tell me why the Republican side of the Senate is charged with that? Has there ever been any disposition on this side of the Chamber to prolong this discussion? Has there been any effort on the Republican side of the Chamber to retard the passage of the bill? Has there been any caucus of the Republican Members of the Senate from which such an enunciation has come? Has any Member on this side desired to the contrary? So far as I know, they are ready to vote this week; they are ready—
Mr. JAMES. Mr. President, the Senator from West Virginia

certainly was not in the Chamber when a unanimous-consent agreement to vote was objected to by a Senator on that side

or he would not make the statement.

Mr. GOFF. I was in the Chamber, and I concurred with that Senator, not because I was not ready to vote, but because I did not believe in that manner of legislation. I did not believe in

that method which, while in name not so, is in effect cloture. The effort, then, I say, to demonstrate to the country that the Republicans of the Senate are preventing the passage of this bill should be, as it will be, a failure; and I, for one, protest against its being charged as an act of the Republican Party or a determination of a Republican agreement.

Mr. ROOT. Mr. President, I should like to see this bill acted upon speedily, and I was much inclined to vote for longer hours of debate. I was ready to give my assent to the request for a unanimous-consent agreement fixing a day. But I can not vote for a resolution which is offered and supported here with the avowed purpose of wearing out the members of the minerity in the discussion of a great public measure.

We all know that the resolution which is proposed will have that effect. In the air of the Senate Chamber, which becomes, to speak very mildly, insanitary long before the close of an ordinary session, the forces of even a strong man in the prime of his youth flag and fail. For men of the age of a majority of the Members of the Senate, long before the hours proposed in the resolution shall have elapsed both body and mind will be incapable of properly performing the duty of discussing or listening to discussion upon a difficult and complicated subject such as a banking and currency bill. So the purpose of the resolution, which is avowed to be to wear out the members of the minority in the discussion of the measure, will be accomplished.

I can not vote for any such injury to the great principle and the great right—a principle and a right which I deem to be essential to the maintenance of free self-government-that no matter how powerful a majority may be, there always shall be considerate attention to the protests, the arguments, and

the appeals of the minority.

It is quite natural, sir, that there shall be impatience over delay in legislation. I know by experience how natural it is for executive officers to be impatient with the delays that occur in both Houses of Congress, and with the desire to change measures which from the executive point of view are deemed to be important and to be complete.

I know from experience how natural it is for the members of a majority to look with impatience upon the attempts of a minority to change, to modify, to postpone what to them is the evil day of enactment of legislation they do not desire. sir, there is nothing more important for us, there is no higher duty for us, than to preserve the right of the minority, of whatever party, upon every public question to present their views, to make their arguments and their protests, and to be heard.

I beg my friends on the other side to consider whether they have not permitted themselves to get into a somewhat intolerant attitude toward this great right of the minority. At the beginning, when this bill came from the House, the pressure was very strong to have immediate action. The very desire to force the committee into hearings while its members were upon the floor taking part in the discussion of the tariff bill was and must have been born from a feeling that, after all, the interference of a minority in the passage of legislation was unnecessary and not to be favored. The place of Senators during the discussion of the tariff bill was upon the floor of the Senate, to discuss the bill, to hear discussion, and to take part in deliberations. feeling of impatience that they were not willing to abandon that duty in order immediately to begin proceedings in committee while the Senate was in session indicated some intolerance of the right of the minority to continue to do its duty upon the tariff bill. Now the majority, having agreed upon the bill which they will support, and which they have the power to pass, propose to wear out the minerity before the discussion has fairly begun.

Mr. President, have we not a duty to perform here? Is it not our duty, if we think there are defects in this bill, to say what

we think in the Senate? Is it not your duty to give respectful consideration to what we say? Is there not somewhat of in-tolerance for those rights of a minority, which are the rights of a free people, when at the outset of discussion the majority propose a rule for the avowed purpose of wearing out the minority and compelling them to discuss the measure under such circumstances that they will be compelled to desist through

physical and mental fatigue?

Ah, Mr. President, parties change. One is in the ascendant to-day and another to-morrow. The rule that the dominant party impose upon the minority to-day may come back to deprive them of their rights to-morrow. But above all parties and more important than any measure is the observance of the right of free discussion, the right of the minority, not to obloquy and condemnation, but to the consideration which is essential to free and peaceful and orderly government among a self-governing people.

I, sir, shall vote against this resolution because it is avowed to be for the purpose of putting an end to discussion through fatigue, and it is aptly framed to accomplish the purpose.

Mr. BACON. Mr. President, I shall detain the Senate for only a few minutes. I am unwilling to have this discussion close, however, without disavowing for myself any such purpose as that upon which the Senator from New York has animadverted, and which, in the absence of a denial, might be assumed to be assented to upon my part when I vote for the pending reso-

Mr. President, I sat in this Chamber 18 years in the minority, and no one is more impressed than I am with the importance of the preservation of the rights of a minority. I desire to preserve them as sacredly as I desired them to be preserved when I was in the minority. I think the great safeguard of the minority is freedom of debate in the absence of cloture; and I want to say now to my friends in the minority that recognizing that as the great safeguard of the minority, although I am in the majority, I would stand with them in voting against cloture if I were the only Senator on this side to vote that way.

repeat that in voting for this resolution I have no such desire as that which has been suggested, to accomplish by it the exhaustion of Senators on the other side. I am animated solely by one purpose. I recognize, as I think every Senator must, that the business of the country is in a condition where prompt action on our part is needed. I wish to secure that promptitude, so far as it is possible to do so, without abridging the

right of debate.

If it takes until the end of January or into February for Senators to express themselves upon the question, I am in favor of their having the opportunity, although I should greatly deprecate the necessity. The sole object I have in mind in supporting the resolution is not to exhaust Senators, because the same Senator will not be speaking all the time, but so to extend the time as to give all Senators an opportunity to speak and to discuss this great question and at the same time not unduly to postpone the time for its decision.

I thought it proper that I should say this; and while I have not heard any general expression from Senators on this side. I believe I reflect the sentiment and the purpose of Senators on this side. It is to preserve the right of unlimited debate, and at the same time with that preservation to bring this debate to a conclusion after everybody has had an opportunity to be heard, and to give that opportunity by sitting the unusual length of time which is proposed by the resolution.

Mr. President, I do not claim to be the youngest Member of this body. I am sorry to say I am not. I have been here the I have not had the rest that some of the Senators have had who have manifested so much anxiety on the subject of our physical discomfort. If I can endure it, I think some of my very much younger brethren on the other side need not be so much startled at the prospect of having to sit here from 10 in the morning until 11 at night.

Mr. BRANDEGEE. Mr. President, the resolution as submitted, with the amendments proposed and accepted, will necessitate that Senators leave their residences in the city at o'clock in the morning, come to the Capitol, adjourn at 11 o'clock in the evening, and not return to their homes until 12 o'clock, and that that procedure shall be kept up con-tinuously by this body until this legislation shall have been

finally agreed upon

Mr. KERN. Mr. President, will the Senator yield to me? Mr. BRANDEGEE. I yield to the Senator for an inquiry. I do not yield the floor.

Mr. KERN. Will the Senator yield for a suggestion? Mr. BRANDEGEE. For a suggestion; yes.

Mr. KERN. I was about to suggest that the Senator suspend his remarks for the present, to the end that the Senate, in compliance with the resolution heretofore adopted, may proceed to the Hall of the House of Representatives, to listen to a message from the President of the United States, which is to be delivered at 1 o'clock.

Mr. BRANDEGEE. Mr. President, having the floor, I am perfectly willing to be courteous, and to defer the conclusion of my remarks for that purpose, provided the resolution shall not be put upon its passage until after we return from the House.

Mr. KERN. Oh, certainly not.
The VICE PRESIDENT. It is understood that the Senator from Connecticut has the floor.

THE PRESIDENT'S ANNUAL ADDRESS.

The VICE PRESIDENT. Senators, the hour of 12 o'clock and 58 minutes has arrived. On Saturday last the Senate accepted the invitation of the House of Representatives to repair to its Hall at this time and listen to the communication of the President of the United States. The Sergeant at Arms will carry out the order of the Senate.

Thereupon the Senate, preceded by its Secretary and Sergeant at Arms, proceeded to the Hall of the House of Representatives. The Senate returned to its Chamber at 1 o'clock and 40 min-

utes p. m.

The address of the President of the United States, delivered this day to both Houses of Congress, is as follows:

The PRESIDENT. Mr. Speaker, Mr. President, gentlemen of the Congress, in pursuance of my constitutional duty to "give to the Congress information of the state of the Union," I take the liberty of addressing you on several matters which ought, as it seems to me, particularly to engage the attention of your honorable bodies, as of all who study the welfare and progress of the Nation.

I shall ask your indulgence if I venture to depart in some degree from the usual custom of setting before you in formal review the many matters which have engaged the attention and called for the action of the several departments of the Government or which look to them for early treatment in the future, because the list is long, very long, and would suffer in the abbreviation to which I should have to subject it. I shall submit to you the reports of the heads of the several departments, in which these subjects are set forth in careful detail, and beg that they may receive the thoughtful attention of your committees and of all Members of the Congress who may have the leisure to study them. Their obvious importance, as constituting the very substance of the business of the Government, makes comment and emphasis on my part unnecessary

The country, I am thankful to say, is at peace with all the world, and many happy manifestations multiply about us of a growing cordiality and sense of community of interest among the nations, foreshadowing an age of settled peace and good will. More and more readily each decade do the nations manifest their willingness to bind themselves by solemn treaty to the processes of peace, the processes of frankness and fair con-So far the United States has stood at the front of such negotiations. She will, I earnestly hope and confidently believe, give fresh proof of her sincere adherence to the cause of international friendship by ratifying the several treaties of arbitration awaiting renewal by the Senate. In addition to these, it has been the privilege of the Department of State to gain the assent, in principle, of no less than 31 nations, representing four-fifths of the population of the world, to the negotiation of treaties by which it shall be agreed that whenever differences of interest or of policy arise which can not be resolved by the ordinary processes of diplomacy they shall be publicly analyzed, discussed, and reported upon by a tribunal chosen by the parties before either nation determines its course of action.

There is only one possible standard by which to determine controversies between the United States and other nations, and that is compounded of these two elements: Our own honor and our obligations to the peace of the world. A test so compounded ought easily to be made to govern both the establishment of new treaty obligations and the interpretation of those

already assumed.

There is but one cloud upon our horizon. That has shown itself to the south of us, and hangs over Mexico. There can be no certain prospect of peace in America until Gen. Huerta has surrendered his usurped authority in Mexico; until it is understood on all hands, indeed, that such pretended governments will not be countenanced or dealt with by the Government of the United States. We are the friends of constitutional government in America; we are more than its friends, we are its champions; because in no other way can our neighbors, to whom we would wish in every way to make proof of our friendship, work out their own development in peace and liberty. Mexico has no government. The attempt to maintain one at the City of Mexico

has broken down, and a mere military despotism has been set up which has hardly more than the semblance of national authority. It originated in the usurpation of Victoriano Huerta, who, after a brief attempt to play the part of constitutional President, has at last cast aside even the pretense of legal right and declared himself dictator. As a consequence, a condition of affairs now exists in Mexico which has made it doubtful whether even the most elementary and fundamental rights either of her own people or of the citizens of other countries resident within her territory can long be successfully safeguarded, and which threatens, if long continued, to imperil the interests of peace, order, and tolerable life in the lands immediately to the south of us. Even if the usurper had succeeded in his purposes, in despite of the constitution of the Republic and the rights of its people, he would have set up nothing but a precarious and hateful power, which could have lasted but a little while, and whose eventual downfall would have left the country in a more deplorable condition than ever. But he has not succeeded. He has forfeited the respect and the moral support even of those who were at one time willing to see him succeed. Little by little he has been completely isolated. a little every day his power and prestige are crumbling and the collapse is not far away. We shall not, I believe, be obliged to alter our policy of watchful waiting. And then, when the end comes, we shall hope to see constitutional order restored in distressed Mexico by the concert and energy of such of her leaders as prefer the liberty of their people to their own ambitions.

I turn to matters of domestic concern. You already have under consideration a bill for the reform of our system of banking and currency, for which the country waits with impatience, as for something fundamental to its whole business life and necessary to set credit free from arbitrary and artificial restraints. I need not say how earnestly I hope for its early enactment into law. I take leave to beg that the whole energy and attention of the Senate be concentrated upon it till the matter is successfully disposed of. And yet I feel that the request is not needed—that the Members of that great House need no urging in this service to the country.

I present to you, in addition, the urgent necessity that special provision be made also for facilitating the credits needed by the farmers of the country. The pending currency bill does the farmers a great service. It puts them upon an equal footing with other business men and masters of enterprise, as it should; and upon its passage they will find themselves quit of many of the difficulties which now hamper them in the field of credit. The farmers, of course, ask and should be given no special privilege, such as extending to them the credit of the Government itself. What they need and should obtain is legislation which will make their own abundant and substantial credit resources available as a foundation for joint, concerted local action in their own behalf in getting the capital they must use. It is to this we should now address ourselves.

It has, singularly enough, come to pass that we have allowed the industry of our farms to lag behind the other activities of the country in its development. I need not stop to tell you how fundamental to the life of the Nation is the production of its food. Our thoughts may ordinarily be concentrated upon the cities and the hives of industry, upon the cries of the crowded market place and the clangor of the factory, but it is from the quiet interspaces of the open valleys and the free hillsides that we draw the sources of life and of prosperity, from the farm and the ranch, from the forest and the mine. every street would be silent, every office deserted, every factory fallen into disrepair. And yet the farmer does not stand upon the same footing with the forester and the miner in the market of credit. He is the servant of the seasons. Nature determines how long he must wait for his crops, and will not be hurried in her processes. He may give his note, but the season of its maturity depends upon the season when his crop matures, lies at the gates of the market where his products are sold. the security he gives is of a character not known in the broker's office or as familiarly as it might be on the counter of the

The Agricultural Department of the Government is seeking to assist as never before to make farming an efficient business, of wide cooperative effort, in quick touch with the markets for foodstuffs. The farmers and the Government will henceforth work together as real partners in this field, where we now begin to see our way very clearly and where many intelligent plans are already being put into execution. The Treasury of the United States has, by a timely and well-considered distribution of its deposits, facilitated the moving of the crops in the present season and prevented the scarcity of available funds too often experienced at such times. But we must not allow ourselves

to depend upon extraordinary expedients. We must add the means by which the farmer may make his credit constantly and easily available and command when he will the capital by which to support and expand his business. We lag behind many other great countries of the modern world in attempting to do this. Systems of rural credit have been studied and developed on the other side of the water while we left our farmers to shift for themselves in the ordinary money market. You have but to look about you in any rural district to see the result, the handicap and embarrassment which have been put upon those who produce our food.

Conscious of this backwardness and neglect on our part, the Congress recently authorized the creation of a special commission to study the various systems of rural credit which have been put into operation in Europe, and this commission is already prepared to report. Its report ought to make it easier for us to determine what methods will be best suited to our own farmers. I hope and believe that the committees of the Senate and House will address themselves to this matter with the most fruitful results, and I believe that the studies and recently formed plans of the Department of Agriculture may be made to serve them very greatly in their work of framing appropriate and adequate legislation. It would be indiscreet and presumptuous in anyone to dogmatize upon so great and many-sided a question, but I feel confident that common counsel will produce the results we must all desire.

Turn from the farm to the world of business which centers in the city and in the factory, and I think that all thoughtful observers will agree that the immediate service we owe the business communities of the country is to prevent private monopoly more effectually than it has yet been prevented. I think it will be easily agreed that we should let the Sherman antitrust law stand, unaltered, as it is, with its debatable ground about it, but that we should as much as possible reduce the area of that debatable ground by further and more explicit legislation; and should also supplement that great act by legislation which will not only clarify it, but also facilitate its administration and make it fairer to all concerned. No doubt we shall all wish, and the country will expect, this to be the central subject of our deliberations during the present session, but it is a subject so many-sided and so deserving of careful and discriminating discussion that I shall take the liberty of addressing you upon it in a special message at a later date than this. It is of capital importance that the business men of this country should be relieved of all uncertainties of law with regard to their enterprises and investments and a clear path indicated which they can travel without anxiety. It is as important that they should be relieved of embarrassment and set free to prosper as that private monopoly should be destroyed. The ways of action should be thrown wide open.

I turn to a subject which I hope can be handled promptly and without serious controversy of any kind. I mean the method of selecting nominees for the Presidency of the United States. I feel confident that I do not misinterpret the wishes or the expectations of the country when I urge the prompt enactment of legislation which will provide for primary elections throughout the country at which the voters of the several parties may choose their nominees for the Presidency without the intervention of nominating conventions. I venture the suggestion that this legislation should provide for the retention of party conventions, but only for the purpose of declaring and accepting the verdict of the primaries and formulating the platforms of the parties, and I suggest that these conventions should consist not of delegates chosen for this single purpose, but of the nominees for Congress, the nominees for vacant seats in the Senate of the United States, the Senators whose terms have not yet closed, the national committees, and the candidates for the Presidency themselves, in order that platforms may be framed by those responsible to the people for carrying them into effect.

These are all matters of vital domestic concern, and besides them, outside the charmed circle of our own national life in which our affections command us, as well as our consciences, there stand out our obligations toward our territories oversea. Here we are trustees. Porto Rico, Hawaii, the Philippines, are ours, indeed, but not ours to do what we please with. Such territories, once regarded as mere possessions, are no longer to be selfishly exploited; they are part of the domain of public conscience and of serviceable and enlightened statesmanship. We must administer them for the people who live in them and with the same sense of responsibility to them as toward our own people in our domestic affairs. No doubt we shall successfully enough bind Porto Rico and the Hawaiian Islands to ourselves by ties of justice and interest and affection, but the performance of our duty toward the Philippines is a more difficult

and debatable matter. We can satisfy the obligations of generous justice toward the people of Porto Rico by giving them the ample and familiar rights and privileges accorded our own citizens in our own territories and our obligations toward the people of Hawaii by perfecting the provisions for self-government already granted them, but in the Philippines we must go fur-We must hold steadily in view their ultimate independence, and we must move toward the time of that independence as steadily as the way can be cleared and the foundations

thoughtfully and permanently laid.

Acting under the authority conferred upon the President by Congress, I have already accorded the people of the islands a majority in both houses of their legislative body by appointing five instead of four native citizens to the membership of the commission. I believe that in this way we shall make proof of their capacity in counsel and their sense of responsibility in the exercise of political power, and that the success of this step will be sure to clear our view for the steps which are to follow. Step by step we should extend and perfect the system of selfgovernment in the islands, making test of them and modifying them as experience discloses their successes and their failures; that we should more and more put under the control of the native citizens of the archipelago the essential instruments of their life, their local instrumentalities of government, their schools, all the common interests of their communities, and so by counsel and experience set up a government which all the world will see to be suitable to a people whose affairs are under their own control. At last, I hope and believe, we are begin-ning to gain the confidence of the Filipino peoples. By their counsel and experience, rather than by our own, we shall learn how best to serve them and how soon it will be possible and wise to withdraw our supervision. Let us once find the path and set out with firm and confident tread upon it and we shall not wander from it or linger upon it.

A duty faces us with regard to Alaska which seems to me very pressing and very imperative; perhaps I should say a double duty, for it concerns both the political and the material development of the Territory. The people of Alaska should be given the full Territorial form of government, and Alaska, as a storehouse, should be unlocked. One key to it is a system of These the Government should itself build and administer, and the ports and terminals it should itself control in the interest of all who wish to use them for the service and de-

velopment of the country and its people.

But the construction of railways is only the first step; is only thrusting in the key to the storehouse and throwing back the lock and opening the door. How the tempting resources of the country are to be exploited is another matter, to which I shall take the liberty of from time to time calling your attention, for it is a policy which must be worked out by well-considered stages, not upon theory, but upon lines of practical expediency. It is part of our general problem of conservation. We have a freer hand in working out the problem in Alaska than in the States of the Union; and yet the principle and object are the same, wherever we touch it. We must use the resources of the country, not lock them up. There need be no conflict or jealousy as between State and Federal authorities, for there can be no essential difference of purpose between The resources in question must be used, but not destroyed or wasted; used, but not monopolized upon any narrow idea of individual rights as against the abiding interests of communities. That a policy can be worked out by conference and concession which will release these resources and yet not jeopard or dissipate them, I for one have no doubt; and it can be done on lines of regulation which need be no less acceptable to the people and governments of the States concerned than to the people and Government of the Nation at large, whose heritage these resources are. We must bend our counsels to this A common purpose ought to make agreement easy.

Three or four matters of special importance and significance

I beg that you will permit me to mention in closing.

Our Bureau of Mines ought to be equipped and empowered to render even more effectual service than it renders now in improving the conditions of mine labor and making the mines more economically productive as well as more safe. This is an all-important part of the work of conservation; and the conservation of human life and energy lies even nearer to our interest than the preservation from waste of our material resources.

We owe it, in mere justice to the railway employees of the country, to provide for them a fair and effective employers' liability act; and a law that we can stand by in this matter will be no less to the advantage of those who administer the railroads of the country than to the advantage of those whom they employ. The experience of a large number of the States abundantly proves that.

We ought to devote ourselves to meeting pressing demands of plain justice like this as earnestly as to the accomplishment of political and economic reforms. Social justice comes first. Law is the machinery for its realization and is vital only as it expresses and embodies it.

An international congress for the discussion of all questions that affect safety at sea is now sitting in London at the suggestion of our own Government. So soon as the conclusions of that congress can be learned and considered we ought to address ourselves, among other things, to the prompt alleviation of the very unsafe, unjust, and burdensome conditions which now surround the employment of sailors and render it extremely difficult to obtain the services of spirited and competent men such as every ship needs if it is to be safely handled and

brought to port.

May I not express the very real pleasure I have experienced in cooperating with this Congress and sharing with it the labors of common service to which it has devoted itself so unreservedly during the past seven months of uncomplaining concentration upon the business of legislation? Surely it is a proper and pertinent part of my report on "the state of the Union" to express my admiration for the diligence, the good temper, and the full comprehension of public duty which has already been manifested by both the Houses; and I hope that it may not be deemed an impertinent intrusion of myself into the picture if I say with how much and how constant satisfaction I have availed myself of the privilege of putting my time and energy at their disposal alike in counsel and in action.

#### ORDER OF BUSINESS.

The VICE PRESIDENT. The morning hour having expired, the Chair lays before the Senate the unfinished business, the

title of which will be stated.

The SECRETARY. A bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. CLAPP. I suggest the want of a quorum. The VICE PRESIDENT. If there be no objection, the unfin-

ished business will be laid aside temporarily

Mr. BURTON. Mr. President, I should like to be heard on that if it is going to be laid aside. I understand also that there has been a call for a quorum. The Senator from Minnesota [Mr. Clapp] suggested the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst Bacon Borah Bradley Brady Brandegee Bristow Bryan Burleigh Burton Chamberlain Chilton Clapp Clark, Wyo. Colt Cummins du Pont Fletcher

Gallinger Goff Gore Gronna Hollis Hollis
Hughes
James
Kenyon
Kern
La Foliette
Lane
Lewis
Lippitt
McCumber
Martin, Va.
Myers
Nelson Norris O'Gorman Overman Owen Page Perkins Pittman Poindexter Pomerene Reed Reed Robinson Root Saulsbury Shafroth Sheppard Sherman Shields

Smith, Ariz. Smith, Ga. Smith, S. C. Smoot Stephenson Sterling Sutherland Swanson Thompson Thornton Tillman Townsend Vardaman Walsh Warren Weeks Williams

Mr. SHEPPARD. My colleague [Mr. Culberson] is unavoidably absent. He is paired with the Senator from Delaware [Mr. DU PONT]. I ask that this announcement stand for the

Shively

Mr. WEEKS. I wish to state that my colleague [Mr. Lodge] is absent on account of illness. He has a general pair with the junior Senator from Georgia [Mr. SMITH]. I should like to

have that statement stand for the day.

Mr. BRANDEGEE. Has the fact as to whether a quorum is present been announced to the Senate? I think nothing is in order until the presence of a quorum has been announced.

Mr. KERN. I thought the announcement had been made. The VICE PRESIDENT. Seventy-two Senators have Seventy-two Senators have answered to the roll call. There is a quorum of the Senate present. The Senator from Indiana asks that the unfinished business may be temporarily laid aside.

Mr. BURTON. As I understand, the object of that request is in order that disposition may be made of the motions which

were pending before the recess.

Mr. KERN. It is primarily that the Senator from Connecticut [Mr. Brandegee] may conclude his remarks and, secondarily, that we may vote on the motion.

Mr. GALLINGER. I call attention to the fact that it is not the unfinished business. The Hetch Hetchy bill is properly before the Senate, or it ought to be laid before the Senate

Mr. BRANDEGEE. My understanding is that the Chair had laid the unfinished business before the Senate and that the Senator from Indiana asked that it be temporarily laid aside.

Mr. CLARK of Wyoming. The unfinished business is the cur-

rency bill.

Mr. BURTON. Oh, no. Mr. BRANDEGEE. Oh, no; the unfinished business is the

Hetch Hetchy bill.
Mr. GALLINGER. No; it is the currency bill.

Mr. CLARK of Wyoming. According to the calendar, the currency bill was made the unfinished business.

Mr. BRANDEGEE. The Senator is correct.

Mr. CLARK of Wyoming. Subject to the special order. Mr. BRANDEGEE. The Senator is correct; but the unanimous-consent agreement is that the Senate shall proceed with the Hetch Hetchy bill, as I understand, after the morning business, and I assumed that the morning business closed at 1 o'clock. Therefore I assumed that the unanimous-consent agreement would have to be enforced.

Mr. KERN. Let the unanimous-consent agreement be laid before the Senate, and then we shall ask that it be temporarily

laid aside.

Mr. BRANDEGEE. Well, Mr. President, I failed to make myself clear to the Senator from Indiana, I think. If the Senate has agreed by unanimous consent that after the morning hour shall expire to-day, at 1 o'clock, the Hetch Hetchy bill will be considered, of course it can not be laid aside by unanimous consent. That would be by one unanimous-consent agreement to undo another.

Mr. KERN. It may be temporarily laid aside. Mr. BRANDEGEE. I do not think so.

The VICE PRESIDENT. The Chair thinks perhaps, to clear the situation, he should state that the currency bill is the unfinished business coming over from yesterday. If the morning unfinished business coming over from yesterday. If the morning business had been concluded prior to 1 o'clock, it would have been the duty of the Chair to have laid before the Senate the Hetch Hetchy bill, but the morning business having run until 1 o'clock, it is the opinion of the Chair that the unfinished business should now be laid before the Senate, but it does not take precedence over a unanimous-consent agreement the moment there is a desire to proceed with the discussion.

Mr. BRANDEGEE. My idea would be that if the morning business had been announced as closed before the hour of 1 o'clock arrived, the calendar, under Rule VIII, would be in

The VICE PRESIDENT. No; the unanimous-consent agreement.

Mr. BRANDEGEE. The unanimous-consent agreement.

The VICE PRESIDENT. The unanimous consent agreement. That is the way the Chair has been trying to rule, though he may not have expressed it in good language.

Mr. BRANDEGEE. Has the Chair made a ruling, may I

inquire, then, upon the request of the Senator from Indiana,

if he has a request pending?

Mr. CUMMINS. Mr. President, I rise to a parliamentary quiry. In the absence of unanimous consent, does the resoluinquiry. In the absence of unanimous consent, does the resolution (S. Res. 225) offered by the Senator from Indiana go over until to-morrow or would it go to the calendar.

Mr. GALLINGER. It would go to the calendar.

morning hour having expired.

Mr. CUMMINS. I have no desire that the resolution shall go to the calendar, for I rather favor it; but I know that there will be very considerable discussion upon it before it comes to a vote. Therefore it ought not to be continued this afternoon.

Mr. GALLINGER. Mr. President, will the Senator yield

to me?

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from New Hampshire?

Mr. CUMMINS. I do.

Mr. GALLINGER. I ask unanimous consent that the resolu-

tion go over without prejudice until to-morrow.

Mr. WORKS obtained the floor.

Mr. BRANDEGEE. Mr. President, I inquire if the unfinished business has been temporarily laid aside?
The VICE PRESIDENT. It has been.

Mr. BRANDEGEE. Very well.
Mr. SMOOT. What is before the Senate now, Mr. President? The VICE PRESIDENT. The matter now before the Senate is House bill 7207, the title of which the Secretary will state.

The SECRETARY. A bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes.

The Senate, as in Committee of the Whole, resumed the con-

sideration of the bill.

Mr. SUTHERLAND. Mr. President-

The VICE PRESIDENT. Does the Senator from California yield to the Senator from Utah?

Mr. WORKS. I yield.

Mr. SUTHERLAND. I judge from the vacant seats on the other side of the Chamber that some of our Democratic friends are seeking a little rest in anticipation of the vigorous night work promised for the future. I therefore suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Dillingham	Martine, N. J.	Smith, Ariz,
Bacon	Fletcher	Nelson	Smith, Ga.
Borah	Gallinger	O'Gornian	Smith, S. C.
Bradley	Goff	Owen	Smoot
Brady	Gronna	Page	Sutherland
Brandegee	Hollis	Perkins	Thomas
Bristow	Hughes	Pittman	Thompson
Bryan	James	Pomerene	Townsend
Burleigh	Johnson	Reed	Vardaman
Burton	Kenyon	Robinson	Walsh
Chamberlain	Kern	Root	Weeks
Chilton	La Follette	Shafroth	Williams
Clapp	Lane	Sheppard	Works
Clark, Wyo.	Lippitt	Sherman	Berlin Street
Clarke, Ark.	McCumber	Shields	
Cummins	Martin, Va.	Shively	

The VICE PRESIDENT. Sixty-one Senators have answered to the roll call. There is a quorum of the Senate present. The

Senator from California will proceed. Mr. WORKS. Mr. President, this bill in its practical results affects the State of California alone. The principles which are involved are of importance to the whole Nation. One of the great cities of the State and one of the largest farming communities are in direct conflict as to the right to use the waters of this stream. I expect to show that this bill, in its general object and purpose, and in most of its provisions, is in direct conflict with the laws of the State of California governing the appropriation and distribution of the waters of the streams of

the State. I was very much surprised that an endeavor should have been made to press this bill to hearing and passage in my absence from the Senate. The reason for it, as announced by some Members of this body, was an entirely mistaken one. It was assumed and directly stated that I was objecting to the bill solely in the interest of people outside of the two irrigation districts that have been mentioned here as protected by the provisions of the bill.

I had not given the bill the attention that it deserved, and that I should have given to it, up to the time I made my visit to my own State. I then found by investigation that there were two sides to the question; that the bill itself did not protect the interests of the farmers of the San Joaquin Valley as it professed to do, and as everybody connected with the legislation understood it to do. Upon discovering that state of things, I sent this telegram to the chairman of the Senate Committee on Public Lands:

CORONADO, CAL., October 2, 1913.

Hon. Henry L. Myers,

Chairman Committee on Public Lands.

Senate Chamber, Washington, D. C.:

I have satisfied myself that the Hetch Hetch bill should not pass without further investigation. Ninety-nine per cent of water users in the irrigation districts are strongly opposed to it and claim that they were betrayed by those who consented to the compromise measure. They claim that thousands of acres of lands in their districts and outside of them will be deprived of water to which they are entitled, and that they can show that this sacrifice of the best and most fertile lands in the State is unnecessary in the interest of San Francisco. Because of the compromise, that they indignantly repudiate, this phase of the question has not been investigated. The bill should not be rushed through this session under such circumstances. It is too serious, not only to the parties directly interested but to the whole State.

John D. Works.

Upon that telegram being received, the following occurred on the floor of the Senate:

Mr. Bristow. I desire to say, with the permission of the Senator from Nevada, that I have not been in the Senate a great while, but I have been here something over four years and I have never known, when a request was made by a Senator from a State which is affected by a bill and that Senator is absent and asks that it be not considered until he can get back, that such a request has been denied.

Not only was such a request made by the junior Senator from Callfornia [Mr. Works], but the Senator from Utah [Mr. Smoot], who was until the 4th of last March the chairman of the committee that reports this bill, is absent from the city and he desires to be present when it is heard. For the first time in my short service here has such a request been ignored by the Senate, and I can not understand why this request is not needed.

Now follows the reason for not heeding it:

Now follows the reason for not heeding it:

Mr. Norris. I can tell the Senator why. Personally, I have no objection to postponing it as far as I am concerned, although I voted to consider it. If I understand the telegram of the junior Senator from California, he referred in his telegram to men who have no legal right involved in this bill, men who are not even organized into an irrigation district, men who have made no filing, who have not taken any steps to get the water, who have not any legal claim to it, and if we gave them all they wanted it would be a question whether we should use the water to let people drink or have for domestic use or whether we should use it for irrigation. They have not any legal filing.

Mr. Bristow. Let me ask the Senator from Nebraska, through the kindness and courtesy of the Senator from Nevada—

Mr. PITTMAN. Certainly.

Mr. Bristow. If the Senator from Nebraska were in Nebraska and there was a bill pending here affecting the State of Nebraska, and be should send a telegram here asking that its consideration be deferred until he could be heard, does not the Senator think it would be a courtesy to him for the Senate to grant his request?

Mr. Norris. I think it would be, and it would be a courtesy to the Senator from California, as the Senator from Kansas knows. I do not think there can be any doubt about this proposition.

The Senator from California in his telegram is referring to something that, even if he were here, could not possibly make any difference with this bill one way or the other. These men who are unorganized, who have no legal claim to the water, who have made no filing during all these years that this has been under consideration, have never before until the last days that the bill was before the Senate committee made any protest or any claim of any kind. Mr. Lehane very fairly and squarely stated that he had no legal right; but he said, "We can get our men together, we can organize, and we can use this water; let us have it." In the first place, the committee he

As far as Mr. Lehane is concerned, his hearing before the Senate committee showed distinctly that he was not representing the "outsiders," so called, or the men who were not connected with the irrigation districts only, but that he was representing the water users within the districts. To prove that to be so, notwithstanding the statement of the Senator from Nebraska, I call attention to a short portion of the report of the hearings before the Public Lands Committee. He says:

I have here telegrams that have been sent to Senator MYERS, chairman of the Senate Committee on Public Lands, and I will read them. The first is as follows:

Modesto, Cal., September 23, 1913. HENRY L. MYERS, Chairman Senate Public Lands Committee, Washington, D. C.:

Chairman Senate Public Lands Committee, Washington, D. C.:
We, the undersigned committee, representing the water users of the
Modesto irrigation district, 475 of whom have signed a petition to the
effect that the lands tributary to the Tuolumne River are able and
willing to store the Hetch Hetchy waters, and asking and urging that
the Senate postpone action on the Raker bill and appoint a commission
to investigate and report on our claims. Said petition was signed by
99 per cent of the water users to whom presented. W. C. Lehane, of
this committee, will represent us in person before your committee.

LEVI WINKLEBLECK,

Acting Chairman.

Mr. Winklebleck is head of the Dunkard settlement 5 miles east of Modesto, and when you get a Dunkard out rustling with public sentiment you may know that he has something at stake.

The next telegram I wish to read is from Mr. Thomas Caswell, and is as follows:

Modesto, Cal., September 23, 1913.

HENRY L. MYERS,
Chairman Senate Public Lands Committee,
Washington, D. C.:

The undersigned, representing the water users of the Turlock irrigation district, 100 of whom have this day signed a petition setting forth that lands contiguous to the Tuolumne River are ready and able to store the waters of the Hetch Hetchy, request that the Senate postpone action on the Raker bill and appoint a committee to investigate and report on our claims. Said petition was signed by 98 per cent of the water users to whom it was presented.

THOMAS CASWELL.

Now, here is a telegram from the west side of the river, from the chamber of commerce at Crows Landing, which is as follows:

CROWS LANDING, CAL., September 23, 1913.

HENRY L. MYERS, Chairman Committee on Public Lands, Washington, D. C.:

The chamber of commerce of Crows Landing urge delay in the passage of the Raker bill until you investigate the claims of the land on the west side of the San Joaquin River to water or power. W. C. Lehane will appear before you in our behalf.

W. P. Witten, Secretary.

I will say, gentlemen, that the Modesto irrigation district lies north and west of the Tholumne River. The Turlock irrigation district lies south and east, and the Turlock irrigation district is twice as large as our district. We have \$1,000 acres; they have \$176,000 acres. On the west side of the Tuolamne River is a strip of country, probably

8 or 10 miles wide, which runs down the San Joaquin River, down beyond Tracy. They are organized there now into what is known as the Tracy district.

It will be seen that instead of Mr. Lehane coming here and representing outsiders who have no legal claim upon this stream he was here representing 98 per cent of the men who own the lands within the districts and pay their taxes to support them. They were not only protesting here against the passage of the bill, but they were protesting that they had sent a delegation to Washington to oppose its passage, and that instead of fol-lowing instructions and opposing the passage of the bill they had compromised their interests and consented that a bill should be made which in form protected them but in fact does not do so, as I shall show further along.

After I learned that the claim was being made that I was not speaking for the actual water users who had legal rights in the stream, I sent this telegram to Mr. Levi Winklebleck, who came to me at San Diego and represented the conditions as he claimed them to exist, which prompted the telegram that I sent to the Senate asking for delay in order that the matter might

be further investigated:

Los Angeles, October 28, 1913.

LEVI WINKLEBLECK, Modesto, Cal.:

Levi Winklebleck, Modesto, Cal.

In your representations to me at San Diego did you represent landowners within the irrigation district or outsiders, and did Judge Lehane speak for the people within the irrigation districts or the outsiders alone? It was claimed, I see in the debate in the Senate, that complaint was made only by people who had obtained no legal right to any of the waters of the stream. I did not so understand the situation when I sent the telegram to Washington at your request.

JOHN D. WORKS.

To that telegram I received an answer from J. S. Rhodes, secretary and treasurer of the Water Users' Association of the Modesto irrigation district, as follows:

Hon. John D. Works, United States Schator, Los Angeles, Cal.:

United States Senator, Los Angeles, Cal.:

Replying to your telegram of October 28, 1913, received by the Water Users' Association of the Modesto irrigation district of Modesto, Cal., that Mr. Levi Winklebleck represented the bona fide water users of the Modesto irrigation district, and that over 95 per cent of the water users within the district are opposed to the Hetch Hetchy Raker bill and have perfected arrangements to secure a hearing for the water users of the Modesto irrigation district before the United States Senate before the final passage of the Raker bill. Lehane letter will follow.

J. S. Rhodes,

Secretary-Treasurer Water Users' Association of Modesto Irrigation District.

I also received this telegram from Mr. Winklebleck himself: Modesto, Cal., October 30, 1913.

Senator John D. Works,
H. W. H. Building, Los Angeles, Cal.:

Made a canvass of the Turlock irrigation district yesterday, and find water users unanimously opposed to the Raker or any other bill taking water from the Hetch Hetchy.

LEVI WINKLEBLECK, Chairman Modesto Water Users' Association.

So, in asking for delay and further investigation I was speaking for the men who had rights in the stream which were

threatened with destruction.

Mr. President, in what I shall say on this subject I speak for the farmers of the San Joaquin Valley. I speak for the thousands of people all over this country who are protesting against the use of a part of the magnificent Yosemite Park for commercial purposes. I speak for the great city of San Francisco in opposition to the attempt that is being made to impose more than commercial purposes. impose upon it an enormous burden of debt, unnecessary and useless, and which will bring none of the benefits that are claimed for it by those who are advocating the passage of the bill. I shall show, I think, that in practically all of its pro-visions this bill is in direct conflict with the laws of the State of California providing for the distribution of the waters that belong to the State itself under the constitution of the waters that belong to the State itself under the constitution of the State; that San Francisco has not secured, by compliance with the laws of the State or otherwise, any legal right to divert from this stream any such quantity of water as is claimed by the advocates of the bill; that if it has the water commission provided for by the laws of the State of California has the right, under the laws of the State, to regulate and control its use and disposition and to compel it to confine its use to what it needs for its own purposes. I shall show, I think, that this whole proceeding, in the attempt to procure these rights from the National Government, has been a tissue of misrepresentations that amount, whether so intended or not, to a positive fraud, not only upon the rights of the people who have already filed upon the stream but upon the people of the city of San Francisco.

What are they proposing to do? They propose, under the grant that they expect from the National Government, as they claim, to construct a dam in the Hetch Hetchy Valley in the Yosemite Park that will store 400,000,000 gallons of water per day. What for? For San Francisco's use? Not at all.

The bill itself provides on its face that this grant is made not alone in the interest of San Francisco, but for San Francisco and the cities around the Bay of San Francisco. Nobody claims, and I suppose nobody will claim, that San Francisco will need 400,000,000 gallons of water a day for a century to come. San Francisco has no more right than I have to enter upon this stream and appropriate water for Oakland or other cities and attempt to distribute it or sell it to those cities, and the National Government has no authority or power to give it any such right. Therefore San Francisco is expecting to spend something like \$100,000,000 for the purpose of appropriating water and making the necessary improvements for that purpose that she never will be able to use under the law of the State of California.

If you will take the pains to examine these proceedings, from the report of the Board of Army Engineers that was employed to deal with this question down to this time, you will find that the whole proceeding was for the purpose of acquiring rights for about 26 different cities in the water of this stream, and to impound and take it out for the use of these various cities by the city of San Francisco, and only with her consent, as against the farmers of the San Joaquin Valley, who have made their legal appropriations upon the stream, have taken out a portion of the water they are entitled to use, and under the law of the State of California, if they proceed with reasonable diligence, are entitled to take out the balance of the water for their use.

Not only that, but Sau Francisco, while claiming the right to take out of the stream 400,000,000 gallons of water per day, has a filing upon the stream that allows her to take out only 161,000,000 gallons for any purpose. Therefore, if she goes to the expense of constructing this vast system for taking out water, when she is through and the laws of California are brought to bear upon her she will not be allowed to take out more than 161,000,000 gallons per day under her initial filings. If she does not need that quantity of water she will not be able to take out even that amount, because under the laws of the State her claims will be confined to the water necessary for her The balance of it will go to somebody else who is entitled to enter upon the stream, and it will not be confined to the people who have already made filings.

There has been a good deal said here about these "outsiders, so called, having no legal right to the streams of the State; but that is a mistake. Every citizen who owns land under that stream of water has a legal right at any time to enter upon it and claim the amount of water that he needs for his own use.

Mr. President Mr. BORAH.

The PRESIDING OFFICER (Mr. Owen in the chair). the Senator from California yield to the Senator from Idaho?

Mr. WORKS. I do.

Mr. BORAH. I want to ask the Senator from California if the law of California or the constitution of California provides

that the waters of the State belong to the public.

Mr. WORKS. Yes; I am coming to that in a moment. expect before I have done with this branch of the subject to analyze the bill that is before the Senate and then the laws of the State of California and compare the two to show what the conflicts are and what are the rights that these people have under the law as it is. But before I pass to that, on the subject of the rights of San Francisco and these landowners, l would like to read a part of a statement that has been issued by Leon Leighton and others, a committee for the Ceres Water-Users' Association, in which they say:

The Raker bill, H. R. 7207, allows 2,350 second-feet for both districts out of the natural flow of the river, and, between April 15 and June 15, allows 1,650 second-feet additional out of the flow waters of the river. This amount is totally insufficient for the needs of the

It has been claimed here all along that by this compromise arrangement the bill protects these people in the quantity of water that they need. That the water users deny. They are not only not allowed the amount of water that they have legally filed upon and are entitled to take out if they pursue their work of preparing their district by the application of the water, but they are not allowed sufficient to properly irrigate the land now under irrigation.

In the Modesto district they are all using almost their full share under the terms of the Raker bill and are barely able to supply their present needs. They have 35,000 acres of land receiving no water, which is being developed from year to year and which is entitled to share in the water they will receive under the Raker bill. If said bill passes, it will result in the farmers having such a small amount of water per acre that they will be ruined. The same thing is true in the Turlock district, excepting that their acreage is over two times as much as in the Modesto district.

San Francisco is attempting to secure the three choicest sites on the entire watershed, and also "desires that all permits for reservoir building on the public lands upstream from Hetch Hetchy, Lake Eleanor, and Cherry reservoir sites be reserved in favor of the municipalities of Greater San Francisco."

We contend that we are entitled to the water to the amount of our original appropriations, provided that we can make use of the same, beneficially, and in that event, we contend that there will not be water for San Francisco and its neighboring cities sufficient to meet with the least of their demands.

Mr. SUTHERLAND. Mr. President, will the Senator from California yield to me?

Mr. WORKS. I yield to the Senator from Utah.

Mr. SUTHERLAND. The Senator from California is making an exceedingly interesting statement on a very important bill. I observe that on the Democratic side of the Chamber there is just one Senator, the Senator from Colorado [Mr. Thomas]. name him in order that his patient attention to duty may be properly preserved in the records of the Senate.

Mr. OVERMAN. I think I had better get on the other side.

[Laughter.]

Mr. SUTHERLAND. I had not observed the Senator from North Carolina, who is evidently on this side in order that he may be in good company. In view of the situation which I have stated, I suggest the absence of a quorum.

Mr. THOMAS. Before that suggestion is pressed, may I simply say that I think a great many Senators have not returned to the Chamber since the reading of the President's ad-

dress, but are getting their midday meal.

Mr. SUTHERLAND. The Senators can come in long enough to answer the roll call.

to answer the roll call.

The PRESIDING OFFICER. The Senator from Utah suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Gore	Norris	Smith, Ga.
Bacon	Gronna	O'Gorman	Smith, Md.
Bankhead	Hollis	Overman	Smoot
Borah	James	Owen	Stephenson
Bradley	Johnson	Page	Stone
Brady	Kenyon	Perkins	Sutherland
Bryan	Kern	Pittman	Swanson
Burton	La Follette	Pomerene	Thomas
Chamberlain	Lane	Reed	Thompson
Chilton	Lewis	Robinson	Townsend
Clapp	Lippitt	Root	Vardaman
Clark, Wyo.	McCumber	Shafroth	Walsh
Cummins	Martin, Va.	Sheppard	Williams
Dillingham	Martine, N. J.	Sherman	Works
Fletcher	Myers	Shields	
Gallinger	Nelson	Shively	
Goff	Newlands	Smith, Ariz.	

Mr. GALLINGER. I desire to announce that the Senator from Connecticut [Mr. BRANDEGEE] has been called from the Chamber and that he stands paired with the Senator from Illinois [Mr. Lewis].

Mr. CLARK of Wyoming. I desire to announce that my colleague, the Senator from Wyoming [Mr. WARREN], is absent

from the Senate on public business

The PRESIDING OFFICER. Sixty-four Senators have answered to their names. A quorum is present. The Senator

from California will proceed.

Mr. WORKS. I feel more than ordinarily desirous that Senators should hear what I have to say on this subject. I do not believe that a great number of the Members of this body really understand the situation as they should in order to vote upon it intelligently. I am particularly anxious that the Democratic Members should be in their seats, because it is being circulated here and has come to me at various times that this has been made a Democratic measure, and that the Democrats propose to put it through. I do not believe that statement. This is too important a matter to the State of California to be dealt with in that way, and I am sure that no Senator here has any such disposition. I have been assured of that fact by a number of Democratic Senators.

Mr. STONE. If the Senator will pardon me— The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Missouri?

Mr. WORKS. I yield.

Mr. STONE. I desire to say in this immediate connection that I am absolutely sure there has been no consultation even, much less any conference, of the Democratic Senators, with any view of concerted action with respect to this bill. I am absolutely sure that every Senator on this side has his mind open and will vote in accordance with his own judgment.

Mr. WORKS. I have been assured of that fact, as I said before, and I have no doubt of the correctness of the statement of the Senator from Missouri. But it shows the extent to which some people are going for the purpose of bringing about the passage of this bill, and I did want the opportunity to explain the situation to Democratic Senators so that they might fully realize not only the importance of this question but understand what should be done in the interest and for the welfare of the State of California, not only these two sections of it but all of it.

Proceeding with what I was reading-

Our districts need additional storage. This must be found on Tuolumne River and its tributaries. The districts are now in this

position:

If San Francisco is permitted to hold back the flood waters of the Tuolumne River in her reservoirs at Hetch Hetchy, Lake Eleanor, and Cherry Creek, there will not be sufficient flood waters to fill such reservoirs as the districts may be able to construct above the La Grange Dam on the Tuolumne River. The natural flow of the Tuolumne River is early in July, and they will therefore be left in the last half of the season without water for irrigation. In other words, under the Raker bill they will have a short supply in the first half of the season and no supply at all in the latter half of the season.

The future progress and development of our community depends upon the water supply of our lands. Any abridgment of our rights in regard to water will discourage investment and injure irreparably the future progress of ourselves and our posterity.

Mr. THOMAS Mr. President.

Mr. THOMAS. Mr. President-

The PRESIDING OFFICER. Will the Senator from California yield to the Senator from Colorado?

Mr. WORKS. I yield. Mr. THOMAS. I should like to inquire of the Senator if he has read the report of the Army engineers upon this project? Mr. WORKS. I have studied it very carefully, and I will

come to comment upon it later.

Mr. THOMAS. Then the Senator probably recalls the fact-I think it is in that report—that this river sometimes at flood season has a flow of between 30,000 and 40,000 second-feet, which, of course, is more than enough to supply San Francisco and all previous appropriations and to build as many reservoirs as natural conditions would permit the construction of.

Mr. WORKS. It is true that at certain times of the year flood water will come down and it may be stored, but I think the Senator is mistaken in his statement that the flood waters of this stream if properly stored will supply San Francisco and leave water enough to supply these lands. I think he is also mistaken in saying that the Army board report shows any such thing.

Mr. THOMAS. I may be mistaken as to that. I remember

reading it in one of the many reports.

Mr. WORKS. I will endeavor later on to analyze that report and find out just what it does say in relation to the matter.

Mr. MYERS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Cali-

fornia yield to the Senator from Montana?

Mr. WORKS. I yield.

Mr. MYERS. I was not fortunate enough to be in the Chamber when the Senator began his remarks. I ask from whom is the statement the Senator has just read? What irrigationists are making that complaint?

Mr. WORKS. It is signed by Leon Leighton, W. S. Watson, G. W. Miles, committee for the Ceres Water Users' Association. They compose a part of the water users in one of these irrigation districts.

Mr. MYERS. Under the Turlock-Modesto system or district?

Mr. WORKS. Yes.

Where are those people getting sufficient water of this for their irrigation purposes now? The flood waters of this river run to the sea, and they are not impounded at all. Where

do they get enough water now? Mr. WORKS. They do not g

Mr. WORKS. They do not get enough water now.
Mr. MYERS. Why did they not impound it long ago if they needed it?

Mr. WORKS. The conditions in this valley have been such that the single landowners were not able to build the necessary storage reservoirs for the purpose of taking the waters out of the stream. In order to meet that condition and help the farmers themselves a law was passed providing for the forma-tion of irrigation districts. Those districts are being formed all over the State of California, whereby the farmers can com-bine themselves together and so make the necessary appropriations, build the necessary reservoirs, and take out the water under the direction of the irrigation district, and distribute it to the land belonging to the landowners. That would have been impossible but for the authority given to establish these irrigation districts. They have formed districts taking up a large part of these valley lands, but not all of them. They have formed two irrigation districts lately-one the Tracey and another the name of which I do not remember-for the purpose of combining and making such appropriations and building such reservoirs as may be necessary to store the water that is now going to waste; but if they are prevented from doing that by this grant and the impounding of the water in this large reservoir, then that right is taken away from them.

Mr. MYERS. How long has California's irrigation district law been in existence?

Mr. WORKS. Oh, a number of years, Mr. MYERS. They have had about 20 years to do this, and why have they not done it, and why do they get in a hurry to do it now?

Mr. WORKS. Will the Senator allow me to answer the question'

Mr. MYERS. Certainly, but I wished to complete my question before the Senator answered it. I have completed it.

Mr. WORKS. The irrigation law has been in force for probably 20 years, as the Senator says. I do not remember the exact time, but the law was defective, and a great many of the irrigation districts that were formed failed. The law has been amended on several different occasions until it is supposed now that investors can safely take up the bonds of the district and that they can negotiate their bonds and build reservoirs and appropriate and use the water. That is the exact condition of the section that I am now talking about. People are coming into that valley by the thousand, induced to come there by the fact that they have taken these steps to appropriate and use water for the irrigation of the lands.

Mr. MYERS. Then I would ask—
The PRESIDING OFFICER (Mr. SHIVELY in the chair). Does the Senator from California yield further to the Senator from Montana?

Mr. WORKS. I yield.

Mr. MYERS. Has there been any organized effort heretofore or any steps taken in the past for the procurement of the appropriation of these waste waters by the irrigation district?

Mr. WORKS. Yes; they have made their regular filings upon the stream, which entitle them to take out a part of the flood waters. They have built some reservoirs there already. are preparing to build other storage reservoirs below the point where it is proposed to grant the right to build this one, which would be interfered with if this bill should pass and this reservoir be constructed.

Mr. MYERS. I should like to ask further, the Senator does not contend that where any of these appropriations have already been made or where steps have been taken they could be interfered with by this bill?

Mr. WORKS. Certainly, I do. I believe they would be very

seriously interfered with.

Mr. MYERS. Does the Senator say that Congress could interfere with a water-right appropriation under a State law when It is initiated according to law?

Mr. WORKS. It can; if this statute is to be enforced.

Mr. MYERS. I should like to have the Senator explain how

it can be done.

Mr. BORAH. Mr. President-

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Idaho?

Mr. WORKS. I yield. Mr. BORAH. In answ

In answer to the suggestion of the Senator from Montana, if Congress has any power at all in the premises to control and distribute and adjust this water, it is a superior power, and it can affect that which has been done as well as that which is to be done. If we are correct in our contention that the entire matter rests upon rights arising under the State law, then Congress can not deal with the subject. If that is not true, then it is within the power of Congress to readjust the matter.

Mr. MYERS. With the permission of the Senator from California, I should like to say, if I do not interrupt him too much, that I do not understand how Congress could interfere with any vested right which accrued to anybody under any legitimate and jurisdictional law, State or National.

Mr. WORKS. Does the Senator mean to say that this bill

does not attempt to do it?

Mr. MYERS. I claim that it undertakes not to do it. That is my understanding of it.

Mr. BORAH. It is no more difficult for Congress to interfere with a vested right than it is for Congress to interfere with a power reserved entirely to the State. It is, of course, impossible for Congress to do either; but one, I apprehend, could be about as well justified as the other.

Mr. WORKS. Mr. President, I come now to analyze the bill

before the Senate.

Mr. THOMAS. Mr. President-

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Colorado?

Mr. WORKS. I do.

Mr. THOMAS. I apologize to the Senator for interrupting him-

Mr. WORKS. That is unnecessary. Mr. THOMAS. But the source of my statement was not the report of the Board of Army Engineers, but a statement of Mr. O'Shaughnessy, on page 136 of the hearings before the Committee on Public Lands of the House of Representatives.

Mr. WORKS. I have not discovered any statement of that kind in the report of the Army engineers, and I have studied it

very carefully.

Mr. THOMAS. The Senator is correct. I was mistaken as to the source of my information. Mr. STONE. Mr. President—

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Missouri?

Mr. WORKS. I do.

Mr. STONE. I should like, as a matter of information, to ask the Senator to state the arable area of the valley through which the river flows.

Mr. WORKS. I would not be able to do that from present memory, but I will do it in the course of my remarks. The whole matter will be disclosed before I have done.

Mr. STONE. Does the Senator know how much of it is now in actual occupancy?

Mr. WORKS. Something like 400,000 acres is under irrigation.

Mr. STONE. And how much is lying idle?

Mr. WORKS. The remainder is lying idle-at least 200,000 The Senator from Utah says more than that.

Mr. STONE. The Senator from Colorado said 6,000,000 acres. in the aggregate.

Mr. WORKS. I am talking about the irrigable land. Mr. WALSH. Mr. President—

The PRESIDING OFFICER. Does the Senator from California yield to the junior Senator from Montana?

Mr. WORKS. I yield.

Before the Senator from California passes Mr. WALSH. from the presentation of the protest or objection made by the irrigation district and those interested in it to consider the particular features of the bill, I should be very thankful, indeed, if he would give us a little clearer idea of just exactly what the protest of these people is and upon what it is founded.

This is a bill permitting the creation and establishment of a dam within the Hetch Hetchy Valley, in the Yosemite National Park, for the purpose of impounding water which would otherwise flow away. No one heretofore has ever had a right to put a dam there for the purpose of impounding the water. Neither the people of San Francisco nor the people of the San Joaquin

Valley have had that right. No one has had the right to do so.

I gather from what the Senator says, however, that these people do not want the privilege which is here to be given to the people of San Francisco to erect a dam in the Hetch Hetchy Valley; in other words, to step into the position that the people of San Francisco would occupy under this bill. They are not asking that. If they are not asking that, I do not understand how they are injured in any way by the passage of this act, except it be that they intend hereafter to erect dams at some lower point in the stream for the purpose of there impounding the waters which would by this dam be stored within the Hetch Hetchy Valley. If they do hereafter intend to construct such dams, they have no rights accrued which could be affected by If they have already, as the Senator now tells us, constructed dams below for the purpose of impounding water there, or if they have started already to do so, any rights which they have acquired by virtue of that work thus initiated or carried to its termination will be, of course, superior and paramount to any rights that the city of San Francisco could acquire by reason of this construction work to be carried on later. Thus, it occurs to me that, as I understand it now-and I ask simply to be enlightened upon the matter-this act can not possibly injure them, and I am anxious to know just what it is that these people complain about.

Mr. WORKS. Mr. President, I am quite willing to yield to questions, but I hope I will not be asked to yield in order that some other Senator may make a speech on this question in my time.

I had not commenced to develop the question the Senator refers to. It was simply a passing reference to it for the purpose of showing the interest these landowners have in the subject. But I expect to take that matter up more fully as I go along, and I shall be very glad to submit to any inquiry the Senator may then desire to make.

I may say, however, in this connection that there seems to be some idea here that there is a difference between the storm waters of a stream and the natural flow of it with respect to the legal rights of persons who are claiming the waters of that stream. That is not so. Precisely the same law applies to both of them. It may be more difficult, it may cost more money to store the water that comes down during a storm time, but the law is precisely the same with respect to its appropriation and its use. There is no difference in a legal sense.

If these landowners have filed upon a specific quantity of

water and that water is not to be had from the natural flow of the stream, they have a right to take the balance of it from

any storm waters and to take any steps that are necessary to

accomplish that result.

Neither the city of San Francisco nor anyone else has undertaken to file upon this stream and take out a part of the storm waters and assume that they are not going to interfere with the natural flow of the stream. They can no more interfere with the rights of the landowners to take out storm water than they can with the natural flow of the stream. Therefore, if any dam is constructed above the dam of the landowners which will stop the flow of the storm waters and impound them for the use of the city of San Francisco, and thereby lessen the quantity of water that will pass down to the dam of the landowners, then they are encroaching upon their rights and could be enjoined.

The landowners, following further the suggestion of the Senator from Montana, have certain filings upon the stream. They have not taken out all the water that they are entitled to take out. They could not take it out from the natural flow of the stream. They will be compelled, in order to get the amount of water to which they are entitled, to erect a storage dam or dams,

They have erected one of them below where it is proposed to construct this dam. They have never said, as the Senator suggested, that they do not propose to erect a dam in Hetch Hetchy Valley. The claim is being made here that they will not be able to do so, but as a matter of fact, with the combination that can be brought about through this irrigation district, they would be able to construct a dam sufficiently high to furnish the water that is necessary for the supply of their lands. But I think I shall show the Senate before I have done that if San Francisco proposes to construct a dam for the purpose of taking out the waters of the stream, and it should be a hundred feet high, the water commissioners could compel the city of San Francisco to permit the landowners to add another 50 feet or another 100 feet for the purpose of storing the water that they need as well and compel a joint distribution of it.

Now, Mr. President, taking up the bill itself, I call attention, in the first place, to a clause on page 2 of the bill, which is a part of the grant and discloses to whom the grant is proposed to

be made:

For conveying water for domestic purposes and uses to the city and county of San Francisco—

Now, mark you-

and such other municipalities and water districts as, with the consent of the city and county of San Francisco, or in accordance with the laws of the State of California in force at the time application is made, may hereafter participate in the beneficial use of the rights and privileges granted by this act.

Has anybody else but the city of San Francisco made application for any grant of this kind? Has Oakland or Berkeley or any of the other 26 cities that are mentioned here asked the Government for any grant to take water from the stream and store it? Not at all. Has the city of San Francisco the right to enter upon the stream and take out the water for anybody else but San Francisco? I shall show that she has not. If San Francisco has no right to enter upon the stream and take out the water for anybody else, then why should the Government grant to San Francisco the right to erect this reservoir for the purpose of storing water that it can never legally take out?

Mr. President, let us look at some of the most remarkable provisions of this bill. Nothing like it has ever been known in the history of this country, so far as I know. There have been grants of this kind made before. There was a grant made to the city of Los Angeles to enter upon the land of the United States and construct its reservoirs and its ditches and canals, but it was a plain simple grant of that right. It made no attempt to interfere with the disposition or use of the water; it made no conditions even for the payment of money to the Government; it simply granted a right to construct these improvements upon Government land in order that the water might be disposed of in accordance with the laws of California; but they are not content with that in this case. They propose to say for what this water shall be stored, to whom it shall be distributed, where it shall go, and what shall be paid for it.

Mr. THOMAS. Mr. President—
The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Colorado?

Mr. WORKS. I do.

Mr. THOMAS. I wish to call the Senator's attention to the last section of the act granting the right to use the public lands of the Nation for the construction of this water system, which reads:

That the city of Los Angeles is prohibited from ever selling or letting to any corporation or individual except a municipality the right for such corporation or individual to sell or sublet the water sold or given to it or him by the city.

I desire to ask whether that does not impose a restriction upon the sale or the use of the water that the city of Los Angeles receives within its municipality to the system of waterworks that it constructed by virtue of this act?

Mr. WORKS. No; because it was simply a statement of the law of California. It could not do it under the law of that State. Therefore the provision amounted to nothing, and was not objectionable to Los Angeles.

Section 6 provides practically what has just been stated by the Senator from Colorado with respect to Los Angeles.

Section 7 provides:

Section I provides:

Sec. 7. That for and in consideration of the grant by the United States as provided for in this act the said grantee shall assign, free of cost to the United States, all roads and trails built under the provisions hereof; and further, after the expiration of five years from the passage of this act the grantee shall pay to the United States the sum of \$15,000 annually for a period of 10 years, beginning with the expiration of the 5-year period before mentioned, and for the next 10 years following \$20,000 annually, and for the remainder of the term of the grant shall, unless in the discretion of Congress the annual charge should be increased or diminished, pay the sum of \$30,000 annually.

With respect to the roads, this condition is not objectionable; that is a condition that the Government may very properly impose, as it will affect the Government lands. That is left in its hands after this grant is made, and the Government certainly has the right to make any conditions of the grant that affect the title or the use of its own lands. To those provisions of the bill and those conditions I make no objection, because they are perfectly legitimate.

Section 8 provides:

SEC. 8. That the word "grantee," as used herein, shall be understood as meaning the city and county of San Francisco and such other municipalities or water district or water districts as may, with the consent of the city and county of San Francisco, or in accordance with the laws of the State of California, hereafter participate in or succeed to the beneficial rights and privileges granted by this act.

There is a grant to some city that may or may not at some future time seek to take advantage of the grant; but the grant compels, as I shall show directly, the city of San Francisco to construct a dam 200 feet high for the purpose of storing this entire quantity of water, whether anybody else claims it or not, and for a purpose not within the filing made by the city of San Francisco; and where the filings of that city only amount to 161,000,000 gallons a day, where San Francisco is claiming the right here to construct a dam which will store three times that amount, or nearly that, without any provision or any legal act on the part of the city of San Francisco that entitles it to store that quantity of water.

Going further, section 9 provides:

Sec. 9. That this grant is made to the said grantee subject to the observance on the part of the grantee of all the conditions hereinbefore and hereinafter enumerated.

Now, mind you, those are some of the conditions of the grant. The right of the city of San Francisco to construct a dam and use it is subject to these conditions. If it fails to comply with them, they having been made conditions, of course it forfeits its right and all the money that it has placed upon this property.

Let us now see what it is required to do. I am passing over some of these provisions, which refer simply to sanitary conditions that the Government has the undoubted right to impose;

but coming down to subdivision (b), it is provided:

(b) That the said grantee shall recognize the prior rights of the Modesto irrigation district and the Turlock irrigation district as now constituted under thee laws of the State of California, or as said districts may be hereafter enlarged to contain in the aggregate not to exceed 300,000 acres of land, to receive 2,350 second-feet of the natural daily flow of the Tuolumne River, measured at the La Grange Dam—

That is a dam that is constructed by the districts themselveswhenever the same can be beneficially used by said irrigation districts, and that the grantee shall never interfere with said rights.

Who in this Senate knows anything about what water these districts are entitled to? How do we know? Mr. PITTMAN. Mr. President—

Mr. PITTMAN. Mr. President—
The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Nevada?
Mr. WORKS. I yield.
Mr. PITTMAN. What difference does it make to this body what amount of water either San Francisco or the irrigation districts are entitled to?

Mr. WORKS. It ought not to make any, but it seems to do so by the provisions of this bill. If not, why should the Government legislate upon it at all?

Mr. PITTMAN. Does the Senator think that we should take that question into consideration at all?

Mr. WORKS. I think it ought not to be in the bill at all, I will say to the Senator. That is just what I am complaining of.
Mr. PITTMAN. If the Senator will pardon me, my only
answer to that is that I do not think there is a Senator who

favors this bill believes that provision is material to the bill; but those who want to give to San Francisco the right to build a dam on the public lands believe that without that agreement in the bill the House of Representatives will not pass the bill.

Mr. WORKS. That is a very singular position for the Senate of the United States to take, to adopt a provision in a bill in opposition to what the Senate thinks it ought to be because of some action that may in the future take place in the House of Representatives.

Mr. NORRIS. Mr. President—
The PRESIDING OFFICER. Does the Senator from Califor-

nia yield to the Senator from Nebraska?

Mr. WORKS. I yield.

Mr. NORRIS. If the provision to which the Senator refers has no effect

Mr. WORKS. Mr. President, I have not said it has no effect. That remark was made by the Senator from Nevada [Mr. Pitt-

MAN].

Mr. NORRIS. I understood the Senator to say that,
Mr. WORKS. No; I did not.
Mr. NORRIS. Then, I will ask the Senator, does he claim
that we can pass any act that will be effective, that will take
away or add to any of the rights belonging to these people who
want to use water for irrigation?

Mr. WORKS. Mr. President, the Congress of the United.

Mr. WORKS. Mr. President, the Congress of the United States by a provision of this kind may do one of two things. It may deprive future proprietors in that stream of the surplus waters, of some of the waters to which they are entitled, by providing that a certain quantity of this water shall be taken out by the city of San Francisco, or, if the city of San Francisco is not able to do that by complying with the conditions contained in the bill, then it is subject to a forfeiture of its

Mr.-NORRIS. Then, if this section of which the Senator com-

plains was omitted, would that help the matter any? Mr. WORKS. It would help the matter, certainly, so far as

that particular question is concerned.

Mr. NORRIS. Would that eliminate that difficulty? Mr. WORKS. It would eliminate that particular difficulty; yes. Mr. NORRIS. I can not understand, if the Senator will pardon me, if this does not undertake to control the balance of the water, and only controls it to the extent named in the bill, if you would eliminate that and say nothing about it, how it would make the matter any better for those who are not mentioned in the bill than it is now. In other words, if this particular part here, which the Senator thinks ought to be out, and which only undertakes to apply to certain corporations, were eliminated, how can the stipulations of the bill in regard to them be construed to injure anybody else who is not mentioned in the bill, when the Senator contends that we ought to say nothing about it and let everybody take water under his rights

as given by the California law?

Mr. WORKS. Mr. President, if the Senator from Nebraska does not understand the plain language of the bill and its legal effect, I am afraid I shall have a great deal of trouble in mak-

ing him understand it.

Mr. WALSH. Mr. President—

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Montana?

. Mr. WORKS. I was about to reply to what the Senator from Nebraska had said, if the Senator from Montana will pardon me for a moment.

Mr. WALSH. I shall be very glad to listen to the Senator.
Mr. WORKS. Here is a provision in this proposed statute
made a condition to the grant that a specific quantity of water shall be turned out to the two irrigation districts. I do not know, neither does any Senator here know, whether or not that is the amount of water that they are entitled to. It may be more or it may be less.

Mr. NORRIS. Mr. WORKS. Mr. President— Wait a moment.

I was going to answer that question. Wait until I get through with the answer, and Mr. NORRIS.

Mr. WORKS.

then I will give the Senator an opportunity to do so.

If the Government is compelling San Francisco by this condition to turn out to the two irrigation districts more water than they are entitled to, then it is either taking away from San Francisco part of the water to which it is entitled or it is taking it away from somebody else who may have the legal right to file upon the stream and take out water. On the other hand, if by this condition the Government compels San Francisco to turn out this quantity of water from the amount stored in the reservoir, if it fails to do that it is subject to the forfeiture of its grant.

Suppose the State of California comes in through its water commissioners and determines, as it has the right to do, as I shall show directly, just what quantity of water shall be used by those districts, just what quantity may be left in the streams as surplus water, what is appropriated and what is unappropriated, and how much of it may be taken by San Francisco. Here we have a provision in direct violation of the provisions of those statutes of California which authorize somebody else to determine just how much water shall be taken from the stream and how it shall be used. It can not be said, I will say to the Senator from Nebraska, that this does not limit the use of the water or that it does not provide for the distribution of the water-something which I think the Government of the United States has no power whatever to do.

Mr. NORRIS. Will the Senator permit me there? Mr. WORKS. Certainly; I yield to the Senator.

Mr. NORRIS. The last remark of the Senator was that it was something that the Government of the United States has no power to do. Then is it not on all fours with a prevision in the Los Angeles grant, which the Senator said just a few moments ago was simply a statement of the California law and had no effect?

Mr. WORKS. No: because in the case of the Los Angeles district the bill provided just what the law of California provides for, while in this case it is providing something that is in direct opposition to the law of California.

Mr. NORRIS. Exactly; but if the Senator's theory is true, then the particular provision that he is opposing so strenuously, even if it were left in the bill, would have no legal effect what-ever, because, as the Senator says, it is an effort to do something which we have no right to do; so that at least it would not hurt anvone.

Mr. WORKS. I have said very distinctly that it does have a legal effect so far as it affects the grant to the city of San Francisco, because, if she fails to do this, I do not care for what cause, she is subject to the forfeiture of her grant.

Mr. BORAH. Mr. President-

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Idaho?

Mr. WORKS. Yes; I yield. Mr. BORAH. I want to ask a question of the Senator from Nebraska, who is on the committee, and doubtless knows something about the genesis of the bill. Does the Senator from Nebraska think that that clause is one that Congress has power

Mr. NORRIS. Will the Senator from California yield to me to answer the question?

Mr. WORKS. Yes. Mr. NORRIS. I said the other day, and I think I will take occasion to say again later on in the debate if I take part in it, that I do not think, if I had my own way about it, that I would have this provision and some of the other provisions in the I do not think that we can determine that question, but I think that it does not do any harm in the bill, except perhaps in one sense it might look a little ridiculous. It is the same question exactly, as I look at it, that was in the Los Angeles bill, where certain provisions were put in which, as the Senator from California has said, did not have any legal effect and did not hurt anyone. In this case the provision was put in, not because San Francisco wanted it in, but because the men who were fighting the bill at the time it was put in insisted that it should be put in or they would continue to fight the bill. It was put in to satisfy the very men who are now the enemies of the

Mr. BORAH. As I understand the Senator from Nebraska and also the Senator from Montana, there is very little difference of view here with reference to the legal proposition.

Mr. NORRIS. I do not believe there is any. I think we

Mr. BORAH. I think there is very little difference of opinion as to the proposition that if this bill were stripped of all the things which we can not do and confined to the things which we can do there would be very much less of opposition to it; but evidently these provisions were put in upon the theory that they would be legal, and those who consented to them consented for the reason that they believed it was in the power of Congress to enact them.

Now, having discovered that they have something which is of no legal validity, it is right and proper that they should not desire to have such provisions in there, because doubtedly lead, as the Senator from California said the other day, to litigation and to difficulties and costs in that respect. What the legal effect may be is one thing, but what might grow out of it in the way of lawsuits in order to determine that

legal effect is another thing. But it is an anomalous proposition that we will seek to solemnly enact that which all concede to be beyond our power to enact.

Mr. NORRIS. Will the Senator permit a question?

Mr. BORAH. Yes; if the Senator from California will permit.

The PRESIDING OFFICER. Does the Senator from California yield further to the Senator from Nebraska?

Mr. WORKS. I yield. Mr. NORRIS. The Senator says it will lead to litigation. the language put in the bill which the Senator is now dis--I mean that language which says how much water shall be turned out to these two irrigation districts-assuming that the language in the bill states the correct amount that these irrigation companies are entitled to under the California law, then would there be any danger in the conditions? As I understand-at least it was stated to be true on both sides of the proposition—these people were given under the terms of the bill itself all the water to which they were entitled under the laws of California.

Mr. BORAH. If there was no one else to complain or to become involved in a law suit except those whose rights have been passed upon and it should happen that the amount of water given to them was the correct amount, it would not likely lead to a law suit, but the evil of this thing, and the objection I have to it, is that it seems to be conceded that the Government of the United States is asserting the right and asserting the power to distribute the waters of California. It is an assertion of power on the part of the Government to do that thing, and it is a little more difficult to get rid of a proposition upon which you can place the authority of the National Government than it is to settle your rights under the State laws alone. We are asserting a power and we are under oath to legislate in accordance with the Constitution.

Mr. WALSH. Mr. President—
The PRESIDING OFFICER, Does the Senator from Cali-

fornia yield to the Senator from Montana?

Mr. WORKS. I am going to yield to the Senator from Montana, but I want to say that from this time on until I have concluded the analysis of this bill and of the California law I shall decline to be interrupted further. Senators may, however, after that, if they so desire, ask me any question, and I shall be glad to answer if I can.

Mr. WALSH. I do not desire to interrupt the Senator unless he wishes. I rose because of the fact that the Senator inquired in the course of his remarks whether there was any Senator upon the floor who was able to say whether this was the amount of water to which these irrigation districts were entitled. I should like to speak briefly on that subject-

Mr. WORKS. Certainly. If the Senater is able to state

that I have no objection to his doing so.

Mr. WALSH. I speak in the hope that the discussion may be clearer to Senators who are listening with interest to the remarks of the Senator from California.

It seems to be assumed here—and undoubtedly it is the casethat the Modesto irrigation district has certain rights in this The Senator is suggesting by the question he asked awhile ago that those rights may amount to very much more than is here specified. Of course none of us knows how much they do amount to. They may be more or they may be less than the amount specified here in this paragraph. As I view it, it is a matter of entire indifference to them whether it is the one or the other; and I should like to be corrected by the Senator from California if I am in error.

Mr. WORKS. I think the Senator is greatly in error.

Mr. WALSH. If they have water rights greater in amount than in this paragraph specified, and they go into a court in the State of California for the purpose of asserting those rights, and the Senator was the judge on the bench, are we to understand him to say that he would have to adjudicate that they could take only those rights specified in this act, and that they would lose the excess to which they are otherwise entitled?

Mr. WORKS. Mr. President-

Mr. WALSH. Let me finish the question.

Mr. WORKS. I thought the Senator had asked two or three

Mr. WALSH. Now, I want you to assume that they have not a right to that much, and when they bring their suit it is determined that they are not entitled as of right, outside of the provisions of this bill, to the amount mentioned in the bill. The city of San Francisco here, however, agrees that no matter how little they may have a right to, or even if it should appear that they have no rights at all, they shall be entitled to the quantity of water specified. In other words, is not this pro-

vision one to the advantage of those people, assuring them that amount in any case, and in any event enabling them to assert whatever excess they have a right to? The city of San Francisco by accepting this grant is forever estopped from asserting to the contrary, while the irrigation districts are at liberty to establish as before that they are really entitled to twice that much. Is not that right?

Mr. WORKS. If I were a judge on the bench, as the Senator suggests, I should hold that the Government of the United States had no right to impose any such conditions, or to distribute this water at all, or to provide for it, or to make any such condition as affecting the city of San Francisco. But why should the Congress of the United States compel these districts to go to me or to any other judge to have that matter determined by a provision in this bill?

Mr. WALSH. Let me make an inquiry of the Senator. city of San Francisco has certain rights in this stream. This district has a right in this stream. They are obliged to adjudicate any controversy either before the courts or a com-

mission, are they not?

Mr. WORKS. They ought not to be compelled to litigate it by any provision we may insert in this bill.

Mr. WALSH. We do not make them litigate it by any pro-

vision of this bill.

Mr. WORKS. They certainly would. If the city of San Francisco is compelled to turn out a certain quantity of water, and demand is made for that quantity, and the city refuses to grant it, resort would have to be made to the courts to compel it. On the other hand, the Senator does not seem to understand that there are other people who are entitled to the water of this stream besides these two districts. Suppose this bill provided for turning out twice as much water to the districts as they are entitled to, as against other people who may have filed or who may desire to file upon the stream, upon water that is not appropriated, then the Government is proposing to compel San Francisco to turn out to the districts water that legally and justly belongs to somebody else. What right has the Government to do that?

Before leaving this subject, I want to refer again to what has been said by the Senator from Nebraska [Mr. Norris]. As I see it, he seems to have an entirely erroneous conception of pretty much everything connected with this bill. He says that this matter has all been agreed upon by the parties in interest. That is a mistake, I will say to the Senator from Nebraska. The very people who are interested in this matter sent a delegation here to Washington for the purpose of op-posing the bill. When they got here, in their wisdom they concluded they had better compromise their differences. They had no authority from the water users of the districts to make any compromise of that kind or any authority from the officials of the district itself. The water users who were not willing that there should be any compromise made upon the bill at once protested, but the people who were here said, "Well, we are right here on the ground, and we know better than you what is to the interest of the water owners, and you had better They did wait until this bill had passed the House, I believe, but it is a mistake to say that nobody was here even at the time of the hearings before the House committee who was protesting against this bill, because Judge Dennett, a resident of that community and a very respectable and able man, was here protesting before the House committee against the passage of the bill; but he was hardly listened to with patience when he undertook to show the committee the injustice of the compromise that had been made. So it is a mistake to say that there has been no protest made by anybody who is interested on the other side of this question. But it has had this effect, Mr. President: The effect of it has been that this hearing was completely one-sided; the rights of the irrigationists and landowners were never presented to the committee, except in that one statement that was made by Judge Dennett with respect to what are called, the out-

Mr. PITTMAN. Mr. President-

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Nevada?

Mr. WORKS. I yield. Mr. PITTMAN. The Senator from California evidently has a different opinion as to what took place than have those who are advocating this bill, and I think that his last statement is in error with regard to the fact that the representatives of the irrigation districts were not confirmed in their action by these who created them. It will only take me a minute to read a statement of the confirmation, if the Senator will permit me. Mr. WORKS. Certainly.

Mr. PITTMAN. So that it will be understood, I will state that this matter was first taken up before the Public Lands Committee of the House, which held a hearing lasting several weeks. At least two months subsequent to that time the matter was taken up for consideration before the Public Lands Committee of the Senate, of which I am a member and of which the Senator from California is a member. Mr. Lehane appeared before that committee, making the same charges then that the Senator from California now is making.

Mr. WORKS. But that, I remind the Senator, was after the bill had passed the House and was before the Senate, and while

I was away in California.

Mr. PITTMAN. The Senator is correct; but at that time Mr.

Lehane was here. It was after the bill had passed the House. and Mr. Lehane charged before the Public Lands Committee of the Senate the same things that the Senator is now charging—that the representatives of the irrigation districts violated their authority in making this agreement. My answer to that is that Mr. Church gave the following testimony before the Public Lands Committee of the Senate, which is found in the hearings of the Senate committee on this bill at page 64:

The Chairman. All right: you may proceed, Mr. Church.
Representative Raker. Mr. Church is from the San Joaquin district, and he is familiar with this entire question.

By the way, Mr. Church is a Representative from that dis-

By the way, Mr. Church is a Representative from that district.

Mr. Church. Originally I was very much opposed to this plan. I had heard of this Hetch Hetchy matter for years and years; I had heard that Mr. Needham was fighting for the rights of the irrigation districts and the people. When I came to Washington this spring the battle was on in reference to the Hetch Hetchy and, very fortunately, certain representatives from these districts came here. Their names were as follows: Hon. L. W. Fulkerth, superior judge of Stanislaus County, wherein is located both these irrigation districts, in a way. There were two representatives, two attorneys for these districts—the Stanislaus and the Modesto districts—also two engineers representing the districts who came here. Mr. Corey and Mr. Smith. Mr. Needham was also employed to represent the districts, and all these people came on here to Washington. All the interests they had on earth were involved and they were acquainted with the whole history of the case from start to finish.

I felt greatly relieved, because I knew that what they decided in relation to the matter would be for the best interest of the districts. They came here and they entered into an arrangement—an agreement. Those agreements are all embedied in this bill. They all agreed to them—the engineers, the attorneys, and the special representatives. They all agreed to the conditions that are now embodied in this bill. For that reason I withdrew any opposition that I had, and in view of the fact that these people who knew so much about the matter and had only the interests of the irrigation districts at heart advised me this way, I withdrew what little opposition I had manifested to the bill. I was very greatly pleased, gentlemen, when those men went back home to report, that the people back theer ratified their work, and so I will just here read some telegrams that I have received, which I have published in your records and which are in the Congressional Record. Those telegrams are sent by people of standin

Modesto, Cal., August 13, 1913.

DENVER S. CHURCH, M. C., Washington, D. C.:

Washington, D. C.:

At a joint meeting of the board of directors of the Modesto and Turlock irrigation districts held in Modesto this day the action of the committee sent to Washington to represent the districts was fully indorsed, and the Raker bill, as recommended by the House committee, was approved. The boards also passed resolutions requesting our Representatives in Congress to use their best efforts to pass such bill and oppose the passage of any bill granting San Francisco the Hetch Hetch which does not contain provisions recognizing and protecting the rights of the districts in the Tuolumne watershed, as provided in the bill. Stanislaus County Board of Trade passed resolutions on Monday night in effect that no further opposition would be made to the Raker bill. Some little opposition to the bill had been engendered by persons having special interests outside of the districts and by a few others who feel that the waters of the river should never be taken from the valley. People generally of the irrigation districts believe that under all the circumstances the Raker bill should be adopted without material amendment and that the strongest opposition should be made to any change in the bill which would eliminate any of the conditions in favor of the districts.

C. S. Anbort.

C. S. Abbott,

Secretary Joint Meeting of Directors

Modesto and Turbock Irrigation Districts.
P. H. Griffin,

Attorney Turbock Irrigation District.
E. R. Jones,

Attorney Modesto Irrigation District.
L. W. FULKERTH.

I will now read another telegram sent under date of August 12 of this year, which is as follows: HUGHSON, CAL., August 12, 1913.

Hon. DENVER S. CHURCH, M. C. Washington, D. C .:

At a mass meeting of taxpayers and irrigators of Hughson section of the Turlock Brigation district the secretary of the meeting was instructed by resolution to wire you to vote for and use your influence for the immediate passage of the Raker bill as approved by our committee. E. F. Sawdex, Secretary.

I have another one from Turlock, dated August 14, 1913, which is as follows: TURLOCK, CAL., August 14, 1913.

DENVER S. CHURCH, House of Representatives, Washington, D. C.:

We, the committee appointed by a citizens' mass meeting of the Turlock irrigation district, working in conjunction with the directors of said district, do hereby indorse the work of the representatives of the Turlock and Modesto irrigation districts sent to Washington for the Turlock and Modesto irrigation districts sent to Washington for the Turlock and Francisco as set forth in a certain bill known as the Raker bill. We further ask our Representatives in Congress to support and vote for the said Raker bill, H. R. 7207, as reported out of the Public Lands Committee and now before Congress.

Unanimously carried.

H. C. Hoskins, Chairman.

H. C. HOSKINS, Chairman.

Gentlemen, that is all I have to say. I thank you for your courtesy and attention.

Mr. WORKS. Mr. President, I do not quite understand why the Senator from Nevada should have taken up so much of my time in reading something that does not contradict a single word I have said here. These telegrams relate to the board of directors, not to the water users of the district. They have con-firmed what these people did; but the directors of one of these districts have been removed by the water users for that very reason and others substituted in their places. This matter never was submitted to the water users at any time in order to determine whether or not they desired that this course should be taken. The moment they discovered that it was, they formed their own separate organization, independent of the board of directors, and insisted that this bill should be opposed. The new board of directors, appointed in place of those referred to by the Senator from Nevada, have appropriated certain moneys for the purpose of aiding in defeating this bill.

Mr. PITTMAN. Mr. President— Mr. WORKS. Mr. President, I object to any further inter-Mr. WORKS. ruption. A number of Senators have expressed a desire to hear what I have to say, in connected form, and I am not able to get anything in any logical form before the Senate in the face of continued interruptions. I shall submit to any questions that

may be asked after I have finished.

The PRESIDING OFFICER. The Senator from California

declines to be further interrupted.

Mr. WORKS. Representative Church has been to his district since he made the statements contained in this hearing. He is in the Senate Chamber now, and I imagine that if he were to tell what the sentiments of his constituents in these districts were it would be quite a different story from that disclosed in the hearings.

Now I proceed, Mr. President. Subdivision (c) provides:

Now I proceed, Mr. President. Subdivision (c) provides:

That whenever said irrigation districts receive at the La Grange Dam less than 2,350 second-feet of water, and when it is necessary for their beneficial use to receive more water, the said grantee shall release, free of charge, out of the natural daily flow of the streams which it has intercepted, so much water as may be necessary for the beneficial use of said irrigation districts, not exceeding an amount which, with the waters of the Tuolumne and its tributaries, will cause a flow at La Grange Dam of 2,350 second-feet; and shall also recognize the rights of the said irrigation districts to the extent of 4,000 second-feet of water out of the natural daily flow of the Tuolumne River for combined direct use and collection into storage reservoirs as may be provided by said irrigation districts, during the period of 60 days immediately following and including April 15 of each year, and shall during such period release free of charge such quantity of water as may be necessary to secure to the said irrigation districts such 4,000 second-feet flow or portion thereof as the said irrigation districts are capable of beneficially directly using and storing below Jawbone Creek: Provided, however, That at such times as the aggregate daily natural flow of the watershed of the Tuolumne and its tributaries measured at the La Grange Dam shall be less than said districts can beneficially use and less than 2,350 second-feet, then and in that event the said grantee shall release, free of charge, the entire natural daily flow of the streams which it has under this grant intercepted.

The object and effect of that provision, if it has any effect

The object and effect of that provision, if it has any effect at all, legally speaking, is to provide specifically for the taking over by the Government of the actual distribution and use of the water referred to in the bill. Everybody who has spoken heretofore has admitted that the Government has no such power as that. Therefore, why should it make the attempt? should it impose that condition upon San Francisco?

Subdivision (d) provides:

That the said grantee whenever the said irrigation districts desire water in excess of that to which they are entitled under the foregoing, shall on the written demand of the said irrigation districts sell to the said irrigation districts from the reservoir or reservoirs of the said grantee such amounts of stored water as may be needed—

They go a little further than that. They not only provide how much water shall be turned out to these people, but they provide that the city of San Francisco shall sell them the water that they demand, at prices fixed by the Government.

Subdivision (e) provides:

That such minimum and maximum amounts of such stored water to be so released during any calendar year as hereinbefore provided and the price to be paid therefor by the said irrigation districts are to be

determined and fixed by the Secretary of the Interior in accordance with the provisions of the preceding paragraph.

Then the right is given to the Secretary of the Interior to determine how this water shall be distributed in accordance with the terms of the bill—not in accordance with the laws of California, but in accordance with the terms of the bill itself. What right has the Secretary of the Interior to take upon himself, or what right has the Congress of the United States to impose upon the Secretary of the Interior the duty of caring for and determining how the water shall be distributed?

Subdivision (f) provides:

Subdivision (f) provides:

That the Secretary of the Interior shall revise the maximum and minimum amounts of stored water to be supplied to said irrigation districts by said grantee as hereinbefore provided, whenever the said irrigation districts have properly developed the facilities of the Davis Reservoir of the Modesto Irrigation District and the Warner-Dallas Reservoir of the Modesto Irrigation District to the fullest practicable extent up to a development not exceeding in cost \$15 per acre-foot storage capacity, and whenever additional storage has been provided by the said Irrigation districts which is necessary to the economical utilization of the waters of said watershed, and also after water losses and wastes have been reduced to such reasonable minimum as will assure the economical and beneficial use of such water.

(g) That the said grantee shall not be required to furnish more than the said irrigation districts shall have first drawn upon their own stored water to the fullest practicable extent.

(h) That the said grantee shall not divert beyond the limits of the San Joaquin Valley any more of the waters from the Tuolumne water-shed than, together with the waters which it now has or may hereafter acquire, shall be necessary for its beneficial use for domestic and other municipal purposes.

That subdivision is in direct conflict with the first section of

That subdivision is in direct conflict with the first section of the bill, which provides that San Francisco may store not only the water she needs but the water all these other cities need, running up to 400,000,000 gallons a day:

running up to 400,000,000 gallons a day:

(i) That the said grantee shall, at its own expense, locate and construct, under the direction of the Secretary of the Interior, such weirs or other suitable structures on sites to be granted, if necessary, by the United States, for accurately measuring the flow in the said river at or above La Grange Dam, and measuring the flow in the said river at or above La Grange Dam, and measuring the flow into and out from the reservoirs or intakes of said districts, and into and out from any reservoirs constructed by the said grantee, and at any other point on the Tuolumne River or its tributaries which he may designate, and fit the same with water-measuring apparatus satisfactory to said Secretary and keep such hydrographic records as he may direct, such apparatus and records to be open to inspection by any interested party at any time.

(j) That by "the flow," "natural daily flow," "aggregate daily natural flow," and "what is naturally flowing," as are used herein, is meant such flow as on any given day would flow in the Tuolumne River or its tributaries if said grantee had no storage or diversion works on the said Tuolumne watershed.

(k) That when the said grantee begins the development of the Hetch Hetchy Reservoir site it shall undertake and vigorously prosecute to completion a dam at least 200 feet high, with a foundation capable of supporting said dam when built to its greatest economic and safe height.

The question is whether the construction of a dam 200 feet high is necessary to store the water actually needed by the city of San Francisco. Not a single one of the engineers who have investigated this question will say that it is necessary to construct any such dam as that to supply San Francisco with They have not conducted this affair with any such idea or principle as that. They have been conducting it upon the theory that San Francisco shall have the right to store water not only for herself but for 25 other cities in California.

Suppose, as I shall point out after a while, that the water commission of California should come along and say to San Francisco, "You have no right to construct a dam on this stream and obstruct its flow and store the water above what you are entitled to take from it for your own uses," and should resort to the courts to compel San Francisco to limit the height of her dam so that the water not needed by her should flow down to the people below. What would happen then? It has that power, as I shall show you directly.

If San Francisco should construct her dam to such a height that it would be an obstruction of the flow of the water to the people below and should be compelled to take down 100 feet of it for their protection, what would become of the grant that had been made by the Government upon the condition that she should construct and maintain a dam of that height?

should construct and maintain a dam of that height?

(1) That the said grantee shall, upon request, sell or supply to said irrigation districts, and also to the municipalities within either or both said irrigation districts, for the use of any land owner or owners therein for pumping subsurface water for drainage or irrigation, or for the actual municipal public purposes of said municipalities (which purposes shall not include sale to private persons or corporations) any excess of electrical energy which may be generated, and which may be so beneficially used by said irrigation districts or municipalities, when any such excess of electric energy may not be required for pumping the water supply for said grantee (which purposes shall not include sale to private persons or corporations) at such price as will actually reimburse the said grantee for developing and maintaining and transmitting the surplus electrical energy thus sold; and no power plant shall be interposed on the line of the conduit except by the said grantee, or the lessee, as hereinafter provided, and for the purposes and within the limitations in the conditions set forth herein: Provided, That said grantee shall satisfy the needs of the landowners in said irrigation districts for pumping subsurface water for drainage or irrigation, and the

needs of the municipalities within such irrigation districts for actual municipal public purposes, after which it may dispose of any excess electrical energy for commercial purposes.

What right has San Francisco to enter into the market and sell to somebody else for profit either the water it has appropriated or the energy it has developed?

Subdivision (m) provides:

Subdivision (m) provides:

That the right of said grantee in the Tuolumne water supply to develop electric power for either municipal or commercial use is to be made conditional for 20 years following the completion of any portion of the works adapted to the generation of electrical energy, as follows: The said grantee shall within three years from the date of completion of said portion of the works install, operate, and maintain apparatus capable of developing and transmitting not less than 10,000 horse-power of electric power for municipal and commercial use, said 10,000 horse-power to be actually used or offered for use; and within 10 years from the completion of said portion of the works not less than 20,000 horse-power; and within 15 years therefrom not less than 30,000 horse-power; and within 20 years therefrom not less than 60,000 horse-power; unless in the judgment of the Secretary of the Interior the public interest will be satisfied with a lesser development. The said grantee shall develop and use hydroelectric power for the use of its people and shall, at prices to be fixed under the laws of California or, in the absence of such laws, at prices approved by the Secretary of the Interior, sell or supply such power for irrigation, pumping, or other beneficial use, said prices not to be less than will return to said grantee the actual total costs of providing and supplying said power, which costs shall be computed in accordance with the currently accepted practice of public cost accounting, as shall be determined by the Secretary of the Interior, including, however, a fair proportion of cost of conduit, lands, dams, and water-supply system; and, further, said grantee shall, before using any of said water for the purpose of developing hydroelectric power, file such maps, surveys, field notes, or other data as may be required by law, and shall conform to any law existing and applicable to said subject of development of said hydroelectric power for municipal or commercial uses.

Why should the Government of the United States compel the city of San Francisco, as a condition of granting her the right to erect a dam to supply herself with water, to develop 60,000 horsepower of electrical energy, without any reference to the question as to how much she actually needs for her uses, and then provide that she can go into the market and sell this electricity commercially?

Now let us look at subdivision (n):

Now let us look at subdivision (n):

That after the period of 20 years hereinbefore provided for the development, transmission, use, and sale of electric power, the Secretary of the Interior, under authorization hereby given, may require the grantee, within a time fixed by the Secretary, to develop, transmit, and use, or offer for sale, such additional power, and also such power less than 60,000 horsepower as the grantee may have failed to develop, transmit, use, or sell, within the 20 years aforesaid, as in the judgment of said Secretary the grantee may or ought to develop under this grant, and which in his judgment the public interest demands or convenience requires; and in case of the failure of the grantee to carry out any such requirements of the Secretary of the Interior the latter is hereby authorized so to do, and he may, in such manner and form and upon such terms and conditions as he may determine, provide for the development, transmission, use, and sale of such additional power and such power not so developed, transmitted, or used by the grantee at the end of said 20 years up to 60,000 horsepower; and for that purpose the Secretary of the Interior may take possession of and lease to such person or persons as he may designate such portion of the rights of way, structures, dams, conduits, and other property acquired or constructed by the grantee hercunder as may be necessary for the development, transmission, use, and sale of such power.

In other words, if San Francisco fails to apply the electric

In other words, if San Francisco fails to apply the electric energy, the Secretary of the Interior, acting for the National Government, may himself lease this power to somebody else and provide for its transmission and sale. Under the laws of California the rates to be charged for electric power or for the use of water are fixed by the water commission. Nobody has any authority to sell water to the city or anybody else until those rates are fixed by the proper State authorities. The Secretary of the Interior has no more power than some private individual to make disposition of this water power.

Mr. LIPPITT. That is all provided for in the next section.

Mr. WORKS. What is provided for? Mr. LIPPITT. That they must confe That they must conform to the laws of the State of California.

Mr. WORKS. They can not conform to the laws of California, because the Secretary of the Interior has no power to deal with the matter at all. The provision is purely superfluous.

Then I call attention to the following language in subdivision (p):

The said grantee shall further lay and maintain a water pipe, or otherwise provide a good and sufficient supply of water for camp purposes at the Meadow, one-third of a mile, more or less, southeasterly from the Hetch Hetchy Dam site.

Then, there is a provision as follows:

(q) That the said grantee shall furnish water at cost to any authorized occupant within 1 mile of the reservoir and in addition to the sums provided for in section 7 it shall reimburse the United States Government for the actual cost of maintenance of the above reads and trails in a condition of repair as good as when constructed.

Subdivision (u) provides that water shall be furnished to the Government.

Section 10 provides:

That this grant, so far as it relates to the said irrigation districts, shall be deemed and held to constitute a binding obligation upon said

grantee in favor of the said irrigation districts which said districts, or either of them, may judicially enforce in any court of competent juris-

We come now to section 11, which has been commented upon here, and which is a most remarkable section to attach to the bill. It provides:

That this act is a grant upon certain express conditions specifically set forth herein, and nothing herein contained shall be construed as affecting or intending to affect or in any way to interfere with the laws of the State of California relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired thereunder, and the Secretary of the Interior, in carrying out the provisions of this act, shall proceed in conformity with the laws of said State.

It is uttery impossible that the Secretary of the Interior could do anything under this bill in conformity with the laws of the State of California, because those things must be done by a water commission provided for by the State, and the Secretary of the Interior has no right to interfere with it directly or indirectly. To set out in a bill provision after provision that is in direct opposition to the laws of the State of California, and then to say in a final section that the provisions shall not have that effect is simply absurd. Either the section should be eliminated, together with all of these provisions, or the section itself ought to be eliminated, for at the time it was made it was a fraud upon the rights of the people v:ho were relying upon it.

Mr. SMITH of Arizona. Mr. President, for my own information as a lawyer I should like to ask the Senator a question.

In the opinion of the Senator, is not the effect of that section largely to nullify the powers granted in the bill to the Secretary of the Interior? If the State of California, as I apprehend and believe is the case, has control of the waters of the State of California flowing in these streams-and in this matter I feel very much in sympathy with the Senator-the question arises in my mind, and that is the reason I have been giving attention to the matter, why this provision says that all of this shall be done in absolute conformity with the laws of the State, and that the State law shall apply to everything the bill contains. If the framers of this bill have given or attempted to give to the Secretary of the Interior power that he could not exercise in opposition to the power of the State, does it not become a mere nullity in the bill?

I ask for the opinion of the Senator about that matter.

Mr. WORKS. Mr. President, I have already said that it would be utterly impossible to do the things provided in this bill in accordance with the laws of California, and that is all the section provides. The Secretary of the Interior is not excluded from the powers granted by the last section of the bill, but it provides that the Secretary of the Interior shall do these things in accordance with the laws of the State of California. The Senator knows as well as I do that he can not do that.

I have undertaken to analyze this bill, and to point out as well as I could the provisions that I think are objectionable and in violation of the constitution and laws of the State of California. In order to verify what I have said in that respect I wish now to take up the laws of California relating to the subject of the distribution of water.

For a good many years after I went to California we had what I always considered a very imperfect and unsatisfactory law providing for the appropriation and distribution of water. It gave anybody who claimed it the right to enter upon a stream and give notice of the quantity of water he desired to appropriate and divert from the stream, stating the purposes for which he proposed to appropriate it, how it was to be taken out of the stream, and by what means; and thereby established an inchoate right to the water that might be followed up by the actual construction of the necessary works and the actual appropriation of the water to a beneficial use-for instance, irrigation or domestic purposes.

The result of it was that hundreds of filings were made on some of the streams, away beyond the entire volume of the stream, the natural flow as well as the storm water. conflicts arose and an immense amount of litigation grew out of that condition of things. San Francisco was one of the attempted appropriators under that statute, just as the irrigation districts were, and I suppose hundreds of others on the same stream. I have no doubt that if an investigation were made, it would be found that there were numerous filings upon the stream, a great many of which have been abandoned because the filing was not followed up within a reasonable time, as required by the statute to give them the right to take out the

water. Mr. SMOOT, Mr. President-

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Utah?

Mr. WORKS. I yield to the Senator.

Mr. SMOOT. The Senator from California is about to enter upon a discussion of the laws of California affecting the waters of that State-one of the most important questions involved in I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the

The Secretary called the roll, and the following Senators answered to their names:

Johnson Kenyon Kern . La Follette Lane Lewis Lippitt McCumber Martin, Va. Martine, N. J. Norris Perkins Pittman Reed Robinson Smith, S. C. Ashurst Bacon Smoot Stephenson Sterling Brady Bryan Burton Chilton Cummins Stone Sutherland Swanson Thomas Root Root Saulsbury Shafroth Sheppard Sherman Shively Simmons Smith, Ariz. Smith, Ga. Smith, Md. Fletcher Gallinger Thompson Thornton Vardaman Walsh Goff Gore Norris O'Gorman Gronna Hollis Overman Page Works James

The PRESIDING OFFICER. Fifty-six Senators having answered to their names, a quorum is present. The Senator from

California will proceed.

Mr. WORKS. Mr. President, I was about to take up the laws of California relating to this subject and to point out how and in what respect this bill is in conflict with the laws of that We first have this provision of the constitution-

Mr. LEWIS. Before the Senator proceeds with that particular branch I should like to have his information upon a point, knowing that he was an eminent judicial officer of that State and is informed as to the law. I ask the Senator from California if my memory is correct in assuming that there was a concession by the State of California which ceded this very park and this very body of land and water to the National Gov-ernment with certain qualifications for local use?

Mr. WORKS. I have no recollection of the specific provision of that act; so I could not answer the Senator's question.

Mr. LEWIS. I was only going to follow that with the question whether those qualifications embodied the use of the water. As the Senator can not remember, of course he is not able to state.

Mr. WORKS. I am not able to state. The constitution of California provides that-

All water now appropriated or that may hereafter be appropriated for sale, rental, or distribution is hereby declared to be a public use and subject to the regulation and control of the State in the manner to be prescribed by law.

This is a late amendment to the constitution of California which puts in the hands of the State full power to control the distribution and use of the water.

In carrying out the provisions of that section of the constitution, an act was passed known as the water commissioners act of California. It was approved June 16, 1913, and is therefore a new and a very complete act on the subject. I think I may say that the California statute, as it now stands, is about as advanced and as complete a provision for the control and use of the waters by the people of the State as has ever been enacted in any State in the Union. It provides for the appointment of commissioners and their salaries and the manner in which they shall be organized, and all that sort of thing, which I have not included in what I am going to submit to the Senate; but I want to call the attention of the Senate to the working provisions of the act, that Senators may see how completely the act which we are asked to make a law is in violation of and in conflict with those provisions of the California statutes. Section 10 of the statute provides that-

The State water commission is hereby authorized and empowered to investigate for the purpose of this act all streams, stream systems, portions of stream systems, lakes, or other bodies of water and to take testimony in regard to the rights to water or the use of water thereon or therein, and to ascertain whether or not such water, or any portion thereof, or the use of said water, or any portion thereof, heretofore filed upon or attempted to be appropriated by any person, firm, association, or corporation is appropriated under the laws of the State.

Now, applying it to this bill, if it should be enacted into law, whatever the provisions of that statute may be, the water commissioners of California have a right to investigate the whole thing and determine just how much of the water is properly appropriated and used and to compel its proper distribution, no matter what has gone before. If San Francisco has filed upon twice as much water as it needs, this water commission has the right to compel it to let go of the excess and allow it to be used by somebody else. The commission has a right to de-termine just how much water is needed for the use of San Francisco, and if the National Government has authorized the city to construct a dam that will supply the 400,000,000 gallons

of water a day and the commission finds that it can only use properly, within a reasonable time, 100,000,000 gallons of water a day, then the decision of the water commission on that subject is binding and conclusive, except upon an appeal to the courts, and the Congress of the United States has no right to interfere with that control of the water.

interfere with that control of the water.

Sec. 11. All water or the use of water which has never been appropriated, or which has been heretofore appropriated and which has not been in process, from the date of the initial act of appropriation, of being put, with due diligence in proportion to the magnitude of the work necessary properly to utilize for the purpose of such appropriation such water, or the use of water, or which has not been put or which has ceased to be put to some useful or beneficial purpose, or which may hereafter be appropriated and cease to be put to the useful or beneficial purpose for which it was appropriated, or which in the future may be appropriated and not be, in the process of being put, from the date of the initial act of appropriation, to the useful or beneficial purpose for which it was appropriated, with due diligence in proportion to the magnitude of the work necessary properly to utilize for the purpose of such appropriated. And all waters flowing in any river, stream, canyon, ravine, or other natural channel, excepting so far as such waters have been or are being applied to useful and beneficial purposes upon, or in so far as such waters are or may be reasonably needed for useful and beneficial purposes upon lands riparian thereto, or otherwise appropriated. is, and are hereby, declared to be public waters of the State of California and subject to appropriation in accordance with the provisions of this act.

The purpose of this particular provision is that these streams may be relieved of the various filings that have been made upon them where the necessary work to appropriate and put the water to a beneficial use has not been done. This commission may go upon any of the streams, investigate the different filings, determine the amount of work that has been done in order to make them good, and if in any instance it is found that they have not complied with the provisions of the statute that previously existed by actually putting the water to beneficial use, then the water commission has the right to declare that unappropriated water and it is subject to be granted to somebody

Section 12 provides that-

Section 12 provides that—

Sec. 12. The State water commission shall have authority to, and may, for good cause shown, upon the application of any appropriator or user of water under an appropriation made and maintained according to law prior to the passage of this act, prescribe the time within which the full amount of the water appropriated shall be applied to a useful or beneficial purpose; Provided, That said appropriator or user shall have proceeded with due diligence in proportion to the magnitude of the project to carry on the work necessary to put the water to a beneficial use; and in determining said time said commission shall grant a reasonable time after the construction of the works or canal or ditch or condults or storage system used for the diversion, conveyance, or storage of water; and in doing so, said commission shall also take into consideration the cost of the application of such water to the useful or beneficial purpose, the good faith of the appropriator, the market for water or power to be supplied, the present demand therefor, and the income or use that may be required to provide fair and reasonable returns upon the investment and any other facts or matters pertinent to the inquiry. Upon prescribing such time the State water commission shall issue a certificate showing its determination of the market. For good cause shown the State water commission may extend the time by granting further certificates. And for the time so prescribed or extended the said appropriation or user shall be deemed to be putting said water to a beneficial use.

Suppose we apply that to the condition of the irrigation dis-

Suppose we apply that to the condition of the irrigation dis-The water users in the districts complain that they have not all the water that they need. They have expended the money that they have been able to expend in attempting to carry on the work necessary in order to distribute the water. If the commission should make an investigation, as provided in that section, and it should be shown by the irrigation districts that they need more water than they have now and ask for an extension of time in order to take out and supply the water for beneficial use, the commission would have a right to provide for that extension of time and the taking out of additional water, no matter what is contained in this bill, and any attempt on the part of the National Government to limit the amount that is to be turned out of this stream by San Francisco to the districts will be an absolute nullity as against any order that might be made by the water commission. Further:

that might be made by the water commission. Further:

And if at any time it shall appear to the State water commission, after a hearing of the parties interested and an investigation, that the full capacity of the works built or constructed, or being built or constructed, under an appropriation of water or the use thereof made under the provisions of this act has not developed or can not develop the full capacity of the stream at the point where said works have been or are being built or constructed, and that the holder of the said appropriation will not or can not, within a period deemed to be reasonable by the commission, develop the said stream at said point to such a capacity as the commission deems to be required by the public good, then and in that case the said commission, in its discretion, may permit the joint occupancy and use, with the holder of the appropriation, to the extent necessary to develop the stream to its full capacity or to such portion of said capacity as may appear to the State water commission to be advisable, by any and all persons, firms, associations, or corporations applying therefor, of any dam, tunnel, diversion works, ditch, or other works or constructed under this act: Provided, That said commission shall take into consideration the reasonable cost of the original and new work, the good faith of the applicant, the market for

water or power to be supplied by the original and the new work, and the income or use that may be required to provide fair and reasonable returns upon such cost: Provided further, That the applicant or applicants shall be required to pay to the party or parties owning said dam, tunnel, diversion works, ditch, or other works or constructions a prorata portion of the total cost of the old and the new works, said prorata portion to be based upon the proportion of the water used by the original and the subsequent users of said dam, tunnel, diversion works, ditch, or other works or constructions, if the water is used or to be used for the generation of electricity or electrical or other power, the said pro rata portion shall be based upon the relative amount of electricity or electrical or other power capable of being developed by the original and the new works; or, if a portion of the water utilized under a joint occupancy of any dam, tunnel, diversion works, ditch, or other works or construction shall be used for the generation of electricity or electrical or other power, then and in that case the applicant or applicants for joint occupancy shall be required to pay to the party or parties owning said dam, tunnel, diversion works, ditch, or other works or constructions a pro rata portion of the total cost of the old and new works, said pro rata portion to be based upon the proportion of the relative amount of the water used by each, joint occupant and the income derived by each said joint occupant from said joint occupancy; or, if any of the waters used under such joint occupancy shall be utilized for purposes other than those specified above, then and in that case the applicant or applicants for such joint occupancy shall be required to pay to the party or partles owning said dam, tunnel, diversion works, ditch, or other works or constructions such a prorata portion of the total cost of the old and new works as shall appear to the State water commission to be just and equitable. Said applicant or applicants shall

The object and purpose of that section is quite evident. is to allow persons who are claiming water from a stream to join-together for the purpose of constructing the necessary dam and works. Taking this case, if San Francisco should construct a dam at this point sufficient to take out the 161,000,000 gallons of water per day that it is legally entitled to under its filing, then the State water commissioners would have the right to compel the city of San Francisco to allow these irrigation districts or anybody else to add to that dam a sufficient amount to store the water that they desire to take out of the stream, and the water commissioners would not allow the city of San Francisco to construct its dam higher than was necessary to take out the water that it is legally entitled to. It would have no right to construct this dam to a height that would enable it to take out water for Oakland or for Alameda, or Berkeley or San Jose or any of the other cities. It has no filing of that kind. It has no legal right to any water, no matter what it does, for any of the other cities. It has filed upon water for its own use, limited in quantity, and has no right to go beyond that under the laws of the State of California. Therefore, if the other cities, which, it is said, are willing that San Francisco should expend this money for the purpose of taking out and bringing down the water to the bay, are depending upon any right of theirs to have any part of the water under that appropriation they will be woefully mistaken.

The statute—which I shall make a part of my remarks in full, or at least this portion of it—provides specifically with respect to what shall be done relative to water that is stored by these

claimants jointly, and it is provided:

claimants jointly, and it is provided:

May permit any person, firm, association, or corporation to repair, improve, add to, supplement, or enlarge, at his or its proper cost, charge, and expense, any dam, tunnel, diversion works, ditch, or other works or constructions already built or constructed or in process of being built or constructed under the provisions of this act, and to use the same jointly with the owners thereof: Provided, That the said repairing, improving, adding to, supplementing, or enlarging shall not materially interfere with the proper use thereof by the owner of said dam, tunnel, diversion works, ditch, or other works or constructions or shall not materially injure said dam, tunnel, diversion works, ditch, or other works or constructions. And the said State water commission shall determine the pro rata and other costs provided for in this section.

Section 15 of the act provides:

Section 15 of the act provides:

The State water commission shall allow, under the provisions of this act, the appropriation of unappropriated water or of the use thereof, or of water or of the use thereof which may hereafter cease to be appropriated, or which may hereafter be declared to be unappropriated, or which having been used under claim of riparian proprietorship or appropriation finds its way back into a stream, lake, or other body of water, and also such water as is declared under section 11 of this act to be subject to appropriation.

Then the statute provides that the applicant for water, no matter in what form or for what purpose, shall file an application with the water commissioners for a permit to construct necessary works, to appropriate, divert, and apply the water to beneficial uses, and, amongst other things, it also provides

if for storage in a reservoir, it shall give, in addition to the general requirements prescribed above, the height of dam, the capacity of the reservoir, and the use to be made of the impounded waters; if for

municipal water supply, it shall give, besides the general requirements specified above, the present population to be served and, as near as may be, the future requirements of the city. \* \* \*

San Francisco has not gone so far under the filing that it has made that it will not be subject to the provisions of this When it undertakes to construct its works it will be compelled to procure a permit for that purpose from the water commission, and that permit will have to set out the height of the dam that they propose to construct and the various things that are called for under this section of the statute. The permit to be issued will allow San Francisco only to construct such a dam as is necessary to carry out the purposes stated in the application. It will make no difference that the National Government has granted to the city the right to construct a dam sufficient to store water for itself and for 25 other cities, for San Francisco can not procure a permit to supply water to the city of Oakland or any other city; those cities must make their own application, and if San Francisco makes its application and takes out the water of the stream, if it is found at any time that it is taking more water than it needs for its actual purposes, the water commission can compel it to allow that water to flow down to somebody else who is entitled to water.

Section 18 provides:

Section 18 provides:

Sec. 18. Actual construction work upon any project shall begin within such time after the date of the approval of the application as shall be specified in said approval, which time shall not be less than 60 days from date of said approval, and the construction of the work thereafter shall be prosecuted with due diligence in accordance with this act, the terms of the approved application, and the rules and regulations of said commission; and said work shall be completed in accordance with law, the rules and regulations of the State water commission, and the terms of the approved application and within a period specified in the permit, but the period of completion specified in the permit may, for good cause shown, be extended by the State water commission. And if such work be not so commenced, prosecuted, and completed, the water commission shall, after notice in writing and mailed in a sealed, postage-prepaid, and registered letter addressed to the applicant at the address given in his application for a permit to appropriate water, and a hearing before the commission, revoke its approval of the application. But any applicant, the approval of whose application shall have been thus revoked, shall have the right to bring an action in the superior court of the county in which is situated the point of proposed diversion of the water for a review of the order of the commission revoking said approval of the application.

Section 19 provides:

Section 19 provides:

Section 19 provides:

SEC. 19. Immediately upon completion, in accordance with law, the rules and regulations of the State water commission, and the terms of the permit, of the project under such application, the holder of a permit for the right to appropriate water shall report said completion to the State water commission. The said commission shall immediately thereafter cause to be made a full inspection and examination of the works constructed, and shall determine whether the construction of said works is in conformity with law, the terms of the approved application, the rules and regulations of the State water commission, and the permit. The said water commission shall, if said determination is favorable to the applicant, issue a license which shall give the right to the diversion of such an amount of water and to the use thereof as may be necessary to fulfill the purpose of the approved application.

That section provides just what amount of water shall be

That section provides just what amount of water shall be allowed to the city of San Francisco. It must be investigated and determined by the water commission; and whatever it says on the subject is final, except, as I have said before, that appeal may be made to the courts for the purpose of settling

the question.

The city, as I have more than once said, has filed upon water amounting to about 160,000,000 gallons per day. It would have no right under this statute to go beyond that amount. It has not made any application for more than that. It is not entitled under the old law to more. While its vested rights, whatever they may be, can not be taken away by this later statute, yet it is subject to the regulations contained in the statute in the matter of the construction of its works and the various other things necessary to apply water to a beneficial use. Therefore any attempt on the part of the National Government to say that this water shall go to some other city, or that the right shall be granted for the purpose of furnishing water to San Francisco and other cities, is absurd.

Section 20 provides:

Section 20 provides:

Sec. 20. \* \* The application for a permit by municipalities for the use of water for said municipalities or the inhabitants thereof for domestic purposes shall be considered first in right, irrespective of whether they are first in time: Provided, however, That such application for a permit or the granting thereafter of permission to any municipality to appropriate waters shall not authorize the appropriation of any water for other than municipal purposes: And provided further, That where permission to appropriate is granted by the State water commission to any municipality for any quantity of water in excess of the existing municipal needs therefor, that pending the application of the entire appropriation permitted the State water commission shall have the power to issue permits for the temporary appropriation of the excess of such permitted appropriation over and above the quantity being applied from time to time by such municipality.

Now, stop and observe the effect of that provision. Under

Now, stop and observe the effect of that provision. Under the grant which it is proposed to make to the city the provision is that San Francisco may dispose of the water to other cities and to various persons, landowners, for irrigation, or for any-

thing of that sort; but this proposed law provides that the water can only be used where the application is by a municipal corporation for municipal purposes, and during the time it is not using the full quantity that it has filed upon and to which it is entitled the water commission may send the water to anybody else who needs it temporarily until the city itself needs the water for its own uses. The object and purpose of this bill, which we are asked to pass, is to take that matter over into the hands of the National Government and say where San Francisco shall dispose of the water, and for what purpose.

And provided further, That in lieu of the granting of such temporary permits for appropriation, the State water commission may authorize such municipality to become, as to such surplus, a public utility, subject to the furisdiction and control of the railroad commission of the State of California for such period or periods from and after the date of the issuance of such permission to appropriate as may be allowed for the application to municipal uses of the entire appropriation permitted. mitted.

There is an alternative, but it is one that can only be granted by the water commissioners. It may, instead of determining for itself how the water shall be distributed, give the city of San Francisco the right to dispose of the water for municipal purposes under the direction and control of the State railroad commission, which is authorized to fix the rates at which water shall be furnished.

And provided further, That when such municipality shall desire to use the additional water granted in its said application it may so do upon making just compensation for the facilities for taking, conveying, and storing such additional water rendered valueless for said purposes to the person, firm, or corporation which constructed said facilities for the temporary use of said excess waters, and which compensation, if not agreed upon between the municipality and said person, firm, or corporation, may be determined in the manner provided by law for determining the value of property taken by and through eminent-domain proceedings. mining the proceedings.

Section 37 provides:

The power to supervise the distribution of water in accordance with the priorities established under this act, when such supervision does not contravene the authority vested in the judiciary of the State, is hereby vested in the State water commission.

Section 38 provides:

The diversion or use of water subject to the provisions of this act, other than as it is in this act authorized, is hereby declared to be a trespass, and the State water commission is hereby authorized to institute in the superior court in and for any county wherein such diversion or use is attempted appropriate action to have such trespass enjoined.

Section 40 provides:

The State water commission is also authorized and empowered to investigate any natural situation available for reservoirs or reservoir systems for gathering and distributing flood or other waters not under beneficial use in any stream, stream system, or lake, or other body of water, and to ascertain the feasibility of such projects, including the supply of water that may thereby be made available, the extent and character of the areas that may be thereby irrigated, and make estimate of the cost of such project.

Section 41 provides:

Nothing in this act shall be construed as depriving any city, city and county, municipal water district, irrigation district, or lighting district of the benefit of any law heretofore or hereafter passed for their benefit in regard to the appropriation or acquisition of water or the use of water; and nething in this act shall affect or limit in any manner whatsoever the right or power of any municipality which has heretofore appropriated or acquired water or the use of water for municipal purposes to use or sell or otherwise dispose of such water or the use thereof, either within or without its limits, for domestic, irrigation, or other purposes, in accordance with laws in effect at the time of the passage of this act.

That section has no relation to San Francisco, because she has not yet appropriated the water and is subject to the regulations with respect to its final appropriation and use.

Mr. President, this is a complete scheme for the control of the distribution of the waters of the State, and I think it is about as complete as any law that has ever been enacted on the subject. The National Government, if this bill is passed, is interfering with that system providing for the distribution of the water equitably and justly between the people of the State.

There is another statute to which I desire to call the attention of the Senate, because it is claimed that this statute authorizes the sale and disposition of the water by the city of San Francisco. It is an act that was passed and approved in 1911. It was passed in the interest of the city of Los Angeles. That city had provided for the construction of reservoirs and an aqueduct, to cost something in the neighborhood of \$30,000,000. The city was growing rapidly, and it was thought best to provide for the appropriation and storage of water beyond its present needs in order that it might be supplied in the future. act was passed for the purpose of allowing the city of Los Angeles, and any other cities in like condition, to convey the surplus water belonging to it until it should need the water for its own purposes, so that the water might not be in the meantime wasted. It provides in section 2—I will make the whole of this short statute a part of my remarks, but I will read section 2, as follows.

Sec. 2. For such purpose any such municipal corporation may acquire, own, control, sell, or exchange lands, easements, licenses, and rights of every nature within or without its municipal limits, and may operate any such public utility within or without the municipal limits when necessary to supply such municipality, or the inhabitants of any portion thereof, with the service desired.

Section 3 provides that-

Whenever, in the operation of any such utility, any such municipality shall develop an excess of water, light, heat, or power over and above the amount thereof which is necessary for the use of such municipality and its inhabitants, or of such portion thereof as the legislative body of such municipality may determine shall be supplied therewith, then such municipality may sell, lease, or distribute such excess of water, light, heat, or power outside of the corporate limits of such municipality

That statute, obviously, is repealed by the later statute under the new amendment to the constitution which I have just read, which provides completely for the determination by the water commission as to how the excess of water may be distributed. In addition to that, it has been held in California that under this permission the city of Los Angeles had no right to sell its water except on regulations and at rates fixed by the railroad commission. Neither could San Francisco do so even if this new statute had not been enacted, so that that statute does not help the situation.

In order to justify San Francisco in the attempt to procure this large supply of water and deprive the landowners of the San Joaquin Valley of its use an act was procured to be passed by the Legislature of California providing for the formation of a municipal water district, to be composed of such cities as might join together for the purpose of forming that district, and it is claimed that for that reason San Francisco may appropriate this large quantity of water that is not at all necessary for its own use for the purpose eventually of turning it over to the water district. One of the difficulties about that is that no water has been appropriated for this district; no water has been appropriated upon this stream for any other city than San Francisco; and if the district should be formed and San Francisco as one of the cities composing that district should turn over its rights to the district it could only turn over to it the 160,000,000 gallens of water which it has legally appropriated for its own use. Therefore the other cities and other water districts would gain nothing by any attempt of that kind; but this scheme, utterly impracticable under the laws of California, has been used to justify the people who have been besieging Senators and Members of the House here in support of their claim of the right to appropriate the 400,000,000 gallons of water.

The whole proceeding from beginning to end has been based upon the claim that this water is necessary not for San Francisco but for San Francisco and all of these other cities eventually to be combined in one water district. It is done for effect, I do not believe the men who are trying to work this scheme through here have ever believed they could form such a water district as this under the laws of California.

Does anybody suppose that the city of Oakland, for example, with a population of probably 175,000 people, would enter into an arrangement of this kind, which, as I shall show you, would put Oakland absolutely within the control of San Francisco in the distribution and application of the water supplied to that city? Do you suppose you could get the 26 cities that are mentioned here to combine for the purpose of procuring a water supply to be furnished to them by a district that is to be organized?

But that is not all. Suppose they did organize a district of that kind. What right would the city of San Jose have, for example, by becoming a party to this district, to apply for permission to take out water that justly belongs to the landowners of the San Joaquin Valley? She could not do it alone. Probably not a single one of these cities except San Francisco could establish the right to file upon this stream in the future, if there should be any water left there for distribution. But whether they could or not, none of them ever have filed upon the stream. None of them have acquired a right to any part of the water of the stream by any proceeding under the laws of the State of California; and if there should be an attempt made now, through this concession proposed to be made by the Congress of the United States, to carry into this district 400,000,000 gallons of water per day you would be taking it away from the landowners of the San Joaquin Valley and taking it to cities that have no more right to the water than you or I have.

I am going to make a part of my remarks the portion of the statute which provides the means of organizing water districts. The portion of the statute referred to is as follows:

An act to provide for the incorporation, organization, and management of municipal water districts. (Approved Apr. 26, 1909.).

SECTION I. A municipal water district may be organized and incorporated and managed as herein provided, and may exercise the powers herein expressly granted or necessarily implied.

SEC. 2. When any municipality in the State of California desires to organize such a municipal water district, as herein provided for, the legislative body of any municipal corporation, at any regular meeting of such body, may pass an ordinance reciting:

1. The name of the city adopting the ordinance.

2. That the public interest requires the incorporation of a municipal water district.

1. The name of the city adopting the ordinance.

2. That the public interest requires the incorporation of a municipal water district.

3. The names of the municipalities which it is desired to include within the district.

4. The name of the district which shall include the words "municipal water district."

SEC. 3. Within 10 days after such ordinance becomes a law the clerk of the said legislative body adopting the same shall transmit by registered mail a certified copy thereof to the legislative body, or bodies, of the other municipalities named therein, addressed to the clerk thereof.

SEC. 4. Within 40 days after the receipt of such certified copy of such ordinance by any municipality named therein the legislative body thereof shall by ordinance either approve or disapprove the said ordinance without alteration or amendment; a failure on the part of any municipality to act as herein provided shall be deemed a refusal to approve of such ordinance.

SEC. 5. After the passage of said ordinance required to be passed by section 4 hereof the clerk of the municipality acting thereon shall forthwith forward a certified copy of such ordinance to the municipality initiating the proceedings.

SEC. 6. Within 30 days after the receipt of all the ordinances passed by the municipalities named in the initiatory ordinance, if it shall appear that said initiatory ordinance has been approved of said ordinance, at which shall be submitted to the electors thereof the proposition of organizing such municipal water district, and shall also provide for holding a similar election within its own municipality; in case the initiatory ordinance has not been approved by all of the municipalities named therein no further proceedings shall be had, but new proceedings may be taken as provided in sector 2.

SEC. 9. Within 30 days after the receipt of the certificates showing

SEC. 9. Within 30 days after the receipt of the certificates showing the result of the election held in the several municipalities, if it appears therefrom that the proposition submitted has been approved by a majority of the votes cast on said proposition in each municipality wherein such election is held, the legislative body of the municipality receiving such certificates shall certify to the secretary of state the passage of the ordinance provided for in section 2, its subsequent approval by the several municipalities approving the same in manner aforesaid, and the result of the elections held as herein provided.

SEC. 10. Upon the receipt of the certificate mentioned in the foregoing section, the secretary of state shall, within 10 days, issue his certificate reciting that the municipal water district (naming it) has been duly incorporated according to the laws of the State of California, and that such district is composed of the municipalities of (naming all the municipalities which have approved at the election such organization). A copy of such certificate shall be transmitted to each of the municipalities comprising such district. From and after the date of such certificate the district named therein shall be deemed incorporated as a municipal water district, with all the rights, privileges, and powers set forth in this act and necessarily incident thereto.

.

SEC. 13. \* \* \* 1. The mayor or president of the board of trustees of each municipality comprising the district shall be ex officio a member of said board.

2. Each municipality having 5,000 legal and registered voters shall choose by and from the members of its legislative body one additional director, and each municipality for each and every 10,000 legal and registered voters over 5,000 shall choose by and from the members of its legislative body one additional director, all of whom shall serve during the pleasure of the body making the appointment: Provided, That if such members do not desire to serve as such directors, said legislative body may choose any other person who is an elector and resident of such municipality. The number of legal and registered voters in each municipality on the 1st day of November, 1908, and every four years thereafter shall be taken as the basis for determining the representation of such municipality in the board of directors.

It provides that any city may pass an ordinance proposing to organize a water district with certain cities it may name in the ordinance within a fixed time. That ordinance, when enacted, is to be sent to the other cities for their action, and within another specified time any city that desires to become a part of the water district may signify its intention to do so by passing a like ordinance, and so on around until all that are willing to join in the proposed water district have signified whing to join in the proposed water district have significant their willingness to do so. Then the whole matter is to be submitted to a vote of the people of the various cities for the purpose of determining, by that vote, whether or not the organization shall be entered into; and it is provided that the mayor of each one of the cities shall be a member of the board of directors to control the affairs of the district. In addition to that, it is provided that the board of directors shall be made up of members selected by the different cities, and they are provided for in proportion to the population of the cities.

The result would be, in this particular instance, that the smaller cities, including Oakland itself, would be put in the absolute control of the city of San Francisco in dealing with the water that may be acquired for the uses of the various cities. They are distributed around, some of them being 50 miles or more away from the city of San Francisco. As I have said, a great many of them have no right whatever to participate in the waters of the stream. They have sources of supply elsewhere. They have the means by which they can procure additional water. Nobody has intimated here that San Jose is crying out for water, or Alameda, or Berkeley, or Niles, or the

various other cities that are mentioned. There is no claim that there is any emergency that calls upon the National Govern-ment to allow these cities to enter upon the Yosemite Park for the purpose of supplying themselves with water.

Mr. President, I am not going to discuss at any length the legal aspect of this matter. I do not think there is very much controversy about what the law is respecting the right to the use of the water. I do not think it will be seriously contended—it has not been so far—that the National Government has any right to interfers with the distribution of water. That is, a right to interfere with the distribution of water. That is a right that belongs exclusively to the States. But in view of the support to this bill by the Senator from Colorado [Mr. Thomas], a very able and distinguished lawyer, a man in whose judgment I place great confidence, and the views of two other distinguished Senators on the other side of the Chamber, I have made a short extract from a colloquy that took place when the Sena-tor from Colorado was discussing the Connecticut River bill, where the question of the right of the National Government to interfere was very thoroughly discussed by the Senate, and the bill was defeated for the reason that it was an attempt to interfere with the disposition of power in that instance. One of the differences between that bill and this, however, is that there the National Government was dealing with a navigable stream. It had a right, therefore, to authorize the structure that was under discussion in that case; and the question was whether, in doing so, it had a right to impose conditions upon the distribution of the power. It was a much stronger case than this one in favor of the National Government,

This is what was said:

This is what was said:

Mr. O'Gorman. Does the Senator from Nevada claim that an agreement may be made between the Federal Government and an agent whereby the property of a State may be taken without the consent of the State?

Mr. Newlands. I do not.

Mr. O'Gorman. Does the Senator from Nevada claim that the Federal Government has any right, under the commerce clause, to do more than to enter the stream for the single, naked purpose of promoting its navigation, and that when it performs that purpose it exhausts every power granted to the Federal Government under the Constitution—that the right to go into a stream for the purpose of promoting its navigation can not be construed into a grant of property rights in the possession of the State? The stream belongs to the State before the Federal Government enters it for the purpose of exercising this naked right, and the stream continues the property of the State even after the Federal Government exercises this right. The right exercised by the Federal Government is akin to a limited agency conferred by a principal upon an agent to do a specific thing, and it can not be extended or enlarged, as I understand the Senator from Nevada is disposed to enlarge this power.

Much of the discussion here to-day and previously relates to a question of policy and ignores the vital proposition that under this bill recognition is proposed to be given to a principle which would be destructive of the rights reserved to the States.

Mr. Newlands. Mr. President, will the Senator from Colorado permit me?

The President of the Senator from Nevada?

destructive of the rights reserved to the States.

Mr. Newlands. Mr. President, will the Senator from Colorado permit me?

The President Officer. Does the Senator from Colorado yield further to the Senator from Nevada?

Mr. Thomas. Certainly.

Mr. Newlands. It is not necessary, in order to answer the Senator from New York [Mr. O'Gorman], to enter into all the refinements which he has considered with reference to the rights of the States and the rights of the Nation. Every man will admit that the Nation has a right in aid of navigation to construct the structure which is authorized by this bill. If the Nation constructed it, it would be the owner of it; and, being the owner of it, it could put that structure to any beneficial use it chose.

Mr. O'Gorman. Whether provided for by the Constitution or not?

Mr. Newlands. It could put it to any beneficial use it chose—that is my contention—because it is the owner of the structure, and every right of ownership attaches to it as the owner of the structure. In this case the agent is designated by the National Government to put up that structure. The agent would have the same right as the Government itself in that structure if those rights are secured by the contract between the National Government. It is a matter simply of contract between the National Government and the agent regarding fueconstruction and regarding the use of a structure which the National Government has the right to create or which it can authorize an agent to create. That is my contention. That structure in that stream creates a certain head of water which can be used beneficially either by the Government or by the agent, and the use of that head of water created by the structure, which no one else can erect, does not invade any right of the State in the stream.

Mr. Thomas. Mr. President, the Senator is logical, and his conclusion is consistent with his premise, but the fundamental difference between us is evolved at the threshold of his statement. If it be true that the Government, after constructi

I centend, further, that the Federal Government can not, through the exercise of the sovereign Federal authority or power to regulate or improve a navigable stream, acquire interests or rights to its waters as the owner or proprietor thereof which may be used or conveyed or sold or leased to others for purposes wholly foreign to navigation. It is a fundamental proposition that you can not lease or sell or dispose of property unless you own it or have some interest in it which is the subject of a transfer; and I do not perceive any difference—certainly there is no essential difference—between the proprietary powers of the Government of the United States in that regard and those of an individual.

This proposition, apart from its self-evident truth, to my mind was

Government of the United States in that regard and those of an individual.

This proposition, apart from its self-evident truth, to my mind was ultimately conceded by the Senator from Ohio before he took his seat and concluded his discussion. On page 2815 of the Congressional Record he is reported to have made this statement:

"First, that whenever an improvement is made which promotes navigation and in such improvement, whether by locks or dams or otherwise, a water power is created—"
Which, of course, means that it did not before exist; which means that it was brought into existence by virtue of the improvement—"
"that water power is an incident to the principal fact, and it belongs to the State or Government which seeks to promote navigation."
Hence, unless it can be said that this power so created does belong to the Government, its authority, acting through Congress, to enact this measure falls to the ground. We therefore are at one with reference to the fundamental condition underlying the exercise of this power. I might paraphrase the expression of the Senator from Ohio by stating the proposition thus: Wherever an improvement is made which promotes navigation, but which improvement is primarily designed to develop water power and to promote navigation merely as an incident to the principal fact, such water power does not belong nor become subject to the control of the Government either in its proprietary or sovereign capacity.

Mr. President, that is good law. There can be no question

Mr. President, that is good law. There can be no question about it. There was some sort of foundation for the claim in that instance, because the Government was dealing with a navigable stream. In this instance, however, there is not even that justification for it.

I wish to call attention to two or three editorials in the San Francisco Chronicle, which, as you know, is one of the leading newspapers of San Francisco and of the Pacific coast, upon the question of the Government attempting to control the distribution of this water.

They are as follows:

THE HETCH HETCHY BILL.—BUT A VERY SMALL CHANCE OF PASSAGE AT THE EXTRA SESSION.

THE EXTRA SESSION.

While the Hetch Hetchy bill will doubtless pass the Senate whenever a vote is taken, it can not pass without opposition from Senators who hold that it is gross usurpation—as it doubtless is—for Congress to make use of a power which is open to dispute to effect legislation in a matter of which it does not even pretend to have jurisdiction.

If the general laws of California are paramount within the State, Congress can not hinder San Francisco from utilizing the Tuolumne water. Congress does not pretend to possess jurisdiction of the use of water in any State, and yet the Hetch Hetchy bill purports to control the use of the Hetch Hetchy water by making a prescribed use, the condition of what it calls a permit.

The entire Hetch Hetchy bill, except in so far as it grants whatever authority Congress can lawfully give, will be so regarded as void until the Supreme Court has held otherwise. If Congress chooses to enact void legislation, we in San Francisco need make no more objection than the man made whose wife gave him a whipping. If it pleased her he did not object, for it did not hurt him any.

But there are Senators who do most seriously object to the impairment of the dignity of Congress by purporting to enact legislation which has no validity. And it is right that they should be fully heard and the case set forth in the Recomp. This will probably take two or three days, after which the bill will pass and become what they will call a law. And thereupon we can proceed with our work and settle the question of right and law some years hence when the water becomes available.

But unless the bill is taken from the calendar to-day it is not believed that ther will eatendance.

But unless the bill is taken from the calendar to-day it is not be-lieved that there will again be a quorum of the Senate in attendance until the currency bill is reported, which will not be for some time. Senators who have stayed all summer in Washington are claiming their vacations. And when debate on the currency bill gets started we are not likely to get any attention for Hetch Hetchy; and Congress is not likely to consent to continue in session until December, when the regu-

not likely to get any attention for Hetch Hetchy; and Congress is not likely to consent to continue in session until December, when the regular session begins.

This delay is the more aggravating from the fact that water from the Sierra is now within 38 miles of the city of Los Angeles and is now being delivered there, as it will soon be delivered to the city, without any attempt on the part of the Federal powers that be to impose any of the absurd, unjust, and unlawful restrictions upon its use which are sought to be imposed on the people of this city.

As in any case, it must be years before this city actually receives any water from the Sierra, and as the necessity for an additional supply is now upon us, and in default of abundant winter rains will involve grave distress next summer, it will be best that our authorities devote all their energy to the prosecution of the suit for the condemnation of Spring Valley, which seems to slumber soundly and strangely.

Another short editorial that I will read has this to say

SAN JOAQUIN VALLEY IRRIGATORS PROTEST AGAINST ITS DIVERSION.

The people of this city demand that the use of this water be determined by the laws of California. We deny both the moral and legal right of Congress to have any voice in the matter whatever.

We submit to Federal usurpation as we would submit to any other superior force when we are deserted by the State authorities, which should be our protectors, but who are as silent as the grave.

Nothing is ever settled until it is settled right, Regardless of what Congress does or does not do, we shall ultimately get the Hetch Hetchy water, because it belongs to us in virtue of proper proceedings under the State law, which is the only authority having lawful jurisdiction in the premises.

The question of maintaining the undisputed constitutions.

The question of maintaining the undisputed constitutional rights of the States against unblushing Federal usurpation is the most important question before the people of the United States to-day,

It is a great deal bigger than the Hetch Hetchy question. (From the San Francisco Chronicle, Nov. 16, 1913.)

[From the San Francisco Chronicle.]

WORKS NO OBSTRUCTIONIST—THE SENATOR HOLDS THAT CALIFORNIA LAW GOVERNS USE OF CALIFORNIA WATER.

WORKS NO OBSTRUCTIONIST—THE SENATOR HOLDS THAT CALIFORNIA LAW GOVERNS USE OF CALIFORNIA WATER.

Senator Works does not oppose the acquirement of the Hetch Hetchy water supply by this city, and is in favor of a congressional grant to this city of whatever the National Government has power to grant.

He is opposed, however, to including in the grant language purporting to in any way designate the use or control of that water, because he holds that any such purported direction or restriction will be absolutely void and of no effect because outside the Federal jurisdiction.

More power to Senator Works's tongue. The louder and more continuous the protest the better. Senator Smoot is with him, and how many more Senators is not known. It is to be hoped that they will not give way until there has been exhaustive and thoroughgoing discussion of the fundamental principle involved.

As an act of courtesy and to avoid discussion on a point immaterial in this particular case, and because the Federal Government as trustee may have some color of title to a voice in the matter, no objection is raised to having Congress grant a formal permit for right of way.

But it is denied that Congress can confer any right or privilege whatever affecting the use of any water in this State or the means of putting it to use, because the State law is paramount within the State except as to areas where jurisdiction has been ceded.

While we all desire and expect to get the Tuolumne water, it is not desirable that the bill shall be rushed through without a full and free discussion of the rights of the States. The water which we shall need for the next few years will have to be got by the development of the Spring Valley property, and we should make a very poor trade to surrender the rights of the States. The water which we shall need for the next few years will have to be got by the development of the Spring Valley property, and we should make a very poor trade to surrender the rights of the State.

That, however, will all settle itself in due

[From the San Francisco Chronicle.]

THE HETCH HETCHY BILL-IT HAS RAISED THE WHOLE QUESTION OF STATE RIGHTS IN CONGRESS.

THE HETCH HETCHY BILL—IT HAS RAISED THE WHOLE QUESTION OF STATE RIGHTS IN CONCRESS.

It is improbable that the Hetch Hetchy bill will be considered at the special session of Congress, although on the mere question of giving this city the Tuolumne water source the bill would probably pass both House of Congress by unanimous vote.

It may be considered settled that the Hetch Hetchy dam site will be utilized, that San Francisco will get it; and that there will be pressure put upon us to develop it more rapidly than our requirements demand. As our home supply when developed will be ample for the next decade, and payments for it will use all our borrowing ability, the delay of a session will not be an unmixed evil.

It is improbable that the bill will be taken up this session, for the reason that it is now evident that the discussion will center, not on the propriety of awarding the water to this city, but on the power of Congress to prescribe any conditions whatever as to the use of the water or to extort from any beneficiary any revenue whatever for the Federal Treasury.

We deny the right of Congress to deal with the subject in any way except in the capacity of trustee of the national domain, but not of its usurfruct. We insist that all the laws of California, including the power of eminent domain, but not including the power to tax the public land run everywhere within the State, except when the State has expressly ceded jurisdiction, as it has as to some portions of the Yosemite National Park, but not as to the Hetch Hetchy Valley.

It has become evident that many Senators and Congressmen entertain the same views, and that the Hetch Hetchy Valley.

It has become evident that many Senators and Congressmen entertain the same views, and that the Hetch Hetchy Will will create in Congress the most momentous debate that has occurred there for a generation. Upon that the whole batch of Federal departments will be solidly against us, for in each department there is a given determination to place all the great interests

Mr. President, assuming that the city of San Francisco is entitled to this water as a part of the public use of the State, why should the National Government impose upon that city these onerous burdens and obligations? This magnificent park belonged to the State of California. It voluntarily turned it over to the National Government that it might be the better protected and cared for and made accessible to the people of the whole country. It is the duty of the National Government to care for that park and to protect it from invasion except in case of necessity. It comes with very poor grace from the National Government to say that the people of San Francisco, upon whom this burden will finally fall, shall pay to the Government \$30,000 a year for the mere privilege of putting a dam upon land that for practical purposes is absolutely worthless or that it should compel it to pay for the power that it generates by the expenditure of its own money. Why should the National Government be small enough to impose upon the people of that city the burden of constructing the highways and roads in its own park, simply because it has the power to do it, as a condition upon which it grants to the city of San Francisco the right that it asks for?

I wish to dwell for a moment upon the question of the destruction of a portion of the beauties of the park. There are thousands of people in this country who believe that this magnificent park, which belongs to the National Government as the trustee of the people themselves, should not be invaded and its beauties destroyed. If San Francisco actually needed this water for domestic purposes, if the children of San Francisco were famishing for water, as the Senator from Montana [Mr. MYEES] has been led to believe, and there was nowhere else that the city could procure the water for its necessary uses, this claim of the destruction of the park would not weigh a

feather's weight with me.

But if the city of San Francisco can procure its water elsewhere without entering upon the park, as I shall show it can, then it is the duty of the National Government to protect this park for the people of the Nation. However, it is said that the portion of the park called Hetch Hetchy is not accessible to the people to the extent that they would desire to go there. Why is it not accessible? Simply because the Government has neglected the obligations that rest upon it to construct roads that will enable people to go into this portion of the park as well as the other. Can the Government's failure to make the necessary roads in the park justify it in allowing somebody else to use it for some other purpose, because it is inaccessible by reason of the failure of the Government to supply the necessary means of getting into the Hetch Hetchy?

I suppose I have a reasonable degree of appreciation of the beauties of nature. I feel a good many times that I would like to get away from the strife and turmoil and noise of the great cities to the quiet and peace of the mountains, with their trees and running streams. But my lot has been cast elsewhere. However, those people who are able to enjoy the beauties of a place like the Yosemite Park should be protected in that right by the National Government, and I think I am going to show before I complete the discussion of this question that there is not the slightest reason why San Francisco should go into the park for the purpose of securing all the water it needs for a century to come.

Mr. SMOOT. Mr. President-

The VICE PRESIDENT. Does the Senator from California yield to the Senator from Utah?

Mr. WORKS. I do. Mr. SMOOT. The very crux of this question is whether San Francisco can get water from any other source than the Tuol-umne River. It seems to me that the Senator has now reached that point, and I believe we ought to have a quorum of the Senate to hear him discuss that question. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names.

Ashurst Bacon Smith, Md. Smith, S. C. Smoot Stephenson Page Perkins Hughes James
Johnson
Kenyon
Kern
La Follette Pittman Poindexter Borah Borah Brady Bryan Burton Chilton Clapp Clark, Wyo. Clarke, Ark. Cummins Dillingham Pomerene Sterling Sterring Stone Thomas Thompson Vardaman Walsh Reed Robinson Lane McCumber Martin, Va. Martine, N. J. Root Saulsbury Shafroth Sheppard Sherman Shields Simmons Smith, Ga. Warren Williams Dillingham Norris O'Gorman Overman Gallinger

The VICE PRESIDENT. Fifty-eight Senators have answered to the roll call. There is a quorum present. The Senator from California will proceed.

Mr. KERN. If the Senator from California will yield to me, and he has kindly consented to do so for that purpose, I move that when the hour of 6 o'clock shall have arrived, the Senate will take a recess until 8 o'clock this evening.

The VICE PRESIDENT. The question is on the motion of the Senator from Indiana.

Mr. SMOOT. Just to keep the record straight. I do not want the Senator from Indiana to understand that I am going to object, but I wish to call the attention of Senators to the fact that it is against the rules of the Senate, when a Senator is on the floor speaking, for any other Senator to make any kind of a mo-However, I am not going to object.

Mr. KERN. I thought I had the implied premise of the Sena-

tor from Utah that he would not object to the motion.

Mr. SMOOT. It is only for the record that I called attention

The VICE PRESIDENT. The question is on agreeing to the motion of the Senator from Indiana.

The motion was agreed to.

Mr. McCUMBER. As new business has intervened, I should like to ask unanimous consent out of order to submit an amendment to the pending bill. I ask that it may be printed and lie on the table until to-morrow.

The VICE PRESIDENT. Without objection, the amendment will be received and printed, and it will lie on the table.

Mr. WORKS. Mr. President, I have said that the application for this grant was not made in the interest of San Francisco alone. Nobody has claimed that San Francisco needs any such quantity of water as they are seeking to store by the erection of the dam, but in order to procure this grant they have taken in ostensibly 26 cities. During all this investigation from beginning to end you will not find any showing as to the quantity of water that the city of San Francisco actually needs, except a statement in one sentence by Mr. Wadsworth, who was delegated by the Army board to make an additional investigation into the different water supplies. In that sentence he makes a statement, as I remember it now—I shall call it to the attention of the Senate later-that San Francisco will need up to the year 1955, 100,000,000 gallons of water per day.

The application for this grant is founded upon the necessity

of San Francisco and these other cities for 400,000,000 gallons of water per day, and all the hearings-the whole proceedingshave been founded upon the supposition that that quantity of water was needed for the purposes of meeting the needs of San

Francisco.

There is not a Senator here who can determine from the hearings or anything that has taken place in this whole transaction how much water San Francisco actually needs or whether she can procure that water somewhere else than from the Hetch Hetchy Valley. There are numerous statements in the reports that are made, including the report of the Board of Army Engineers, to the effect that there are other places where San Francisco can procure even the 400,000,000 gallons of water per day. It is said that it will cost more money by probably \$20,000,000. Just a few days ago, at the request of the people who are here representing the interests of San Francisco, I called upon Col. Biddle, who was the chairman of the Army board, and asked him the direct question whether he had ever considered the question as to whether San Francisco could procure nearer at home and at less expense and without entering into the Hetch Hetchy Valley the water that it needed for its own use, and he I said, "Have you ever considered this question with respect to any other quantity of water than the 400,000,000 gallons that are necessary for all of these cities?" He said, I said, "Do you believe that there are places nearer to San Francisco where she could procure the necessary supply of water for herself at a less cost without going to the Hetch Hetchy Valley?" He said, "Yes." I said, "Could not San Francisco procure all the water she needs for half a century by simply improving Cherry Creek and Eleanor Lake?" "Yes; but that has never been considered." They He said. They have not taken into account the simple question as to what San Francisco needs; they have taken this greater supply and have based all their calculations upon the necessity for 400,000,000 gallons of

In that connection I call attention to a statement that is made in the brief of representatives of San Francisco by Mr. Percy V. Long, city attorney, a very able and very competent gentleman. He says:

GEOGRAPHICAL SITUATION.

GEOGRAPHICAL SITUATION.

For the benefit of those Senators who are not wholly familiar with the relative geographical location of the cities, districts, and water sources affected by this bill, the following brief statement is made:

The cities of San Francisco. Burlingame, San Mateo, Redwood, Palo Alto, Hayward, Alameda, Oakland, Piedmont, and Berkeley, which are to be organized into a municipal water district for development of the Hetch Hetch water supply, form an almost continuous chain around the Bay of San Francisco. Their combined population at the present date is more than 700,000. Directly east of these bay cities the Cost Range Mountains form a low barrier between the bay cities and the San Joaquin Valley, one of the two great interior valleys of California. Through the middle of this valley the San Joaquin River flows north to the Carquinez Straits and thence into San Francisco Bay. On the east side of the valley the Sierra Nevada Range rises, reaching heights of over 12,000 feet at the summit. Down the western slopes of the

Sierras the Tuolumne River winds in a general westerly direction to its confluence with the San Joaquin River. For the purpose of irrigating during the dry season the part of the valley floor which is normally drained by the Tuolumne River, the Modesto and Turlock firrigation districts were formed, comprising 257,000 acres in extent. Conjointly they have built the La Grange diverting dam at the point where the Tuolumne leaves the foothills on its westward course and divert its waters through irrigating canals to the extent of their needs. About 50 miles farther up the Tuolumne and about 165 miles due east from San Francisco the river flows through the Hetch Hetchy Valley, which lies within the boundaries of the Yosemite National Park, about 25 miles north of the Yosemite Valley and on an entirely different watershed. The valley floor is about 3,530 feet in elevation. To the north of Hetch Hetchy and about 9 miles distant lies Lake Eleanor, one of the numerous mountain lakes of the Sierras. A short distance west of Lake Eleanor the ground falls off into Cherry Valley, through which the Cherry River flows to join the Tuolumne about 12 miles below the Hetch Hetchy Valley. The relative positions of the foregoing points will more readily appear from the map on file with your committee.

Not a single one of those cities named had any filings upon

Not a single one of those cities named had any filings upon this stream; they have no kind of legal claim to the waters of the stream in any way whatever; they have no legal right, nor any equitable right, to receive any part of the water as against this vast section of farm lands that are needing all the water they can get from this stream for irrigation and can not get it anywhere else.

Mr. GALLINGER. Is it not also true that none of those cities need any more water than it has at the present time?

Mr. WORKS. I am not able to say from my own personal information whether they do or not; but there is no showing anywhere that they do need it; and if they are proposing to secure a grant from the National Government to invade one of the national parks the burden is upon them to show that they do need water, that they have a right to appropriate it from this stream, and that they are not able to get it anywhere else. I will say, in answer to the Senator from New Hampshire, that, so far as I know, there is no claim that these cities need the water.

I want Senators to notice another thing. They have talked a good deal about this municipal water district. It will be noticed that only these three or four cities are mentioned as having any intention to form a water district. There is no claim made that San Francisco and Oakland and these larger cities propose to combine in a water district for the purpose of taking water out of this stream. I do not believe that any such thing as that will ever occur in the history of the State of California; but to show further what the disposition has been and the deception that has been practiced upon Members of Congress with respect to this matter, I want to call attention to an extract from the report of Mr. Freeman, who was called in as consulting en-gineer, at the instance, I think, of the Government itself, to investigate this situation and to report. It was at his suggestion that the law was enacted providing for a municipal water They had something of that sort in Boston and its surroundings, where some of the cities had joined with Boston, or some other cities had joined together for the purpose of organizing a water district. Certainly Mr. Freeman had very little conception of the conditions in California, involving not only the question of the right of the cities to domestic water, but of the landowners to irrigation, when he suggested the idea of organizing a water district under the circumstances that existed in the State.

I do not mean to say that Mr. Freeman was intending to deceive anybody. I have no idea but that he was acting in perfect good faith, but I do think that he misunderstood the conditions. He is a man of the highest qualifications, a man of exalted character, a man who has a reputation all over the country as one of the ablest hydraulic engineers that we have, but most of his work has been done not in California or in the Western States. He was called in consultation out at Los Angeles at the time it was proposing to spend about \$30,000,000 for aqueducts and was going up in the mountains 230 miles to get its water supply. He thought that was nonsense; he thought Los Angeles could get its water supply nearer home. He told me the other day that he went out there thinking it was a remarkable thing that Los Angeles should be going 230 miles to get water when there was plenty of water nearer by, but when he got out to California and consulted with William Mulholland, who knows every stream and canyon and moun-tain in the southern part of California and who constructed the tain in the southern part of California and who constructed the reservoirs and aqueduct for the city of Los Angeles, Mr. Mulholland told him, "If you undertake to take water out of the mountains nearer by you will be taking it away from the farmers who are entitled to use it for the irrigation of their lands, and Los Angeles can not afford to do that." So Los Angeles went 230 miles away, notwithstanding the idea of Mr. Freeman that she might get her water closer home, and secured water that affected but very few landowners and comsecured water that affected but very few landowners and compensated them for their losses.

Mr. POMERENE. Mr. President-

The VICE PRESIDENT. Does the Senator from California yield to the Senator from Ohio?

Mr. WORKS. Yes.

Mr. POMERENE. The only question I desired to ask the Senator was in view of the statement he has just made. Assenator was in view of the statement he has just made. Assuming that water should be taken out of that section of country for the city of San Francisco, would the farmers whose supply of water was thereby interfered with have a cause of action against the city or company that might be thus taking water from them?

Mr. WORKS. They would have a cause of action, of course, if the water was taken in violation of the rights of the farmers. The question would arise as to the respective rights of the

parties in the streams.

I was about to read, right at the beginning, a part of the report of Mr. Freeman, which is really the basis on which he made all of his calculations, and is the only justification for the conclusions which he reached:

FORMATION OF A METROPOLITAN WATER DISTRICT.

It is confidently expected that in the near future definite and important progress can be made upon the formation of a metropolitan water district, including, with San Francisco, the rapidly growing communities in San Mateo County and the group of cities that may be described as Greater Oakland, all of which together now consume about two-thirds as much water as San Francisco.

That is to say, these other cities that have no claim at all to the stream use two-thirds as much water as does San Francisco, which claims, on account of its filing, to have a right to take water out of the stream.

right to take water out of the stream.

The members of this metropolitan water district would share all of the expense incurred in providing the supply and in delivering it into the chief storage reservoirs, the water district conducting, as it were, a wholesale business in water supply, while leaving to each of the several municipalities the retail business of supplying its own citizens through its own distribution mains, very much as is done in the case of the Boston metropolitan district.

After the Hetch Hetchy aqueduct is once brought into use, the natural policy will be to use the better, softer water, and to either waste the harder water from the near-by sources or divert it temporarily to agricultural purposes until again needed for domestic supply, and therefore each of these reservoirs enumerated above would seldom or never be drawn so low in future as under present conditions.

Three-fourths of the aggregate quantity that the above contain—exclusive of raising Crystal and Chabot—would supply a daily draft of 200,000,000 gallons for a full year, or would supply 400,000,000 gallons for a full year, or would supply 400,000,000 gallons for six months, and beyond this the city could still draw water from the Pleasanton-Sunol sources, and draft would still be possible from the Bay shore gravels, and the run-off from the several catchments to these reservoirs would add an important amount.

I quote again from the Freeman report:

I quote again from the Freeman report:

SAN FRANCISCO AND NEIGHBORING MUNICIPALITIES.

For simplicity in all of the following descriptions the word San Francisco has been used to indicate the group of cities of which that city is the commercial center, comprising substantially all of the cities and smaller communities bordering upon the bay, from San Francisco around southerly, easterly, and northerly to Oakland, Berkeley, and Richmond, some 26 municipalities, comprising 37 separate communities in all. As will appear later, the matter of uniting more or less of these communities in closer municipal relations, possibly into a metropolitan water district, in some respects similar to that which supplies the Boston metropolitan district, is now being actively promoted with practical certainty of ultimate success.

When the second pipe across the San Joaquin Valley is added, this quantity of 400,000,000 gallons daily can be conveyed from Hetch Hetchy to the gatchouse, near Irrington, where it will be subdivided among the different communities contributing to its cost. During the early years, with only a single pipe across the San Joaquin Valley, the delivery of the aqueduct would be in excess of 200,000,000 gallons daily—possibly 240,000,000. The branch line of steel pipe to be taken across to supply the cities and valleys of the San Francisco Peninsula will have a capacity of about 100,000,000 gallons per 24 hours.

A single branch is sufficient to supply San Francisco with all

A single branch is sufficient to supply San Francisco with all the water she needs for half a century.

In this connection, with respect to the rights of the different parties, I want to submit what is called "A Primer of Facts," relating to the Modesto and Turlock irrigation districts. It is quite brief and concise, and contains a good deal of what I regard as valuable information:

PRIMER OF FACTS-THE MODESTO AND TURLOCK IRRIGATION DISTRICTS. First, Organized under the Wright law, 1887; the first in California. Second. Area, 258,000 acres. Now irrigated, about 150,000 acres. Third. Source of water, Tuolumne River, diverted at the La Grange

Fourth, Amount of water filed on, 9,500 second-feet. San Francisco generously proposes to allow the districts 2,350 second-feet.

And only 150,000 acres of the 258,000 is receiving water at the

Fifth. Total cost of irrigation works and up-keep to date, \$4,500,000. Sixth. Estimated area outside the districts which could be irrigated from the Tuolumne River, about 200,000 acres.

Seventh. Development resulting from irrigation:
Increase of population in Stanislaus County in the last decade, 135.8 per cent, which is only second to Los Angeles County. Shipments of agricultural products, \$3,000,000; dairy products, \$3,000,000; butter, 1912, 6,894,225 pounds, leading all the California counties. For the past year the butter product was 8,292,100 pounds, 58 per cent more than was ever produced in any other California county. This development is attributable to irrigation alone.

Eighth. Our present prosperity would be threatened and all further development of the districts and adjoining lands would be prevented by taking the so-called "flood waters" to San Francisco.

Ninth. The proposed measure does not protect the districts because:

(a) It cuts down our water to one-fourth of our legal appropriation, while San Francisco adds 50,000 acres to our area without providing any additional water therefor, and prohibits the development of any lands outside the districts (of which we have some 200,000 acres) contiguous to the Tuolumne River.

(b) It allows the districts to buy power only "when not wanted for pumping by the grantee."

(c) It allows the districts to buy stored water only under onerous conditions.

(d) It may establish, if the "restrictions" are removed (as now

conditions.

(d) It may establish, if the "restrictions" are removed (as now threatened by San Francisco), another power monopoly in the valley by which the people would be not served but exploited.

Tenth. The undisputed fact that the Sacramento Valley has six times the water that the San Joaquin Valley has, and equally as good, is sufficient to show that San Francisco should go to the northern valley for her supply.

Eleventh. Finally, we ask that the "waters of the San Joaquin Valley be conserved for the land of the San Joaquin Valley."

I have here also a letter from the Livingston Chronicle which I think is worthy of the attention of the Senate. All of us have received numerous communications of this kind. I have tried to select a few of them that will carry to the Senate some valuable information bearing upon this important subject. Livingston is in Merced County, right in this section of California.

LIVINGSTON, MERCED COUNTY, CAL., September 18, 1913.

LIVINGSTON, MERCED COUNTY, CAL., September 18, 1913.

Hon. John D. Works,

United States Senator, Washington, D. C.

Dear Sir: At the request of citizens of portions of Merced and Stanislaus Counties, Cal., I am addressing you relative to their feeling regarding the Raker bill. In as few words as possible, and without any attempt to discuss any of the features of the act, I desire to present to you the sentiment of a unanimous people regarding the proposed diversion of a portion of the Tuolume River to San Francisco for alleged municipal purposes. This feeling extends to the point where the diversion of any water from any stream of the San Joaquin Valley basin to points outside of the valley would meet with opposition.

It would be useless for me at this time to quote at length from reports of the Board of Army Engineers or from the reports of the United States Geological Survey, relative to the amount of land in the San Joaquin Valley that is susceptible of irrigation, or as to the amount of water that is available in these watersheds. Such reports are doubtless at your hand.

The people of this section of the San Joaquin Valley, in Merced and Stanislaus Counties, are a unit in declaring that the diversion of any water from the Tuolumne River (Hetch Hetchy) or from any other stream having a source in the Sierra Nevada Mountains and finding its way toward the sea through this great inland valley to San Francisco, or to any other point outside of this valley, for municipal or other purposes will prove an irreparable loss to the land in this valley, as every drop of this water and more if it could be secured is needed for the proper irrigation and development of the agricultural lands of the valley.

If San Francisco or any of the boy cities had no other source to

this valley, as every drop of this water and more if it could be secured is needed for the proper irrigation and development of the agricultural lands of the valley.

If San Francisco or any of the bay cities had no other source to which they could go to secure a supply for its municipal needs, then the people of the San Joaquin would open to them the mountains at their back and say, "Take what is needed." But those cities have other ample sources, as has been shown in the several engineering reports that have been made of record in previous hearings upon this question. Three such sources are the McCloud River, Sacramento River, and American River, any one of which could supply San Francisco for all time to come without in any manner drawing upon the needs of lands that might be irrigated, for the Sacramento Valley has an annual rainfall sufficient to cover its irrigable portions to a depth of 11 feet, while in the San Joaquin Valley there would be only 20 inches.

Permit me to suggest at this moment that if it were a mere matter of securing water for municipal purposes that prompts San Francisco to seek privileges in the Hetch Hetchy; that if the matter of the generation of electrical energy were not a considered in preference to Hetch Hetchy, even though San Francisco might be compelled to purchase certain rights in order to obtain the water that is alleged to be needed. I will ask that you eliminate the power features of the Raker bill in this consideration and see for yourself what would be left of the measure that would be of value to San Francisco. It is here contended that the Raker Act makes possible a "power grab," and that if this "grab" were not veiled by the alleged needs of the city for water for municipal purposes the bill would never have seen the light of day outside of a pigeonhole in the room of the Public Lands Committee of the House and would not now be before your committee for consideration.

I submit that the business men of San Francisco do not understand

for municipal purposes the bill would never have seen the light of day outside of a pigeonhole in the room of the Public Lands Committee of the House and would not now be before your committee for consideration.

I submit that the business men of San Francisco do not understand that by securing this grant in Hetch Hetchy they are taking water from 250 square miles of arable and irrigable land in the San Joaquin Valley that can look to no other source of supply save the Tuolumne River alone. I charge that the great mass of citizens of San Francisco do not know the "inside" of this proposed diversion of Tuolumne River water; that if they did, their support would not now be with the board of supervisors of the county of San Francisco and those who are spurring them on to secure Hetch Hetchy for a reservoir site. I submit that this feature can be shown to the entire satisfaction of your committee and to the Members of Congress if this measure is put over until the next session. So many points have developed within recent weeks that I feel that the people shall not be given a fair chance to present their side of this contention if this bill is rushed to passage in the Senate at the present session.

I desire to submit that the Raker bill is not an emergency measure in any sense of the word, for an emergency does not exist, unless it be the immediato need of the San Joaquin Valley for the use of all of the water flowing in its rivers and streams. That no emergency exists in San Francisco is apparent to all, for should Congress grant the demands of San Francisco and give Hetch Hetchy Valley to that city for a reservoir site the city is not in a position to even commence development of this supply. The Garfield permit, without Hetch Hetchy, willi furnish San Francisco with water for many, many years to come, according to the report of the Director of the United States Geological Survey; and yet no hurry is manifested in San Francisco to exercise

rights which the city claims on Lake Eleanor. Should San Francisco be given Hetch Hetchy, water from that source could not be delivered to the city within a dozen years; perhaps not within a score of years; perhaps not within a century. Business men in San Francisco are free to admit at this time that they do not know how the supervisors propose to bring water from Hetch Hetchy to San Francisco, as the municipality is now bonded beyond its legal limit.

Why, then, all of this hurry? Where is the emergency? I pray you. consider this matter carefully; I pray you nothing be done that shall make possible the entering of the Yosemite National Park or any other public domain by interests whose object is the exploiting of public property, even though such exploitation be hid by the veil of an alleged municipal necessity.

As regarding Hetch Hetchy, no municipal necessity exists, save and alone the necessity of the Waterford irrigation district, organized by the vote of the people on Saturday, September 6, 1913, when the proposition of organizing an irrigation district under the Wright law of California was given unanimous approval. Only one vote was cast against the organization. This new district represents an area of 20,000 acres. This district is organized for the purpose of securing water for irrigation from the Tuolumme River. Another district that is contemplated is the Merced Irrigation district, to be organized under the same law. This proposed district has tentative boundaries fixed to cover 220,000 acres, and intends when organized to secure and develop the Dry Creek reservoir site, mention of which was made by City Engineer O'Shaughnessy, of San Francisco capitalists, but not reported to the board of Army engineers.

The Dry Creek reservoir, when built, can be filled from the Tuolumne

other San Francisco, in private reports to William H. Crocker and other San Francisco capitalists, but not reported to the board of Army engineers.

The Dry Creek reservoir, when built, can be filled from the Tuolumne and Merced Rivers, and the proper development of the lands adjacent to these two streams can only be accomplished through the use of this site and all of the flood waters of these two rivers. This feature has not been presented to public consideration because of the fact that no organization existed which could place the stamp of authority upon a presentation. If this Raker bill can go over until the next-session of Congress organizations will be in existence that will be empowered to gather and present just such information as this.

There is no wonder that such information has not been supplied to the Senate and House committees having this bill in charge, for this is the first time that a situation has arisen whereby a protest of any character was necessary to protect the rights of the people of this section of the San Joaquin Valley to the waters of the Tuolumne River or the waters of any other stream. Resting confident in their rights to appropriate the waters of these streams as a means made possible, the people little dreamed until engineering reports were made that they did not have more than enough water for all their needs.

The last session of the Legislature of California revised the Wright law, as well as other irrigation laws of the State, to such an extent that it is now practical for the people to organize districts and bond them for the building of irrigation systems. In this connection it may not be amiss to suggest that perhaps therein lies one of the reasons why the "interests" who are behind this Hetch Hetchy movement, and who are covering their work with the curtain of San Francisco's alleged municipal need, are anxious to have this measure passed by this Congress, so they can forestall any organization of people in the San Joaquin Valley who might seek to appropriate the una

Francisco. San Francisco is endeavoring to establish a right to divert 400,-000,000 gallons of water daily from the Tuolumne watershed. This is sufficient to irrigate 250 square miles of territory, or 160,000 acres. If this quantity of water is diverted for other purposes, 160,000 acres will be condemned to remain forever arid and barren, for there is no other adequate supply this land can draw upon. Allow me to point out what this means. The 160,000 acres of land that will be thus barred from irrigation and development is the same character of land found in the Turlock irrigation district, to which it is adjacent.

Statistics show that the Turlock district during the year 1912 produced crops valued at more than \$100 per acre on its irrigated sections, Let us bring these 160,000 acres under irrigation and they will produce crops annually valued at more than \$16,000,000.

That is to say, this valley will lose in a single year almost as much as the difference between the cost of the two water supplies to which San Francisco may resort. They are insisting that they ought not to resort to the one that costs \$20,000,000 more than the other, when their taking away the water from these valuable tracts of land will cause them to lose in one year nearly as much as the difference in the cost of the two systems.

nearly as much as the difference in the cost of the two systems.

Land in the Turlock district, which has only a 50 per cent irrigation service, is worth anywhere from \$250 to \$500 per acre. Has San Francisco ever shown a necessity equal to the possibility of making 160,000 acres of land worth anywhere from \$40,000,000 to \$80,000,000.

I submit that the task is impossible upon the part of San Francisco, but that it will be realized here if the land can secure this water. I assure you every possible step is being taken looking to this development. Sir, this is a matter of such magnitude that the plea of San Francisco that an emergency exists is but the piea of the beggar who steals and blames his crime against an alleged necessity that does not exist.

In the protests before the Public Lands Committee before the House the Modesto and Turlock irrigation districts were compelled to stand alone and take whatever they could get. I beg to advise you that if this measure can be put over until the next session of Congress there will be a united demand from every county, eight in number, in the San Joaquin Valley that this water be not diverted. As proof of this I refer you to resolutions of protest that have been filed before the House committee from chambers of commerce and public meetings and from the San Joaquin Valley Water Problem Association. Similar protests from the Water Problem Association should reach your committee at any time, as the resolutions have been prepared and are now receiving the referendum vote of the members of the association. Mr. A. L. Cowell, secretary of the association, will transmit them to your committee and to others.

In conclusion I may be permitted to say that the San Joaquin Valley Water Problem Association has been formed for the purpose of working out a comprehensive scheme whereby the irrigation, reclamation, and drainage of every section of the San Joaquin Valley and that there are eight counties in this valley and that there are over 7,000,000 acres of land that can be made to

very first obstacle this organization has encountered is this proposed diversion of water.

We are hardly prepared to meet it at this time, yet it must be met. This situation appearing, we have but one alternative and that an appeal to you to use your very best efforts to secure a postponement of action on the Raker bill, or any other similar measure that might be presented, until the next session of Congress. The necessity for this postponement must be apparent to you, and our people desire this most fervently.

I may add as a suggestion of our future work for the irrigation, reclamation, and drainage of this valley that the matter of applying to the United States Reclamation Service is being considered. Should this be done, and we have strong reason to believe that action of this sort will be taken in the near future, you will realize at once that this branch of the Federal Government must be safeguarded in the matter of water supplies. Sir, in submitting this appeal, I beg that it will receive that careful consideration which I am impelled to believe you will give it.

Respectfully submitted.

Edward S. Ellis.

EDWARD S. ELLIS.

Mr. President, this appeal was made mainly for delay until the next session of Congress, which has now arrived. The trouble about it, however, is that these people have been foreclosed against making any further showing upon this question because of the unanimous-consent agreement entered into by the Senate, which calls for a vote on the coming Saturday, and therefore the matter could not go back to the committee for further consideration.

#### RECESS.

Mr. WILLIAMS. Mr. President, I thought a motion had been made and carried that at 6 o'clock we should take a recess

until 8 o'clock. The hour of 6 o'clock has arrived.

The PRESIDING OFFICER (Mr. O'GORMAN in the chair).

That is correct. The hour of 6 o'clock having arrived, the Senate will take a recess until 8 o'clock p. m.

The Senate thereupon, at 6 o'clock p. m., took a recess until 8 o'clock p. m.

### EVENING SESSION.

The PRESIDENT pro tempore (JAMES P. CLARKE, a Senator from the State of Arkansas) called the Senate to order at 8 o'clock p. m.

## SAN FRANCISCO WATER SUPPLY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes

Mr. GALLINGER. Mr. President, there are very few Senators present, and I would suggest the absence of a quorum.

The PRESIDENT pro tempore. The Senator from New Hampshire suggests the absence of a quorum. Let the Secretary call the roll.

The Secretary called the roll, and the following Senators

answered to their names:

Goff Gronna Hollis Johnson Kenyon Smith, Ga. Smith, Md. Smith, S. C. Swanson Thomas Thompson Thornton Townsend Works Owen Bankhead Page Pomerene Reed Robinson Saulsbury Shafroth Bryan Martin, Va. Martine, N. J. Myers Nelson O'Gorman Overman Burton Clapp Clarke, Ark. Colt Dillingham Sheppard Sherman Shields Fletcher Gallinger Shively Simmons

Mr. CLAPP. The senior Senator from Utah [Mr. Smoot] is

unavoidably detained from the Chamber.

The PRESIDING OFFICER (Mr. O'GORMAN in the chair). Forty-five Senators having responded to the call, there is not a

Mr. GALLINGER. Let the names of the absentees be called. The PRESIDING OFFICER. The Secretary will call the

names of the absentees.

The Secretary called the names of the absent Senators, and Mr. PITTMAN, Mr. STERLING, and Mr. VARDAMAN answered to their names when called.

Mr. SMITH of Arizona, Mr. ASHURST, Mr. HUGHES, Mr. NORRIS, Mr. CUMMINS, Mr. KERN, Mr. CHILTON, and Mr. WALSH entered the Chamber and answered to their names.

The PRESIDING OFFICER. Fifty-six Senators being present, a quorum is present and ready for the transaction of business. The Senator from California will proceed.

which to store the flood waters of the Tuolumne River, to be diverted thence to the city for municipal and other purposes.

Out of the Hetch Hetchy Valley comes three-fourths of the water of the Tuolumne River. The area of irrigable land on the Tuolumne River watershed is about 1,000,000 acres.

Of this about 500,000 acres is level valley land of great fertility and capable of supporting a large population.

About 500,000 acres lie in the foothills on both sides of the Tuolumne River and are equal in value to any other body of foothill land in the State.

About 500,000 acres lie in the foothills on both sides of the Tuolumne River and are equal in value to any other body of foothill land in the State.

Of this area about 275,000 acres are organized in the Turlock, Modesto, and Waterford districts, leaving 225,000 acres of level valley land and 500,000 acres of foothill land to be organized. Of course it takes time to accomplish this.

We have to await population, especially for the foothills.

Now, Senator, we oppose the Raker bill because we believe that if it is passed it will give San Francisco a great advantage in a contest before the courts. Such contest we expect, whether the Raker bill passes or does not pass.

Does San Francisco need the Hetch Hetchy? Is there an emergency requiring an immediate decision of this water question?

H. M. Chittenden, in his report on the Spring Valley, says: "One result of the investigation has been to show that such a necessity does not now and possibly may never exist. \* \* \* So far as quantity is concerned, there is no present necessity for a resort to the Sierra, and will not be for an indefinite period to come. \* \* As to quality, the Sierra supply is softer, but hygienically no purer."

In view of the vast importance of this question, would it not be best to delay a decision at this time? Refer it back to the Land Committee and give the Tuolumne River farmers a chance to show the disastrous effect the passage of the bill will have on their interests and also to show that San Francisco can get a water supply elsewhere.

Yours, truly,

J. R. Horsley.

J. R. HORSLEY.

I also read an editorial from the Stockton Daily Evening Record of October 29, which is as follows:

THE SAN JOAQUIN VALLEY MUST SAVE HETCH HETCHY WATER FOR IRRIGATION—SAN FRANCISCO CAN GET WATER IN NORTH COAST RANGE.

THE SAN JOAQUIN VALLEY MUST SAVE HETCH HETCHY WATER FOR IRRIGATION—SAN FRANCISCO CAN GET WATER IN NORTH COAST RANGE.

San Francisco bases its claims to the Hetch Hetchy water supply on the unfounded statement that it is the only available and sufficient supply for the present and future needs of the city.

San Francisco gives no indication of what use it purposes to make of the Spring Valley water system, which now supplies the city.

San Francisco proposes to capitalize a great water supply for the city's own profit, irrespective of the injury to the San Joaquin Valley.

San Francisco bases its claim to Hetch Hetchy on its own estimation of its future needs.

San Francisco has forced the Hetch Hetchy bill through the House, It is now in the Senate. The bill will be called up December 1, and there is unanimous consent to vote on it six days later.

If the San Joaquin Valley is to be aroused to the injury which will be done to the valley by the bill, action must be immediate and positive. San Francisco can obtain a water supply—a larger water supply than the Hetch Hetchy, and at less cost. And not one drop of the water need be diverted from the limited amount belonging by nature and equity to the San Joaquin Valley.

The estimated amount of water available in Hetch Hetchy for diversion to San Francisco is 400,000,000 gallons daily. The Army engineers estimate the cost of the storage, diversion, and delivery of the water to San Francisco is 477,400,000. The Army engineers examined several sources of water supply and reported that the Hetch Hetchy was the most practical and easily available for the engineers did not go far enough.

Let us consider what may be designated as the Snow Mountain, Clear

was the most practical and easily available for the future needs of San Francisco. But perhaps the investigations of the engineers did not go far enough.

Let us consider what may be designated as the Snow Mountain, Clear Lake, and Putah Creek supply. The distance from Snow Mountain to San Francisco is 140 miles. Surveys just completed show that of this distance the water can be conveyed through natural channels for 66 miles, leaving only 74 miles for aqueducts, etc.

Where can this alleged supply be secured and how much of it is available?

From the South Eel River in Mendocino, from the watershed ranging south to Clear Lake in Lake County, and still farther south to Putah Creek in latitude with Napa.

This transfers the watershed for San Francisco's supply from the Sierra to the Coast Range, and from a diversion of the limited supply for the San Joaquin Valley to the surplus running to waste in the overwatered Sacramento Valley.

How much water?

Estimates just completed by competent engineers show that the South Eel River watershed may be relied upon for 200,000,000 gallons daily: that the Putah Creek watershed has a dependable supply of 300,000,000 more gallons daily than Hetch Hetchy. Further, the cost of bringing this water to San Francisco across the upper Berkeley Hills and Carquinez Straits is only \$41,250,000—about one-half as much as the Hetch Hetchy plan. The storage capacity of the Snow Mountain-Eel River-Putah Creek plan is 1,500,000 acre-feet—enough water to supply San Francisco with water for three and one-half years, even if not another drop of water fell. There are practically no water rights filed against this proposed supply. Less than 2,000 acres are now in cultivation in districts affected by it.

It will be noticed that in this instance as in a good many others they combine two or three of these different systems. What for? Not to secure the supply of water that San Francisco needs, because either one of them alone would furnish ample water for San Francisco, but they do it upon the theory that they must raise the 400,000,000 gallons of water that are necessary for all these cities. Therefore all these petitions and the reports of the engineers are misleading in that respect.

ent, a quorum is present and ready for the transaction of business. The Senator from California will proceed.

Mr. WORKS. Mr. President, I shall read next a letter from J. R. Horsley on this subject. He says:

J. R. Horsley on this subject. He says:

J. R. Horsley & Son, Waterford, Cal., November 21, 1913.

Hon. John D. Works, Washington, D. C.

Dear Sir: The great and absorbing question here is the proposition to grant Hetch Hetchy Valley to San Francisco for a great reservoir in

a supply of more than 24,000,000 feet for 2,659,000 acres, while San Joaquin has only 10,665,000 feet for its 6,630,000 acres. Yet San Francisco would divert the Hetch Hetchy supply, which San Joaquin Valley will soon need and which some of the districts already need.

The Eel River and Putah Creek supply always will be waste water, unless utilized for the supply of some large city.

The watershed belonging naturally to the San Joaquin Valley will not irrigate one-half the valley's acreage which can be brought under irrigation. The situation is reversed in Sacramento Valley, where there is not enough acreage susceptible to irrigation to use one-half its available water supply.

It is time for the people of San Joaquin Valley to get busy, and the press will be derelict in its duty if it fails to put the facts before the people.

press will be derelict in its duty if it fails to put the facts before the people.

The Hetch Hetchy scheme is unnecessary for the future of San Francisco, since a better and cheaper water supply can be secured in the Coast Range watershed.

The water of Hetch Hetchy ought to be conserved for the future use of San Joaquin Valley, which needs every drop of it.

The Record protests, as it has protested before, against the Hetch Hetchy bill.

It embodies nothing but the inate selfishness of San Francisco, shortsighted statesmanship by the bill's sponsors, and a wanton injury to the San Joaquin Valley, upon the development of which much of the future greatness of California depends.

Mr. TOWNSEND. Mr. President, I notice that there is in the Chamber now considerably less than half of a quorum. few of the Senators on the majority side are in their seats, yet we have been compelled to come here to-night to carry on an evening session. Unless the speaker insists to the contrary, I shall make a point of no quorum whenever I discover that there is no quorum in the Chamber. I now, Mr. President, suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll. The Secretary called the roll, and the following Senators

answered to their names:

Smith, Ga. Smith, Md. Smith, S. C. Sterling Thomas Thompson Thornton Townsend Vardaman Walsh Ashurst Goff Gronna Hollis Hughes Owen Page
Pittman
Poindexter
Pomerene
Reed
Robinson
Saulsbury
Shafroth
Shennard Bacon Bankhead Borah James Johnson Kenyon Kern Brady Brandegee Bryan Chilton Clapp Clarke, Ark. Lane Lippitt Martin, Va. Martine, N. J. Sheppard Sherman Shields Shively Walsh Warren Williams Works Cummins Dillingham Myers Nelson O'Gorman Simmons Gallinger Smith, Ariz.

The PRESIDING OFFICER. The roll call discloses the presence of 58 Senators. A quorum being present, the Senator from California will proceed.

Mr. WORKS. Mr. President, one of the claims made is that while there are other sources of supply that will furnish 400,000,000 gallons of water daily, which it is claimed San Francisco needs, it will cost the city more money to secure that supply from other sources. I have here a telegram from Mr. Doak, of San Francisco, addressed to Mr. Ferris, chairman of the House Committee on the Public Lands, bearing upon that question, which I think will be of interest to the Senate. It is as follows:

SAN FRANCISCO, July 5, 1913.

Hon. Scott Ferris, Chairman Committee Public Lands, Washington, D. C.:

Hon, Scott Ferris,

Chairman Committee Public Lands, Washington, D. C.:

At the hearing before the congressional committee on the Raker bill, now before Congress, to grant the city of San Francisco the right to use the Hetch Hetchy Valley as a reservoir site, according to press reports, statements were made by the representatives of the city that the Army board's report shows the cost of construction of the Hetch Hetchy project to be \$20,000,000 less than the McCloud River or other sources. This is not correct and is not borne out by the reports.

The board's estimate of cost of the Hetch Hetchy project, fully developed for a supply of 400,000,000 gallons per day, as set forth in the report, is \$77,367,400. Their estimate of the cost of the McCloud project fully developed for a supply of 500,000,000 gallons per day, with Bay Crossing, is \$71,446,200, showing a saving in favor of the McCloud in actual cost of construction of \$5,921,200.

The figures of Mr. H. H. Wadsworth, assistant engineer of the board, show a saving of \$12,416,300, and those of R. W. Van Norden, a prominent and well-known engineer of San Francisco, who made an independent estimate of cost for the Journal of Electricity, finds a saving of \$22,743,000.

It should be understood that the plans submitted by the proponents of the McCloud project call for the construction of a reinforced concrete aqueduct of the highest type and class of permanent construction, developed at the beginning to its full capacity of 500,000,000 gallons per day, with a view of utilizing the surplus water for irrigation until the same is needed for domestic purposes; whereas the plans submitted by the city for the Hetch Hetchy project call for an entirely different class of construction, a large part of which is steel-pressure pipe, which will deteriorate and will have to be replaced at the end of 20 or 25 years. The Standard Oil Co. are now replacing oil pipe line in the San Joaquin Valley that has been laid less than 8 years.

By adopting a system of high finance, sugges

for city use. The revenue from this surplus water would, if sold at the price fixed by the Los Angeles aqueduct for their surplus water, be sufficient to pay 4½ per cent interest on over \$40,000,000.

There was also, no account taken of the cost of the extra depreciation of the Hetch Hetchy project due to the replacement of the pipe construction. No competent engineer will estimate the life of that part the Santa Clara Valley at 40 years. It must be remembered that the plans and estimates call for ordinary steel plpe and not expensive Sected Iron pipe, such as used by the Spring Valley Co.

Both City Engineer Grunsky and Manson estimate the cost of repolect planned by them, at \$21,325,000. (See city with the project planned by them, at \$21,325,000. (See city with the project planned by them, at \$21,325,000.) (See c

I have a communication from Mr. Miller, who is referred to in that letter, bearing upon that same question. It is dated July 31, 1913. It is as follows: JULY 31, 1913.

Hon. John D. Works.

United States Senate, Washington, D. C.

My Dear Sir. I had the the privilege of reading a letter addressed by you to Mr. Taggart Ashton, civil engineer of this city, relative to the subject of water supply for San Francisco and the bay cities. In response to your request contained therein for further information on this subject, I have taken the liberty of addressing you.

I have given this subject three years of very careful study, including formulation of reports supplied to the advisory board of Army engineers appointed by the Secretary of the Interior. I desire particularly to call your attention to certain circumstances that prevailed during the period in which San Francisco was requested and expected to furnish the Army board with correct and detailed information.

Mr. John R. Freeman had been engaged by the city of San Francisco to make an appraisal of the value of the Spring Valley Water Co., for which he was paid many thousands of dollars, and if his report was ever submitted to San Francisco this fact has never been made public.

was ever submitted to San Francisco this fact has never been made public.

On the order of Secretary Ballinger requiring San Francisco to show cause why the Garfield permit should not be revoked, Mr. Freeman was selected by San Francisco as the engineer to acquire facts and report on all available sources of supply. This report was to be submitted for a hearing in June, 1911. At this time negotiations were pending between the city of San Francisco and the company claiming to own certain water rights on Lake Eleanor and Cherry Creek, of which company John Hays Hammond was the principal owner. It appeared to be difficult to bring these negotiations to a definite conclusion, and apparently the city officials had no desire to investigate other sources of supply until these negotiations were closed. As a

consequence, the city asked for postponement of the hearing from June until the following December, and repeatedly asked for other were concluded and the money paid over, amounting to \$1,000,000. During this period of time complete data was furnished relative to évaluing a supply from the McCloud River, with a definite offer by Mir. D. P. Doak and associates, which on its face presented a project war furnished in December of the Tuolume River. The only detailed in the control of the purchase of the bound of the purchase of the furnished in December of the purchase of the Hammond water rights Mr. Freeman discovered that be had time to take up this investigation. He proceeded to change the entire plan of development as made originally by the city engineer of San Jonean. Of development as made originally by the city engineer of San Jonean. Of development as made originally by the city engineer of San Jonean. Of development as made originally by the city engineer of San Jonean. Of development as made originally by the city engineer of San Jonean. Of development as made originally by the city engineer of San Jonean. Of development as made originally by the city engineer of San Jonean. Of development as made originally by the city engineer of San Jonean. Of development as made or permitted the engineer engaged by them to delay, for an entire year taking up this investigation, unless there was some ulterior motive to be gained in paying cut this large sum of money for water rights that Mr. Freeman admits have no warm and associated would have delayed, or permitted the engineer engaged by them to delay, for an entire year taking up this investigation, unless there was some ulterior motive to be gained in paying cut this large sum of money for water rights that Mr. Freeman admits have no warm and associated would have delayed, or permitted the engineer engaged by them from the proper sum and a revision of previous reports and by the same engineers, all of which was done in offices in San Francisco.

The investigation of

From reading a transcript of the hearing before the House committee it appears that that committee have not read the Army Engineers' report or the conclusions and recommendations made by Secretary Fisher, nor any other documents on file in the city of Washington pertaining to this matter, and as a consequence are basing their opinions on rerbal evidence given by officials of San Francisco, which do not present any of the real facts in the case and in many respects are inaccurate and absolutely misleading.

We would be willing to incur the expense and time necessary in presenting the merits of our project if this matter were to be taken up by Congress and considered impartially and thoroughly; and if, as you suggest, this hearing will be postponed until the next regular session, I can assure you that we will be present and fully prepared.

I am inclosing copy of a telegram, dated July 5, addressed to the House Committee on the Public Lands, which is self-explanatory. A copy of this telegram we later sent to the Senate Committee on Public Lands. I am also inclosing an article written for publication dealing with this subject.

Very respectfully, yours,

CLEMENT H. MILLER,

Chief Engineer.

CLEMENT H. MILLER, Chief Engineer.

Here is another short statement of the water conditions. is headed "Misapprehensions about the Hetch Hetchy, and a correction":

In the recent debate Senators have been led into positive misstatements that befog the issue.

THOSE "WATER RIGHTS" CLAIMED BY THE CITY.

The city claims "legal rights" to the Hetch Hetchy water through its "flings." There are no such rights. In 1901 (July 29) James D. Phelan "filed" at Hetch Hetchy for 10,000 miners inches, equal to 161,000,000 gallons daily, and for half that amount at Lake Eleanor, or another stream. The city now insists that these "filings" are entirely inadequate for its needs, as the bill contemplates 400,000,000 gallons daily from Hetch Hetchy alone.

But, further, the law requires a "filing" to be followed by "diversion and beneficial use" of the water. When Secretary Hitchcock denied the right to dam Hetch Hetchy in 1903 the city abandoned the project and took away its plans, which were burned up in the great fre. This abandonment was formally voted by the board of supervisors on January 24, 1906 (resolution No. 6949). Later, after Mr. Pinchot had

urged the city to take the matter up again, Secretary Garfield, in 1908, granted the right to dam Lake Eleanor, but required postponement of any development at Hetch Hetchy till the Eleanor source was fully developed—say 50 years. Even at Lake Eleanor there has been no "diversion and use," although 200,000,000 gallons daily can be obtained from that source alone.

I should like Senators to remember that statement, which is a correct one, that from Lake Eleanor alone 200,000,000 gallons of water daily can be obtained for the use of San Francisco. That is 40,000,000 gallons more than the amount San Francisco has filed upon and has a right to take from the stream.

I have here a statement of the cost of the Eel River project in detail, which I ask leave to make a part of my remarks, without reading.

The PRESIDING OFFICER. If there be no objection, it will be so ordered.

The matter referred to is as follows:

EEL RIVER PROJECT.

Estimated complete cost \$00,000,000 gallons daily delivered. FIRST DIVISION.

(Gravelly Valley Reservoir to Clear Lake.) \$809,000 1, 977, 000 220,000 3,006,500 Total SECOND DIVISION. (Clear Lake to Monticello Reservoir.) Tunnel entrance, gates, etc., Cache Creek.

Pressure tunnel (220,000,000 gallons daily capacity) 8 feet diameter, 15,800 linear feet, at \$33.50 26,000 529, 300 555, 300 THIRD DIVISION. (Monticello Reservoir to Carquinez Straits.) Devil's Gate Dam, with spillway crest at 240 feet, storage 1,019,000 acre-feet
Pressure tunnel (400,000,000 gallons daily capacity) 11 feet diameter, 85,100 feet, at \$56.

Tunnel shafts
Steel pipe line (200,000,000 gallons daily capacity) 8.2 feet diameter, 4-inch shell, cement lined and coated, 104,300 linear feet, price per foot \$30. 2, 128, 000 4, 765, 600 292, 500 120, 000

3, 129, 000 10, 435, 100 FOURTH DIVISION. (North side Carquinez Straits to San Francisco.)

Tunnels (400,000,000 gailons daily capacity):

12.8 feet diameter, pressure, concrete lined, 5,300 feet under Carquinez Straits at \$220.

Two 300-foot shafts, at \$165.

12.8 feet diameter, pressure, concrete lined, 12,600 linear feet, at \$60.

11 feet diameter, pressure, concrete lined—
21,920 feet, at \$56.

Steel pipe (200,000,000 gailons daily capacity), cement lined and covered:

6.75 feet diameter, shell \$ to 75 inch, price per foot \$16.50 to \$26, 19,860 linear feet.

6.75 feet diameter, shell \$ inch, 35,680 feet, at \$26.

Pumping station at Martinez, 200,000,000 gailons daily capacity, 300-foot lift.

Equalizing reservoir, San Pablo and Pinole Creek:
2,500 acres of land, at \$200.

Construction of dams.

Submerged pipe, San Francisco Bay, 6.75 feet diameter, 18,480 linear feet, at \$120.

Total (North side Carquinez Straits to San Francisco.) 1, 166, 000 99, 000 756,000 1, 227, 520 1, 690, 000 436, 900 927, 680 1, 200, 000 500, 000 2, 750, 000 2, 217, 600 12, 970, 700 Total

Estimated cost sewage-disposal systems for towns of Middletown, population 500; Upper Lake, population 350; and Lower Lake, population 350 26,000 SUMMARY OF ESTIMATED COSTS.

3, 006, 500 555, 300 10, 435, 100 12, 970, 700 26, 000 First division Second division Third division Fourth division Sewage-disposal systems, three towns 26, 993, 600

Total costs construction of aqueduct for delivery 200,000,000 gallons daily to San Francisco.
Water rights, reservoir sites, and aqueduct rights of way, estimated at.
Additional 200,000,000 gallons daily to bay cities by duplicating pipe lines and doubling capacity of Martinez pumping plant. 6,000,000 5, 393, 580

Total cost construction, 400,000,000 gallons daily to San Francisco and say cities\_\_\_\_\_ 38, 387, 180

Mr. WORKS. In connection with that statement I wish to read the telegram I sent to Hon. C. N. Felton, of San Francisco, who at one time was a member of this body. I have no doubt some of the older Members of the Sente will remember him.

Mr. TOWNSEND. Mr. President, will the Senator yield to me?

The PRESIDING OFFICER. Fifty-eight Senators have answered to their names. A quorum of the Senate is present. The Senator from California will proceed.

Mr. BACON. Mr. President, before the Senator from California proceeds, inasmuch as the Senator from Michigan has twice had put into the RECORD his estimate of the number of Senators present, I think it is proper to say that each time the roll call has shown that there were present about three times as many Democrats as Republicans.

Mr. TOWNSEND. Mr. President, undoubtedly that is true, as shown by the roll call. It does not follow, however, that it was true when the Senator from California was speaking. Furthermore, it was the majority that called the Senate here to-night for the purpose of facilitating the business of the Senate, and the members of the majority are not here in their seats. The Senator from Michigan was correct in making the statement as to the attendance at the time he called for a

Mr. BACON. Mr. President, one Senator is under just as much obligation as another to attend to his duties in this Chamber. There may be greater responsibility upon some than upon others, but no greater duty. I wish to say to the Senator from Michigan that when he made his first remark as to the number of Senators present I counted, and there were only 11 Repub-

Mr. OWEN. Mr. President, at 1.55 p. m. to-day the Senator from Utah [Mr. SUTHERLAND] made the point of no quorum. There were 61 Senators present. At 2.45 p. m. the Senator from Utah [Mr. SUTHERLAND] again made the point of no quorum. There were 65 Senators present. At 4 o'clock p. m. the Senator from Utah [Mr. Smoot] made the point of no quorum. There were 56 Senators present. The Senator from Utah [Mr. Smoot] again made the point of no quorum at 12 minutes past 5. There were 58 Senators present. Neither of those Senators is in his seat to-night.

Mr. SHIVELY. Mr. President, does the Senator think he ought to make these observations in the absence of the Senator

from Utah [Mr. SMOOT]?

Mr. OWEN. It is very painful to make observations of this character in the absence of the Senator. The Senator from New Hampshire [Mr. Gallinger] made the point of no quorum at 8 o'clock to-night. There were 56 Senators present. The Senator from Michigan [Mr. Townsend] made the point of no quorum at 8.25. There were 57 Senators present. The Senator from Michigan [Mr. Townsenn] again made the point of no quorum 25 minutes later, at 8.50. There were 56 Senators present.

If the Senators on the other side care to continue that kind

of record, it is open to them to do so.

Mr. GALLINGER. Mr. President, did I understand the Senator to say that when I made the point of no quorum, at 8 o'clock, there were forty-odd Senators present?

Mr. OWEN. I said the call of the roll disclosed the presence

of 56 Senators.

Mr. GALLINGER. Yes; but we do not count Senators who are in the cloakroom or in other places outside of the Chamber. There were not half that number present when I made the point of no quorum.

Mr. OWEN. The Senator made the point of no quorum

instantly after 8 o'clock.

Mr. GALLINGER. I did, because the Senator from California was about to proceed with his speech.

Mr. OWEN. I have no objection, of course, to the Senator

making that explanation.

Mr. GALLINGER. Inasmuch as the Senators on the other side seem to have pretty decided opinions on this question, I thought possibly the Senator from California might convert some of them.

Mr. WORKS. Mr. President, I have noticed that upon the roll call my Democratic friends come out from their hole somewhere, I do not know just where, and answer to the roll call and make a quorum, but it may be on account of my manner of speech, and before I have gone very far they have melted away. Now, I am not asking the attendance of any Senator here on my account, but here is a great question involved, of vital importance to my State, and I do think that Democratic Senators, and Republicans as well, should remain here and listen to what is said upon this subject, whether well said or not, in order to inform themselves upon this important question, and I think it is unfair and unjust that I should be compelled to proceed with my speech to-night when other Members of this body abandon the Chamber and go to the cloakroom or anywhere else while I am addressing myself to a subject that is one of importance.

Mr. WORKS. I shall now read the telegram that I addressed

to Senator Felton.

WASHINGTON, November 28, 1913.

Hon. C. N. Felton, 452 Mills Building, San Francisco, Cal.;

452 Mills Building, San Francisco, Cal.:

Wire me amount of water and of what kind San Francisco can obtain from Eel River and at what cost to the city, and any particulars that you may feel at liberty to give me on that subject. Expect to address the Senate on Hetch Hetchy bill on Thursday next. Any information you may give me will be important in that connection.

JOHN D. WORKS.

I received from the Senator the following telegram:

SAN FRANCISCO, CAL., December 2, 1913. Hon. JOHN D. WORKS, United States Senate, Washington, D. C.:

Have this day answered your wire of the 28th by telegram through the engineer of the Snow Mount Water & Power Co., who is more capable and conversant of the facts than myself. Trusting that it may of service to you,

C. N. FELTON.

The telegram of the engineer is as follows:

Hon. John D. Works.

San Francisco, Cal., December 1, 1910.

Hon. John D. Works.

United States Senate, Washington, D. C.:

In reply to yours of the 28th, San Francisco can obtain more than 200,000,000 gallons a day from South Eel River and 300,000,000,000 gallons a day from Middle Eel River of mountain water uncontaminated by local influences. I think an examination will prove that 500,000,000 gallons a day can be delivered from this source to San Francisco, and am advised and believe within the sum of \$60,000,000. The line is already paralleled by and for four-fifths of the distance is immediately adjacent to the Northwestern Pacific Railroad. This scheme has also the advantage that the pipe line can be laid much nearer the hydraulic grade line, and thus the weight of steel pipe would be less than for the Sierra Nevada schemes; or reenforced concrete pipe could be used over portions of the distance, which makes the unit cost very low. Quoting from A. M. Hunt's report on the South Eel River supply, written in 1906, the water rights of the Snow Mountain Water & Power Co. are not in conflict with any others; in fact, there are no prior rights, nor has the water ever been diverted for any purpose. There is practically no agricultural land in the river bottom below the diversion point, so there can be no claim that the waters are needed or may be needed in the future for irrigation purposes. In this respect, as a supply for San Francisco, it is superior to any of the Sierra propositions. The same is true of the waters of the Middle Eel River.

\*\*Engineer and General Manager\*\*, \*\*Snow Mountain Water & Power Co.\*\*

\*\*Now either of those projects taken alone—not both of them, \*\*Snow Mountain Water than San \*\*Andream San \*\*Andrea

but either one of them-would furnish more water than San Francisco is legally entitled to under its filing to take out of the Tuolumne River and twice as much as the only engineer who has said anything on the subject has declared is needed by San Francisco for 30 years to come.

Now, Mr. President, I come to the question as to whether

San Francisco

Mr. BACON. Mr. President, I ask this question in the utmost good faith. I am seeking light. Could the Senator within a few words tell us why it would be conducive to the public interest that the one project should be carried out and not the other? In other words, why is it that there will be any objection of a public or private character to the Hetch Hetchy project which does not apply to the other? I want a comparison between the two.

Mr. WORKS. The objection is that San Francisco ought not to be allowed to take of the waters of the State more than is necessary for its own use, and it should leave the balance for distribution to others who may need it. Therefore it would be unjust if San Francisco should take out of both these systems an amount of water that it is not able to use, and San Fran-

cisco has no right to sell the water to anybody else. If it should have these two sources of supply, and they are more than it needs, the water commission of the State of California would compel it to surrender a part of it to other people who

needed it for irrigation purposes.

The Senator must understand that there is not enough water in California to go around, and one of the great efforts on the part of the Legislature of California and of the administration of affairs in connection with the water is to make the water go just as far as possible. It is different in the State of Georgia, I assume, where it is not a question of lack of water, but very frequently there is too much of it. But that is not so in Callfornia. The purpose is to distribute this water so that it will cover the most acres of land and supply the greater number of people for domestic purposes. Therefore San Francisco has no right to take two of these supplies if one of them is sufficient. Did I answer the Senator's question?

Mr. BACON. I am not sufficiently familiar with the subject to say whether or not it is a complete answer. I will state to the Senator in passing, if I do not occupy too much time, that I have always been under a somewhat different impression in regard to the water supply of California, if the statement of

the Senator is now correct.

Mr. WORKS. A great many people are under that misapprehension.

Mr. BACON. I recollect once in passing from San Francisco east I was very much struck by the accounts given me of the vast snowfall upon the mountains, which in the spring and summer melts and furnishes the necessary water for the lowlands. I presumed that that was one great source of supply. I recollect at one place where the cars stopped—I think it was for supper, before the days when the trains carried dining cars-I was told that snow accumulated to the extent of 20 feet in depth.

Mr. WORKS. Has the Senator any idea how much water that would make down on the Sacramento Valley, for example? Mr. BACON. That would depend a good deal upon the area

over which it fell.

Mr. WORKS. One of the difficulties that we have had in the West has been in making ourselves understood with respect to this water question. I appreciate that, because I went from a Middle Western State to California. It is extremely difficult for a man who has had no practical experience of the appropriation and distribution of water to understand the situation.

Mr. POINDEXTER. Mr. President, if the Senator will per-

mit me

I yield to the Senator from Washington.

Mr. POINDEXTER. I should like to make a statement in a very few words to go into the RECORD at this point. The question of the Senator from Georgia of course, I should judge, indicates that the Senator has not understood the basis of the opposition to this bill. The entire objection to it is based upon just such a distinction as asked for by the Senator from Georgia. The water of the Tuolumne River is all needed for irriga-

If San Francisco takes it, it will deprive the land in the San Joaquin Valley of the necessary water needed for irriga-tion, whereas if you take the water from the Eel River, or preferably from the McCloud River, that would be taking water

which is not needed for irrigation.

And there is another reason which is an answer to the question of the Senator from Georgia which is the basis of the objection of one class of opponents to this bill, and that is that the adoption of the Hetch Hetchy project will destroy the Hetch Hetchy Valley, so far as its present condition is con-cerned, whereas the taking of water from the McCloud or from the Eel Rivers will not destroy any national park or any great

seenic wonder or unusually attractive scenery.

Mr. BACON. I hope I may not be misunderstood. I did not mean by my question to interject myself into the debate. The Senator from California had stated as a fact that water could be obtained from another river, and I really, for the purpose of acquiring the information, wanted to know why it was that it was objectionable to obtain water from one river and not from another. I do not wish to be understood as taking part in this debate. I have not a sufficient knowledge of the subject to

attempt anything of the kind.

Mr. BORAH. Mr. President—

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Idaho?

Mr. WORKS. I yield. Mr. BORAH. I wish to ask the Senator from California with reference to the construction of this grant a little more fully than it has been discussed, because I think he has passed over that feature of it. What is the effect of it? I will read the language of it-

That there is hereby granted to the city and county of San Francisco, municipal corporation in the State of California, all necessary rights

And so forth.

Now, the grant runs to the city of San Franciso. Mr. WORKS. The city and county of San Francisco. Mr. BORAH. Yes; and it goes on to say:

All necessary rights of way along such locations and of such width, not to exceed 250 feet, as in the judgment of the Secretary of the Interior may be required for the purposes of this act, in. over, and through the public lands of the United States in the counties of Tuolumne—

And the other counties named here-

and in. and over, and through the Yosemite National Park and the Stanislaus National Forest, or portions thereof, lying within the said counties, for the purpose of constructing, operating, and maintaining aqueducts, canals, ditches, pipes, pipes lines, flumes, tunnels, and conduits for conveying water for domestic purposes and uses to the city and county of San Francisco and such other municipalities and water districts as, with the consent of the city and county of San Francisco, or in accordance with the laws of the State of California in force at the time application is made, may hereafter participate, etc.

Now does the Sanator understand that that grant running

Now, does the Senator understand that that grant running direct to the city and county of San Francisco passes the title to San Francisco, but gives over the privilege of selling and disposing of this water to the other municipalities and irrigation districts?

Mr. WORKS. Certainly.
Mr. BORAH. Then are we granting to the city of San Francisco not water sufficient for herself, but water upon which she

may speculate and which she may sell?

Mr. WORKS. I think I so stated in positive terms. That is my understanding of the construction of the bill. I do not think there can be any question about that. I made the further point-

Mr. WALSH rose.

Mr. WORKS. If the Senator will bear with me, I made the further point that San Francisco had no right under the laws of California to make any disposition of the surplus which is conveyed to it in that way

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Montana?

Mr. WORKS. I yield.
Mr. WALSH. With the permission of the gentlemen on the floor, will either of them kindly call our attention to the language of the bill that grants any water at all to San Francisco?
Mr. BORAH. I do not know whether I can do it kindly or

not, but I will do it:

not, but I will do it:

That there is hereby granted to the city and county of San Francisco, a municipal corporation in the State of California, all necessary rights of way along such locations and of such width, not to exceed 250 feet, as in the judgment of the Secretary of the Interior may be required for the purposes of this act, in, over, and through the public lands of the United States in the counties of Tuolumne, Stanislaus, San Joaquin, and Alameda, in the State of California, and in, over, and through the Yosemite National Park and the Stanislaus National Forest, er portions thereof, lying within the said counties, for the purpose of constructing, operating, and maintaining aqueducts, canals, ditches, pipes, pipe lines, flumes, tunnels, and conduits for conveying water for domestic purposes and uses to the city and county of San Francisco and such other municipalities and water districts as, with the consent of the city and county of San Francisco, or in accordance with the laws of the State of California in force at the time application is made, may hereafter participate in the beneficial use of the rights and privileges granted by this act; and for the purpose of constructing, operating, and maintaining power and electric plants—

Mr. WALSH. Mr. President, there is not any "and" in my

Mr. WALSH. Mr. President, there is not any "and" in my

Mr. BORAH. There is not any "and" where?
Mr. WALSH. There is not any "and" before "for."
is simply "for the purpose of constructing."

Mr. BORAH. There is a semicolon there, which has largely the same effect:

For the purpose of constructing, operating, and maintaining power and electric plants, poles, and lines for generation and sale and distribution of electric energy.

Now, it would be worthy of the metaphysical capacity of the Senator from Montana to show how they will dispose of any electrical energy unless they have some water.

Mr. WALSH. Certainly, but that is not the question. I ask the Senator to point out the language by which they are

granted by this act the water.

Mr. BORAH. We will go ahead now. We have got it granted. The thing which comes from that is water.

Mr. WALSH. You have a right of way granted.

Mr. BORAH. I will venture to say that San Francisco will get the rest of it.

Mr. WALSH. Mr. President, I daresay that is true. If she gets the rest of it she gets it by virtue of the laws of the State of California. I think the Senator will agree with me in that.

Mr. BORAH. Now, without reading the bill, what it purports to do is to grant the right to impound the water upon the

public land of the United States, and that by reason of impounding that water the National Government has the right to fix the terms upon which it shall be used, because it is impounded upon the public land and belongs to it. That is the doctrine of many of our conservation friends. They believe that the water which flows off the public land is subject to the control of the National Government because it comes off the public land, as if the water which flowed off the Capitol here belonged to the National Government because it fell upon the Capitol Building

and went off the Capitol.

Mr. WALSH. Of course the Senator from Idaho recognizes that I myself do not entertain such an opinion as that.

Mr. BORAH. I know the Senator does not.
Mr. WALSH. It is a simple question as to the construction of
this act, as to whether this act does recognize that theory and that principle or does not recognize that theory and principle.

Mr. BORAH. We will go further. Mr. WALSH. What is there here except a pure and simple grant of a right to flood certain lands and to carry the ditches

and pipe lines over other land?

Mr. BORAH. If the Senator is correct, I very much appreciate the Senator's ability as an attorney. He would be a dangerous antagonist on the other side of this bill if he were trying to get the water.

Mr. WALSH. I should like, if I may have the floor for a moment, to call the attention of the Senator a little later to some features that I think ought not to be in here. I think there are conditions which ought not to be imposed.

Mr. BORAH. It says so. The language is:

(b) That the said grantee shall recognize the prior rights of the Modesto irrigation district and the Turlock irrigation district as now constituted under the laws of the State of California, or as said districts may be hereafter enlarged to contain in the aggregate not to exceed 300,000 acres of land, to receive 2.350 second-feet of the natural daily flow of the Tuolumne River, measured at the La Grange Dam.

Now, the city of San Francisco is to recognize the rights of these districts to so much water, and when they get so much water the city of San Francisco is to have the right to the power, to take the balance, and deprive them of it. If you are placing a construction upon this act as a whole, considering that the water is impounded upon the public land, that the city of San Francisco is given the right to use the power which is generated by this water, that the city of San Francisco is given the right to limit the use of other water users, and that the city of San Francisco is entitled to take the rest of it, it would be construed, in my judgment, on the whole, as an attempt to grant water to the city of San Francisco.

Mr. WALSH. Mr. President I should like to inquire of the Senator from Idaho whether he does not agree with me that subsection "b," to which he has now invited our attention, far from being a grant of anything to the city of San Francisco, is a limitation upon the right and the power of the city of San Francisco. The Modesto Irrigation Co. and the Turiock Irrigation Co. have or have not rights in the stream. If they have any rights, they are either greater or they are less than the amount here prescribed. If they are, as a matter of fact, greater than the amount here prescribed, these irrigation districts will go into any court in the State of California and establish their right to the greater amount of water, regardless of any limitation that may be imposed by this bill, if a limitation were sought to be imposed. If, on the other hand, in that were sought to be imposed. It, on the other mand, in that kind of a controversy it should be established that they had not appropriated that much water, the city of San Francisco would be estopped from asserting it by accepting this grant. Accordingly, it actually guarantees to them more than they would be entitled to, so far as the city of San Francisco is concerned, if they are not entitled to that much. On the other hand, if they are entitled to more, this is no limitation upon them at all.
Will not the Senator from Idaho agree to that?

Mr. BORAH. I will agree with the legal proposition which the Senator from Montana states, the effect of which is, as I understand, that we have no power as a Congress to pass that

provision at all.

Mr. WALSH. Am I to understand, then, the Senator to assume the position that when the Congress grants the power to flood the public lands, to carry the ditches and the pole lines over the public lands, to take timber from the public lands for the purpose of constructing the work, and to take other material from the public lands for the purpose of aiding it, that Congress can not then impose just exactly such conditions as it may see fit, and say to San Francisco, "You must observe these conditions or forfeit the grant"?

Mr. BORAH. I have no doubt about that at all.
Mr. POINDEXTER. Mr. President—
The PRESIDING OFFICER. Does the Senator from Idaho
yield to the Senator from Washington?

Mr. BORAH. I yield to the Senator.

Mr. POINDEXTER. I should like to ask the Senator from Montana [Mr. Walsh] if the proposition which he has just stated, and with which I very largely agree, as the basis of the regulation of the use of the water by the grantee of whatever is granted by this bill is not identical with the authority claimed for the United States in every water-power bill that has been considered by Congress? Are they not all based on the

same proposition?

Mr. WALSH. I will say to the Senator from Washington that I do not think so. I have not the slightest doubt in the world that these provisions were put in here by the gentlemen who entertained those views as another means of reaching exactly the same end. In further answer to the Senator from Washington, as I said on yesterday, I would agree with everybody that if there were no grant of rights in public lands here, but if this act were for the purpose of disposing of the running water in the streams of the State of California, I would say unquestionably Congress has no power to do that, but that is not the situation. We are making a grant of rights in the public lands to the city of San Francisco, and we may im-pose just exactly such conditions as we see fit, and San Francisco can take the grant with all those conditions or it can let

Mr. POINDEXTER. Mr. President, that, I think, is a perfectly correct statement of the theory of this bill, and if the Senator from Montana was present when the so-called Coosa River Dam bill and the Connecticut River Dam bill were discussed here, he would certainly realize that the identical proposition was involved in those two bills, and all the controversy about the authority of the United States Government to attach conditions to the use of power or of water upon a grant of a right to construct a dam in the bed of a river or to occupy the shores of a river involved the identical propositions that are involved in this bill.

I myself believe, and I think the Senator now admits, that the Government has the right to attach such conditions. That was the basis upon which I thought that the other bills which I have mentioned were perfectly valid exercises of the Federal power; but those who opposed those two bills, all of those Senators-and there were many of them on the Democratic side who took a different and an opposite view in regard to the Federal power-opposed the adoption of the conditions attached to the grant of the power of the Coosa River and the Connecticut River. I fail to see how they can reconcile their attitude in regard to those power bills with their support of this bill because the principles in them are identical.

Mr. WALSH. I thought I had made myself clear enough so

that my position would be understood by the Senator from Washington.

Mr. BORAH. The Senator from Montana, as I understand, simply contends that the United States, as a proprietor of this public land, may make a grant, as might any other proprietor, and attach such conditions to the grant as a proprietor sees fit to attach, and that the grantee must take the grant subject to the terms of the grant, or not take it at all. I do no disagree with that proposition, that the United States Government as a proprietor may do what any other proprietor may do; but the United States Government can not attach to its proprietary power its municipal or governmental power and do things in addition to its proprietary power which an individual can not do, as is attempted to be done in this bill.

Now, if the Senator will listen for a moment, I will call his attention to what he asked me in the first instance. We have read subdivision "b," upon page 13, which provides for a division of the water between these parties. Subdivision "c

(c) That whenever said irrigation districts receive at the La Grange Dam less than 2,350 second-feet of water, and when it is necessary for their beneficial use to receive more water the said grantee shall release free of charge—

Shall release what? The water which it has free of chargeshall release free of charge, out of the natural daily flow of the streams which it has intercepted, so much water as may be necessary for the beneficial use of said irrigation districts not exceeding an amount which, with the waters of the Tuolumne and its tributaries, will cause a flow at La Grange Dam of 2,350 second-feet; and shall also recognize the rights of the said irrigation districts to the extent of 4,000 second-feet water.

Now, will not the Senator agree with me that it is not within our power to say as a Congress that San Francisco shall distribute so much water to this individual and so much water to that individual, but that the State of California itself must distribute its water and say to whom the right shall go, who shall

be recognized and who shall not?

Mr. WALSH. I will answer the Senator from Idaho by saying that there are a great many duties imposed upon the officers of the Federal Government by these conditions which, in my judgment, ought not to be imposed upon them. I will say, however, to the Senator from Idaho that I do not take that view of the matter at all. This bill recognizes that when we make the grants provided by it-the grant of the right to flood these lands, the grant of the right to occupy the public lands with the ditches and canals to be constructed—that right will be absolutely valueless to the city of San Francisco until, under and by virtue of the laws of the State of California, it acquires rights to the water. The bill contemplates likewise that San Francisco will acquire those rights, and therefore it will impound the water by means of these dams; and then it is provided that, as a condition of this grant, it shall do thus and so with the water which it impounds.

Mr. BORAH. Permit me to ask the Senator this question: Suppose an action were brought against the city of San Francisco to forfeit this grant and the distinguished Senator were attorney for the city of San Francisco, and it was sought to forfeit the grant by reason of the fact that it could not comply with the provision because it was not lawful to do so, to wit, that it could not distribute the water so and so because the commissioners of California had authorized it to be distributed otherwise. Does the Senator from Montana believe that a person who had entered in good faith upon a grant could be made to forfeit that grant by reason of an impossible clause or

an illegal clause placed in the grant?

Mr. WALSH. The Senator from Montana will be obliged to say to the Senator from Idaho that if any controversy of that character arose the ctiy of San Francisco would be estopped to deny that these people had a right to any less than the amount specified. If a controversy arose between them and some one else, some one else claiming the right over and above both of them or against either of them as being entitled to a prior right,

undoubtedly it would go to them. To illustrate—
Mr. BORAH. Now, Mr. President, upon what ground of estoppel would the city of San Francisco be estopped?

Mr. WALSH. Because it took this grant.

But in order to work the principle of estoppel there must be something moving in favor of the party against whom the estoppel is worked. Now, nothing would move in favor of San Francisco in taking a grant containing an illegal proposition.

Mr. WALSH. Of course that assumes the illegality of it,

which is the basis of the contention.

Mr. BORAH. But the Senator admitted yesterday, and is willing to admit to-night, as I understand, that we have not any power to distribute this water as against the distribution which the commission of the State of California might make. So when we impose upon the city of San Francisco a condition to recognize a certain distribution, we are imposing impossible terms, illegal terms, unconstitutional terms.

I have simply asserted that in a controversy between the Modesto and the Turlock Irrigation Cos. and the city of San Francisco the city of San Francisco could not be heard to say that the irrigation companies are not entitled to the amount of water which is given here, while the irrigation companies would be able to assert anything that they would be

Mr. BRANDEGEE. Mr. President, in relation to the suggestion interpolated by the Senator from Washington [Mr. Poin-DEXTER] as to the principle attaching in this bill to the public lands owned by the Government and the right of the Government to grant an easement on its public lands under such conditions as the Government may see fit to impose, as being parallel or even analogous to the right of the Government to attach conditions to the issuing of a permit to maintain a dam across a navigable stream under the commerce clause of the Constitution, I want to suggest that I think the two cases can be differentiated quite clearly from each other. I will not, however, take the time to do so now.

Mr. CUMMINS and Mr. POINDEXTER addressed the Chair. The PRESIDING OFFICER. The Senator from Iowa.

Mr. WORKS. I hope the Presiding Officer will recognize the fact that I still have the floor.

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Iowa?

Mr. WORKS. I yield to the Senator from Iowa.

Mr. CUMMINS. Mr. President, the colloquy that has taken place between the Senator from Idaho [Mr. Borah] and the Senator from Montana [Mr. Walsh] has almost convinced me that we have no right to make the grant at all. I should like, before we go further in the matter, to ask a question or so of the Senator from Montana, in order to clear up what is now a very perplexing problem in my mind.

We all agree that the United States owns a bit of ground out there, and I suppose we will all agree that the United States can not use it in contravention of the laws of California nor permit anybody else to use it in contravention of the laws of California. The Senator from Montana has asserted-and that seems to be the prevailing opinion here, and I have no reason to doubt its correctness-that the State of California owns the water that runs in this river. The river runs across land that is owned by the Nation. San Francisco asks the United States to allow it to impound property that belongs to somebody else upon the land of the United States. The Senator from Montana has very nearly established the proposition, in my mind, that if the United States grants to anyone the right to put this water upon his lands, it must deal with California and with no

With all these premises agreed upon, we certainly can not agree that San Francisco can take the property of California and put it upon the lands of the United States. Therefore, it seems to me, that instead of dealing with San Francisco we ought to grant the right of way over this property to the State of California and allow it to collect what water it pleases of its own upon our property and to distribute it according to its

notion of the welfare of its people.

This seems to me to be the inevitable conclusion to be drawn from the premises that have been agreed upon by the Senator from Idaho and the Senator from Montana; and I should like to know upon what basis the United States, as a proprietor and not as a sovereign, can grant the use of its lands to San Francisco upon which to store water that belongs to the State of

California

Mr. WALSH. Mr. President, I shall be glad to do what I can to clear up the matter that troubles the mind of the Senator from Iowa. Of course, all our national legislation is enacted in view of and recognizing the scope and field of State legislation and in the presence of and recognizing the existence of State laws. While the water running in the streams of the State of California belongs to the State of California, we recognize the fact that the State of California permits any of its citizens at their will to take that water from the streams for their use, pursuant to its laws. Thus, when we grant to the city of San Francisco the right to construct this dam and these canals and ditches for the purpose of impounding water and transporting it, we recognize that the laws of the State of California permit the city of San Francisco and any others who may care to make use of it for any beneficial purpose to take that water out of the stream, to impound it by means of a dam, and thus to divert it.

Mr. CUMMINS. Precisely; but, Mr. President, California does with her water precisely what we are doing with these lands. California makes a grant to her people under a general statute, I take it, authorizing them to enter upon these waters that belong to the State and take from them certain quantities. Nevertheless, before they are entered upon and taken they be-

long to the State.

It seems to me, therefore, that it is in the highest degree illogical, if not unjust, for us to undertake to allow some citizen of California, whether a municipal citizen or an individual, to use our lands upon which to store water until we have dealt with California upon the subject and know whether she desires to use our lands for that purpose.

I have been driven to the conclusion that the only thing for us to do, if this water ought to be used-and I am entirely satisfied that it ought to be used-is to give California the right to use our lands, and let her designate who shall use them and

how they shall be used.

Mr. BORAH. Mr. President-

Mr. WALSH. If I may be pardoned for just a moment, I will conclude. Another illustration will serve to illustrate how, as I think, there is not the force in the suggestions of the Sena-

tor from Iowa that he seems to think they possess.

We frequently grant to a company the right to dam a stream. To do so almost of necessity occasions the flooding of private lands above the dam. We do not hesitate, however, to give the right to construct the dam because the construction of the dam is going to occasion the flooding. We recognize that before the right thus granted to construct the dam can be availed of at all it will be necessary for the grantee to acquire an easement in the lands to be flooded, either by a grant or by condemnation proceedings; but we do not halt our legislation until

the right is acquired.

Mr. CUMMINS. Mr. President, the principle invoked in the case of a navigable stream is radically different from the principle invoked when we deal with our private property. Without saying now just what power Congress has over a navigable stream with respect to bridges that are proposed to be built over it, it is sufficient to remember that we deal with that subject as a sovereign and not as a proprietor. Granting that we have the constitutional authority to do it-and I am not here to question it-we can grant the right to an individual to build a bridge over a navigable stream, and that is all we have to do with it. Now, if we grant the right to build a dam in a navigable stream-a matter of which I have the gravest doubt, unless we can say that we are granting it in order to improve navigation-then the individual or the corporation to which we grant the right must proceed in the usual way to acquire whatever other rights are necessary in order to enable him or it to enjoy the franchise granted by the sovereign power.

I see no parallel at all between granting the privilege of damming a navigable river and the conveyance by the United States of property not as a sovereign but as a proprietor. I am very sure that it is utterly impossible for the United States to attach to any grant it may make of its lands a condition which in the fulfillment involves a violation of the laws of the

State in which the lands may be situated.

It was for these reasons that the question arose which I

originally propounded to the Senator from Montana.

Mr. CLARK of Wyoming. Mr. President, if I may be permitted, in pursuing further the immediate subject before the Senate which was called up by the Senator from Montana [Mr. WALSH], it might be well to remember that the rights of proprietors of land in some States differ from the rights of proprietors of land in other States. I know that in some Statesand I assume the same is true in California in regard to these streams-the proprietor of land may not even build a dam upon his own land to impound and divert the waters of a stream without the consent of the State first had and obtained. I believe that is true in California,

Mr. WORKS. That is true in California.

Mr. CLARK of Wyoming. I know it is true in nearly all the States where the law of irrigation has prevailed that the proprietor or the owner of land may not build a dam upon his land and impound or divert the waters of a stream running through and over his land without first obtaining permission from the State so to do. In other words, the State reserves the right to have the waters of its rivers run unfettered over every proprietor's land which they may touch.

The Government of the United States recognizes that identical principle in its own irrigation works in the arid-land States where it is building these irrigation projects and these great This carries out the idea expressed for the first time in this Chamber, I think, by the Senator from Iowa. The Government of the United States in building its great dams, which cost millions of dollars to construct, for the purpose of impounding and distributing the waters over its own lands, first goes to the State authorities and gets permission from them to proceed

with the work.

Mr. WALSH. Mr. President, before that feature is passed I desire to add that we are endeavoring now to enact such a law in our State, prohibiting anybody from constructing a dam for the diversion of waters except by permission of the State authorities. We have not got it yet, however. Under the present law of our State any riparian proprietor is permitted to dam a stream, and the Government of the United States in its irrigation works exercises that right without any let or privilege of any kind from the State.

Mr. CLARK of Wyoming. Of course I was not alluding to the State of the Senator; but in my own State and in the State of California, as is said, and in others, no water can be im-

pounded or diverted without the consent of the State.

Mr. WALSH. A very wise law; but let me remark further that this dam is to be constructed within the Yosemite National Park, over which the Government of the United States has

exclusive jurisdiction.

Mr. BORAH. Mr. President, I wish to ask a question of the Senator from Montana. Has the Senator ever examined the grant by which the State of California granted these lands to the United States? Did not the lands which constitute the Yosemite Park come from the State of California to the United States?

Mr. WALSH. I did not make any such statement. Mr. BORAH. I know the Senator did not make any such statement.

Mr. WORKS. That is the fact, however.

Mr. WALSH. I did not understand that the United States ever had acquired any public lands in the State of California by grant from that State.

Mr. BORAH. My understanding is that the State of Cali-

Park to the United States for park purposes; that the United States has not anything in the park but an easement; that it is granted to the United States for a specific purpose, and the United States has not anything to grant away.

Mr. WALSH. That is a piece of history with which I was not familiar. My understanding was that the Yosemite National Park, like the Yellowstone National Park, was originally

public land.

Mr. REED. Mr. President, even then the Government would have the right to give its permission. It might not convey a complete title; it might be that the title would be disputed by the State of California; but in so far as the Government has any right, it can grant that right. If it has no right whatever, then, of course, it grants nothing. No man ought to be heard to complain very loudly because the Government wrote a piece of paper purporting to grant something that, in fact, conveyed no title. But if the fee is in the State of California, and the Government has a park easement, certainly the Government can grant its permission, so far as it has any easement or right, that that easement or right may be released by the Government. Nevertheless, if the fee is in the State of California, it can afterwards raise the question of Federal authority.

Mr. BORAH. Suppose the State of California deeded the land in this park to the United States to be used exclusively for park purposes. I do not know that that is true, but I am informed that it is. Suppose they granted it to be used exclusively for park purposes. Then have we any authority to grant it to be used for reservoir purposes?

Mr. REED. That goes to the question of whether we can convey a good title.

convey a good title.

Mr. BORAH. That is what I thought.

Mr. REED. That would be a question which the men who propose to make this investment might well examine; but, so far as we are concerned, if we are satisfied that the improvement will do the Government no harm and that it ought to be made from our standpoint, we have a perfect right to give our consent. Then, if the title be not good, if the State of California has a paramount title, the State of California can assert it against the grantee.

Mr. BORAH. Let me ask the Senator from Missouri another question. I do not know that what I am stating is the fact; it is only represented to me, and I have not had time to examine the grant. Suppose it be true, however, that the State of California deeded this park to the United States to be used solely for park purposes and the United States should undertake to deed it away for reservoir purposes. What would be the effect of the action of the United States upon the entire grant of the Yosemite National Park? Would the United States forfeit its grant by undertaking to make a grant for another purpose?

Mr. REED. That would be a very strained construction, and one which, I think, the Senator would not greatly fear. think it is extremely improbable that any grant should have been accepted by the Government conditioned as the Senator Second, no court would forfeit the grant because the Government of the United States allowed a lake to be created in the park, which is legitimately part of a park scheme and The mere fact that the Government permitted somebody to take out the water in a pipe certainly would not be such a diversion of the subject matter of the grant as to warrant the harsh remedy of a forfeiture.

It seems to me that those who stand here to assert that there is such a condition in the grant ought to bring forward their evidence, and the grant ought to be brought in by that side. As we are in possession of this property, exercising apparently complete control over it, it would seem that the burden would be upon those who claim that the Government is liable to work a forfeiture of the grant. That, I think, is not a serious risk.

Mr. BORAH. I have not asserted that that is true. I have asserted, however, that it has been stated to me by a person who has read the grant, and promises to have it here, that it is true. I do not know that that is the case. If it is true, however, that the grant is upon a specific basis and for a specific purpose, our undertaking to grant it for another purpose might

work an injury to the entire grant.

Mr. THOMAS. Mr. President, my understanding of the grant—and I should like to be set right if it is not correct—is that the original boundary of the Yosemite National Park does not include the Hetch Hetchy Valley, but that the boundaries of the park were afterwards extended by the action of the Government so as to include the part of the Stanislaus Forest Reserve that included the Hetch Hetchy Valley. In other words, I understand that the grant of the State of California to the Government was of the Yosemite Park as it was origifornia granted the land contained in the Yosemite National nally bounded, but that its present dimensions were extended

to include the Hetch Hetchy Valley by merely carving it out of the Stanislaus Forest Reserve. If that be so, then of course the grant by the State to the National Government would not affect the part of the Yosemite which is here in controversy.

Mr. BORAH. If the Senator is correct in his statement of

facts, then I think he is correct in his statement of law. I am frank to say that I do not know whether it was by enlargement or in the original grant. We shall have to wait until we get the grant to see. It may be that the Senator is correct about the grant.

Mr. THOMAS. I have not examined the grant. That is

merely my information.

Mr. STONE. Mr. President, I have been a little surprised that Senators who have been giving special attention to this matter have not said anything with knowledge, with definite information, with respect to the grant by the State of California of the Yosemite Park. It is important that clear and definite information on that subject should be laid before the Senate, and I suppose it will be later. We have had several speeches, and I have been listening to them with a view to informing myself in respect to this question, that I might be able to vote with some degree of satisfaction as to the accuracy of my opinion. I have been waiting to hear something on that subject. So far nothing has been said.

Mr. WORKS. If the Senator will allow me, I will take up the particular portion that he thinks has been overlooked. I was interrupted by a Senator who was talking to me. Will the

Senator kindly restate it?

Mr. STONE. I said that so far I have not heard any clear or definite statement as to the exact terms of the grant made by

the State of California of the Yosemite Park.

Mr. WORKS. I have not been considering that feature of it. I have taken it for granted in what I have said that the National Government has the right to make this grant. I did not suppose there was any question about it until it was raised by

Mr. STONE. Very well. Then, if you have no question about the right of the Government of the United States to make the grant, of course it is conceded that there is nothing in the grant made by the State of California to the Government of the tract constituting the Yosemite Park that would conflict with this bill. There is nothing in that grant that would conflict with this bill?

Mr. WORKS. I have not said that I conceded that fact. do not know. I have taken it for granted, as I said, that the power does exist in the National Government to make the grant, and I have been discussing it upon that theory. I have never examined and, as far as I remember now, I have never seen the instrument by which the State of California trans-ferred the park to the National Government. I do not know what its terms are.

Mr. STONE. Mr. President, it may not be important, it may turn out to be of very little importance when the grant itself is laid before the Senate; but I say I have been a little bit surprised that so far that subject has not been discussed before

the Senate.

the whole bill?

Mr. President, I confess that I am a little bit up in the air about this Hetch Hetchy proposition. I do not know just "where I am at," and just what I ought to do, but at present I am under the impression-and if I am wrong I want to be set right—that this bill primarily proposes to grant to the city of San Francisco a right—that is, the permission, so far as the Government of the United States is concerned-for the erection of a dam across the Tuolumne River to flood certain lands belonging to the United States, and if the dam is erected condition, an easement, a license, so to speak, as far as the United States is concerned, is granted to the city of San Francisco to spread out the water from this dam over the lands belonging to the United States, and, further, to use the lands of the United States to this extent in tunneling, in piping, or in any way to convey the water from the dam to the city. lands of the United States may be used for purposes of this kind, and that is substantially the extent of the grant, the concession, the permission embodied in this bill.

It is true there are some other provisions in it. There are some regulations in it. If the United States owns the lands, as it does concededly, or apparently concededly, that are to be flooded and through and over which these water conveyances may be constructed, the United States may impose certain conditions upon which it may be done, and those conditions are embodied in this bill. That is to say, the United States in this bill says that you may flood these lands of ours, you may use other lands of ours for the purposes mentioned, but upon the condition that certain things shall be done. Now, is not that

Mr. BORAH. Mr. President, the matter to which I referred

few moments ago for whatever it is worth—— Mr. WORKS. Will the Senator from Idaho allow me in this connection to answer the question that has been put by the Senator from Missouri?

Mr. BORAH. Certainly; I did not know that he had put a question to the Senator.

Mr. WORKS. The Senator from Missouri is right enough

as far as his statement goes, but it does not go far enough.

The Government of the United States owns the land; the State of California owns the water that passes over the land. The Government of the United States would have no right to place a structure in the stream that would obstruct its flow to the people below who were entitled to its use. It has no right to make a grant to anybody else to construct a dam in the stream unless that person has a legal right to obstruct the stream for the purpose of storing the water for his use, and if it does make the grant, if San Francisco or anybody else has a right to the water of the stream and to store it by the dam, it can only legally grant the right to store the quantity of water that San Francisco is entitled to receive.

Now, suppose this dam were constructed by the National Government and it had no right to take out any of the water for these purposes; that would be a trespass, would it not? It is a trespass, Mr. President, by the direct and positive terms of the statute of California relating to this very subject. Therefore, if the Government were to construct the dam in the stream it would be a trespass, a violation of the rights of people who are entitled to the water below, and if it makes a grant to somebody else to do the same thing, it is a void grant and a grant that it has no power and no authority to make. It can not grant its use if this land belongs to it and at the same time obstruct the flow of the water that belongs to the State.

Mr. STONE and Mr. BORAH addressed the Chair.

The PRESIDING OFFICER (Mr. SAULSBURY in the chair). Does the Senator from California yield, and to whom?

Mr. WORKS. I yield to the Senator from Missouri. Mr. STONE. I did not know the Senator from California had the floor.

The PRESIDING OFFICER. The Senator from California has been recognized as having the floor, and was so recognized before the present occupant of the chair took it.

Mr. STONE. I thought the Senator had yielded the floor, Mr. WORKS. I beg pardon of the Senator from Missouri; I have had the floor all the time.

Mr. STONE. Oh, well; I beg pardon.

Mr. WORKS. Other gentlemen seemed disposed to rest me for a little while.

Mr. STONE. I was not aware the Senator had the floor. Mr. WORKS. But I am not objecting to the Senator from

Missouri saying what he has to say on the subject.

Mr. STONE. I want information. That was my only purpose in rising. I am inclined to agree wholly with the Senator from California that this being a nonnavigable stream the United States has an exceedingly limited right, if any right at all, to concern itself with the waters; they are absolutely under the control of the government of California. But does the Senator understand that the Government of the United States by this bill proposes to authorize the city of San Francisco, without regard to the State of California, to construct this dam?

Mr. WORKS. Certainly. It not only authorizes the city of San Francisco to construct the dam and to distribute a part of the water to the districts, but absolutely commands it to do it as one of the conditions contained in the bill. Now, the vice

about it-

Mr. STONE. I did not think that was quite the meaning of the bill.

Mr. WORKS. The Senator and I may disagree as to the meaning of the bill, but he asked me for my construction of it,

and I am giving it.

Mr. STONE. Well, the Senator gives it and I am not controverting it; I am asking the opinion of the Senator. If he himself believes that the chief purpose of the bill is merely to grant the right to flood public lands and to use them in conveying water, I can not see any objection to it. If it be to assert sovereign jurisdiction over the water itself and the matter of erecting dams and impounding it and controlling it as against the

State of California, then that is a different question.

Mr. WORKS. Mr. President, a good deal has been said here to-night upon the question of the provisions of the bill relating to the water. The vice of the bill is that Congress is proposing to deal with the question of water at all. It has no power to make any provisions that will be binding upon anybody with respect to the uses of the water. The provisions that are contained in the bill that are made conditions as

against the city of San Francisco are not binding upon anybody else. Then why should the Government undertake to do some thing through an act of Congress that it has absolutely no right or power to do? It does not make the slightest difference whether it undertakes to control the distribution of water by imposing a condition upon the city of San Francisco or by a direct provision in the bill that the water shall go here or there, according to its provisions. The National Government has no right to deal with the question at all, and I think the Senator from Idaho [Mr. Borah] admitted altogether too much when he admitted that the Government might impose a condition in this bill that would affect in any way whatever the distribution or use of the waters of the stream.

Mr. THOMAS and Mr. BORAH addressed the Chair.

The PRESIDING OFFICER. Does the Senator from California yield, and to whom?

Mr. WORKS. I yield first to the Senator from Colorado. Mr. THOMAS. My purpose is merely to set the Senate Mr. THOMAS. right over the extent and nature of the grant of the State of California to the United States of the Yosemite National Park. I quote from the testimony of Mr. Long in the House hearings, on page 102:

I might say that at the time these filings were made Hetch Hetchy Valley was not in the national park. It was not in the national park until 1905, and even then not by express dedication. It has been referred to as being in the Yosemite National Park, but the forest reservation of which it was then a part, or that portion of it in which were Lake Eleanor and Hetch Hetchy, was merged into the Yosemite National Park without expressly naming Hetch Hetchy as a national park.

So it would appear that this is a part of the Yosemite National Park now, but not by grant from the State of California to the United States.

Mr. BORAH. Mr. President-

Now I yield to the Senator from Idaho. Mr. WORKS.

Mr. BORAH. In connection with what the Senator from Colorado has said, I do not know what the boundaries of this park are, but this is the provision to which my attention was called a while ago and to which I called the attention of the The grant of the State of California to the United States of the Yosemite National Park

Mr. THOMAS. Will the Senator give me the date of it? Mr. BORAH. The date is 1905.

This act shall take effect from and after acceptance by the United States of America of the recession and regrants herein made, thereby forever releasing the State of California from further cost of maintaining the said premises, the same to be held for all time by the United States of America for public use, resort, and recreation, and imposing on the United States of America the cost of maintaining the same as a national park.

That was what the party had reference to. I will have something to say about it later, but did I understand the Senator from California to think that I made a certain concession that was not the law?

Mr. WORKS. I certainly did.

Mr. BORAH. What was it? Mr. WORKS. The concession that the National Government might provide as a condition that the water of this stream should be distributed by San Francisco to certain individuals.

Mr. BORAH. If I made any such concession as that it was by a slip of language. I said that the National Government as a proprietor could deed the land which it owned upon the same condition that any other proprietor could, with the same terms and grants of any other proprietor, but that it could not impose and attach to its proprietary power a governmental power to control the situation.

Mr. WORKS. But the Senator from Montana [Mr. Walsh] had made the direct statement that as a condition, not as a direct act, the United States Government could impose just such a condition, and the Senator admitted that his statement was correct.

Mr. BORAH. No; I beg the Senator's pardon. Mr. WORKS. I think the Senator will correct that state-

ment, if I am right as to what was said.

Mr. BORAH. If the Senator is right, I will correct it, but I said the Senator from Montana had said what I understood to be the legal proposition, and then I stated in my own terms the legal proposition that I have just stated. I have no reason to modify that.

Mr. PITTMAN. Mr. President-

The PRESIDING OFFICER. Does the Senator from Cali-

fornia yield to the Senator from Nevada?

WORKS. If I am expected to go on and make my speech to-night and continue until 11 o'clock, I should prefer to continue. If other Senators desire to take up the balance of the time in discussion, I shall be very glad to have them do so, for I have been on the floor a good part of the day, and I shall be very glad to be allowed to suspend my remarks at this point

with notice that I will conclude my remarks to-morrow morning after the routine morning business.

Mr. PITTMAN. I realize the Senator's position. I will not urge it, but I want to correct what I believe is a misstatement of fact in regard to the law of California. I want to call his

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Nevada?

Mr. WORKS. The Senator may make the statement now if

Mr. PITTMAN. I simply wish to state that the law of California provides for the building of dams in national parks and forest reserves

Mr. WORKS. I have made no statement, I will say to the Senator, with respect to that matter.

Mr. PITTMAN. It not only provides for it, but it has already granted to the city of San Francisco the right to build a dam at the exact place it is now asking the Government to grant the same right.

Mr. WORKS. The Senator, I suppose, is not intending to address his remarks to me, for I have made no such contention as that. That originated in the discussion between other Senators

Mr. PITTMAN. It may be an error on my part, but I thought the Senator from California contended that it had to go first to the State of California.

Mr. WORKS. Not at all. I made no such contention. Mr. PITTMAN. They have the permission of the State now, and they are now asking the Government to permit them to impound water upon Government land.

Mr. WORKS. I do not think it makes any difference whether there is an express provision of that kind by the State of California or not. I think that right exists independently of any statute under the general laws of the State.

Mr. GALLINGER. Mr. President-

The PRESIDING OFFICER. Does the Senator from California yield to the Senator from New Hampshire?

Mr. WORKS. I yield to the Senator.

Mr. GALLINGER. Mr. President, we all understand that probably on to-morrow a resolution will be passed keeping us in session from 8 o'clock until 11 o'clock in the evening, but that resolution has not yet passed the Senate. The Senator from California has spoken several hours; he says he is very much fatigued, and he must be, and it seems to me that the majority might well permit us to adjourn. We have been here almost 11 hours in practically continuous session, and if we adjourn the Senator can complete his speech in the morning. I trust that a motion will be made to adjourn at this time.

Mr. THOMAS. About how much more time will the Senator

from California occupy?

Mr. WORKS. I can not tell the Senator. I have to go over

Mr. SMITH of Arizona. Why not let the Senator rest, and take up the currency bill?

Mr. WORKS. We would hardly get started on that in the little over half an hour now remaining before 11 o'clock.

Mr. GALLINGER. The request, Mr. President, that I make is not an unusual one; in fact, it is one that has been made hundreds of times during my service in the Senate, and it occurs to me that it ought to be acceded to. If the resolution had passed that we should sit until 11 o'clock, I would not have ventured to make the suggestion, and, as I said in the beginning, I have no doubt that that resolution will pass to-morrow and that in the future we will be held in session until 11 o'clock in the

Mr. STONE. Mr. President, I very much hope the request of the Senator from New Hampshire will be acceded to. There is only about half an hour left, and I think as a matter of ordinary courtesy, under the circumstances, the request, for the convenience of the Senator from California, might be agreed to. I can not see how we will facilitate matters very much by proceeding further to-night.

Mr. OWEN. Is it the Senator's understanding, then, that we will meet at 10 o'clock in the morning?

Mr. GALLINGER. It is, I think we have agreed to that.
The PRESIDING OFFICER. The Chair will state that there has been no motion to that effect.

Mr. GALLINGER. It will not be resisted on this side if it shall be made. I think the minority is quite willing to meet to-

morrow at 10 o'clock.

Mr. OWEN. I move that the Senate adjourn to meet to-mor-

row morning at 10 o'clock.

The motion was agreed to; and (at 10 o'clock and 23 minutes p. m.) the Senate adjourned until to-morrow, Wednesday, December 3, 1913, at 10 o'clock a. m.

## HOUSE OF REPRESENTATIVES.

Tuesday, December 2, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the fol-

lowing prayer:

We wait on Thy spirit, Almighty Father, and pray that it may come in all fullness and power to illumine our minds, strengthen our hearts, and fit us for every conflict which waits on us in the daily duties of life. May it put us in a receptive mood, that with open minds and hearts we may listen to the message of the President of the United States, and be profited by the wisdom, knowledge, and truths which may fall from his lips. In Christ's name. Amen.

The Journal of the proceedings of yesterday was read and

approved.

REPORT OF COMMITTEE TO NOTIFY THE PRESIDENT.

The committee to notify the President, consisting of Mr. Underwood, Mr. Fitzgerald, and Mr. Mann, appeared at the bar of the House.

Mr. UNDERWOOD. Mr. Speaker, your committee, appointed by the House to wait upon the President, together with a similar committee on the part of the Senate, beg leave to report that they have called upon the President of the United States and have advised him that the two Houses of Congress are in session, that a quorum is present, and that they are prepared to receive any communications he may desire to lay before them. The President has directed me to say to the House that he will present his message to the House and the Senate in person at 1 o'clock to-day.

CHANGE OF REFERENCE.

Mr. HOUSTON. Mr. Speaker, I ask unanimous consent that a memorial in support of the bill (H. R. 9022) to ratify the act of the Legislature of Hawaii relating to the franchise of the Honolulu Rapid Transit & Land Co. be transferred from the Committee on Insular Affairs to the Committee on the Territories. The bill H. R. 9022 was referred to the Committee on the Territories and is now pending before that committee.

The SPEAKER. The gentleman from Tennessee asks unanimous consent to change the reference of this memorial from the Committee on Insular Affairs to the Committee on the Territories. Is there objection?

There was no objection.

REGULATION OF COMMERCE.

Mr. LEVY. Mr. Speaker, I ask unanimous consent to extend my remarks in the Record for the purpose of explaining a bill which I have introduced, H. R. 9394, to amend section 6 of the act entitled "An act to regulate commerce," approved February 4, 1887, and amendments thereto.

The SPEAKER. The gentleman from New York [Mr. Levy] asks unanimous consent to extend his remarks in the Record

in the manner stated. Is there objection?

There was no objection.

RECESS.

Mr. UNDERWOOD. Mr. Speaker, the joint session of the two Houses will occur at 1 o'clock to-day. I do not think the Members of the Senate will be present here before a quarter of 1 o'clock. I therefore ask unanimous consent that the House stand in recess until 12 o'clock and 45 minutes p. m.

The SPEAKER. The gentleman from Alabama asks unanimous consent that the House stand in recess until 12 o'clock

and 45 minutes p. m. Is there objection?

There was no objection.

Accordingly (at 12 o'clock and 7 minutes p. m.) the House stood in recess until 12 o'clock and 45 minutes p. m.

AFTER RECESS.

The recess having expired, the House was called to order by the Speaker.

The SPEAKER. The Chair repeats the statement that the three rows closest to the Speaker's stand will be vacated for the benefit of the Senate and the Cabinet.

At 1 o'clock and 3 minutes p. m. the Doorkeeper amounced the Vice President of the United States and the Members of the United States Senate.

The Members of the House rose.

The Senate, preceded by the Vice President and by their Secretary and Sergeant at Arms, entered the Chamber.

The Vice President took the chair at the right of the Speaker and the Members of the Senate took the seats reserved for them.

The SPEAKER. On the part of the House the Speaker successfully safeguarded, and which threatens, if long continued, appoints Mr. Underwood, Mr. Fitzgerald, and Mr. Mann as a to imperil the interests of peace, order, and tolerable life in the

committee to wait upon the President. The Vice President will make his own appointment.

The VICE PRESIDENT. On the part of the Senate the Vice President appoints Senators Kern, Gallinger, and Overman.

At 1 o'clock and 8 minutes p. m. the President of the United States, excerted by the joint committee of Senators and Representatives, entered the Hall of the House and stood at the Clerk's desk, amid applause on the floor and in the galleries.

The SPEAKER. Gentlemen of the Senate and House of Representatives, I present to you the President of the United States. [Applause.]

ADDRESS OF THE PRESIDENT (H. DOC. NO. 330).

The PRESIDENT. Mr. Speaker, Mr. President, gentlemen of the Congress: In pursuance of my constitutional duty to "give to the Congress information of the state of the Union," I take the liberty of addressing you on several matters which ought, as it seems to me, particularly to engage the attention of your honorable bodies, as of all who study the welfare and progress of the Nation.

I shall ask your indulgence if I venture to depart in some degree from the usual custom of setting before you in formal review the many matters which have engaged the attention and called for the action of the several departments of the Government or which look to them for early treatment in the future, because the list is long, very long, and would suffer in the abbreviation to which I should have to subject it. I shall submit to you the reports of the heads of the several departments, in which these subjects are set forth in careful detail, and beg that they may receive the thoughtful attention of your committees and of all Members of the Congress who may have the leisure to study them. Their obvious importance, as constituting the very substance of the business of the Government, makes comment and emphasis on my part unnecessary.

The country, I am thankful to say, is at peace with all the world, and many happy manifestations multiply about us of a growing cordiality and sense of community of interest among the nations, foreshadowing an age of settled peace and good will. More and more readily each decade do the nations manifest their willingness to bind themselves by solemn treaty to the processes of peace, the processes of frankness and fair conces-So far the United States has stood at the front of such negotiations. She will, I earnestly hope and confidently believe, give fresh proof of her sincere adherence to the cause of international friendship by ratifying the several treaties of arbitration awaiting renewal by the Senate. In addition to these, it has been the privilege of the Department of State to gain the assent, in principle, of no less than 31 nations, representing four-fifths of the population of the world, to the negotiation of treaties by which it shall be agreed that whenever differences of interest or of policy arise which can not be resolved by the ordinary processes of diplomacy they shall be publicly analyzed, discussed, and reported upon by a tribunal chosen by the parties before either nation determines its course of action.

There is only one possible standard by which to determine controversies between the United States and other nations, and that is compounded of these two elements: Our own honor and our obligations to the peace of the world. A test so compounded ought easily to be made to govern both the establishment of new treaty obligations and the interpretation of those already assumed.

There is but one cloud upon our horizon. That has shown itself to the south of us, and hangs over Mexico. There can be no certain prospect of peace in America until Gen. Huerta has surrendered his usurped authority in Mexico [applause]; until it is understood on all hands, indeed, that such pretended governments will not be countenanced or dealt with by the Government of the United States. We are the friends of consti-tutional government in America; we are more than its friends, we are its champions; because in no other way can our neighbors, to whom we would wish in every way to make proof of our friendship, work out their own development in peace and liberty. Mexico has no government. The attempt to maintain one at the City of Mexico has broken down, and a mere military despotism has been set up which has hardly more than the semblance of national authority. It originated in the usurpa-tion of Victoriano Huerta, who, after a brief attempt to play the part of constitutional President, has at last cast aside even the pretense of legal right and declared himself dictator. As a consequence, a condition of affairs now exists in Mexico which has made it doubtful whether even the most elementary and fundamental rights either of her own people or of the citizens of other countries resident within her territory can long be successfully safeguarded, and which threatens, if long continued, lands immediately to the south of us. Even if the usurper had succeeded in his purposes, in despite of the conscitution of the Republic and the rights of its people, he would have set up nothing but a precarious and hateful power, which could have lasted but a little while, and whose eventual downfall would have left the country in a more deplorable condition than ever. But he has not succeeded. He has forfeited the respect and the moral support even of those who were at one time willing to see him succeed. Little by little he has been completely isolated. By a little every day his power and prestige are crumbling and By a little every day his power and preside are criminal and the collapse is not far away. We shall not, I believe, be obliged to alter our policy of watchful waiting. And then, when the end comes, we shall hope to see constitutional order restored in distressed Mexico by the concert and energy of such of her leaders as prefer the liberty of their people to their own ambitions. [Applause.]

I turn to matters of domestic concern. You already have under consideration a bill for the reform of our system of banking and currency, for which the country waits with impatience, as for something fundamental to its whole business life and necessary to set credit free from arbitrary and artificial restraints. I need not say how earnestly I hope for its early enactment into law. I take leave to beg that the whole energy and attention of the Senate be concentrated upon it till the matter is successfully disposed of. And yet I feel that the request is not needed—that the Members of that great House need no urging

in this service to the country.

I present to you, in addition, the urgent necessity that special provision be made also for facilitating the credits needed by the farmers of the country. [Applause.] The pending currency bill does the farmers a great service. It puts them upon an equal footing with other business men and masters of enterprise, as it should; and upon its passage they will find them-selves quit of many of the difficulties which now hamper them in the field of credit. The farmers, of course, ask and should be given no special privilege, such as extending to them the credit of the Government itself. What they need and should obtain is legislation which will make their own abundant and substantial credit resources available as a foundation for joint, concerted local action in their own behalf in getting the capital they must use. It is to this we should now address ourselves.

It has, singularly enough, come to pass that we have allowed the industry of our farms to lag behind the other activities of the country in its development. I need not stop to tell you how fundamental to the life of the Nation is the production of its food. Our thoughts may ordinarily be concentrated upon the cities and the hives of industry, upon the cries of the crowded market place and the clangor of the factory, but it is from the quiet interspaces of the open valleys and the free hillsides that we draw the sources of life and of prosperity-from the farm and the ranch, from the forest and the mine. Without these every street would be silent, every office deserted, every factory And yet the farmer does not stand upon fallen into disrepair. the same footing with the forester and the miner in the market He is the servant of the seasons. Nature determines how long he must wait for his crops and will not be hurried in her processes. He may give his note, but the season of its maturity depends upon the season when his crop matures, lies at the gates of the market where his products are sold. And the security he gives is of a character not known in the broker's office or as familiarly as it might be on the counter of the banker.

The Agricultural Department of the Government is seeking to assist as never before to make farming an efficient business, of wide cooperative effort, in quick touch with the markets for The farmers and the Government will henceforth work together as real partners in this field, where we now begin to see our way very clearly and where many intelligent plans are already being put into execution. The Treasury of the are already being put into execution. The Treasury of the United States has, by a timely and well-considered distribution of its deposits, facilitated the moving of the crops in the present season and prevented the scarcity of available funds too often experienced at such times. But we must not allow ourselves to depend upon extraordinary expedients. We must add the means by which the farmer may make his credit constantly and easily available and command when he will the capital by which to support and expand his business. We lag behind many other great countries of the modern world in attempting Systems of rural credit have been studied and deto do this. veloped on the other side of the water while we left our farmers to shift for themselves in the ordinary money market. You have but to look about you in any rural district to see the rethe handicap, and embarrassment which have been put upon those who produce our food.

Conscious of this backwardness and neglect on our part, the

to study the various systems of rural credit which have been put into operation in Europe, and this commission is already prepared to report. Its report owant to make it easier for us to determine what methods will be best suited to our own farmers. I hope and believe that the committees of the Senate and House will address themselves to this matter with the most fruitful results, and I believe that the studies and recently formed plans of the Department of Agriculture may be made to serve them very greatly in their work of framing appropriate and adequate legislation. It would be indiscreet and presumptuous in anyone to dogmatize upon so great and many-sided a question, but I feel confident that common counsel will produce the results we must all desire.

Turn from the farm to the world of business which centers in the city and in the factory, and I think that all thoughtful observers will agree that the immediate service we owe the business communities of the country is to prevent private monopoly more effectually than it has yet been prevented. [Applause.] I think it will be easily agreed that we should let the Sherman antitrust law stand, unaltered, as it is, with its debatable ground about it, but that we should as much as possible reduce the area of that debatable ground by further and more explicit legislation; and should also supplement that great act by legislation which will not only clarify it but also facilitate its administration and make it fairer to all concerned. No doubt we shall all wish, and the country will expect, this to be the central subject of our deliberations during the present session; but it is a subject so many-sided and so deserving of careful and discriminating discussion that I shall take the liberty of addressing you upon it in a special message at a later date than this. It is of capital importance that the business men of this country should be relieved of all uncertainties of law with regard to their enterprises and investments and a clear path indicated which they can travel without anxiety. It is as important that they should be relieved of embarrassment and set free to prosper as that private monopoly should be destroyed. The ways of action should be thrown wide open.

I turn to a subject which I hope can be handled promptly and without serious controversy of any kind. I mean the method of selecting nominees for the Presidency of the United States. I feel confident that I do not misinterpret the wishes or the expectations of the country when I urge the prompt enactment of legislation which will provide for primary elections throughout the country at which the voters of the several parties may choose their nominees for the Presidency without the intervention of nominating conventions. [Applause.] I venture the suggestion that this legislation should provide for the retention of party conventions, but only for the purpose of declaring and accepting the verdict of the primaries and formulating the platforms of the parties; and I suggest that these conventions should consist not of delegates chosen for this single purpose but of the nominees for Congress, the nominees for vacant seats in the Senate of the United States, the Senators whose terms have not yet closed, the national committees, and the candidates for the Presidency themselves, in order that platforms may be framed by those responsible to the people for carrying

them into effect. [Applause.]

These are all matters of vital domestic concern, and besides them, outside the charmed circle of our own national life in which our affections command us, as well as our consciences, there stand out our obligations toward our territories over sea. Here we are trustees. Porto Rico, Hawaii, the Philippines are ours, indeed, but not ours to do what we please with. Such territories, once regarded as mere possessions, are no longer to be selfishly exploited; they are part of the domain of public conscience and of serviceable and enlightened statesmanship. must administer them for the people who live in them and with the same sense of responsibility to them as toward our own people in our domestic affairs. No doubt we shall successfully enough bind Porto Rico and the Hawalian Islands to ourselves by ties of justice and interest and affection, but the performance of our duty toward the Philippines is a more difficult and debatable matter. We can satisfy the obligations of generous justice toward the people of Porto Rico by giving them the ample and familiar rights and privileges accorded our own citizens in our own territories and our obligations toward the people of Hawaii by perfecting the provisions for self-government already granted them, but in the Philippines we must go further. must hold steadily in view their ultimate independence [applause], and we must move toward the time of that independence as steadily as the way can be cleared and the foundations thoughtfully and permanently laid.

Acting under the authority conferred upon the President by Congress, I have already accorded the people of the islands a Congress recently authorized the creation of a special commission | majority in both houses of their legislative body by appointing

five instead of four native citizens to the membership of the commission. I believe that in this way we shall make proof of their capacity in counsel and their sense of responsibility in the exercise of political power, and that the success of this step will be sure to clear our view for the steps which are to follow. Step by step we should extend and perfect the system of self-government in the islands, making test of them and modifying them as experience discloses their successes and their failures; that we should more and more put under the control of the native citizens of the archipelago the essential instruments of their life, their local instrumentalities of government, their schools, all the common interests of their communities, and so by counsel and experience set up a government which all the world will see to be suitable to a people whose affairs are under their own control. At last, I hope and believe, we are beginning to gain the confidence of the Filipino peoples. By their counsel and experience, rather than by our own, we shall learn how best to serve them and how soon it will be possible and wise to withdraw our supervision. Let us once find the path and set out with firm and confident tread upon it and we shall not wander from it or linger upon it.

A duty faces us with regard to Alaska which seems to me very pressing and very imperative; perhaps I should say a double duty, for it concerns both the political and the material development of the Territory. The people of Alaska should be given the full Territorial form of government, and Alaska, as a storehouse, should be unlocked. [Applause.] One key to it a storehouse, should be unlocked. [Applause.] One key to it is a system of railways. These the Government should itself build and administer [applause], and the ports and terminals it should itself control in the interest of all who wish to use them for the service and development of the country and its

But the construction of railways is only the first step; is only thrusting in the key to the storehouse and throwing back the lock and opening the door. [Applause.] How the tempting resources of the country are to be exploited is another matter, to which I shall take the liberty of from time to time calling your attention, for it is a policy which must be worked out by well-considered stages, not upon theory, but upon lines of practical expediency. It is part of our general problem of We have a freer hand in working out the problem in Alaska than in the States of the Union, and yet the principle and object are the same wherever we touch it. We must use the resources of the country, not lock them up. [Apmust use the resources of the country, not lock them up. [Applause.] There need be no conflict or jealousy as between State and Federal authorities, for there can be no essential difference of purpose between them. The resources in question must be used, but not destroyed or wasted; used, but not monopolized upon any narrow idea of individual rights as against the abiding interests of communities. That a policy can be worked out by conference and concession which will release these resources and yet not jeopard or dissipate them, I for one have no doubt, and it can be done on lines of regulation which need be no less acceptable to the people and governments of the States concerned than to the people and Government of the Nation at large, whose heritage these resources are. We must bend our counsels to this end. A common purpose ought to make agreement easy.

Three or four matters of special importance and significance

I beg that you will permit to mention in closing.
Our Bureau of Mines ought to be equipped and empowered to render even more effectual service than it renders now in improving the conditions of mine labor and making the mines more economically productive as well as more safe. This is an all-important part of the work of conservation, and the conservation of human life and energy lies even nearer to our interest than the preservation from waste of our material

We owe it, in mere justice to the railway employees of the country, to provide for them a fair and effective employers' liability act, and a law that we can stand by in this matter will be no less to the advantage of those who administer the railroads of the country than to the advantage of those whom they employ. The experience of a large number of the States abundantly proves that.

We ought to devote ourselves to meeting pressing demands of plain justice like this as earnestly as to the accomplishment of political and economic reforms. Social justice comes first. Law is the machinery for its realization and is vital only

as it expresses and embodies it.

An international congress for the discussion of all questions that affect safety at sea is now sitting in London at the suggestion of our own Government. So soon as the conclusions of that congress can be learned and considered we ought to address ourselves, among other things, to the prompt alleviation of the

very unsafe, unjust, and burdensome conditions which now surround the employment of sailors and render it extremely difficult to obtain the services of spirited and competent men such as every ship needs if it is to be safely handled and brought to

May I not express the very real pleasure I have experienced in cooperating with this Congress and sharing with it the labors of common service to which it has devoted itself so unreservedly during the past seven months of uncomplaining concentration upon the business of legislation? Surely it is a proper and pertinent part of my report on "the state of the Union" to express my admiration for the diligence, the good temper, and the full comprehension of public duty which has already been manifested by both the Houses; and I hope that it may not be deemed an impertinent intrusion of myself into the picture if I say with how much and how constant satisfaction I have availed myself of the privilege of putting my time and energy at their disposal alike in counsel and in action. [Applause on the floor and in the galleries.]

At 1 o'clock and 36 minutes p. m. the President retired from the Hall of the House.

Thereupon the Vice President and the Members of the Senate returned to their Chamber.

REFERENCE OF ADDRESS OF THE PRESIDENT (H. DOC. NO. 339).

Mr. UNDERWOOD. Mr. Speaker, I move that the address of the President of the United States be referred to the Committee on Ways and Means for distribution to the standing committees of the House.

The SPEAKER. The gentleman from Alabama moves that the address of the President of the United States be referred to the Committee on Ways and Means to be distributed to the proper committees.

The question was taken, and the motion was agreed to.

SUSPENSION OF NAVAL CONSTRUCTION PROGRAMS.

Mr. HENSLEY. Mr. Speaker, I call up House resolution No. 298, and ask that it be reported.

The SPEAKER. The gentleman from Missouri calls up House resolution No. 298, which the Clerk will report.

The Clerk read as follows:

House resolution (H. Res. 298) to authorize the President to cooperate with the United Kingdom of Great Britain to the end that naval construction may be suspended for the period of one year.

struction may be suspended for the period of one year.

Resolved, That in the opinion of the House of Representatives the deciaration of the Lord of the Admiralty of Great Britain, the Right Hon. Winston Churchill, that the Government of the United Kingdom is willing and ready to cooperate with other Governments to secure for one year a suspension of naval construction programs offers the means of immediately lessening the enormous burdens of the people and avoiding the waste of investment in war material.

SEC. 2. That a copy of this resolution be furnished the President with the request that, so far as he can do so, having due regard for the interests of the United States, he use his influence to consummate the agreement suggested by the Right Hon. Winston Churchill.

Mr. MANN. Mr. Speaker, does the gentleman from Missouri [Mr. Hensley] have any idea of how much discussion there may be on this resolution?

Mr. HENSLEY. I will say to the gentleman from Illinois that I have not any definite idea with reference to the time that will be consumed if no limit is placed upon it, but I can say that quite a number of the Members of the House have come to me and said that they would like very much to be given some time to talk on the resolution. Although I am not sure, I should think it would take several hours.

Mr. MANN. When the resolution was before the House on a former occasion we were promised a treat in the way of a speech on the resolution by the Speaker. Whether the Speaker is now prepared in consideration of the resolution to give us that treat, I am not informed. To-morrow, of course, will be Calendar Wednesday, and there will be business on the calendar, I presume. I doubt whether there is any other pressing business for the rest of the week. Perhaps the gentleman from Alabama [Mr. Underwood] can inform us. It seems to me that on this resolution a rather full discussion of it by those who desire to discuss it may be as serviceable almost as action upon the resolution itself.

Mr. SLAYDEN. Will the gentleman permit an interruption?

Mr. MANN. Certainly.

Mr. SLAYDEN. I would like to ask the gentleman if he does not think that Thursday might also be given up to the discussion of this resolution with profit, provided that so many gentlemen as will occupy that time desire to speak?

Mr. MANN. It seems to me, if gentlemen desire to discuss the resolution, it might properly go through the day on Thurs-

day, and possibly longer.

Mr. SLAYDEN. There is no pressing business after Wednesday in the way?

So far as I know, there is none. Mr MANN

The SPEAKER. The Chair will state for the benefit of all concerned that he has been notified by a few gentlemen that they have business on the calendar to-morrow.

Mr. MANN. That is to-morrow?

The SPEAKER. Yes; Wednesday. And that one of the bills will probably take all day. The Chair, of course, does not know.

Mr. UNDERWOOD. Mr. Speaker, I suggest to the gentleman who has charge of the bill that there is no reason for not allowing the debate on this important resolution to run as long as it does not interfere with the public business to be transacted. I take it the resolution will be passed nearly unanimously in the House when the time comes to act upon it. [Applause.] But in the meantime I can see no reason why there should not be a

full discussion as long as it does not interfere with business, but I suggest that the present time is not a wise one in which to fix the time limit for the debate. Mr. MANN. I do not wish to fix a limit on the debate. I simply wished to ascertain, for the benefit of the House, about how

long it would run. Of course the gentleman from Missouri

[Mr. Hensley], I take it, would be recognized for the previous

question at any time, so that it would not interfere with any

Mr. MOORE. Mr. Speaker-

The SPEAKER. Does the gentleman from Alabama [Mr. Underwood] yield to the gentleman from Pennsylvania [Mr.

Mr. UNDERWOOD, I do.

Since the gentleman has reached the question Mr. MOORE. of limit of time for debate, I wish to say that there are some gentlemen here who will not favor the passage of this resolution. When the question was up before an effort was made to obtain time through the gentleman from Missouri [Mr. Hens-LEY], and that effort was not successful. Now, it appears there are more gentlemen here to-day who are opposed to this resolution than were here when the matter was up before. These gentlemen want to be considered in the matter of time. The passage of this resolution will not be unanimous by any means. It is a very important resolution, involving the employment of labor, the expenditure of capital, and the national welfare to a large extent. Some time will be asked by those who are opposed to the bill.

Mr. UNDERWOOD. I will say to the gentleman from Pennsylvania [Mr. Moore] that, of course, the control of the time under this resolution is in the hands of the Speaker. It is in the House, and I have no doubt in the world if the gentleman himself and others who are opposed to the resolution apply to the Speaker they will have an equal opportunity to debate the

question with those who are in favor of it.

Mr. MOORE. I will be entirely satisfied with that. Mr. HENSLEY. Since I have perhaps had more to do with this resolution than any other Member, I heartily agree with the statement made by the gentleman from Alabama [Mr. Underwood], and also with the position taken by the gentleman from Illinois [Mr. MANN], that there ought not to be any gentleman of this House cut off from expressing his views upon this subject, because, above all things, we want the facts. We want to understand the whole subject, and we want to act intelli-

As for myself, I will say in this connection that a few days ago I made a talk on the resolution and consumed over one hour, and it is not my purpose now to take up any of the time; but I am sure that, with sufficient time granted, there are a great many Members here who desire to be heard on the resolution, and I am very anxious that they may all be heard on it.

Mr. MANN. Mr. Speaker, will the gentleman yield? The SPEAKER. Does the gentleman from Missouri yield? Mr HENSLEY. Certainly.

Certainly.

Mr. MANN. Does the gentleman know whether anyone is prepared this afternoon to proceed with the debate on the resolution'

I can only answer the gentleman from Illi-Mr. HENSLEY. nois by saying that I have had a number of gentlemen come to me within the last hour and ask me for time on the resolution, if I should have anything to do with the time.

Mr. MANN. Then I suggest to the gentleman to go ahead. Mr. HENSLEY. And I told them that if I had anything to do with the time, I would grant them time with pleasure.

Mr. MOORE. Mr. Speaker, will the gentleman yield?

The SPEAKER. Does the gentleman from Missouri yield to

the gentleman from Pennsylvania [Mr. Moore]?

Mr. HENSLEY. Yes.
Mr. MOORE. The Secretary of the Navy has just submitted his annual estimates in which he urges that provision should be made for the construction of two battleships for the

coming year. Does the gentleman think this is a proper time to discuss a resolution of this kind in the face of the contrary recommendation of the department?

Mr. HENSLEY. I want to say, in answer to that, Mr. Speaker, that they are two distinct and separate propositions. This resolution has no bearing at all upon the recommendation made by the Secretary of the Navy, and so far as I am concerned, I do not want it to have any bearing upon the proposition.

Mr. MOORE. Then, what is the purpose of this resolution? Mr. HENSLEY. When the proposition comes up concerning the recommendations of the Secretary of the Navy, each man at that time can act upon his judgment as to what he deems his duty to be

Mr. MOORE. Then, what is the purpose in calling for the passage of this resolution at this time? Is it merely to sup-

port the sentiment of Mr. Winston Churchill?

Mr. HENSLEY. And the sentiment so admirably expressed by the President of the United States just a few moments ago, and I think now is the propitious time.

Mr. MOORE. And the gentleman wants to do that instead of following the recommendation of the Secretary of the Navy that we shall proceed to construct two battleships next year?

Mr. HENSLEY. I deprecate the spirit, Mr. Speaker, that should prompt one to try to inject that proposition into the consideration of and the passage of this resolution.

With all due deference to the gentleman from Missouri, I wish to say that the gentleman seems himself to be injecting a spirit of "no battleships" into the recommendation of the department for two battleships. Why not have this question taken up when we come to consider the recommendation of the Navy Department? The gentleman anticipates the action of one of the executive departments in the administration of his own party.

Mr. HENSLEY. Mr. Speaker, I may have been unhappy and unfortunate in presenting my views to the gentleman from Pennsylvania, but I have endeavored to present to him the situation as I see it. This recommendation contained in the resolution has nothing to do with the recommendation of the

Cabinet officer.

Mr. MOORE. Mr. Speaker, will the gentleman yield for just one more question?

The SPEAKER. Does the gentleman from Missouri yield? Mr. HENSLEY. Yes.

Mr. MOORE. Is it not a fact that since the recommendation was made by Mr. Winston Churchill, who, of course, is interested in the British navy and in British expenditures-is it not a fact that since that time both Germany and Great Britain have completed larger battleships than ever before?

Mr. HENSLEY. Well, I will say to the gentleman from Pennsylvania that those things have come to my attention, but-

The SPEAKER. The Chair ought to suggest to the gentleman from Missouri and to the gentleman from Pennsylvania and all the rest that this talk is going on by unanimous consent, and we are not getting anywhere.

Mr. MADDEN. Mr. Speaker, I ask for the regular order. The SPEAKER. The regular order is the motion of the gen-

tleman from Missouri.

Mr. HENSLEY. I would like, Mr. Speaker, to ask the gentleman from Pennsylvania [Mr. Moore] whether or not he favors the passage of the resolution; and if not, what he does favor?

Mr. MOORE. I do not favor it in its present form. I see nothing in this but a suggestion by an English statesmax who

wants to accomplish something for his own country.

Mr. MADDEN. Mr. Speaker, I ask for the regular order.

Mr. HENSLEY. Mr. Speaker, I ask for an agreement as to

the division of the time.

Mr. MANN. That does not require any agreement.

The SPEAKER. The regular order is this resolution. has been called up, and the House has been talking about it for at least 15 or 20 minutes, and the point of order comes too late. Now, if the gentleman from Missouri [Mr. Hensley] wants to be recognized to discuss this resolution, the Chair will recognize him.

Mr. MANN. A parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. MANN. The gentleman from Missouri [Mr. Hensley] has occupied an hour already. Of course, if he wants any more time, I shall be glad to ask unanimous consent that it be given to him, but I understood that he did not want the time now.

Mr. HENSLEY. I did not catch the gentleman's remark.
Mr. MANN. The gentleman from Missouri [Mr. Hensley]
has already occupied his hour on this resolution upon a former occasion. If the gentleman desires more time to discuss it now, I am sure the House will be glad to give it to him, but I understood the gentleman did not desire time now.

Mr. HENSLEY. That is exactly correct.

Mr. MANN. Then let somebody else be recognized. Mr. BORLAND. Mr. Speaker, I ask for recognition

The SPEAKER. The gentleman from Missouri [Mr. Bor-

LAND] asks for recognition.

Mr. MOORE. I desire recognition also at the proper time for an hour. I understand another gentleman is about to be recognized, but I make my request now so that I may not be

The SPEAKER. As soon as the gentleman from Missouri [Mr. Borland] has concluded his remarks the Chair will recognize the gentleman from Pennsylvania. The gentleman from Missouri [Mr. Borland] is recognized.

Mr. BORLAND. I yield 10 minutes to the gentleman from

Illinois [Mr. FOSTER]

Mr. SHERLEY. Mr. Speaker, a parliamentary inquiry. The SPEAKER. The gentleman will state it.

Mr. SHERLEY. Is it within the power of the gentleman from Missouri [Mr. Borland] to yield time in a debate of this kind? He takes the floor in his own right and is entitled to an hour. If he does not desire to use the time, he must yield the floor, and then some other Member will be entitled to rec-I have no interest in the matter, but I think that is

The SPEAKER. The gentleman will recall that it is the invariable practice in the House for a man to use as much of

his hour as he wants and reserve the rest.

Mr. SHERLEY. Oh, yes; that is true, but here is time assigned. Now, the assignment of time comes up under an agreement where there is a certain amount of time given for debate, the time to be controlled by respective Members on the two sides; but here is a case where we are proceeding under the ordinary rules of the House, under which any Member, on being recognized, is entitled to an hour, and I make the parliamentary inquiry as to whether, under those circumstances, he is entitled to parcel out his time to others.

Mr. MANN. Mr. Speaker, it seems to be perfectly plain that the gentleman from Missouri [Mr. Borland] having been recognized and having the floor, can occupy an hour himself, or re serve it or yield it. That has been the practice of the House ever since the hour rule was in force, and this matter comes up just as any other matter comes up where a man gets the floor

for an hour.

Mr. SHERLEY. I submit, Mr. Speaker, that the gentleman can yield to interrogation or can use part of his time or all of his time. He can reserve part of his time, but can he yield the floor to another Member, giving him a part of his time under these circumstances?

Mr. MANN. Mr. Speaker, he does not yield the floor. He yields to another Member to occupy a part of his time. other Member would not have the right to offer an amendment, but he has a right to discuss it. The gentleman from Missouri [Mr. Borland] controls an hour's time in debate.

The SPEAKER. It seems to the Chair that that has been the practice of the House. We are operating in the House. A gentleman gets the floor for an hour. Now, if he wants to take half an hour, all well and good. The habit has grown up—I do not know how it ever started or anything about that-that when a man has an hour here he can yield his time. He can not yield it under the five-minute rule.

Mr. BARTHOLDT. Mr. Speaker, I want to make a parlia-

mentary inquiry

The SPEAKER. The gentleman will state it.

Mr. BARTHOLDT. Is it possible to make a motion now to fix the time for this debate?

The SPEAKER. No; that is done by unanimous consent.
Mr. BARTHOLDT. I think that would probably be the most practical way to settle this matter, by agreeing on a time right

Mr. BORLAND. My understanding was that that matter had been discussed, but no agreement had been arrived at, and that there was no prospect of a motion to limit the time; so that the only question now is to debate the resolution under the rules of the House, which permit an hour to each Member who gets the floor, or to those to whom he chooses to yield. At a fitting time a motion can be made to limit the debate.

The SPEAKER. That is the only way to proceed now with-

Mr. BARTHOLDT. Mr. Speaker, I would like to ask if it is the intention of the gentleman from Missouri to ask for a vote upon this resolution this afternoon?

The SPEAKER. That is not a parliamentary inquiry, and

the Chair does not know.

Mr. MOORE. Mr. Speaker, may we not have some understanding as to the time for debate?

The SPEAKER. That was talked about for 15 or 20 minutes, and we came to no understanding. To-morrow is to be taken out because there are two bills on the calendar for Calendar Wednesday, one of them to create a minister to Paraguay and the other the Hay military bill. If the Chair can have the privilege of guessing, he would say that the Paraguay bill would take but a few minutes, but the other may precipitate a long debate.

Mr. MOORE. Mr. Speaker, may I ask the gentleman from

Missouri a question?

Mr. BORLAND. I have the floor, but I will yield to the gen-

tleman from Pennsylvania for that purpose.

Mr. MOORE. I want to ask the gentleman from Missouri [Mr. HENSLEY] if it is not his purpose to ask for a vote to-day, that we have an understanding that this shall go over on

The SPEAKER. The gentleman from Pennsylvania desires to know if the gentleman from Missouri [Mr. Hensley] intends to press for a vote this afternoon?

Mr. HENSLEY. That is not my purpose, Mr. Speaker. My purpose is to let every Member have an opportunity to say what

he has to say on this resolution.

The SPEAKER. The gentleman from Missouri [Mr. Bor-LAND] is recognized for an hour, but before he takes the floor the Chair desires to lay before the House two messages of the President of the United States.

MESSAGES FROM THE PRESIDENT OF THE UNITED STATES.

Sundry messages, in writing, from the President of the United States were communicated to the House of Representatives by Mr. Latta, one of his secretaries, who also informed the House of Representatives that the President had approved and signed bill of the following title:

On November 27, 1913:

H. R. 8702. An act to authorize the county of Miami, Ind., to construct a bridge across the Wabash River in Miami County, Ind.

### PANAMA CANAL (H. DOC. NO. 426).

The SPEAKER laid before the House the following message from the President of the United States, which was read, referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed.

To the Senate and House of Representatives:

Pursuant to the requirements of chapter 1302 (32 Stats., p. "An act to provide for the construction of a canal connect-483). ing the waters of the Atlantic and Pacific Oceans," approved June 28, 1902, I transmit herewith the annual report of the Isthmian Canal Commission for the fiscal year ended June 30,

WOODROW WILSON.

THE WHITE HOUSE, December 2, 1913.

APPROPRIATIONS AND EXPENDITURES UNDER DEPARTMENT OF STATE (H. DOC. NO. 337).

The SPEAKER also laid before the House the following message from the President of the United States, which was read, referred to the Committee on Expenditures in the State Department, and ordered to be printed:

To the House of Representatives:

I transmit herewith a statement by the Secretary of State, with accompanying papers, of appropriations, expenditures, and balances of appropriations under the Department of State for the fiscal year ended June 30, 1913.

WOODROW WILSON.

THE WHITE HOUSE, December 2, 1913.

SUSPENSION OF NAVAL CONSTRUCTION PROGRAMS.

Mr. BORLAND. Mr. Speaker, we have just listened in this House to one of the most masterly state papers which has ever been framed by a statesman of this or any other land-the message of the President of the United States—a message to the deliberative assembly of this great Nation, teeming with the spirit of the age for social justice and for the rights of humanity. With that message ringing in our ears we are presented now by the gentleman from Missouri with this concrete manifestation of such a spirit, a proposition that the nations by solemn agreement among themselves shall limit excessive and oppressive armament for the purpose of war. We all recognize the paramount duty which rests on every great nation at this time to secure the integrity of its own territory, the protection of its own citizens, and the sanctity of its own honor and plighted faith; we recognize to that end the moral necessity that it is under to provide these means of protection which the discharge of these obligations entail. No man here believes that our Nation should be left without adequate means of guaranteeing and maintaining the American honor and the integrity of the American Government. But in these latter days, since all idea of war for conquest as the great business of nations has passed out of the human mind, we have been taught that the provision for Army and Navy was in its vital essence the insurance toward international peace; that there was no other moral or just foundation upon which to lay the expenditures for armament but the insurance of national peace.

No man here, I believe, will take the sordid ground that the purpose of the purchase of armament is to provide enrichment to certain localities and certain businesses in the country. Nor will any man here take the position openly before this House that armament is a means of offense and oppression of other nations. But each man when he analyzes it in the light of his own conscience will realize that armament rests upon no other moral ground than insurance of peace. In other words, every dollar of expense of this Nation, or any other, is justified on the ground of insurance; that it avoids and guards against the danger, the loss, and the pain and suffering which may come to an unpro-

tected country.

When we recognize that clearly, and confront our conscience with the fact that the purchase of armament is not for the purpose of encouraging private enrichment; that it is not a subsidy toward private businesses; that it not a means of building up favored industries or favored communities, but that it is demanded, and the burden to pay for it is laid upon the entire Nation under the one moral principle, that without it the Nation might be subjected at the hands of some ruthless, irresponsible, and unprincipled foe to loss and danger which it might otherwise avoid; then we must admit that only under those circumstances and upon that principle are appropriations

for armament justifiable by civilized nations.

We come now to this proposition, that one civilized Government in this world, one of the great civilized Governments, in fact, our own mother country, speaking our language, and having a common literature, a common law, and a common tradition with ourselves, the Government of Great Britain, has seriously proposed to the other civilized nations of the world to suspend by mutual agreement for the period of one year the construction of new battleships, that nations may insure their peace without the burden of armament upon the private citizen. Are we not ready to meet that humane proposal? How much are we expending now for armament, for the preparation for war and for the result of wars past? Somewhere, roughly speaking, in the neighborhood of 65 per cent of all of the national revenue gathered from the toil of American citizens goes annually for preparation for possible future war and for the payment for past wars. This leaves only about 35 per cent, roughly speaking, for all of the great civil business of the Government, for all of the conservation of the Nation, for all of the development of the country, for the expenditures to make this country a better and a bigger and a brighter land for our citizens. Of that amount, my recollection is, something less than 12 per cent goes toward the great basic industry of agriculture. Twelve per cent for all the various activities relating to the Agricultural Department, and 65 per cent for armament and for war. I have often thought in looking at this fevered race which nations are running for bigger battleships, more battleships, bigger guns and stronger guns, guns that will shoot a little farther than the other man's gun, that there is no limit to the ingenuity of man. The man who makes the unsinkable battleship can pervert the same God-given talent and ingenuity to making the guns or the destroyer that will destroy that battleship. The man who makes the dreadnought can plan the superdreadnought.

The nation that builds the dreadnought must find that its rival is building a superdreadnought, for there is no limit to the ingenuity of man. No limit has been set to the marvelous inventive genius of man in any mechanical direction, and least of all in the direction of securing the armaments of war. Let us take, for instance, one of the most ordinary of our coast defenses, a 12-inch gun. We now have a larger gun, the 14-inch gun, but let us take the 12-inch gun, our common form of coast armament. A single charge of ammunition in a 12-inch gun costs between \$800 and \$900, and, counting the expense of the wear and tear on the guns and the limited number of shots that can be fired until the metal crystallizes and becomes useless, every shot of that gun costs between \$1,200 and \$1,400. Every time that gun is boomed out, if it be only in military salute to some officer of the Federal Government, from \$1,200 to \$1,400 of the money of the American toiler has been cast out in white smoke. Every time that gun is fired—puff! goes a comfortable

cottage for an American workingman. There is no limit to it. A \$1,200 shot out of a 12-inch gun, a \$1,500 or \$1,600 shot out of a 14-inch gun, and, when you get to larger guns, \$2,000 might not be the limit, or \$2,500 or \$3,000. You would soon get to the point where the salary of a Member of Congress for 12 months would not pay for the single firing of a gun. If there be, then, no limit, we must now come to a sane, sensible proposition that this Nation, recognizing the moral stand which it has among the nations of the earth, recognizing the fact that it is the elder sister of the nations of this hemisphere, recognizing the fact that it is now, as the President has said, enjoying an era of cordiality and universal peace with its neighbors and with foreign countries across the water, now, when there is no temptation or stress of political excitement or national patriotism, it can place before the nations of the world its willingness to enter into an engagement that this burden shall be taken off the people.

the people.

Why, the recommendation for appropriations for the Navy this year is \$145,000,000, and the estimates of the British navy are about \$220,000,000. The United States stands second to Great Britain in the annual cost of its Navy. France and Germany both run over the \$100,000,000 mark, and so on down to the nations that spend \$50,000,000. Our Nation even in its isolated condition—even with its shore line of 3,000 miles from a possible foe—our Nation, with the pledge of friendship of Great Britain in its 3,000 miles of exposed territory to the north of us, with its most powerful neighbor absolutely pledged to friendly relations and a continuation of peace in the Western Hemisphere, even under those circumstances \$145,000,000 is the estimate for naval expenditures for a single year. How much longer ought this matter to go along? How much is asked for the internal improvement of our territory as compared with that \$145,000,000?

Mr. RUSSELL. Mr. Speaker, will my friend yield for a

The SPEAKER. Does the gentleman from Missouri yield to his colleague?

Mr. BORLAND. I yield.

Mr. RUSSELL. I understood my friend from Missouri to state that about 12 per cent of the revenues of the Government are appropriated for agricultural purposes. My understanding is that it is only about 2 per cent. There was appropriated last year less than \$18,000,000 for agriculture. That was less than 2 per cent of the revenues of the country.

Mr. BORLAND. Mr. Speaker, I have no doubt my colleague from Missouri is correct, and that my estimate is very largely exaggerated. I was making the estimate entirely from memory. I had no idea it ran as low as 2 per cent, because the rough calculation had led me to believe it was nearly 12 per cent.

Mr. RUSSELL. The gentleman can see at once what 2

Mr. RUSSEIL. The gentleman can see at once what 2 per cent on the annual revenues would be. It would be \$18,000,000, and we appropriated less than \$18,000,000 last year.

Mr. BORLAND. The gentleman is entirely correct. I have no doubt his figures are accurate. That activity of the Government in the Agricultural Department includes the inspection of beef animals on the hoof, the Bureau of Plant Industry, the Bureau of Animal Industry, and the Bureau of Forestry. recollection is the Bureau of Forestry alone takes \$5,000,000 out of the \$18,000,000 of annual appropriations, and all of these activities of the great Department of Agriculture are embraced within the \$18,000,000, or 2 per cent, as the gentleman from Missouri puts it. Now we are confronted with the necessity of increasing, as a matter of justice not only to the farmers but the bread eaters in the cities, the amount that is expended toward the development of the agricultural interests, and we are confronted in every turn by these enormous fixed expenses for armament and for war. We must provide for the develop-ment of our agricultural interests and conservation of our natural resources; we must extend the aid of the Federal Treasury to the construction of good roads; we must have an agricultural banking system; we must enlarge and improve the Bureau of Mines. All of those matters that are brought before us, which can not be taken up without first providing for that fixed expense for armament and military preparations. Gentlemen, it seems to me that the time is very favorable now for the adoption of this resolution and for the declaration that the sense of this House of Representatives, of this administration, and of the people of this country is in favor of universal peace; that we recognize that the only power a nation has to assemble an army or a navy is for the protection of its own honor and the integrity of its territory and for the safety of its citizens. [Applause.] If this object can be secured by peaceful means, by solemn treaties between the great powers; if the expense which now comes out of the pockets of the toiler can be left in the pockets of the man who earns it, it will tend to a development of the country much more than the enrichment of a few special interests which flourish by the furnishing of armament to the country. And, in closing, I simply want to call attention, as the keynote of my remarks, to the line or sentence of the speech of the President of the United States:

More and more readily each decade do the nations manifest their willingness to bind themselves by solemn treaty to the processes of

Do we believe in that, gentlemen? Are we prepared to follow that ringing declaration?

And further:

So far the United States has stood at the front of such negotiation. Do we believe that? Do we believe that so far the United States has stood at the front of such negotiations?

this House of Representatives, by a practically unanimous vote, will pass this resolution asking the President to negotiate with our sister Government of the United Kingdom of Great Britain for the insurance of universal peace. [Applause.]

Mr. BARTHOLDT. Before the gentleman takes his seat, may

ask him a question?

Mr. BORLAND. Yes; I yield.

Mr. BARTHOLDT. Has the gentleman given any attention to the actual saving that would be effected if building operations in the Navy were suspended for a year by the different nations?

Mr. BORLAND. No, Mr. Speaker. I am going to leave that part, and I purposely so leave it, to the gentlemen of the Committee on Naval Affairs. My colleague from Missouri [Mr. HENSLEY] and others who are on the Naval Committee have become familiar, I have no doubt, with those figures in the course of their investigation. So I would not hazard any statement beyond such ordinary estimate as a Member of Congress could place upon it

Mr. BARTHOLDT. I have tried to estimate it, and I think the saving would be in the neighborhood of \$250,000,000 a year.

Mr. SLOAN. Will the gentleman yield?

Mr. BORLAND. I yield to the gentleman from Nebraska

[Mr. SLOAN].

Mr. SLOAN. Referring to the President's statement as to entering into peace treaties, the gentleman will probably recall, or the President will probably recall, the treatment recent treaties received at the other end of this Capitol, especially by members of the gentleman's and the President's party, by turning down three or four great international treaties all designed to establish peace on earth.

Mr. BORLAND. Mr. Speaker, it would not be proper for me, even if I had any inclination so to do, to discuss the action of the correlative body at the other end of the Capitol, or the very features of those treaties which rendered them unacceptable. It is enough for us to sound the sentiment of the House of Representatives as the direct, popular body of the American Representatives as the direct, popular seems of our people is in people, and the sentiment of our body and of our people is in people, and the sentiment of our body and of our people is in people, and the sentiment of our body and of our people is in

Now, Mr. Speaker, I yield 10 minutes to the gentleman from Illinois [Mr. Foster]. I reserve the balance of my time.

[Applause,

Mr. FOSTER. Mr. Speaker, I desire to congratulate the gentleman from Missouri [Mr. Hensley], who has offered this resolution at this very opportune time, as we are approaching the Christmas celebration when we commemorate the birth

of the great Peacemaker of the world.

We are now called upon by the Secretary of the Navy to appropriate on his estimate \$145,000,000 for the expenses of the Navy for the coming fiscal year. We find that for the support of the Army we are asked to appropriate \$106,000,000, and for other purposes of defense of our country many million dollars more; and for the result of war, for taking care of those who are dependent upon the Government, those who have served in time past, a good many million dollars more. So with this burden upon our country it is proper and right that a resolution of this kind should be considered to see if there is not some way of lessening this enormous expense on the National Treasury.

I am glad to be able to vote for a resolution that indicates to the world in a substantial way that our Government is in favor of disarmament. It is true that this resolution provided only that there shall be a holiday of one year in the building of battleships. I observe by the report of the Secretary of the Navy that he says 10 years ago our largest battleship cost \$5,382,000. The next dreadnought will cost \$14,044,000, nearly three times the amount that was required to build a dread-nought when one was built 10 years ago.

It has been a strife among nations for years and years as to which one could build the largest battleship, which one could equip that battleship with the largest guns that could do the most effective work in destroying the fleet of the enemy. By

destroying the fleet of the enemy it means not only that they shall send to the bottom of the sea this vessel that cost \$14,-000,000, but that there shall go with it the lives of those who man that vessel.

The time has arrived in this country in which we live when we should stop and ask ourselves as a civilized nation of the world if we are not ready to stop the loss of life, the sending of armies against armies that we may see which can kill the greatest number of men and thereby win the battle.

Nations are only aggregations of individuals. No municipality, county, or State government within our borders would say to its citizens, when there comes a dispute between them, that they should take their pistols or their knives and go upon the field and see which one is the best man physically—and that is what war means. Battles are won because one nation is

able to destroy the most property and kill the most men.

I am glad to know that my good friend from Missouri [Mr. BARTHOLDT], who sits before me to-day, favors this resolution. When I first came to this body he was speaking, in season and out of season, for the peace of the world, and has stood upon this floor, and not only upon this floor, but has gone across the ocean to speak peace to those in foreign lands, for what he believes to be right and just treatment from one nation to

another for the peace of the world. [Applause.]

I observe further by reading the report of the Secretary of

the Navy that he says:

I venture to recommend that the war and navy officials and other representatives of all the nations be invited to hold a conference to discuss whether they can not agree upon a plan for lessening the cost of preparation for war. It is recognized that the desired end of competitive building, carried on under whip and spur. could not be effective without agreement between great nations. It ought not to be difficult to secure an agreement by which navies will be adequate without being overgrown and without imposing overheavy taxation upon the industry of a nation. I trust the tentative suggestion for a naval holiday by the strongest of the powers will be debated and the matter seriously considered by an international conference, looking to reduction of the ambitious and costly plans for navy increase. I trust that this country will take the initiative and that steps will be taken by a conference of all the powers to discuss reduction of the heavy cost of the army and navy.

Mr. MOORE Mr. Speaker, will the gentlemen yield?

Mr. MOORE. Mr. Speaker, will the gentleman yield? The SPEAKER. Does the gentleman from Illinois yield to the gentleman from Pennsylvania?

Mr. FOSTER. Certainly.

Mr. MOORE. Is that the report of the Secretary of the Navy, Mr. Daniels?

Mr. FOSTER. Yes; that is the report of Secretary Daniels.

The Secretary further says:

The growing cost of dreadnoughts, of powder, and of everything that makes an efficient navy gives reason for pause. This heavy expense commands national and international consideration. The naval appropriation has doubled in 13 years, and yet this country has not joined the expensive competition and race for overlarge navies to the rame extent as have some other great nations. Ten years ago our largest battleship cost \$5,382,000. The next dreadnought will cost \$14,044,000.

I observe by this report that the naval board has recommended that there be authorized for the coming year 4 battleships, 16 destroyers and 1 destroyer tender, 8 submarines and 1 submarine tender, 2 oilers, 2 gunboats, 1 transport, 1 supply ship, and 1 hospital ship. This naval board would have our Government go to much greater expense for war.

Mr. WILLIS. Whose recommendation is that, I will ask the

gentleman?

The SPEAKER. Does the gentleman yield to the gentleman from Ohio?

Mr. FOSTER. I do. This is the recommendation of the general board on the proposed construction for 1915, and I will say not a very modest request for increasing the Navy

We are called upon to make these large appropriations year after year and to authorize the construction of these battleships, and yet at the end of 10 years, after we have built one battleship costing \$14,000,000 or \$15,000,000, it must go to the scrap heap, and then we must authorize the construction of new and greater ships than those that have been discarded.

I had hoped that when the Panama Canal should have been completed we might have entered into an agreement with the nations of the world to make that canal a great commercial highway, and that it should not have been necessary to expend the millions of dollars that this country has spent for its fortification, but that there might have been that good feeling and peace among all the nations that would guarantee the use of that canal to the nations of the world. [Applause.] But this Congress decided otherwise, and there we must continue to incur an annual expense of millions of dollars so long as this armament must be kept up-an expense and a burden upon the

people of our own country.

It was well said by the gentleman from Missouri [Mr. Russell] a while ago that only 2 per cent of our revenues goes for

the benefit of agriculture. To-day we have heard a message by the President of the United States, calling our special attention to something that we ought to do to help along the farming conditions of our country, because, as he said, from the farm must our people be fed. To-day from one end of the land to the other is going up the cry of the high cost of living, yet only 2 per cent of our revenues goes to the benefit of agriculture, while more than 60 per cent goes toward defraying the cost of past wars and preparing for future wars.

Mr. WILLIS. Mr. Speaker, will the gentleman yield for a

question?

The SPEAKER. Does the gentleman yield?

Mr. FOSTER. I do. Mr. WILLIS. I attach great weight to what the gentleman says, therefore I want to be sure that I understand him correctly. Do we understand the gentleman to say that he is in favor of a policy whereby the commercial ships of all the earth shall have the right to use the Panama Canal absolutely free from the payment of tolls?

Mr. FOSTER. Oh, no.
Mr. WILLIS. What did the gentleman say as to that?
Mr. FOSTER. What I said was that I hoped this canal would be the highway of all the ships of the world, not that they should go through there free of tolls, but that a guaranty might be given that that canal should be preserved in such a way that it would not be necessary to fortify it, at great expense to our own people.

Mr. WILLIS. Will the gentleman yield for another question?

Mr. FOSTER. Yes.

The SPEAKER. The time of the gentleman has expired.

Mr. WILLIS. Give him some more time.

Mr. HENSLEY. I yield to the gentleman from Illinois five minutes additional.

The SPEAKER. How did the gentleman from Missouri [Mr.

HENSLEY] get possession of the floor?

Mr. HENSLEY. My colleague [Mr. Borland] told me to handle his time in his absence.

The SPEAKER. How much time does the gentleman yield? Mr. HENSLEY. Five minutes. Mr. WILLIS. Now, will the gentleman yield for a further

question?

Mr. WILLIS. I understand this resolution, as it was explained by the gentleman from Missouri [Mr. Borland], conplained by the gentleman from Missouri [Mr. Borkland], contemplates that an agreement be made between this country and the United Kingdom particularly. Now, would the gentleman from Illinois be in favor of a naval holiday limited to these two nations? If so, after the heliday was over, would not this naval board say, "Now, in order to make up for past time we have got to build six battleships instead of four"?

Mr. FOSTER. As I understand the idea of Mr. Churchill, it was that these two nations should take the lead; that he had invited the nations of the world, and now that we had responded to that invitation, the nations of the world should get together and endeavor, if possible, to have a naval holiday for at least one year. I am not able to say, but I hope if the agreement is made that that holiday may be extended in-

Mr. WILLIS. What I want to get at is this: If we are not able to get the other nations of the earth to agree to this holiday, is the gentleman in favor of a holiday established by these two nations, with the possibility that thereafter it will be said, "We must increase our annual program in order to make

up for lost time"?
Mr. FOSTBR. Oh, no; the idea of Mr. Churchill was that this should be done in connection with all the other nations

who are now building navies.

Mr. WILLIS. Not that it should be done by these two courses unless all the others are agreed to the same holiday? Not that it should be done by these two coun-

Mr. FOSTER. Oh, no; not unless the others agree to it also. Mr. HARDY. Will the gentleman yield to me for one suggestion?

Mr. FOSTER. Yes.
Mr. HARDY. That is, the utter impossibility of England agreeing to such a holiday unless Germany also agrees to it.

Mr. FOSTER. I think the gentleman is correct about that. Now, Mr. Speaker, just a word in conclusion. I desire to say that the people of this country have been asking Congress to appropriate more money for internal improvements. They are They are asking us as Members of Congress to make appropriations for these needed improvements. Those of us who represent rural districts have been asked to do something for good roads, and we realize how important to our people it is to have better roads, and we hope that we may be able to assist in this work.

There are thousands of acres of swamp and overflowed lands this would not be saved. He argues that this money that goes

that ought to be reclaimed for the benefit of agriculture. prevention of the disastrous floods on our rivers is an impor-tant matter and one in which the National Government should do its part. Rivers and harbors need improvement for the benefit of navigation. All these would be of vastly more benefit to the people than the building of battleships and the expenses of the Army. If only the world could agree to a peaceful settlement of differences. Let us hope and pray for the time to hasten when "nations shall beat their swords into plowshares, and their spears into pruninghooks: nation shall not lift up sword against nation, neither shall they learn war any more. Yet, when we come here to consider these questions we are confronted with this great expense for armament. I am not one of those who believe that when we have a Navy it ought to be inferior in men or battleships to the needs of our country; but, I do believe that the time has come when our great Govern-ment ought to take the lead of all the nations of the world in this effort for peace, in this effort to secure, with the cooperation of other nations of the world, a cessation of this great expenditure, in order that we may lift from the people of our country the burden of this increasing cost of the Army and Navy, and that when differences arise between nations they may be settled in a civilized, humane, and intelligent way by arbitration between those nations. [Applause.]

Mr. HENSLEY. I yield 10 minutes to my colleague [Mr.

DECKER 1.

Mr. DECKER. Mr. Speaker, it gives me keen pleasure to speak in favor of this resolution which has been presented by my worthy colleague from Missouri, Mr. Hensley. I hope that he may live long and do great good; but if he lives long and participates in many important affairs I doubt if he will ever participate in a more important matter than the one which we are considering now. [Applause.] I believe he has introduced a resolution here which, if adopted—and I believe it will be adopted—will make him known throughout the United States and will make him loved at every fireside in Missouri, the State

from which he comes. [Applause.]
Why the need of all these battleships? There is just one reason for these battleships that you and I are called upon to vote the money to build, and that is because other nations of this world are building battleships. One nation builds more battle-The other nations, fearing to fall behind in naval prestige, builds more battleships. So the mad race goes on. The appropriations increase by leaps and bounds. The people of this country and the people of the world—I mean the people who bear the burdens-do not realize the cost of war. As Senawho bear the burdens—do not realize the cost of war. As sena-tor Burton has pointed out, the "civilized nations are spend-ing \$2,500,000,000 on wars, past, present, and prospective. For the current fiscal year the United States has appropriated in round numbers \$535,000,000 for the prospective wars and be-cause of wars that have terminated." Thus two-thirds of all the money we raise by taxation is spent for war and one-third for the ordinary functions of government. Do our people realize the enormity of our naval expenditure? Do they realize that our naval expenses for the present fiscal year will be over \$140,000,000? I live in the greatest zinc-producing region of the world. The value of all the zinc produced in that district in 1912 was \$15,500,000. The largest dreadnought will cost \$15,-000,000—that is, just to build the hull. The population of Joplin, the city where I live, is about 35,000. Its assessed valuation is about \$10,000,000. It costs \$5,000,000 more than that to build the hull of the largest battleship, the maintenance of which for one year costs \$1,000,000. One thousand dollars will build a comfortable cottage for a miner or a carpenter.

Every time one of the largest guns on these dreadnozghts is fired more than \$1,000 goes up in smoke. From the time their keels are laid these costly monsters become obsolescent and in a few years they are worthless. But in spite of cost the mad race goes on. England burdens her people to maintain the "two-power naval standard." Germany watches England and France watches Germany, and the gentleman from Alabama contends that we are lost unless we maintain an "equilibrium" on the Atlantic and Pacific. The mad race goes on; the toilers stagger Atlantic and Facine. The mad race goes on, the toners stagger under taxation, and the governments of the earth hurry toward bankruptcy, and still the relative naval strength is little changed. Why, then, should we not have a naval holiday for one year? This resolution does not involve the question of how many battleships we should build if other nations continue to build. The proposition is: Why should not all stop for one year, at the end of which time the relative strength is unchanged? Why should not the people of the United States get the benefit of this \$50,000,000 which my colleague [Mr. Bartholdt] estimates would be saved?

But the gentleman from Pennsylvania [Mr. Moore] says that

for the battleships is not wasted, even though a naval holiday would make them unnecessary. He argues that these battleships make a market for our lumber and our iron and give employment to laboring men, and that this makes for prosperity. If this be true, let us tear down this Capitol, levy taxes, and build another, that there may be a market for stone and work for masons. It is the old cry, "Let us tax ourselves into pros-perity." It can not be done. When money and labor are employed in useless and unnecessary channels it is just that much diverted from the avenues that supply the necessaries of life. It is an economic waste, and results in scarcity and exorbitant prices of those things that are useful and necessary. money, if left in the pockets of the people, would find its way into avenues that would make for prosperity. If it is to be collected as taxes by the States or Nation, it could be spent for better purposes than battleships. We could use it to stop the devastating floods, improve navigation, to irrigate the deserts, protect our forests, to fight tuberculosis, to build schoolhouses, to erect hospitals, to lessen crime, to foster agriculture, to build roads over plains and hills and mountains. Would not such enterprises make markets for our products, labor for our toilers, and also add to the permanent comfort, progress, and prosperity of our country?

Some few here show little enthusiasm for this resolution because they fear it may be ignored by those who control the destinies of other nations and bring humiliation to us. humiliation can come from attempting to do good, even if we fail. I believe this proposition will receive the cordial consideration of those in authority in our sister nations. And even though it might not coincide with the ideas and plans of those in authority, yet in other lands, as in our own, those who pay for battleships have a voice, and sooner or later that voice is heard and heeded. The national debt of France is to-day \$6,286.435,000. Russia has a war debt of \$3,507,071,000; Austria-Hungary, \$6,612,389,000; Germany, \$3,500,000,000; Great Britain, \$3,389,577,000; Italy \$2,614,183,000; Spain, \$1,886,221,000; Japan, \$1,325,198,000. It is not the rich who bear these national burdens. In these lands, as in our own, these burdens fall most heavily upon the toilers. Sooner or later this proposition we make here will reach the toilers, the men who work on the farms and in the factories; who work in the mines and the quarries; at the forge and the foundry; the men who dig the ditches, lay the rails, and run the engines; the men who fell the trees and build the houses; it will reach the men who live on the hillsides; it will reach the multitudes who live in crowded cities; those who know want and squalor and sickness; those whose children seldom see a green field or hear the song of a bird. When our proposition, the proposition of 92,000,000 people, a proposition that can not lessen the safety of other nations, but will lighten their burdens-when our proposition reaches these toilers the answer will come, and it will be heard,

The gentleman from Ohio asked, "How long should this holiday last?" If it lasts no longer than a year it is worth the effort. I am not a prophet, but I firmly believe that if we are instrumental in bringing about this naval holiday, participated in by the leading nations of the earth for one year, then the blessings and advantages will be so apparent that this naval holiday will be extended until that hour for which we all should work, that good hour of which the poet dreamed, when-

The war drum throbs no longer and the battle flags are furled in the parliament of man, the federation of the world.

I say this is the place from which the proposition of a naval holiday should emanate. We, of all the world, are most able to build battleships. Our resources are unlimited; our wealth can not be measured. Our national debt is smaller than that of any leading nation of the earth. What is more, we need battle-ships less than any other nation. Our geographical location is a protection that other nations do not have.

We hear men speak of the importance of the Louisiana Pur-They speak of the wonderful Commonwealths carved from this great territory. They speak of its rivers, its mountains underlaid with minerals, its fertile plains, and its farms, its factories, its railroads, and its mighty cities, but we sometimes forget the thing that made it most important to our Nation, and that is that when Napoleon signed that deed he made it forever impossible for any other nation to separate us from Pacific Ocean. He made it forever unnecessary for the United States to maintain a standing army which would be a burden to our toilers. We need no battleships to protect our 3,000 miles of border to the north. I had forgotten, until reminded by the eloquent speech of my worthy colleague [Mr. Hensley], that we had no gunboats on the Great Lakes. And why? Simply because Great Britain and the United States said, "We will build no gunboats on the Great Lakes"; and

that is the reason they are not there. For a hundred years we have lived in peace with our neighbor to the north, and next year we will celebrate that peace. Despite the cloud that hangs in the direction of the south, we need no battleships to protect us from a neighbor toward which in these troubled times we maintain the attitude of a stalwart brother toward a fretfal child. Thus, separated from the world upon the east and west by thousands of miles of open sea, with nothing to fear from the north and nothing to fear from the south, we need battleships less than any nation of the world.

Again I say this is the place from which such a proposition should come. No one will suspicion us of having an ulterior motive in saying to the world, "Let us stop this awful expenditure, this needless expenditure of money." No one will say that it is because we are afraid to fight, for every nation knows that America is made up of men and women from every land and every clime. Will Germany say we are afraid, when 20,000,000 from the Fatherland are living on our soil and ready to fight and die for the Stars and Stripes. [Applause.] Will they of France say we are afraid to fight because we say to all the world, "Let us have peace." No; because millions of men, descended from those who followed Napoleon when he made the eagles of France mingle with the eagles of the crags," are living on American soil and have sworn allegiance to that flag. Will England say that America is afraid because we vote for peace. No; not while the sons of those who fought with Wellington at Waterloo and on many other bloody fields are living on the hillsides and in the hamlets and in the cities of this great Republic. From the sun-kissed hills of Italy, from hardy Norway, from sturdy Sweden, from plucky Holland, from the frozen plains of Moscow-aye, from all the world-brave men are gathered here in the great melting pot of civilization, and from us, the center of the modern world, should come the message, "Let us have peace. Let us build no more battleships for a year." [Applause.] [Applause.]

This is not only the place from which such a resolution should come, but this is the best time in all the year, in the beginning of this great session, which all believe will be a historic one, approaching, as we are, the time that brings cheer to all the world, approaching the time when we shall celebrate the birth of Him who brought not a message of greater battleships, not a message of tramping armies, not a message of groaning men, not a message of dying boys, whose mothers weep for sons who are gone, but who brought a message of peace and who died that men might live. [Applause.] So, Mr. Speaker, from this place, at this good time, let us send forth to all the world by this resolution which my colleague from Missouri has introduced, the message in which we all believe—"Peace on earth, good will toward men." [Applause.]
Mr. HENSLEY. Mr. Speaker, I yield 15 minutes to the gen-

tleman from Wyoming [Mr. MONDELL].

Mr. MONDELL. Mr. Speaker, I wish to thank the gentleman from Missouri, but since I made the request of him for time I have concluded that I would prefer to secure more time later on in the day, and I will yield back that time to the gentleman

from Missouri.

Mr. HENSLEY. Mr. Speaker, then I yield 15 minutes to the gentleman from Tennessee [Mr. Sims].

Mr. SIMS. Mr. Speaker, I am not versed in technical learning with reference to naval equipment. I am not going to try to use that character of language that gives the impression that a man has studied the technique of this thing, but it has developed in this debate that one of these ships to be constructed is to cost practically \$15,000,000. It does not take technical knowledge of naval affairs or naval construction to know that \$15,000,000 is \$15,000,000, and when we owe \$1,000,-000,000 it does not take a man technically equipped to know that you can pay \$15,000,000 of that debt with what it will cost to create one of these instruments of destruction by which the national debt will be further augmented. We will make no mistake if we do not build a single battleship, and if we have money to build instruments of destruction, then we have the money to pay that much of our national debt and stop the interest thereon. I see in the newspapers that to-day we celebrate the ninetieth anniversary of the utterance of the Monroe My recollection is that the population of the United States at that time was less than 20,000,000 of people. We were scattered all over this country, and yet the expression by the President of the United States, the little United States, speaking relatively as to population and power at that time, that we would regard as unfriendly any attempt to further set up European authority not only in the United States but in the whole of Central and South America stands to-day, and since that time that doctrine has never been controverted by any foreign nation.

The simple expression of the President of the United States 90 years ago has prevented the embattled nations of the whole world to this hour from attempting to do that which that declaration was intended to check. And now we are told at this day and time, after we have grown to be a Nation of 100,000,000 people, measured man for man, of more power-intellectual, physical, scientific, commercial, and in every way greater than the people of any nation on earth-and now we talk that we are going to be eaten up and destroyed by nations that practically have to destroy themselves commercially in order to prepare themselves to keep tugging away at each other's throat. 500 years ago there was a strip of a girl in a far-off town of France conceived the idea that God was on the side of the French, and that the English, who had practically destroyed France at that time, must be driven from her Provinces. the Dauphin of France was far off in an obscure portion of the Empire, a young girl, who could neither read nor write, who knew nothing about the rules of war or the implements of destruction, but who believed that God had called her to drive the English from France, never stopped until she met the Dauphin, until men at arms were furnished her. She led those menwarriors, soldiers-against every rule of war that had ever before been established to the successful relief of the French at Orleans. So that child, that strip of a girl, led both technically trained soldiers as well as volunteers against the veterans of England and drove them from France. [Applause.] By what power did she do it? Would any military or naval board have directed that girl to lead anything? Why, facts fly in the face of technical knowledge. They have always done so and always will do so. Why did she do it, and how did she do it? By making the people who believed in God believe that she was the voice of God; that the voice of God had come to her. This is the only instance in the world's history where a man or woman only 17 years old was placed at the head of all the military forces of a great power and led them to victory. It was because she believed in God. Does anybody believe for a moment, sincerely believe, that we are in the slightest danger of any European power, that any such power will have little enough sense to ever attack us? What European wars have we had? Have we ever had one in which we were not the aggressors? war have we ever had with a foreign country that we did not bring on? Yet we are asked to be scared to death for fear some foreign power will attack us, when to do so is to invite selfdestruction. What constitutes being prepared? Building battleships? No; they rust out; one becomes practically obsolete during the period of construction. I will tell you what will prevent European armies from landing on these shores. Schoolhouses, intelligence, general education, and a higher development of individual citizens. What does Europe want to destroy us for? Europe wants to sell us what they have to sell, and we want to sell them what we have to sell. We do not want by wars to render us and them less able to produce, to buy and sell. War puts a load on commerce that it can not carry.

Now, my friends, it is time we thought of something besides increasing interest-bearing obligations to be paid by taxation. Taxation in the last analysis must be paid by the producer, must be paid by those creating wealth instead of those destroying it. We had an institution in the United States oncethat of chattel slavery, property in man. What was property in man? Property in man was simply the power to control his services, simply to control what he could do by way of production. Now look at the indebtedness of the world for military purposes. Look at it in Europe and in this country, young and fresh as we are. You are bringing about a source of slavery by forcing a condition upon this country of a form of nontaxed property in the form of bonds issued by municipalities, States,

and nations

The bondholder holds an untaxed bond, and the creator of wealth by the sweat of his brow pays the bond and the interest. And while it is not a bill of sale, like the bill of sale for the slave, in many respects it is better for the owner than the old bill of sale for the slave was, because the man who owned the slave had to feed, maintain, and protect him, take care of him in sickness; but the untaxed bondholder of Government bonds does not have to feed those who feed him by paying the taxes pledged for payment of his bonds. Let us pay debts instead of creating them, pay what we owe instead of increasing our obligations, especially when those obligations are not those for the promotion of the public welfare, to make life easier, to increase the power of the people to earn a living, but to provide the implements of destruction of both life and property.

Look at our young men in the Army and in the Navy who are devoting their lives to the science of destruction. Why should we follow the foolish example of the European nations, who have nothing between them but an imaginary line or a river. We are protected by geographical location and situation, and the only dangers that we have from European interference are those created, first, by those who have theories of these things and want a war to prove that their theories are right, and, second, those who earn a living by reason of the industries created by this policy. How does it happen, my friends—and I do not wish to make the insinuation, as we are all creatures of environment-how does it happen that the people who live where armor plate is made, where shipbuilding is done, have the greatest fear of foreign aggression? Why is They are just as brave as anybody else; they are just as well protected by nature as any of us, and yet they are having a chill for fear Japan will attack us or that Germany will attack us-one imaginary fear after another.

The day must come, and it must come soon, when the people will realize that they pay out of their own pockets every Government expense and Government obligation, and when they do realize that your \$15,000,000 battleship, your useless, unnecessary, destructive battleship will not be worth one copper in their estimation. Why, in the same Book in which Joan of Arc believed, it is said that there is a time coming when the lion and the lamb shall lie down together, when the instruments of war shall be converted into instruments of industry and peace. How much do you believe in God and believe in the truths of the Bible when you are trying every day to further make a lie of that prophecy? Now, some of you are not willing to have one little year of recess from manufacturing implements of destruction and death.

Mr. SLOAN. Will the gentleman yield?

The SPEAKER. Does the gentleman from Tennessee yield to the gentleman from Nebraska?

Mr. SIMS. Yes. Mr. SLOAN. Speaking of the time for this vacation, when does the gentleman propose it to be?

Mr. SIMS. Just as quick as we can vote on the resolution.

Mr. SLOAN. But with the gentleman's permission I will

There can be no certain prospect of peace in America until Gen. Huerta has surrendered his usurped authority in Mexico; until it is understood on all hands, indeed, that such pretended governments will not be countenanced or dealt with by the Government of the United

Can we properly submit an invitation to enter upon this vacation while we are practically ready for war against our most immediate neighbor?

Mr. SIMS. Now, the gentleman from Nebraska has fallen way down from the dizzy heights that his colleague from Missouri [Mr. Bartholdt] occupies and seeks by partisan reference to get an advantage in party politics.

Mr. SLOAN. I simply read from the President's message.
Mr. SIMS. How many \$14,000,000 battleships would be needed to attend to Gen. Huerta if we had to do it to-day?

The very fact that we want to be prepared for aggression and wrong must be analyzed by every man who analyzes our intentions, that somewhere deep down in our hearts we have the in-tention of doing wrong. When will you have your plowshares made out of spears and your pruning hooks out of swords if you listen to the naval and military fortification boards?

The time of the gentleman from Tennessee The SPEAKER.

[Mr. Sims] has expired.

Mr. HENSLEY. How much time remains, Mr. Speaker? The SPEAKER. Two minutes.

Mr. HENSLEY. Mr. Speaker, I ask that every person who speaks upon this resolution be given five legislative days in which to print his remarks.

The SPEAKER. The gentleman from Missouri [Mr. HENS-LEY] asks uninimous consent that all gentlemen who speak on this resolution shall have five legislative days in which to extend their remarks.

Mr. MANN. Mr. Speaker, reserving the right to object, I do not know that I shall object to it after the debate is finished. but I have seen gentlemen so often take the floor for a minute or half a minute, and then extend their remarks that at present I shall object.

The SPEAKER. The gentleman from Illinois [Mr. MANN] for the present objects. What does the gentleman from Missouri [Mr. Hensley] desire to do with his two minutes' time? Does he wish to reserve it?

Mr. HENSLEY. Yes; to reserve it.

The SPEAKER. The gentleman from Missouri HENSLEY] reserves the balance of his time, and the gentleman from Pennsylvania [Mr. Moore] is recognized for one hour.

Mr. MOORE rose.

Mr. MANN. Mr. Speaker, will the gentleman from Pennsylvania yield? Mr. MOORE. I do.

Mr. MANN. Does the gentleman from Pennsylvania desire to proceed this afternoon?

Mr. MOORE. I am not particular as to that.

Mr. MANN. Does the gentleman from Missouri HENSLEY] know whether anyone else desires to proceed this afternoon?

Mr. HENSLEY. One gentleman, the gentleman from Mississippi [Mr. Sisson], said to me that if the opportunity presented itself to him he desired me to send a page for him. He is now out in the room of the Committee on Appropriations. He desired to be heard.

Mr. MANN. I would suggest to the gentleman from Missouri that we shall not have other business in the House probably Thursday or Friday, or likely on Saturday, and inasmuch as gentlemen had not expected this to come up to-day the gentleman from Missouri might well move that the House adjourn, with the understanding that the resolution shall come up on

Mr. HENSLEY. I will say to the gentleman from Illinois that the gentleman from Alabama [Mr. UNDERWOOD] requested me to send a page for him as soon as the time arrived for adjournment.

Mr. MANN. Then I suggest that the gentleman send a page for Of course, I have no objection to anyone proceeding now. him.

Mr. HOBSON rose. Does the gentleman desire to make a The SPEAKER. motion?

Mr. HOBSON. I suggest, Mr. Speaker, that the gentleman from Pennsylvania take part of his time and give me some time. Mr. MANN. Let the gentleman from Alabama [Mr. Hobson]

go ahead. Mr. Speaker, I reserve the balance of my time. The SPEAKER. The gentleman from Pennsylvania [Mr.

Moore] reserves the balance of his time.

Mr. SLAYDEN. Mr. Speaker, last June one of our colleagues, Mr. Montague, of Virginia, delivered a speech entitled "International Neighborliness," which is exceedingly pertinent to this It was delivered at the celebration of the one hundredth anniversary of the signing of the treaty of Ghent, which made peace between the United States and Great Britain. that that speech be inserted in the RECORD because of its historical value and its pertinency to this discussion.

The SPEAKER. The gentleman from Texas [Mr. SLAYDEN] asks unanimous consent that the speech made last summer by Mr. Montague, of Virginia, a Member of the House at present, on this side, be printed in the Congressional Record.

Mr. MANN. Reserving the right to object, Mr. Speaker, is the gentleman from Texas sure that this speech has not already been printed in the RECORD?

Mr. SLAYDEN. I am pretty sure it has not been.

Mr. MANN. I take the gentleman's statement for it, but my recollection was that I had read it in the RECORD.

Mr. SLAYDEN. The gentleman from Virginia assures me that it has not been printed.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

Mr. HOBSON rose.

The SPEAKER. Does the gentleman from Alabama desire recognition?

Mr. HOBSON. If the Chair pleases.

The SPEAKER. The Chair will recognize the gentleman for

Mr. HOBSON. Mr. Speaker, I recognize that the House does not desire further extended consideration of this resolution to-day, and I shall not intrude to the extent of taking the full hour of my time, probably reserving the balance.

Mr. Speaker, I believe that the United States can contribute more than any other nation in the world to the permanent cause of universal peace. The great possibilities of this contribution should cause all Americans to approach the question with care and with full information on the conditions that exist in the world and on the forces that really determine the evolution of peace between nations.

I shall introduce my remarks by pointing out at the outset that for many years the great military nations of the earth bave been engaged in a heated contest of naval construction while America has practically been at a standstill, so that today, measuring navies by up-to-date ships of the first class—battleships of the dreadnought type and battle cruisers—the naval powers of the world in vessels built, building, and authorized, have the following relative strength. This relative strength can be fairly accepted, since the highest type ship is stands amongst substantially the same in all of these countries: Great Britain with four others.

has 42, Germany 26, the United States 12, France 11, Russia 11, Japan 10, Italy 9.

In other words, Mr. Speaker, it shows three distinct classes: Great Britain comprising the first, Germany the second, and the United States, France, Japan, Russia, and Italy practically tied

Comparing the relative strength of Germany and England, it shows that the proposition for a cessation of authorizing battle-

ships came with easy grace from the English.

Mr. HENSLEY. Mr. Speaker—

The SPEAKER. Does the gentleman from Alabama yield to the gentleman from Missouri?

Mr. HOBSON. Certainly.
Mr. HENSLEY. Is it not a fact that in the last 10 years the United States Government has spent more than \$1,000,000,000 in excess of that spent by Japan for naval armament? And if that be true, will you explain what has become of the billion dollars, together with the other which has been spent within this time?

Mr. HOBSON. I will say to the gentleman that matters of expenditure involve many elements of which it is impossible to take account, but that battleships built, building, and authorized, of a uniform high class, represent the relative naval power of nations at any particular time, and are so accepted by great powers when they shape their foreign policies.

Mr. BUCHANAN of Illinois. I should like to have the gentleman explain why he says the United States is practically tled with France and Japan, when the gentleman's figures show that the United States is ahead of them?

Mr. HOBSON. I put them in a class together. America stands with 12, France and Russia with 11 each, Japan with 10, and Italy with 9. The differences are very small, so that these nations make a class apart. When you pass from America to the nation three numbers below it there is a difference of only 2 battleships. When you pass from America to the next higher, Germany, there is a difference of 14 battleships, and when you pass from Germany to England you have a difference of 16 battleships. It is the wide gaps in the numbers of battleships that create the classes.

Mr. BUCHANAN of Illinois. As a class, yes; but the gentleman stated that we were practically tied; but giving the percentages of relative strength of battleships in tonnage, between

Japan and the United States, what would it be?

Mr. HOBSON. I should say it would be about 17 per cent. Of course, narrow margins of percentage are not of great importance.

Mr. BUCHANAN of Illinois. I do not understand why the gentleman says we are practically tied with Japan.

Mr. MOORE. Does the gentleman have before him statistics showing the relative strength of the navies of the various coun-

Mr. HOBSON. Yes. This is the official report of the office of naval intelligence, of date December 1, 1913.

Mr. MOORE. Will the gentleman tell us what is the status of the various nations, in one, two, three order?

Mr. HOBSON. Great Britain stands first, with 42 capital vessels, and is almost double the next highest.

Mr. MOORE. Great Britain is first? Mr. HOBSON. Great Britain is first and Germany is second, with 26 capital vessels, being more than double the United States.

Mr. MOORE. Which is next? Mr. HOBSON. The United States, with 12 battleships. Mr. MOORE. The United States ranks third among the

naval powers?

Mr. HOBSON. Yes; without being in the class of those above her, but being in the same class as the next three below

Mr. MOORE. What are the next three? Mr. HOBSON. The next three are France and Russia, with 11 each, and Japan with 10. My classification is correct. Great Britain in the first class alone, Germany in the second alone, and the United States in the third class with France, Russia, Japan, and Italy.

Mr. SLAYDEN. I want to ask the gentleman what he means by saying that the United States is third and not in the same class as those above? I did not get the significance of his defi-

nition of classes.

Mr. HOBSON. What I mean is that when there is a very narrow margin of difference in the number of battleships you put them in the same class; but that if there is a gulf of difference, then you put them in different classes; so that the United States stands amongst the third-class powers, practically on a par

Mr. SLAYDEN. Does the gentleman really believe that the United States ranks in naval and military matters as a third-

Mr. HOBSON. I believe that the man behind the gun is a

greater factor than the gun.

Mr. SLAYDEN. And do you not think that the resources

behind the people are as great a power as battleships?

Mr. HOBSON. Yes; the resources behind the man behind the guu settle the question, provided you have a chance to bring those resources to bear; but you must have a chance to bring those resources to bear. There is no doubt in the world that the resources of China are greater than those of her neighbors, and yet she has never been able to bring them to bear. It is possible that the resources of France in the Franco-Prussian War may have been greater than those of Germany, but she was never able to bring them to bear. I think the resources of Austria were quite equal to those of Prussia in the war of 1866, but she was unable to bring them to bear. In the Balkan War the resources of Turkey were very much greater than those of the Balkan States, but Turkey had been neglecting national defense for a number of years and really did not bring her resources to bear. So that when the gentleman takes up the question of resources he must take account of modern wars where nations fight with the preparations made in advance and conclude the war before the tax is put upon the limit of resources, as in ancient wars.

Mr. SLAYDEN. If the gentleman will allow me, I would like to ask him if the resources of Turkey were not exhausted by

the war with Italy before the conflict with Bulgaria?

Mr. HOBSON. I think that her military strength had been dissipated by the conditions in Constantinople that for many years had neglected the question of national defense. completing my answer, I want to say one thing further. I hope the gentleman from Texas will not think that I have a mean conception of my own country. If modern wars were wars of exhaustion I would not hesitate to say that the United States, with her location, and having seventeen billions out of thirty-five billions of the world's banking capital, and with one American producing on an average as much as three Europeans, that these resources ultimately being brought to bear, would enable America to stand up against the whole world combined. I do not for an instant look upon any future war as embracing at all the question of our survival as a Nation. The question of war may decide the survival of our free institutions. If we were to be engaged in a very long war for lack of preparation at the outset of the war, during the course of the war there would be a very great tendency toward militarism among the people. We would have to give the executive branch more power, tending to concentration; our young men would go into the Army, we would hear the drum and see the uniform, and it would tend to bring to the surface that heritage we have in common with all human ity of a hundred generations of fighting, where success in war was the chief test for survival.

Now, particularly, if we should lose the modern war because of being unprepared and allow peace to be concluded with the idea of getting ready in time of peace to fight the war over again, we should find that it would probably require about a generation to get fully ready, and during the generation the youth of America would have hatred in their hearts, looking forward to revenge, and in the vast military preparations our youth would develop the military spirit, so that by the time the second war was finished we would have a new generation of Americans as military as any generation of Europe, and we would be in danger of going back-reversion to type as it is called in biology-run a serious danger of reverting back to the military system from which we sprang, whereas now we are promoting a new type, a civilization of the producer, not the

soldier-a civilization of industrialism.

The danger in lack of preparation is not in the survival of the Nation, but in the survival of our distinct civilization. If America, through lack of preparation, were to suffer defeat, a new premium would be placed on being prepared when war comes, the fierce race of armaments would be intensified, militarism would stalk unchecked over the whole face of the earth, and the cause of peace set back for generations.

I will now yield to the gentleman from South Carolina for a

Mr. JOHNSON of South Carolina. Mr. Speaker, the gentleman has in his philosophizing got a long way from what I wanted to talk about. I want to ask the gentleman what he means when he says that the United States has 12 ships?

Mr. HOBSON. Built, building, and authorized, of the highest

Mr. JOHNSON of South Carolina. You do not count the other ships at all?

Mr. HOBSON. No. sir. Mr. JOHNSON of South Carolina. As compared with the other nations of the world, how do we stand as to other ships? Mr. HOBSON. That is all in the tables here, but I do not think it worth while to cite the figures

Mr. JOHNSON of South Carolina. But not worthy of count-

Mr. HOBSON. Not until you get up to the highest type of

Mr. JOHNSON of South Carolina. And all the ships that we have been building, except the last 12, are not worth counting when you come to estimate our naval strength. Is that the gen-

tleman's position?

Mr. HOBSON. I think when we come to count the relative strength of nations in the world to-day and in the near future it is best to eliminate the ships that are obsolete and obsolescent. Some are obsolete, and those that are not are obsolescent.

Mr. JOHNSON of South Carolina. Every ship is obsolescent. Mr. HOBSON. Just as every piece of machinery in every factory. My idea about a fleet is that on the whole the depreciation in battleships is a good deal like the depreciation of a wellequipped manufacturing plant employing complicated machinery. You ought to write off at least 10 per cent a year if you are a wise proprietor. If we would write off 10 per cent a year on the total tonnage of our fleet to-day, and would make it good by battleship tonnage, it would require three battleships a year to make up for the rust. Has the gentleman from South Carolina any further questions?

Mr. JOHNSON of South Carolina. Mr. Speaker, at this point will yield to my distinguished colleague from Missouri [Mr.

BARTHOLDT

Mr. HOBSON. Mr. Speaker, I yield to my colleague from Mis-

souri, so eminent in this great work of universal peace.

Mr. BARTHOLDT. If the United States continues to build battleships, and England, Germany, and France do the same, will not the relative strength of those nations be the same at the end of the period specified in the gentleman's resolution as it is now?

Mr. HOBSON.

Mr. HOBSON, No. Mr. BARTHOLDT. Then the second part of my question is this: If we adopt this resolution and the President of the United States should succeed in securing an agreement with the other nations to suspend for one year the construction of battleships, would not the relative strength be the same at the end of one year as it is now, and would we not be saving in the meantime about \$50,000,000 of the taxpayers' money, England sixty million, and Germany thirty million, and so on? What does the gentleman estimate the loss to be if such a resolution were put through by the united powers of the world?

Mr. HOBSON. Mr. Speaker, the answers to the gentleman's questions, most of them, are self-evident, except the first, which was very pertinent, as were the others. The answer to the first is that unquestionably the nations of Europe in their race for war equipment would remain pretty nearly in the same relative position they are in now, except that Germany's population developing more rapidly than that of her neighbors and Germany's commerce and manufacturing developing more rapidly than that of her neighbors; on the whole, Germany will nat-urally forge ahead, something like the old test of survival by numbers and strength; but America's relative position if no such agreement is entered into will very radically change in the next generation.

Mr. MOORE. Mr. Speaker, will the gentleman yield? And that brings us really to the point of this Mr. HOBSON. question. I yield to the gentleman from Pennsylvania.

Mr. MOORE. Mr. Speaker, this resolution presumes that a declaration was made by the Lord of the Admiralty of Great Britain, the Hon. Winston Churchill. Does the gentleman know whether any such declaration contemplating an agreement was made or whether an agreement has been actually

Mr. HOBSON. I only speak from memory. My recollection is that Great Britain, standing in the position of a class by herself, where practically she is on a par with any three naval powers in the world, very readily recommended that all should stop construction.

Mr. MOORE. The gentleman does not get my idea. Mr. HOBSON. And that the recommendation was

And that the recommendation was made to Germany specifically. The German Government, evidently recognizing that they have only 26 to Great Britain's 42 of firstclass type, did not feel that that was a fit relative strength. My memory is that Germany has either ignored or declined the proposition. I speak only from recollection. I am not aware of any proposition whatsoever being made to the United States,

since we have not been racing at all and are the seventh

nation in vessel building.

Mr. MOORE. That is the very point. This Congress of the United States is about to act upon a newspaper report of a declaration made by a distinguished Britisher, and we have no official information with regard to this agreement, no agreement is before any department of this Government, and no agreement is before this House, and no official information is before the House.

Mr. HOBSON. That is my impression.

Mr. MOORE. And yet we propose to volunteer to accept a

reported agreement suggested by a distinguished foreigner?

Mr. HOBSON. Mr. Speaker, I am inclined to think that before we get through it possibly might be wise to have a substitute for this resolution, which would commit our country to the principle of universal peace, and which would commit us to a balance and equilibrium of the nations, and when that equilibrium upon which they can agree is attained, then all who attain that equilibrium to stop building.

Mr. MOORE. Now, will the gentleman from Alabama yield

for one more question?

Mr. HOBSON. I will. Mr. MOORE. The gentleman from Missouri [Mr. Bartholdt] asked whether there might be a tremendous saving if such an agreement should be entered into by the nations of the earth, the President acting for the United States, so far as this resolution of request to him is concerned. Does the gentleman from Alabama believe the President of the United States will effectuate any such understanding with the nations of the world?

Mr. HOBSON. Well, I will say to the gentleman that the United States, being a friend of all and being absolutely disinterested in the rivalries of Europe, stands more in a position to be the advisor of all and, as it were, an umpire as to what would be just for all than any other nation in the world, and I would hate to see the United States lose any opportunity to offer its good offices if even only to present a precedent in that

Mr. DECKER. Mr. Speaker, along the line of the question asked by the gentleman from Pennsylvania, I would like to ask what the gentleman thinks of this proposition, as to whether or not, even if there had not been any official statement from England, or even if there had not been any newspaper comment, in his judgment would it be anything wrong if this resolution

came from the United States? [Applause.]
Mr. HOBSON. I am very glad the gentleman asked that question, and I think a substitute resolution would be very appropriate. I think that the resolution in its present form would not be quite fair to our own country, though I will say to the gentleman that my feeling is when we make a proposition we can afford to do it at a great personal sacrifice, relatively,

to ourselves.

Mr. HARDY. Will the gentleman yield for a suggestion? Mr. HOBSON. Certainly. Mr. HARDY. The gentleman has suggested that in all propriety battleships ought to have 10 per cent written off every year for depreciation. Now, I want to suggest that if we want to get rid of the equilibrium, if we pass this resolution and continue it for 10 years you will have written off 100 per cent for England and Germany and all would be even.

Mr. HOBSON. Pretty nearly.
Mr. HARDY. Then why not continue it for 10 years?
Mr. HOBSON. I want to say to the gentleman that involuntarily and by a sequence of coincidences that is what happened a few years ago.

Mr. HARDY. And ought to happen again.

Mr. HOBSON. I will tell the gentleman how it came about. It was not an arrest in building, but an evolution in the type of

Mr. SLAYDEN. It was the change from wood to steel. Mr. HOBSON. The result of leaping from the 16,000-ton type to the dreadnought type. The moment the dreadnought and superdreadnought appeared the fleets of all nations were obso-Now, Germany took advantage of that to start practically on the same footing as Great Britain. That is one reason why Germany is not willing to lose that advantage. Germany took advantage of the fact the British navy as well as the German navy was obsolete, and proceeded to build on a parity with the new British ships.

Mr. SLAYDEN. If the gentleman will permit—
Mr. HOBSON. Certainly.
Mr. SLAYDEN. The gentleman says he thinks a resolution in some other form should be substituted for this, and then he suggested that that should be a sort of platonic declaration, as, for instance: "Resolved, That the United States believes in universal peace." I have heard the gentleman from Alabama say-

I do not want to make a speech in his time, and I propose to give him time-

Mr. HOBSON. The gentleman is perfectly welcome.

Mr. SLAYDEN. I do not want to trespass on his courtesy. I have heard the gentleman make many speeches declaring himself for peace and battleships; declaring himself for peace and an augmented armament; declaring himself for peace and a policy which spells bankruptcy. I think the gentleman was president of an association to which Mr. McCreary, of Kentucky, belonged— Mr. HOBSON.

I had the honor to be vice president.

Mr. SLAYDEN. Well, I think the gentleman was the moving spirit in that association, and the gentleman was recognized by

Mr. HOBSON. I did not know I had such an honor.

Mr. SLAYDEN. And while, as a matter of fact, masquerading under the name of the "dove of peace," he was an "eagle," was he not?

Mr. HOBSON. If the gentleman will permit me, I will give

him an interpretation.

Mr. SLAYDEN. I wanted to ask the question, because everybody says he is for universal peace, and why under such circumstances take up the time of Congress by making the declaration?

I will say to the gentleman that a suggestion Mr. HOBSON. to be permanently helpful to the nations ought to be based on instice.

Mr. SLAYDEN. I am with you.
Mr. HOBSON. And it ought to be based on fairness to all, and that a proposition to stop building or to begin disarming should permit a starting point where there would be a just balance. And my point is that the United States of America is not at that point in a just balance. And I will show the gentleman a little later, if I have time, that that balance in the hands of a disinterested friend, in the hands of the nation that voluntarily announces that it will never annex another foot of territory by conquest, is of supreme importance in the great general evolution of universal peace and ultimate disarmament. And that will bring me to the point now which will conclude my introduction.

Mr. SLAYDEN. I thought the gentleman had reached his peroration.

Mr. SIMS. Will the gentleman from Alabama [Mr. Hobson]

Mr. HOBSON. Yes.

Is it your position that the United States should keep on building battleships until she is equal to Great Britain? Mr. HOBSON. I am reaching that point. My discourse is divided, like Gaul, into three parts. The question of difference in relative strength shows that if the cessation should be inaugurated now the United States would be left in the category of a third-class power along with nations of the resources of Italy, Japan, and France, and that it would leave her almost doubled by Germany and more than trebled by Great Britain. When it is realized that the United States is the one great power in all the world having its vital territory on both of the great oceans, it must be recognized at once that an adjustment of equilibrium of naval power under present conditions would not be fair to the United States.

If you look upon the Navy as you do upon the police, apportioned according to the property exposed, then, on our Atlantic seaboard and our Pacific seaboard and on our bays and harbors and our navigable rivers that could be either blockaded or entered by hostile ships, leading up from the sea, you will find that the United States has within gunshot of the water about 30,000,000 of people and about \$37,000,000,000 of property. Taking the same calculation for Europe, Asia, and Africa, it will be found that America has more lives and property exposed to naval attack than has all the rest of the world combined. Evidently it is not wise or just to condemn America to the grade of a single third-class power in naval protection-

Mr. HENSLEY. Now, right there—
Mr. HOBSON. Certainly.
Mr. HENSLEY. The gentleman from Alabama beyond doubt is familiar with the negotiations that were carried on between Great Britain and this country which brought about the disarmament of the Great Lakes. Are you not familiar with the fact that the representatives of the British Government in that connection made the same character of argument against the disarmament of the Lakes that you are making here now, and that if it had not been for the persistence of the Jefferson administration, with Mr. Monroe as Secretary of State, and Mr. Adams, who was the representative of this Government at Great Britain, we never would have brought about the disarmament of the Great Lakes, which has thereby saved this

Government hundreds of millions of dollars? Do you not appreciate that fact? Have you gone over and read the arguments made by the representatives of Great Britain in those

Mr. HOBSON. I have looked carefully into this question, Mr. Speaker, and I do not form my opinions from only the smooth words of diplomats who are seeking to put a foeman

at a disadvantage.

I will say to the gentleman that in a question involving Great Britain and Canala we might as well eliminate Great Britain from the equation. Great Britain is not armed along the Canadian frontier, because it would be useless.

Mr. HARDY. Mr. Speaker, will the gentleman yield?

The SPEAKER pro tempore (Mr. Russell). Does the gen-

tleman yield?

Mr. HOBSON. In just a second. It would be useless to arm, and Great Britain will never be a party to a war with America, for the reason that we have Canada as a hostage, and for the further reason that Great Britain has not an available standing army and could not on short order strike a blow of serious consequence to America.

Mr. HARDY. Will the gentleman yield right there? The SPEAKER pro tempore. Does the gentleman yield?

Mr. HOBSON. Just in a second. So that when we come to investigate and discuss the true proper relative position of America in a general question of equilibrium we can eliminate entirely the question of Great Britain. I am glad my colleague

brought that question up.

Mr. HARDY. I would like to ask just one question along that It occurred to me that a man going out to protect himself would not protect himself against somebody that he knew was not going to be hostile to him. Does the gentleman conceive that there is a possibility of England or Germany, the only two nations that have a stronger battleship fleet than we, ever making war upon the United States? And if not, then in falling to the third class, but with more battleships than any of those with whom there is a possibility of war, I believe the gentleman thinks about Japan. Now, if we have no danger of war with Germany and France and England, why is it necessary to build

fleet to compete with them? Mr. HOBSON. The gentleman has utterly misunderstood my statement. I eliminated only Great Britain from the equation. Mr. HARDY. The gentleman, then, thinks we ought to be

equal to Germany?

Mr. HOBSON. If the gentleman will wait a few minutes I will make a statement without appearing to single out any particular nation, that will enable him to realize the conditions that prevail.

Mr. HARDY. I will say further to the gentleman that I do not believe there is a possibility of Germany ever undertaking to attack the United States, and I think we are fully equal to any nation that could possibly do it.

Mr. HOBSON. I am glad the gentleman has the confidence of the Texan blood that flows in his veins.

Mr. HENSLEY. If the gentleman will yield, in that connection I will say that we have never had a serious quarrel with Germany, much less a war.

Mr. HOBSON. Will the gentleman allow me to give my con-

struction of that?

Mr. HENSLEY. Answer that question first.
Mr. HOBSON. I will answer that, and then will ask another

Mr. Speaker, if I remember correctly, it was in 1904 that Germany landed upon the soil of Venezuela and hoisted her flag. Of course it was then known that that act was in violation of the Monroe doctrine. This was undoubtedly realized in Germany, but the growing commerce with South America and the development of German colonies in South America prompted the step. Now, in 1904 Germany hoisted her flag in Venezuela. It was very fortunate that at that time-not from any concerted action on our part, not from any wisdom, but merely from the fact of the popularity of the national defense and the Navy as a result of the Spanish War—that we had a good fleet. We were the second naval power in the world, and our fleet available in the Caribbean, the Gulf of Mexico, and the Atlantic was probably 40 to 45 per cent superior to that of Germany, so that unquestionably if the man behind the gun in America was a good man-and he had demonstrated that he was-then America had undisputed control of the sea, and all Germany's armies could not send one soldier across the sea to Venezuela.

There was nothing for Germany to do, when we requested her to retire, but to retire, and she retired gracefully. But before we gave our request to her to retire we were human enough to assemble our whole fleet at Guantanamo, put it on a war footing, and dispatch Admiral Dewey from the Navy Department to take

command; and when he was there with the whole fleet we very courteously requested Germany to retire, and she retired gracefully. [Applause.]

Now, let us compare that with what happened with France, because the same question might be asked me about France as has been asked of me about Germany. What happened in the early sixties when we became embroiled in our Civil War? The

French invaded Mexico. We protested vehemently.

Our Secretary of State advised war. Our President, with great judgment, remarked, "One war at a time." The French ignored our protest. Maximilian remained in Mexico and proceeded to the conquest. When the war was over, as a result of that war, we had built the greatest fleet in the world. We had undisputed control of the sea, and furthermore the south-ern Confederacy was not dissevered, but was an integral part of the Union, and the way was clear for the armies to march to Mexico, and for the Navy to cut off all reenforcements from Our Government promptly dispatched Gen. Sheridan to the Rio Grande, organized for the invasion, had our fleet mobilized, and then courteously requested the French Govern-ment to retire, and the French Government promptly retired in peace. [Applause.]

Mr. MURRAY of Oklahoma. And Maximilian got his head

cut off.

Mr. HOBSON. Yes: France left him there to his fate, and

you know the rest.

Now, Mr. Speaker, say four years hence, when the proposition of all bands stopping naval construction had been carried out, and all the ships building and authorized had been completed. the obsolete and obsolescent ships put in ordinary, and Germany stood with 26 battleships and the United States with 12, what would be the situation? Germany would be in absolute control of the sea. Some may say that Eugland's strength in Europe would debar Germany taking advantage of this situation. Of course, fortunately for America, there has always been an equilibrium in Europe upon which, as statesmen know, depends the peace of Europe. But there have been various times in history when the great nations of Europe could, under European conditions, exert their power freely at a distance. It is very poor policy for any nation to rest its peace and security and its vital interests upon the equilibrium of other powers. China has done that, to her great discomfort. Turkey has really done it until she has been very nearly partitioned. It is not wise, it is not really patriotic, for Americans to leave their own country's defense hinging upon the balance of power and the equilibrium of Europe. With Germany in absolute control of the sea, a repetition of the Venezuelan incident would be full of grave danger.

Mr. SAUNDERS. Will the gentleman yield?
Mr. HOBSON. I will gladly yield in a moment. Now, I assume that the desire for the expansion of German commerce in South America has not declined since 1904. The immigration into Brazil and into Argentina of German settlers has been increasing in vast numbers, so that there would be the same motive behind Germany now as then to hoist her flag in Venezuela, or somewhere in Brazil, or somewhere in Argentina. With the Panama Canal completed the value of territory in Venezuela and the West Indies, and Central and South America, would be vastly enhanced, and a foothold on this continent would be of vast strategic value to any great military power of Europe. Assuming that for these reasons Germany hoisted her flag somewhere near the Panama Canal, or somewhere in South America, and violated the Monroe doctrine, I submit to the lovers of peace that when America called on Germany to haul down her flag. America should not stand in the relative position of 12 capital ships to 26, with Germany in absolute control of the sea, so that not only could her ships take the aggressive against our coasts, but her troops would be available to land and ours would for a long time be powerless to offer effective resistance. The Panama Canal would fall into their power, Porto Rico and Cuba

Mr. SAUNDERS. What I wanted to ask was this. I gather from what the gentleman says that the United States is to-day decidedly inferior to Germany in naval strength.

Mr. HOBSON. Yes. I have given the gentleman a statement

Mr. SAUNDERS. That being so, if Germany wanted to land in Venezuela to-day we could not hinder her?

Mr. HOBSON. We would make a pretty good showing now, because she has not finished building these ships. Germany is

now building 9 of these 26.

Mr. SAUNDERS. And we are building two. The gentleman is taking our figures of those building, as well as those of Germany? Mr. HOBSON. I am including ours that are building. Ger-

many is building nearly twice as many as we are.

Mr. SAUNDERS. Since there is nothing to hinder Germany should she feel disposed to do it, she could land in Venezuela

Mr. HOBSON. I would hate for America to have the task

of preventing her.

Mr. SAUNDERS. That being so, having reference to the relative building program of the two nations, the program of two battleships a year for us continues our inferiority.

Mr. HOBSON. I think two is entirely inadequate, but it is

not nearly as bad as none.

Mr. SAUNDERS. So if we want to prepare ourselves against Germany, our naval program ought to go much ahead of two battleships a year; that is the logical conclusion from the figures the gentleman has given?

Mr. HOBSON. I would be glad to tell the gentleman what our

duty is in relation to that matter, and I am coming to that

Mr. HAMLIN. Will the gentleman yield for a question? Mr. HOBSON. I will yield to the gentleman.

Mr. HOBSON.

Mr. HAMLIN. I want to ask the gentleman if he is opposed to this resolution, which would provide for the cessation of the building of battleships on the part of all the great nations of the earth, on the ground that Germany has now 26 to our 12? What assurance is there that if we go on and build until we have 26 Germany will not have built 40, and when are you ever going to stop?

Mr. HOBSON. I am glad the gentleman brings that up. That is the interesting point. My friends and colleagues, the race will stop as soon as America enters the race.

Mr. HAMLIN. England and Germany have been competing

a good while.

Mr. HOBSON. And they have pretty nearly the same resources. Their budgets put a heavy drain on those resources, but in America the question of our battleships is not more than the weight of a little finger on the Nation. Now, I will show the gentleman how the evolution will work. As long as the peace nations that produce with their industries and commerce remain with little power upon the sea, then the military nation that has got the force can go over the sea and get the spoils of war. There is a premium upon armaments. But if the nations of peace, the commercial, industrial nations establish an equilibrium on the seas so that the nation with a great armament can not pass over at will, then those armaments work a tremendous handicap, and they would not get the compensation, the spoils of war. We can make armaments unprofitable by establishing an equilibrium on the Atlantic and on the Pacific. so that the competitive forces of commerce and industry of all nations not borne down by armaments will put the military nations in the second and third class and compel their disarma-

Mr. HAMLIN. I can not understand or believe that these nations that already have the advantage the gentleman talks so eloquently about are going to give up that advantage. If we continue to build battleships they will continue to build until they become bankrupt.

For years we have not continued to build. Mr. HOBSON.

Mr. HAMLIN. But we are building now.

Not to amount to anything. You find us pass-Mr. HOBSON. ing down from double the strength of Germany in 1904 to onehalf the strength now.

Mr. HAMLIN. They might have doubled if we had kept on building

Mr. HOBSON. They have gone on building at a furious rate when America has stopped. Whether we build one or none a year, it is not going to help; but if we actually enter on the race we can say to the nations of Europe and Asia, "As we have pledged ourselves never to annex a foot of territory by conquest, so you shall never have a foot of the territory annexed by conquest in the Western Hemisphere." If we make that proposition, acting under the equilibrium I will mention in a moment, America on a parity with any nation of Europe in the Atlantic and with any nation of Asia in the Pacific, then, my friends, practically the two oceans—the oceans of destiny, the and the Pacific-will be under the condition of equilibrium, with the Monroe doctrine in the Atlantic and the opendoor policy in Asia both securely protected. The open-door policy in Asia and the Monroe doctrine in America would put all the nations of the world on a footing of equality of opportunity, and then the military nations, out of joint with modern times, nature having doomed them, would the more readily, almost instantly, agree that there can be found a substitute for war in the adjustment of international affairs. [Applause.]

This substitute will be an international organization for peace analogous to the national organizations within civilized peoples.

And the greatest promotion of the evolution of peace through international organization adequate for peace will be realized by America's performing this great, disinterested service to the world of establishing and maintaining equilibrium in the Atlantic and in the Pacific as against the great military powers of Asia and Europe.

Mr. BARTHOLDT. Mr. Speaker, will the gentleman yield?

Mr. HOBSON. Certainly.
Mr. BARTHOLDT. I have reference to something the gentleman said before. Comparisons are odious, and I think a comparison of the naval strength of the United States and that of Germany is most odious, because while we are celebrating a hundred years of peace with England we can celebrate perpetual peace with Germany. From the beginning of this Gov-ernment Germany has been our friend, and when the gentleman assumes that Germany ever had an intention of hoisting the German flag on South American soil he knows that is a most

unjust assumption to Germany.

Mr. HOBSON. Mr. Speaker, I happened to be at Manila during the concluding days of the War with Spain, and if there ever was anything clearly upon the cards of the nations it was German interference. It would be unnecessary for me to discuss that now. I hope that the gentleman will not infer that I do not believe every word that I have said—that our Government did not believe it when Germany hoisted her flag in Venezuela—and I will tell the gentleman, if he will recall just about that time, that Germany hoisted her flag at Kiaochow, in China, and said that she did it only to revene the murder of a Germany and said that she did it only to revenge the murder of a German missionary, practically with German pledges of going no fur-

Mr. MANN. Mr. Speaker, I hope the gentleman will not say anything that might involve us in a war with Germany.

Mr. BARTHOLDT. The gentleman is aware that Germany was the first European nation to support the open-door policy of Mr. Hay

Mr. HOBSON. Yes; and then went into the open door and

seized Kiaochow.

Mr. MANN. Mr. Speaker, partly for the purpose of diverting the subject, may I ask the gentleman a question? The gentleman a moment ago made a comparison of the fleets of Great Britain, Germany, and the United States, and what he said in reference to it seemed to lead to the proposition that the United States, because it has greater material prosperity or wealth, resources, could outbuild the other two countries.

Mr. HOBSON. I will tell the gentleman just exactly what The moment America announced that she proposes to maintain an equilibrium in the Atlantic Ocean as against the military nations of Europe, and that she proposes to maintain an equilibrium in the Pacific Ocean as against any military nation of Asia, that day that equilibrium will be accepted by all.

Mr. MANN. That is a pure assumption. Let us get at cer-The gentleman assumes that. I do not agree with tain facts.

him as to the facts.

Mr. HOBSON. I assume this, that any one of those military nations of Europe or Asia hearing a nation with our resources, to which I have referred, announce a determination which they knew was deep-seated in the hearts of our people, like the Monroe doctrine, they would readily recognize that we would make it good.

Mr. MANN. I do not want to get away from the proposition that, as I understand the gentleman, it is evident, if the United States enters into competition with these other countries, we can outbuild them, because we have the greater wealth be-

hind us

Mr. HOBSON. That is self-evident, and that is the conten-

Mr. MANN. Assuming that to be true, the gentleman says the other nations will all quit building.

Mr. HOBSON. No; the gentleman is mistaken in that.

Mr. MANN. That is what I understood the gentleman to say, that the moment we announced that we are going to cap the climax the others would quit?

Mr. HOBSON. If the gentleman will permit me, I will tell him what I did mean to say. I may have said what he thought I said, but I meant to say that we ought in the Atlantic and in the Pacific to lay down two simple propositions. I base them on self-preservation, because international law recognizes that, and does not recognize altruism.

Having no army ourselves and since it requires so many years to develop a great and efficient army, a period greater than the duration of modern wars, we could not be aggressive against any nation in the world, even if we had control of the

sea, as the fleet could not be aggressive, could not go ashore. But a great military nation, gaining control of the sea, could strike us with its army before our Army could be prepared. Therefore, having no army of our own, we are entitled to have a fleet on the Atlantic Ocean at least equal to the fleet of any power of Europe that has a great army behind its fleet, and a fleet in the Pacific Ocean at least equal to the fleet of any power of Asia that has a great army behind its fleet. On account of the vast distances we should, in spite of the Panama Canal, have this equilibrium in both oceans at the same time. Applying this to the conditions of to-day, our fleet in the Atlantic should be equal to that of Germany, and our fleet in the Pacific should be equal to that of Japan. In fact, before the world we would be entitled to have a superiority in both oceans. No nation could question our right to announce that we propose to control the seas in the Atlantic and in the Pacific with regard to any single military nation on either of those continents that has a great army that could strike us if we had not that control.

Mr. MANN. Will the gentleman yield further?
Mr. HOBSON. I will.
Mr. MANN. If I understand the position of the gentleman, it is that we ought to have a fleet on the Atlantic Ocean at least equal to the German fleet and that we ought to have a fleet on the Pacific Ocean at least equal to the German fleet-

Mr. HOBSON. The Japanese.
The SPEAKER. The time of the gentleman from Alabama has expired.

Mr. SLAYDEN. Mr. Speaker, I ask that the gentleman be

allowed-how much time?

Mr. HOBSON. Let me go a while, and I will get through as soon as I can.

Mr. SLAYDEN. That his time be extended for half an hour. The SPEAKER. The gentleman from Texas [Mr. SLAYDEN] asks unanimous consent that the gentleman from Alabama [Mr. Hobson] may have his time extended for 30 minutes. Is there objection? [After a pause.] The Chair hears none.

Is not the statement correct?

Mr. HOBSON. That is what I was coming to, and that is

what I believe is the sound policy of this Government.

Mr. MANN. Then I want to get really to this point; if this is the position the gentleman takes, and which he thinks this Government ought to take, is not the necessary corollary of it that Germany will keep on increasing its fleet and that in the end each nation will proceed until one is bankrupt, and that there is no stand between the two; it is competition until bankruptcy. [Applause.]
Mr. HOBSON. I will say to the gentleman this. I will say

to the gentleman that it is competition until America establishes that equilibrium, and then competition ceases, for no nation with heavy armies would think for an instant that the bank-

ruptcy could fall anywhere but on itself.

Mr. SLAYDEN. Mr. Speaker, will the gentleman— Mr. HOBSON. When America announces that proposition that no matter what the size of the navy of any military power

on the Continent of Europe or Asia we propose, having no army, to have a navy of equal size in the Atlantic and of equal size in the Pacific, respectively—that day we are practically left out, for they know there can be no race with America. Then it is that the nations of the earth would not take America into account in their competitions. Then it is, I am persuaded, that we would soon find that the Monroe doctrine would be a reality. That brings me to my second part. When we have that position, the Monroe doctrine would be accepted in the Atlantic and the open-door policy would be accepted in the Ariante and the open-door policy would be accepted in the Pacific by all nations. Then the great competition, not of the sword but of production, would begin, the civilization of the bayonet would fall, undermined in its own stronghold. The very weight of the unprofitable burdens would bring these nations in the shortest time to seek an organization for peace that will take the place of armaments. Equilibrium in the Atlantic and the Pacific through American fleets is, then, the shortest cut to general disarmament

and universal peace. Mr. MANN. Does the gentleman mean early bankruptcy is

necessary? Is that the shortest cut?

Mr. HOBSON. Yes; if the European nations go on as they are now, and as, clearly, Germany intends to go on, irrespective of propositions from Great Britain and others.

And we must outbuild her two to one until she

Mr. HOBSON. I have never suggested that proposition—
Mr. MANN. You say that we should have a fleet on the Atlantic Ocean equal to Germany's, and on the Pacific equal to Germany's fleet.

Mr. HOBSON. On the Pacific equal to Japan's fleet.

Mr. MANN. The gentleman said a fleet in each ocean equal to any fleet that had an armament.

Mr. HOBSON. Equal to the fleet of any military nation on that ocean.

Mr. SLAYDEN. Mr. Speaker, I would like to ask the gentleman whether, if there are two kinds of equilibrium, one of which is so expensive that it means bankruptcy, which he confesses it does, and the other an inexpensive equilibrium, which is suggested by the Hensley resolution, if it would not be in the interests of the people to adopt the inexpensive one? [Applause.

Mr. HOBSON. I will say to the gentleman from Texas that Mr. HOBSON. I will say to the gentieman from Texas that if we could get universal peace by signing a parchment, of course we want it that way, but what we are talking about is how to really get at it. I will develop that in a moment. But here is a point I want to reply to in response to the gentleman from Illinois [Mr. Mann]: When America made the open-door policy effective in the Pacific as the result of her unquestioned right to have a fleet there equal to that of Japan, and made the Monroe doctrine effective on the Atlantic by having there a fleet equal to that of Germany, then with the rights of the weak protected beyond the oceans and equality of opportunity for trade guaranteed to all, the German Government would lose speedily the hope, if it entertains any, of despoiling the British Empire, whether in territory or in commerce, and the German Government and other Governments then, and, in my judgment, not until then, would give serious consideration to the cessation of the armaments.

Mr. SAUNDERS. Now, the gentleman says, suggesting a line of policy, that we could make the Monroe doctrine effective in the Atlantic. May I ask him if it is not effective there

to-day?

Mr. HOBSON. It is not.

Mr. SAUNDERS. Why not? Has it not been effective from the moment it was announced?

Mr. HOBSON. It has not.

Mr. SAUNDERS. When has it been broken into or overridden by any nation across the water?

Mr. HOBSON. I told you it was when Maximilian came into Mexico.

Mr. SAUNDERS. But Maximilian got out. [Applause.]

Mr. HOBSON. Yes; when we got control of the sea. Mr. SAUNDERS. Was it not made effective?

Mr. HOBSON. As the result of having control of the sea-Mr. SAUNDERS. It is effective.

Mr. HOBSON (continuing). And we will make it effective again when we get control of the sea, and not until then.

Mr. SAUNDERS. We will make it effective whenever it is necessary to do so.

Mr. HOBSON. It is necessary now.

Mr. SAUNDERS. What threatens us now, I would like to know?

Mr. BUCHANAN of Ilinois. The nations of the world must secure their men who fight the battles of the nations from the poor people of the country, as the great mass of the people are poor people, and they bear the burden of the expense of war. I think the gentleman will not deny it. Does he take into consideration the fact that the peoples of all countries are becoming better educated, with a higher standard of civilization, and does he not understand that we are getting to that point in civilization that the masses of the people are not going to any longer permit themselves to be used in bearing the burden or the ex-pense of the Government, or to be shot down in battle, in a war that is for the pursose of greed or power or wealth, but only in a war based on grounds of justice?

Mr. HOBSON. I am very glad the gentleman asked me that question, and it brings me to the third part of my discussion,

and then we can gather up the butchered parts when I get a

chance to make my speech.

Mr. HENSLEY. I desire to ask you whether or not this will in any particular affect the status of the different nations of the world if an agreement should be entered into by and between these countries, whether or not in this connection Mr. Churchill's declaration is clearly applicable, which is as follows: That at the end of the year you might have all of these great countries just as safe and just as strong as they will be if they build all the ships they have in mind at the present time, and a vast treasury of many millions or scores of millions would have been arrested for the progress and enlightenment of mankind? Our positions, then, would be unchanged relatively if, by adopting this proposi-

tion, we take a year off.

Mr. HOBSON. I understand the gentleman's contention, and if Germany were willing to accept with England she would accept irrespective of America's suggestion. If she were not

willing to accept the proposition from England, America's suggestion would be of little or no moment. But I agree with the gentleman that America ought not to lose any opportunity to put itself in the light of being the friend of all.

Mr. HENSLEY. Now, one more question in that connection, I would rather the gentleman would not go further before I ask it. The gentleman from Alabama is familiar, beyond doubt, with the negotiations between this country and Great Britain that brought about the disarmament of the Great Lakes, and is he not aware of the fact that it required nearly three years of persistent efforts on the part of this Government to bring about the disarmament of the Great Lakes, and does he not think this is the proper time for this Government to get active and do everything in its power to bring about a thing for which all good citizens should hope? The process is an intricate one.

Mr. HOBSON. If the gentleman will allow me to sum up in one word just about where his resolution stands in fact, I would say, modified slightly, to have America recommend to European nations the cessation of building operations.

Mr. HARDY. Will the gentleman allow me one question right there?

The SPEAKER pro tempore. Does the gentleman yield?

Mr. HOBSON. Yes.
Mr. HARDY. Does not that remind the gentleman of the two boys who were hitting each other on the head, and one was hallooing to his mother to "come and make Bill stop," all the while hitting Bill on the head as hard as he could? [Laughter.]

Mr. BUTLER. Mr. Speaker, will the gentleman yield?

Mr. HOBSON. Certainly.

Mr. BUTLER. The gentleman from Alabama and I have fought many battles side by side in favor of naval armaments. We have, and we have lost a good many.

Mr. BUTLER. We have, and we have been grievously disappointed when we lost them.

Mr. HOBSON. But we have only begun to fight, have we

[Laughter.]

Mr. BUTLER. That will only be determined by circum-I have advocated large armaments for 17 years, in order that we might preserve the peace of the world and help to do it. Now, will not my friend agree with me that if we can do it by resolutions, it is better and cheaper to do it in that way than with cannon?

Mr. HOBSON. Yes; and I will say to the gentleman that right there it brings me to an interesting point. a resolution could not have more than the binding effect of a treaty, a solemn treaty.

Mr. BUTLER. That is true; but is it not a good thing, and

leading in the right direction?

Mr. HOBSON. Certainly it is; and I will tell in a few minutes, if you will permit me, about the value of a resolution, and even the value of a treaty. About the most important treaty that ever was entered into was the treaty of Berlin, in 1878, all of the European powers being party to it; a treaty that was going to protect the integrity of the Ottoman Empire. Now, then, Austria-Hungary proceeded to seize Bosnia and Herzegovina, Austria being a signatory to that treaty, and yet not a single power raised an objection. In fact, Germany and Italy backed her up in doing it. Turkey depended upon the solemn treaty for security.

Take, likewise, the open-door policy. It was solemnly agreed that Manchuria should not be seized, or any part of China; and yet Russia went through Manchuria and came to Port Arthur. When we called upon her to retire, she laughed in our faces and would not even let our consuls go to the ports in Manchuria where the Chinese Government had given them credentials to They had to remain over in Japan. As a matter of fact, if we had had this equilibrium in the Pacific Fleet that I am referring to, Russia would never have gone into Manchuria or Port Arthur; or, if she had, she would have gotten out when we made the request, just as Germany got out of Venezuela, and there would have been no war between Russia and Japan.

Now, that brings me down to my third proposition-the real evolutionary road to peace: There are certain obligations that every living thing owes to its Maker. Self-preservation is the first, and until there is some joint or associate provision made for self-preservation superior to individual means an individual can not, under the laws of nature and of nature's God, give up the individual means. Now, study the evolution of peace. Families used to fight each other up to the time when they found that they were menaced as a whole by stronger families, and then families with blood relationship got together and formed a The families did not disarm when they formed a clan until after the clan armament demonstrated that it could give them better security than the family armaments. The clans

finally stopped fighting each other for various reasons, chiefly because of a common menace. Then they came together and formed a tribe for a better united capacity for self-preservation.

But the clans never gave up their armament until the tribe protection was demonstrated to be better than the clan protection. And at last, when the tribes, for instance in the British Isles, gave up fighting amongst themselves in the face of a common enemy and laid the foundations of a nation, it was not until the nation's power to protect those tribes had been fully dem-

onstrated that the tribes gave up their armaments.

Even to-day in any civilized community there is no government in the world that asks an individual to surrender the right to protect himself. Even the carrying of weapons is not prohibited, but only regulated. Any man may go armed to the teeth, if he wishes; if he will simply not carry weapons concealed, so as to take advantage of somebody else. But men do not go armed. Why? Because the community protection has been found more effective for self-preservation than individual protection. Now, Mr. Speaker, we have reached a new stage in the evolution of humanity, and this stage is coming very much more rapidly than the pages of history would indicate. The earth has recently changed from a cold-blooded creature with slow circulation by osmosis into a warm-blooded creature with a warm, vibrating circulation. It is all bound up together. Now, those are two far different types of creatures, and far different characteristics are found in them. In the warmblooded creatures it is quickly realized that a harm to any part is a harm to the whole, and the world is fast beginning to realize that it is not to the advantage of any to harm any other. Advantage actually comes in cooperation; and the very contest for survival in the new era that is upon us is not the power of might and brute force to destroy, but it is the capacity and the

willingness to cooperate and actually to serve.

A new era is upon the world, and the possibility of disarming is before us. Do not let us make a mistake. Do not let us give disarmament and peace a setback for generations by trying superficial and temporary makeshifts. Let us proceed in the evolutionary method of nature and find the shortest road. Armaments are out of joint, for the reason that it is productiveness that now counts, and just as soon as you can take away the power of armaments to gain anywhere spoils the equivalent of which they could not produce in peace then the complete unprofitableness of armaments will be demonstrated, and then you will have very little difficulty, my friends, in bringing the nations of the earth to join in developing an international organization. The time is really at hand for laying the foundation of the merging of the nations of the earth into a great universal brotherhood. I do not mean all at once, but, to start with, to have this united condition of the world able to guarself-preservation, able to guarantee the rights and the vital interests of individual nations, and then to show the capacity to settle the differences that arise between nations by recourse to justice instead of to might and to war. that is demonstrated, and not until then, can you ask any nation to give up what to it appears to be the necessary provision individually for self-preservation. Without such a condition any concerted disarmament would be but momentary and would retard real progress.

The shortest road toward world organization and then peace can be cut out by America. It is really wonderful how we stand on the apex of the world, to bring in this new era upon the earth. We ourselves in our own tissues represent the coming together of all the other nations that now hate each Even the Jew and the Gentile are reconciling their other.

differences here.

Take the Saxon and the Slav, take the Teuton and the Latin nations, and the rest of Europe with their inherited hatreds of the ages; they are all mingling their blood in America, demonstrating that they do not have to destroy, that practically they can give up their hatreds and get together on a common

basis for the common good.

And bear in mind that we embody in our own institutions the principle of equality of opportunity, of a fair chance for all, and only when that eternal principle is established over the face of the earth can you have the basis for peace.

My friends, America's every move in the councils of the world will project outwardly this principle of our institutions, that of equality of opportunity. And if we will simply do our duty at this juncture to establish in the Atlantic a fleet commensurate with our necessity of self-preservation and our obligations under the Monroe doctrine, an equality of opportunity will prevail in the whole Atlantic Ocean.

If we do the same with the Pacific and the open-door policy will prevail, then, under these two policies, there will be an opportunity for the peace conferences of the world to operate without the demoralization of war. They will not be dis-turbed by the powerful nations across the Pacific pillaging the East, for instance. The great organic forces of commerce and industry, the educational forces, and the moral and religious forces of the world will speedily destroy militarism, and the nations will find that armaments are really unprofitable and not necessary for self-preservation and not available for spoils.

With such a condition prevailing we could with assurance of success call on the nations to give progressively more and more authority to their delegates to the succeeding Hague confer-

Heretofore the delegates to The Hague conference have had practically no authority, and the military nations would not agree to give them even advisory powers. We have the embryo in The Hague conference from which to develop an adequate international parliament. We have in The Hague Tribunal the elements for developing an international judiciary. If there were appointed at a Hague conference an adequate committee, with power to codify what is known as international law in an authoritative way and practically lay down precedents of international obligations, and establish a basis of international common law, then at some future Hague conference, through proper powers delegated by all the nations, actually giving jurisdiction to The Hague Tribunal, we would have an evolutionary process going on for developing an adequate international judiciary. But even that will not be adequate. There never yet has been any permanent basis of peace under any civilized laws, however good those laws, until there was some power behind the law that could make the law good. So that we must ulti-mately fulfill a condition where there will be a council of the nations, an executive council, practically, with supreme power and authority, to which the nations would send their armaments and tend ultimately to pool their armaments, giving that council of the nations greater power than any individual nation, subordinating to that degree the individual sovereignty of the nations, and then when that international organization-legislative, judicial, and executive—demonstrates fully that it can protect individual nations in their rights and vital interests, when it is demonstrated by experience that it can settle the disputes and differences that arise between the nations of the earth by recourse to justice instead of war, then it is that you will have general and universal disarmament.

But even then it will be voluntary. You never yet disarmed a man by law, and you can not disarm the nations of the earth by a resolution or by treaty. If you did, having no organiza-tion for justice, they would soon fall out and begin over the struggle of armaments. Individual nations of the earth will never disarm and can not be asked to disarm until their vital

interests are guaranteed by some common agency.
Mr. BUTLER. Will the gentleman yield?

Mr. HOBSON. Certainly.
Mr. BUTLER. Is it not better to do good than to do bad?
My friend and I know that it is a bad thing to appeal to the brute force as we have been doing when building battleships. am going to vote for more ships, and I do not think voting for this resolution prevents me; but if other nations will agree to put down their armaments I will readily agree.

Mr. HOBSON. The gentleman can well see that Germany

has not agreed.

Mr. BUTLER. That is true, and Germany must agree; all the other nations must agree.

Mr. HOBSON. Japan has not agreed. Mr. BUTLER. But is not this in the right direction; is it not an appeal to them to agree with us, that we will omit the business of building ships of war with which to destroy each other?

Mr. HOBSON. I think if it were extended over 10 years, with America building one battleship a year, it would be a period long enough to put us on an equality, taking account of the obsolescence that would set in. If they would agree to 10 or 20 years under these conditions, then we could start all over again; even then what would be the gain in the long run? As long as human nature continues I do not care whether you agree or not by treaty or resolution, there would be fallings out, like neighbors do, in the most civilized community, and, having no international law and no power to enforce justice, you would not have peace in the world, but a quick recession to the same strifes and struggles as of old.

Next to doing away with law, the poorest way on earth to get peace in any neighborhood is to do away with the power that is there behind the law, and when you go out on the frontier. as the nations of the world are to-day upon the frontier, where there is no law, no police, the poorest way in the world to establish an organization that will work toward peace and establish

law and order would be for the good people, the law-abiding and peaceful citizens to disarm themselves and let the others, the semicivilized and those inclined to disorder, control the destinies of that community. The real, practical road toward peace on any frontier is for the good people to get together and have more power than the bad, and not until then can you restrain the bad and get a chance for your schools and churches to convert the bad and educate them. As sure as the gentleman lives, unless you provide a working means among the nations of the earth to give to each nation that vital protection to which it is entitled under nature and under the obligation of nature's God, until you can supply the machinery that will settle the differences between nations that must arise, by recourse to law, founded on justice, until that time, no matter what you do about armaments, you will not have laid the foundations of peace.

The poorest thing that an advocate of peace can do is to have the one peaceful nation of the world, the one nation that only wants equality of opportunity, the one nation that re-nounces any desire for conquest, the one nation that is the friend of all, the friend of the weak as well as of the strong, the one nation that embodies the elements and truths of the new era—the poorest thing that an advocate of peace can do is to have that nation kept impotent in the world's councils by being without power as compared to the military nations of the world. If you want to promote the real cause of peace. to have it evolve out of human nature, then help us to have our country respected when she proclaims that the Monroe doctrine shall be a reality and the open-door policy a truth. It all means, Mr. Speaker, that an adequate Navy for America, as called for by the Democratic platform of Baltimore, is not only the surest, cheapest, simplest, the only way for peace and security at home, but is the shortest, quickest, effective path leading ultimately to voluntary disarmament in the peace of the world.

### ADJOURNMENT.

Mr. UNDERWOOD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; and accordingly (at 4 o'clock and 46 minutes p. m.) the House adjourned until to-morrow, Wednesday, December 3, 1913, at 12 o'clock noon.

### EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows

1. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on examination of Muskegon Harbor, Mich., with a view to closing the gap in the south revetment (H. Doc. No. 352); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

2. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on examination of Old (Trinity) River, in Chambers County, Tex., with a view to securing increased depth (H. Doc. No. 351); to the Committee on Rivers and Harbors and ordered to be printed.

3. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on examination and survey of Hudson River at Ossining, N. Y. (H. Doc. No. 350); to the Committee on Rivers and Harbors and ordered to be printed, with illustration.

4. A letter from the Secretary of the Interior, transmitting an itemized statement of expenditures made by the department and charged to the appropriation "Repairs of building, Department of the Interior," for the fiscal year ended June 30, 1913 (H. Doc. No. 349); to the Committee on Expenditures in

the Interior Department and ordered to be printed.

5. A letter from the Secretary of the Interior, transmitting an itemized statement of expenditures made by the department and charged to appropriation "Contingent expenses, Department of the Interior," for the fiscal year ended June 30, 1913 (H. Doc. No. 348); to the Committee on Expenditures in the

Interior Department and ordered to be printed.

6. A letter from the Secretary of the Navy, transmitting a list of officers and employees of the Navy Department, who, during the fiscal year ended June 30, 1913, traveled on official business from Washington, D. C., to the points named (H. Doc. No. 347); to the Committee on Expenditures in the Navy Department and ordered to be printed.

7. A letter from the Secretary of the Treasury, transmitting the statement of contingent expenses of the Treasury Department for the fiscal year ended June 30, 1913 (H. Doc. No. 354); to the Committee on Expenditures in the Treasury Department and ordered to be printed.

A letter from the Secretary of the Interior, transmitting, with a letter from the surgeon in chief of the Freedmen's Hos pital, statement of expenditures for salaries, etc., for fiscal year ended June 30, 1913 (H. Doc. No. 346); to the Committee on Expenditures in the Department of the Interior and ordered to be printed.

9. A letter from the Secretary of the Interior, transmitting, with a letter from the surgeon in chief of the Freedmen's Hospital, a detailed statement of the receipts and expenditures on account of pay patients received in the Freedmen's Hospital during the fiscal year ended June 30, 1913 (H. Doc. No. 344); to the Committee on Expenditures in the Department of the Interior and ordered to be printed.

10. A letter from the Secretary of the Interior, transmitting. with a letter from the Superintendent of the Government Hospital for the Insane, a detailed statement of the expenditures of said hospital for the fiscal year ended June 30, 1913 (H. Doc. No. 342); to the Committee on Expenditures in the Department of the Interior and ordered to be printed.

11. A letter from the Secretary of Commerce, transmitting detailed explanations in regard to certain items in the Book of Estimates of Appropriations for 1915 (H. Doc. No. 345); to the Committee on Appropriations and ordered to be printed.

12. A letter from the Secretary of War, transmitting a signed copy of the Twenty-third Annual Report of the Board of Ordnance and Fortifications covering the fiscal year from July

1, 1912, to June 30, 1913 (H. Doc. No. 341); to the Committee on Military Affairs and ordered to be printed.

13. A letter from the Secretary of War, transmitting statements submitted by the Chief of Ordnance, United States Army, of the expenditures and of arms, components of arms, and appendages fabricated, altered, and repaired during the fiscal year ended June 30, 1913, at the Springfield Armory, Springfield, Mass., and at the Rock Island Arsenal, Rock Island, Ill. (H. Doc. No. 340); to the Committee on Military Affairs and ordered to be printed.

14. A letter from the Secretary of the Treasury, transmitting an abstract of the official emoluments of officers of the customs service received by them during the fiscal year ended June 30, 1913 (H. Doc. No. 426); to the Committee on Expenditures in the Treasury Department and ordered to be printed.

#### REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. PADGETT, from the Committee on Naval Affairs, to which was referred the bill (H. R. 8667) to promote the efficiency of the Naval Militia, reported the same with amendment, accompanied by a report (No. 94), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. HAY, from the Committee on Military Affairs, to which was referred the bill (H. R. 7138) to provide for raising the volunteer forces of the United States in time of actual or threatened war, reported the same with amendment, accompanied by a report (No. 95), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. WATSON, from the Committee on Labor, to which was referred the bill (H. R. 1933) to limit the effect of the regulation of interstate commerce between the States in goods, wares, and merchandise wholly or in part manufactured, mined, or produced by convict labor or in any prison or reformatory, reported the same without amendment, accompanied by a report (No. 93), which said bill and report were referred to the House Calendar

Also, memorial of the various business associations of north-eastern section of Philadelphia, favoring passage of bill for appropriations for Frankford Arsenal improvements; to the Committee on Appropriations.

## SENATE.

# Wednesday, December 3, 1913.

The Senate met at 10 o'clock a. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D. The Journal of yesterday's proceedings was read and approved.

REPORT OF THE ISTHMIAN CANAL COMMISSION (H. DOC. NO. 426).

The VICE PRESIDENT laid before the Senate the following message from the President of the United States, which was rend and referred to the Committee on Interoceanic Canals and ordered to be printed:

To the Senate and House of Representatives:

Pursuant to the requirements of chapter 1302 (32 Stats., p. 483), "An act to provide for the construction of a canal connecting the waters of the Atlantic and Pacific Oceans," approved June 28, 1902, I transmit herewith the annual report of the Isthmian Canal Commission for the fiscal year ended June 30, 1913,

WOODROW WILSON.

THE WHITE HOUSE, December 2, 1913.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed the bill (S. 2318) authorizing the appointment of envoys extraordinary and ministers plenipotentiary to each Paraguay and Uruguay.

MARITIME CANAL CO. OF NICARAGUA (H. DOC. NO. 362).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, the report of the Maritime Canal Co. of Nicaragua, submitted December 1, 1913, which, with the accompanying paper, was referred to the Committee on Interoceanic Canals and ordered to be printed.

SPRINGFIELD ARMORY AND ROCK ISLAND ARSENAL (H. DOC. NO. 340).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of War, transmitting, pursuant to law, a statement submitted by the Chief of Ordnance, United States Army, of the expenditures for arms, components of arms, appendages fabricated, altered, and repaired during the fiscal year ended June 30, 1913, at the Springfield Armory, Springfield, Mass., and at the Rock Island Arsenal, Rock Island, Ill., which, with the accompanying paper, was referred to the Committee on Military Affairs and ordered to be printed.

REPORT ON ORDNANCE AND FORTIFICATIONS (H. DOC. NO. 341).

The VICE PRESIDENT laid before the Senate the twentythird annual report of the Board of Ordnance and Fortifications for the fiscal year ended June 30, 1913, which was referred to the Committee on Military Affairs and ordered to be printed.

TRAVEL OF EMPLOYEES OF INTERSTATE COMMERCE COMMISSION.

The VICE PRESIDENT laid before the Senate a communication from the Interstate Commerce Commission, transmitting, pursuant to law, a statement'showing the travel of officials and employees of the commission on official business from Washington to points outside the District of Columbia during the fiscal year ended June 30, 1913 (H. Doc. No. 369), which, with the accompanying paper, was referred to the Committee on Appropriations and ordered to be printed.

He also laid before the Senate a communication from the Interstate Commerce Commission, transmitting, pursuant to law, a statement of expenses incurred by officers and employees in connection with meetings or conventions under written authority of the Secretary of the Interstate Commerce Commission (H. Doc. No. 363), which, with the accompanying paper, was referred to the Committee on Appropriations and ordered to be

printed.

BUZZARDS BAY BUOY, MASSACHUSETTS (S. DOC. NO. 254).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of Commerce, transmitting, in response to a resolution of the 25th ultimo, certain information relative to the placing of buoys and the marking of that part of the public navigable waters of the United States in Buzzards Bay, Mass., etc., which, with the accompanying paper, was referred to the Committee on Commerce and ordered to be printed.

T. L. LOVE V. UNITED STATES (S. DOC. NO. 255).

The VICE PRESIDENT laid before the Senate a communication from the Chief Justice of the Court of Claims, requesting that the findings and opinion of the court in the case of T. L. Love, surviving partner of Robert Love & Son, v. United States

be returned to the court for further examination, which was referred to the Committee on Claims and ordered to be printed.

BRIG "LITTLE JOHN BUTLER" (S. DOC. NO. 256).

The VICE PRESIDENT laid before the Senate a communication from the chief justice of the Court of Claims, requesting that the findings of the court in the French spoliation case of the brig Little John Butler, Smith, master, be returned to the court for further examination, which was referred to the Committee on Claims and ordered to be printed.

#### SAN FRANCISCO WATER SUPPLY,

Mr. GALLINGER. Mr. President, I find in my mail numerous letters and telegrams in the nature of memorials relating to the Hetch Hetchy bill, which is now under consideration. not ask to burden the RECORD with these letters and telegrams, but I will ask unanimous consent to have one of the telegrams read.

There being no objection, the telegram was read and ordered to lie on the table, as follows:

BOSTON, MASS., December 2, 1913.

Hon. JACOB H. GALLINGER, Senate Chamber, Washington, D. C.:

Senate Chamber, Washington, D. C.:

I respectfully urge the importance of voting against Hetch Hetchy bill, and thus helping to prevent an irreparable injustice from being committed against the American Nation. This is not a plea put forth by mere sentimentalists or enthusiasts, but the best intelligence and forethought of the entire country are against the proposed scheme. Other practicable sources of supply are available for San Francisco. Hetch Hetchy Valley, which would be ruined by reservoir scheme, is the essential key to northern half of Yosemite National Park. It can be made readily accessible. This is not a passing question of to-day, but for all time. I respectfully and earnestly urge you to oppose such a dangerous precedent as giving away without real necessity an essential part of a precious national possession.

G. F. Schwarz,

G. F. Schwarz, Hampton Court, Brookline, Mass.

Mr. PERKINS. Mr. President, I have had sent to me by mail from San Francisco petitions signed by 20,000 representative citizens of that city, praying for the passage of the bill giving San Francisco the right to use the waters of the Hetch Hetchy reservoir site. I ask that one of the petitions may be

read and that they may all lie on the table.

The VICE PRESIDENT. Without objection, one of the petitions will be read, omitting the names.

The Secretary read as follows:

YOUR DUTY IS TO LET SAN FRANCISCO HAVE THE WATER SUPPLY IT NEEDS POR ITS FUTURE PRESERVATION.

To the Senate of the United States:

We, the undersigned citizens of California, ask your favorable action on the bill giving San Francisco the right to use the water of the Hetch Hetchy reservoir site.

The Tuolumne River in the Hetch Hetchy Valley furnishes the only available water supply not under private ownership. San Francisco owns three-fourths of the land in that valley in fee simple and it only requires your favorable action on this bill to let us utilize our ownership of that land so that it will procure for us a water supply without which the future of San Francisco is endangered.

San Francisco's need of this water supply is urgent and imperative. Without it the city is throttled; its health menaced; its development blocked.

The Government of the United States has completed the Panama

The Government of the United States has completed the Panama Canal. One of the principal benefits looked for from this magnificent enterprise was the development of the western edge of the United States, of which San Francisco is the metropolis. No benefit can accrue to San Francisco through the Panama Canal if there is withheld from it a water supply capable of sustaining the health and life of the com-

it a water supply capable of sustaining the health and life of the community.

Senators of the United States, San Francisco asks you for simple justice; for fair play. You have already granted to Seattle, to Portland, and to Los Angeles the use of Federal reserves which gave those cities the water supplies they needed.

The need of no city ever has been so great as the need of San Francisco in this emergency.

We ask your favorable vote on this bill, which will give San Francisco the only available water supply adequate to supply its present and future needs.

The VICE PRESIDENT. The petitions will lie on the table.

Mr. PERKINS. I present a petition of citizens of Alameda County, Cal., praying for the passage of the pending Hetch Hetchy bill. It is signed by several hundred citizens. I ask that it may be read.

There being no objection, the petition was read and ordered to lie on the table, as follows:

PETITION TO THE SENATE OF THE UNITED STATES.

PETITION TO THE SENATE OF THE UNITED STATES.

The undersigned citizens of Alameda County carnestly ask that you act favorably on the bill giving San Francisco the right to use the Hetch Hetchy Reservoir site.

We ask this for several reasons.

San Francisco, through the Spring Valley Water Co., is now taking from this county its water supply, doing our county great damage, and if the Spring Valley Co. is allowed to perfect present plans will destroy the future prosperity of both Washington and Pleasanton Townships, one of the most fertile sections in California.

The People's Water Co., supplying the city of Oakland, is also drawing its principal water supply from Washington Township, adding to the damage already done and now being done by the Spring Valley

Co. Our underground water levels are now the lowest in their history, having gone down steadily with the increasing demands made upon them by the two big companies.

Millions of dollars worth of property in this county are threatened with destruction if the bay cities are permitted to continue their demands upon our water supply.

This county needs all the water its watersheds afford right now. It will need much more in the immediate future. The Hetch Hetchy supply is necessary to save our county from further destruction. It is our only hope. only hope.

Mr. WORKS. I submit a telegram from John E. Williams, secretary of the water users' association, which I ask may be read.

There being no objection, the telegram was read and ordered to lie on the table, as follows:

CERES, CAL., December 2, 1913.

CERES, CAL., December 2, 1913.

Senator Works,
Care W. C. Lehane, Congress Hall Hotel,
Washington, D. C.:

Mass meeting held December 1. Unanimous opposition to attitude and acts of board of directors in supporting in any way the Raker bill. Unanimous in condemning the attitude of the board refusing to appropriate \$2,500 asked by the people of Turlock district to fight Raker bill. Unanimous in condemning adoption by board of resolution of appropriate to the Raker bill. Contrary to the belief and wishes of a great majority of water users and taxpayers. Committee appointed to compel appropriation of money. Probable demand for resignation of directors or recall proceedings.

JOHN E. WILLIAMS,

JOHN E. WILLIAMS, Secretary of Water Users' Association.

Mr. WORKS. I also submit a telegram from T. C. Hocking, of the Modesto Morning Herald, on the same subject, which I ask may be printed in the RECORD without reading.

There being no objection, the telegram was ordered to lie on the table and to be printed in the RECORD, as follows:

Modesto, Cal., December 2, 1913.

Modesto, Cal., December 2, 1918.

Senator Works.

Washington, D. C.:

October 6 I signed with others telegram published in Congressional Record October 7, page 6072. Modesto Morning Herald, of which am owner and editor, is by far largest circulated paper Stanislaus County, embracing Modesto-Turlock irrigation districts. Line up in Congress and Cabinet at that time seemed to leave us no hope beyond Raker bill compromise, although I have ever contended no water should be taken from this semiarid valley when can be obtained (and at less cost) from nonarid sources. Since October 6 San Francisco Chronicle and other influences there, assuming victory for Raker bill, have repeatedly declared bill of no effect save for grant to San Francisco, and that promptly on passage action be brought to set aside all but grant.

Further, now find full 95 per cent water users opposed to bill. If bill passed, limits our resources and leaves to perpetual aridity 200,000 acres additional. We have added 20,000 prosperous people because of irrigation to Modesto-Turlock districts in less than 10 years, and have room in same districts 20,000 more. Bill should be killed. San Francisco can get three times present supply from Spring Valley sources and more water at less cost from nonarid sources than from Hetch Hetchy power. Opportunities and rich pickings therefrom for politicians through leasehold privileges represent milk in coconut.

T. C. Hocking, Modesto Morning Herald.

Mr. WORKS. I also submit a memorial of water users within two of the irrigation districts—the Modesto and Turlock districts—opposing the passage of the Hetch Hetchy bill. I ask that the memorial may be read, omitting the names.

There being no objection, the memorial was read and ordered to lie on the table, as follows:

To the honorable Senators of the United States, Washington, D. C .:

The present serious needs of our districts and the agricultural development of our great valley absolutely require the preservation of our entire watershed.

The undersigned water users of the Modesto irrigation district hereby petition and ask you not to pass any bill granting to San Francisco or any other party the right to divert any of the waters of the Tuolumne River from the San Joaquin Valley.

San Francisco has no necessity which can not be met from other sources. We appeal to you to protect our homes and farms from this injustice.

Data supporting our position will be placed in the hands of each Senator in due time.

NOVEMBER 17, 1913.

Mr. WORKS. The memorials which I now present remonstrating against the passage of the bill are signed by 1,865 of the water users within the Turlock irrigation district and over 900 of the water users within the Modesto irrigation district. I ask that the memorials lie on the table.

The VICE PRESIDENT. Without objection, it is so ordered. Mr. WORKS. I present a number of memorials opposing the passage of the Hetch Hetchy bill. I ask that they may be received and laid on the table.

The VICE PRESIDENT. That action will be taken.

Mr. WORKS. In this connection I also submit with the memorials the certificates of various persons who procured the signatures showing that they are the original and authentic signatures of the water users within the districts. I ask that the certificates lie on the table.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. THOMAS. I desire to offer in this connection a letter from the president and secretary of the Widows and Orphans' Mutual Aid Associations of the San Francisco Fire Department (Inc.), and I ask that it be read.

There being no objection, the letter was read and ordered to lie on the table, as follows:

WIDOWS AND ORPHANS' MUTUAL AID ASSOCIATIONS OF THE SAN FRANCISCO FIRE DEPARTMENT (INC.), San Francisco, November 24, 1913.

Hon. CHARLES S. THOMAS, United States Senate, Washington, D. C.:

United States Senate, Washington, D. C.:

We, the undersigned officers of the Widows and Orphans' Mutual Aid Associations of the San Francisco Fire Department (Inc.), in behalf of said associations most earnestly ask for your vote and support in favor of giving to our beloved city of San Francisco the right to use the much-needed water supply, and the only supply adequate to meet its present as well as its future needs.

We ask your favorable vote on this bill as a matter of justice, humanity, and fair play, as the present supply is absolutely inadequate to meet even the present demands. We pray you therefore to grant us the use of the waters of the Hetch Hetchy Valley and the Tuolumne River.

Respectfully submitted.

Capt. WILLIS E. GALLATIN, Jr., President. GEORGE F. BROWN, Secretary, Captain Engine Co. No. 39, 2136 Geary Street, San Francisco, Cal.

### PETITIONS AND MEMORIALS.

The VICE PRESIDENT presented resolutions adopted by the Merchants' Association of Honolulu, Territory of Hawaii, favoring the enactment of legislation confirming the act of the Legislature of the Territory of Hawaii, amending the franchise held by the Honolulu Rapid Transit & Land Co., which were referred to the Committee on the Pacific Islands and Porto Rico.

He also presented a memorial signed by sundry teachers of Belmont, Mass., and a memorial of the Connecticut Woman's Suffrage Association, remonstrating against the passage of the so-called Hetch Hetchy bill, which were ordered to lie on the table.

He also presented a telegram, in the nature of a petition, from the executive board of the San Francisco district of the California Federation of Woman's Clubs, praying for the passage of the so-called Hetch Hetchy bill, which was ordered to lie on the table.

Mr. THOMPSON presented petitions of the United Trades and Labor Council of Pittsburg, Kans.; of the Kansas Society of California, of San Francisco, Cal.; and of the California Club, of San Francisco, Cal., praying for the passage of the so-called Hetch Hetchy bill, which were ordered to lie on the table.

Mr. GRONNA. I have received a number of memorials from

what is known as the Pennsylvania Association Opposed to Woman Suffrage. I ask that the text of one of the memorials may be printed in the RECORD, and that they may be referred to the Committee on Woman Suffrage.

There being no objection, the text of one of the memorials was ordered to be printed in the Record, as follows:

AMERICAN WOMEN DO NOT WANT TO VOTE—PENNNSYLVANIA ASSOCIATION OPPOSED TO WOMAN SUFFRAGE,

PHILADELPHIA.

To the Hon. Asle J. Geonna, Senator from North Dakota, United States Senate, Washington, D. C.

United States Senate, Washington, D. C.

Dear Sir: I am strongly opposed to extending the franchise to women, thereby depriving them of their rights as women and putting apon them the burden of government.

Only a very small portion of the women of this country are making this demand, and I think, moreover, it is a question for the States, not the National Government, to decide.

Hoping you will aid the women of America in their fight for the preservation of our homes, our Nation, and our civilization by voting against any resolution providing for such an amendment to our Constitution, believe me,

Very truly, yours,

Mary C. Knowles,

555 Pelham Road, Mount Airu, Philadelphia.

MARY C. KNOWLES, 555 Pelham Road, Mount Airy, Philadelphia.

Mrs. A. C. KNOWLES.

Mr. OWEN presented a memorial signed by the faculty and students of the University of Oklahoma, Norman, Okla., remonstrating against the passage of the so-called Hetch Hetchy bill, which was ordered to lie on the table.

Mr. PERKINS presented a petition of sundry citizens of San Francisco, Cal., praying for the enactment of legislation granting relief to persons who served in the Military Telegraph Corps of the Army during the Civil War, which was referred to the Committee on Pensions.

He also presented a petition of United Laborers' Union No. 1, of San Francisco, Cal., praying for the enactment of legislation to make lawful certain agreements between employees and laborers and persons engaged in agriculture or horticulture and to limit the issuing of injunctions in certain cases, and for other purposes, which was referred to the Committee on the Judiciary.

ADDRESSES BY JUDGE S. A. LINDSEY.

Mr. SHEPPARD. Mr. President, I have here three short addresses by Judge S. A. Lindsey, of Tyler, Tex., entitled, respectively, "The cooperative agricultural plan," "Rural life and farm problems," and "The building of a State."

They are very short and very valuable, and I ask that they

may be printed as a public document.

Mr. SMOOT. I did not hear the request of the Senator from

Mr. SHEPPARD. My request was for the printing of three short addresses on farm life and other problems by Judge Lindsey, of Texas, chairman of the Texas Farm Life Commission. They are not very long, and I ask that they may be printed as public document.

Mr. SMOOT. Where were the addresses first published? Mr. SHEPPARD. They were first published in Texas. Two addresses were delivered by Judge Lindsey, and one was pub-

lished in the Rice Journal and Southern Farmer.

Mr. SMOOT. May I ask the Senator if he will allow the addresses to go to the Committee on Printing, and we will examine them?

Mr. SHEPPARD. I will. I ask that the addresses be re-

ferred to the Committee on Printing for action.

The VICE PRESIDENT. Without objection, the papers will be referred to the Committee on Printing.

PRESIDENTIAL PRIMARIES.

The VICE PRESIDENT. Reports of committees are now in order.

Mr. BRISTOW. Mr. President, I have been waiting for Senators on the Democratic side representing the Committee on the District of Columbia to appear, but I notice they are not here. I desire to bring a matter to their attention, and, in order that they may be invited to attend, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

O'Gorman Overman Owen Page Perkins Pittman Pomerene Reed Robinson Ashurst Bacon Brady Brandegee Goff Simmons Gronna Hollis Hughes Smith, Ariz. Smith, Ga. Smith, S. C. Bristow Smoot Bryan Burton Chamberlain Sterling Sutherland Thomas Thompson Johnson Johnson Kenyon Kern La Follette Lane Lippitt McCumber McLean Martine N Chilton Thompson Thornton Townsend Walsh Warren Weeks Williams Root Saulsbury Clapp Clark, Wyo. Clarke, Ark. Saulsbury Shafroth Sheppard Sherman Shields Shively Colt Cummins Martine, N. J. Nelson Dillingham Gallinger

Mr. THORNTON. I desire to announce that my colleague [Mr. RANSDELL] is necessarily absent on public business. I ask that this announcement stand for the day.

Mr. KENYON. I desire to announce that the senior Senator from Idaho [Mr. Borahl] is detained from the Chamber on account of illness. I hope he may be here during the day, but if not, this announcement will stand for the day.

Mr. WEEKS. I wish to announce that my colleague [Mr. Lodge] is absent on account of illness and to have this announcement stand for the day. He has a general pair with the

Senator from Georgia [Mr. Smith].

Mr. SHEPPARD. I wish to announce the unavoidable absence of my colleague [Mr. Culberson] and to let this announcement stand for the day. He is paired with the Senator from Delaware [Mr. DU PONT]

The VICE PRESIDENT. Sixty-four Senators have answered

to the roll call. There is a quorum present.

Mr. BRISTOW. Mr. President, I desired the attendance of the senior Senator from Virginia [Mr. MARTIN] and of the senior Senator from Maryland [Mr. SMITH], but I see they are not present, and probably they are detained. I want to read a brief extract from the President's message, on page 74 of the

RECORD:

I turn to a subject which I hope can be handled promptly and without serious controversy of any kind. I mean the method of selecting nominees for the Presidency of the United States. I feel confident that I do not misinterpret the wishes or the expectations of the country when I urge the prompt enactment of legislation which will provide for primary elections throughout the country at which the voters of the several parties may choose their nominees for the Presidency without the intervention of nominating conventions. I venture the suggestion that this legislation should provide for the retention of party conventions, but only for the purpose of declaring and accepting the verdict of the primaries and formulating the platforms of the parties, and I suggest that these conventions should consist not of delegates chosen for this single purpose, but of the nominees for Congress, the nominees for vacant seats in the Senate of the United States, the Senators whose terms have not yet closed, the national committees, and the candidates for the Presidency themselves, in order that platforms may be framed by those responsible to the people for carrying them into effect.

I desire to say that the President in this recommendation has practically copied the Kansas State primary law, for the primary law of the State of Kansas, which has been in operation now for many years, conforms identically with the recommendations made in the message. I want to express my appreciation of the indorsement given by the President to the lawmakers of Kansas, for I believe that was the first State to embody these principles into a legislative enactment in the form suggested here by the President; and I want to call the attention of the Committee on the District of Columbia to the fact that on May 11, 1911, I introduced a bill into the Senate providing for direct primaries for the expression of the choice of the people of the District of Columbia for candidates for President. That bill provided that the people shall express their preference for President and select delegates to carry out their wishes so expressed.

This bill was referred to the Committee on the District of Columbia and reported adversely by the senior Senator from Virginia [Mr. MARTIN], who, I see, has now appeared in the Chamber. I made a strenuous effort to get this bill taken up by the Senate during the last Congress, but every effort I made was blocked by those who were unfriendly to the legislation. The Senator from Virginia, who reported the bill adversely,

seemed to be the leader of the opposition.

On April 7 of this year I introduced the same bill (S. 154) into the Senate and had it referred again to the Committee on the District of Columbia, and it there sleeps at this time. I wanted to inquire of the Senator from Maryland [Mr. SMITH], the chairman of that committee, but, he being absent, I now direct the inquiry to any member of the committee who may be present on the majority side, to learn when we may expect a report upon this bill from that committee.

Mr. POMERENE. Mr. President—

The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Ohio?

Mr. BRISTOW. Gladly.
Mr. POMERENE. I am not the chairman of that committee and am not in a position to speak for it, but in reciting the history of the bill introduced by the Senator from Kansas he has failed to call attention to the fact that a favorable report was made on that bill at one time when I was a member of the subcommittee having it in charge. I think the Senator will remember that fact.

Mr. BRISTOW. Did I understand the Senator to say that a favorable report was made to the Senate?

Mr. POMERENE. That is my recollection of it.
Mr. BRISTOW. No; the Senator is mistaken. An unfavorable report was made by the Senator from Virginia [Mr. Martin]. I think the Senator from Ohio [Mr. POMERENE] favored it in the committee; I was so advised at least, that in the deliberations of the committee the Senator from Ohio was in favor

Mr. POMERENE. Mr. President, I speak only from memory now, subject to correction. I was a member of the subcommittee that had that bill in charge and we made a favorable report. It may be that it was only to the committee, but my present recollection is that it was to the Senate. However, the RECORD will correct me if I am wrong in the matter.

Mr. BRISTOW. The RECORD will correct the Senator, for the Senator from Virginia knows well that it was an adverse

report.

of the bill.

Mr. MARTIN of Virginia. Mr. President, I was absent from the Chamber, and do not know exactly what the Senator is discussing. Now, I understand him—
Mr. BRISTOW. Mr. President—

Mr. MARTIN of Virginia. Just wait a moment until I ask my question. Does the Senator say that the Committee on the District of Columbia had under consideration a bill for a national primary?

Mr. BRISTOW. For a primary for the District of Co-

Mr. MARTIN of Virginia. Oh, well-

Mr. BRISTOW. To elect delegates to the national conven-

tions and to express a choice for President.

Mr. MARTIN of Virginia. I do not recollect it, but I have no doubt I thought then as I think now. I had no willingness to have the District of Columbia start in and pursue a policy, so far as the Democratic Party, with which I am affiliated, was concerned, on that line at all differentiating itself from the policy of the Democratic Party, and having a primary here in the District of Columbia for representation in a Democratic national convention at the instigation of the Senator from Kansas. I no doubt was opposed to that, and still would be.

Mr. BRISTOW. I do not doubt that the Senator from Virginia would oppose almost anything that might be instigated by

the Senator from Kansas.

Mr. MARTIN of Virginia. If the Senator from Kansas will excuse me, he is mistaken. I have great respect for his opinion along certain lines, but not as a guide for the Democratic Party.

Mr. BRISTOW. Since the guide, the true guide, the titular

head of the Democratic Party, has spoken in favor of legisla-tion of this kind, I hope now that the opinion of the Senator from Virginia will change and that this legislation may have his hearty support.

Mr. MARTIN of Virginia. I am in entire accord with the titular head of the Democratic Party and the actual leader of the Democratic party; there is no difference between him and myself on that subject.

Mr. CUMMINS. Mr. President-

The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Iowa?

Mr. BRISTOW. I do.

Mr. CUMMINS. In this connection I desire to remind the Senate that 18 months or more ago I introduced a bill providing for the nomination of candidates for President and Vice President by direct vote throughout the country in a primary election established by the bill. That bill was referred to the Committee on Privileges and Elections, and therefore I am not accusing the Senator from Virginia of any delinquency in this I was unable to get any consideration for the bill in the committee during the last Congress. Immediately upon the assembling of this Congress I reintroduced the bill, and it was again referred to the Committee on Privileges and Elections, the distinguished Senator from Indiana [Mr. Kern] being chairman of that committee. I have done everything in my power since that time to secure consideration of the bill by the committee as it is now constituted, but in vain; and I join my friend from Kansas in the hope that, under the inspiration and the impulse of the admirable message of the President delivered to Congress yesterday, we may be able to induce the Committee on Privileges and Elections to consider that bill, and either report it favorably or report some modification of it that will accomplish the same purpose. It is delightful to know that the whole country is now becoming progressive and that we have a little hope of legislation that will really benefit the people of the United States.

Mr. BRISTOW. I desire to add to the remarks that have just been made by the Senator from Iowa [Mr. CUMMINS] that it does give hope to those of us who have been for many years advocating the nomination of President by primaries to think

that the country is progressing.

Mr. CLAPP. Mr. President, will the Senator pardon me?

Mr. BRISTOW. I yield to the Senator.

Mr. CLAPP. It gives us something more than hope; it gives us respectability, for I have been called an anarchist for several years because I advocated the right of the American people to nominate their candidates for the Presidency. longer be characterized as anarchists. We will no

Mr. GALLINGER. Mr. President—
The VICE PRESIDENT. Does the Senator from Kansas

yield to the Senator from New Hampshire?

I yield to the Senator from New Hampshire. Mr. BRISTOW. Mr. GALLINGER. Mr. President, the mutual felicitations on the part of our Progressive friends are mighty interesting to some of us. I simply want to put in the Record the suggestion that if we shall go to the primaries for presidential candidates, and if it does not work out any better than it is working out in some States of the American Union at the present time for the nomination of other candidates, the Senator from Kansas will have occasion to change his view after a little while. It is a scheme, Mr. President, to give the rich man the advantage over the poor man; it is a scheme to make bribery easier than any other scheme possibly could do. I trust as a progressive conservative [laughter] that the President's suggestion will not find a lodgment in the hearts of the legislators of this country, and that we may never be subjected to such an ordeal.

Mr. BRISTOW. Mr. President, I regret that a discordant element should have been injected into the discussion here this morning by the distinguished senior Senator from New Hampshire.

Mr. SHERMAN. Mr. President, will the Senator from Kansas yield to me?

Mr. BRISTOW. I yield.

Mr. SHERMAN. As long as this seems to be a time for a general collection of primary statistics, I will ask the indulgence of the Senator from Kansas for a moment in order that I may add to the collection.

I know from personal experience with many of the Senators on the other side of the aisle what their views are on converting an indissoluble union of indestructible States into a pure | Every one of the 58 delegates from the State in which I live

democracy. I think I would have considerable support from my Democratic brethren in opposing any such effort. I am in sympathy with them. I range down in my part of the country where I can look over on the old Kentucky shore, so that I am quite sure I am in sympathy with many of their hopes in that direction.

I do not believe in obliterating State lines, either in primaries or in elections. The fathers did not. I will say to the Senator from Kansas that I shall pay due attention to the clock. The fathers did not create this a pure democracy. The Republic as now existing is formed by a proper union and recognition of States.

In obedience to the original impulse giving governmental vitality to this Republic, I prepared last summer a bill known as Senate bill 2309. It struck what I hope is a happy medium. It neither continues the rule of what I call overtraining or overorganization in politics, nor does it provide for a pure democracy and an obliteration and ultimate destruction of the identity of the States, either in the primary elections or, finally, in the general elections, if the same principle should be projected that far.

If I may be allowed, very briefly, without consuming too much of the time which properly belongs to the Senator from Kansas, I will state that the bill recognizes existing conditions. plies a remedy without destroying any proper condition that exists at this time. It recognizes, first, the rule of the congressional district as the unit established in 1880 in the Republican convention at Chicago, in which the struggle between Grant and Blaine was fought out to a conclusion. The congressional district is recognized there as the proper unit for the selection of delegates, the delegates at large to be selected either by a State convention or on a State-wide blanket vote. It restricts the number of delegates to the number of Senators and Representatives multiplied by two. It provides for a diminution in Republican conventions of what I have regarded for some time as an improper representation, so as to be hereafter based on the voting strength of 10 or 11 Southern States.

It provides for curbing the power of national committees. It does not permit to remain longer in the hands of national committees the power to prepare arbitrarily a temporary roll in conventions. It transfers the power of issuing credentials to the hand of the voter. When, under any State primary, delegates are elected, either at large or by congressional districts, those delegates are thereby clothed with unassailable credentials, sacred from the interfering hand of national committees, and they take their seats on temporary rolls in the convention by virtue of the mandate of the voters in their several congres-

sional districts or in the States.

In addition to that, if the Senator from Kansas will permit me, I provide in the bill what I consider at least a fair movement toward an adequate remedy of the conditions that led to the unhappy division of the Republican Party at the polls last November. In the bill it is provided that delegates shall no longer be unseated at the arbitrary will of the committee. recognizes and adopts the primary laws of the States where the voters are heard. It respects the conditions that exist in the actual administration of the affairs of great political parties. It preserves the identity of every State in the Union.

If the principle embodied in the bill should be carried out, it

would be no longer possible for delegates elected in congressional districts or by a State-wide vote, on a blanket ticket in accordance with State-enacted laws, to be unseated in a convention contrary to the will of the voters of the State. There will be no more California cases if that rule is recognized. There will be no more unhappy differences, made necessary by the exigencies of the hour, in the unseating of delegates, if that be the rule. In other words, it proposes by an act of Congress to give recognition and adoption to State primary laws permitting a fair expression of the voters of the States

When delegates are so selected, their seats are valid and immune from attack, and they remain as delegates in the conven-The bill recognizes the lawful province of the States. It recognizes their State-enacted laws for the purpose of securing a fair expression of the voters. For my own part, I prefer to adhere to the congressional district. I prefer to adhere to some lawful way of selecting delegates at large either by a State-wide vote or by a State convention. But there are 11 States in the Union, most of them Western States, which have selected their delegates, and have done so since 1910 or 1912, in accordance with State-enacted primary laws, on blanket tickets, by a State-wide vote. One hundred and six of those delegates sat in a certain convention I know about. Every one of them was as liable to be unseated and denied recognition as the two from the fourth California district who were unseated.

was liable to be unseated by the same power. Every one of them was selected in flat contradiction to the call of the convention.

If the Senator from Kansas will permit me to take a little more time, in our State we have some old-fashioned notions about who ought to vote in a primary. I have not any business thrusting my personality or my political nose into the affairs of the Democratic Party. I stay out. It is not my business. I deplore the necessity that has existed in days past to thrust a number of self-sacrificing and patriotic Democrats into the councils and primaries of the Republican Party in my State.

During the 12 years that I served in the Illinois Legislature I led an unceasing warfare against that reprehensible practice. Finally it was forbidden by statute. In the face of that, a national committee issued a call that all electors who believed in the policies and indorsed the principles of the Republican Party should join in the selection of delegates. That is flatly contrary to the primary law of our State, where we have sought to preserve the integrity of political parties. In many of our western States we confine our family troubles to the members of the family, and all outsiders are invited to stay out in the road until we settle them. We get along better that way.

The bill I have introduced will do no violence to the views of any of our Democratic brethren who believe in the integrity of the State and who believe in confining political activity within lawful lines. They recognize the right of a State to provide election laws as a matter of local sovereignty, and that those laws for the selection of delegates to a national convention, when so provided, ought to be respected. If there is not enough power or self-control in the management of a political party and its committees to make us respect those laws, two alternatives are presented to us. One is to suffer the penalty at the polls; and we have paid that penalty, the Lord knows, Mr. President. We have paid it in seeing a majority on the other side of this Chamber and in the body at the other end of the Capitol. have trodden the wine press alone down to disastrous defeat. I do not want any more of it myself in the little while that I am likely to stay in this august body. I have got enough of it. I think—if the Senator from Kansas, begging his pardon, will permit-that probably the country will get enough of it before very long, judging from the indications that come rumbling up from the northern end of my State and from a certain city that lies on the shore of one of the Great Lakes.

We can take our choice of finishing our troubles in that way or curing them by legislation. It will take an act of Congress to do it. For myself, speaking exclusively and confidentially to my Democratic friends, I do not think you want the plan outlined by your President. The next thing there will be a message sent in here on the initiative and referendum and the recall of judges, and your pure democracy so proposed will go

to everlasting chaos before you get through.

I know where that horse is headed when I see him plunging toward the cliff. That is a runaway rig. If some of you folks do not have a little bit of pride in managing your own States and a little bit of pride in your local sovereignty and do not think every time you get into trouble that you have got to run down to the men on the hill to get help; if you do not get a little local independence and a little revival of the old recollections and the old glory; if you can not arouse yourselves now, you will later on.

This can not be a pure democracy. I am opposed to a nation-wide primary law. It will not work. Why, once we had township government in south Chicago, and in a single New England township organization there we had 16,000 voters and more than 80,000 people. The moderator of the meeting in the old New England township called the house to order, and they had a town meeting and levied taxes in the good old-fashioned way. However, nobody could get into the hall, representing the 16,000 voters, unless he had a ticket from a political club and could get past the club of the policeman. The rest of the 16,000 exercised their rights as citizens in a pure democracy by staying outside and thinking about it. I helped legislate a pure democracy out. That was the best thing that ever was done for the benighted constituency who were members of the air-tight organization that ran that township where it existed.

This will not be a pure democracy for a thousand years unless it becomes an unmitigated tyranny, with the rights of the minority lost, and a Government often by an inconsiderable but active minority. Do not forget that nowadays a man who is wrong can make a greater disturbance and attract more attention and get more space in the newspapers than one who is right. The world always takes more interest in an active devil than it does in a saint down with nervous prostration. It is the active devil that gets the headlines nowadays. This is not yet entirely a Government of the saints; and it will be a long

time, my Democratic brethren, before you get to that happy goal if you elect every President for the next 100 years.

What you have got to do is to preserve the lawful rights of the States. The proposition for a nation-wide presidential primary tends to lead to the destruction of the Union of the States. It ignores States lines, and makes every one of the 48 States of the Union a mere outlying election province, to foot up the returns, and see how many votes are cast in Texas, how many in Rhode Island, and so on.

I would preserve the States in the spirit that the fathers wrote the first charter of liberty. They gathered together the thirteen original States so that not only would individual rights be preserved, but the identity of the Colonies, manifest afterwards when the Revolution was successful and the States were knit together in this indissoluble bond. My bill does not do all this, but it is a premeditated stagger in the right direction. [Laughter.]

I wish to say, in conclusion, that I have had written out ever since last May the notes of a speech on this subject. It is lying on the desk over in my office, and at some opportune time I will inflict it on you and give you a chance to go to lunch. [Laughter.] It was written out in cold blood long before the President delivered his message. I have a message on the subject that I will get to you some time.

Mr. KERN. Mr. President—
The VICE PRESIDENT. Does the Senator from Kansas

yield to the Senator from Indiana?

Mr. BRISTOW. I should like to get through, and then I will yield the floor. I have just a few remarks that I hope to make.

Mr. KERN. If the Senator will allow me, I think, out of respect to the Senator from Illinois, that I shall have to call for the regular order.

Mr. BRISTOW. If the Senator from Indiana desires to take me off my feet in that way, I wish to say to him that I will have my say at some other time; but it is a discourtesy that is not frequently extended to Members of this body. I have yielded to every Senator—

Mr. KERN. If the Senator feels that way about it, I withdraw the request for the regular order; but I hope this discussion will be concluded some time in the next hour or two.

Mr. BRISTOW. The Senator might have made that request when other Senators were occupying the floor through my courtesy.

I desire to say that I had no idea of precipitating a long and continued debate when I made these simple inquiries from the members of the Committee on the District of Columbia, who have now the custody of this bill. The speech of the Senator from Illinois [Mr. Sherman] might have been delivered to the Committee on Privileges and Elections, to the Republican national committee, or to the public at large. It was a good one from his point of view. But since the President has suggested a piece of genuine progressive legislation, I hope the zeal of the Senators on the Democratic side of this Chamber for its enactment will be equal to the zeal which they manifest for the enactment of legislation that is sham progressive, such as the present currency bill that is now before the body.

Mr. THOMPSON. Mr. President, since my distinguished colleague, the senior Senator from Kansas [Mr. Bristow], has been so long without a definite party home, I am certainly glad to have his acknowledgment this morning that he has at last found refuge in the good old Democratic Party. Since he has so graciously and handsomely indorsed the President of the United States in the matter of primaries for the selection of candidates for the Presidency, I hope he will go a little further and adopt some more good Democratic doctrine and indorse the President in a matter which is of greater importance to the people of Kansas and the Nation to-day than any other piece of legislation. I refer to the pending currency bill, of which the President says in his message:

You already have under consideration a bill for the reform of our system of banking and currency, for which the country waits with impatience, as for something fundamental to its whole business life and necessary to set credit free from arbitrary and artificial restraints. I need not say how earnestly I hope for its early enactment into law. I take leave to beg that the whole energy and attention of the Senate be concentrated upon it till the matter is successfully disposed of.

Mr. President, I regret very much to disagree with my distinguished colleague on a matter of procedure in the Senate.

Mr. SMOOT. Mr. President, may I ask the Senator what currency bill the President refers to in his message?

Mr. THOMPSON. The pending currency bill before the Senate.

Mr. SMOOT. Which one? The President virtually made the same statement when the so-called Glass bill passed the House.

Mr. THOMPSON. I think he clearly means the bill commonly referred to as the Owen-Glass bill.

Mr. SMOOT. Is it the House bill, the Owen first or second amendment to it?

Mr. THOMPSON. The pending bill, known as the Owen-Glass bill.

Mr. SMOOT. Does the President want us to pass the bill as it passed the House?

Mr. THOMPSON. He wants the legislation and does not dictate the terms of the legislation.

Mr. SMOOT. No matter what the measure is, he wants a currency bill passed?

What he demands is what the people Mr. THOMPSON. demand, which is immediate action upon the currency question.

Mr. SMOOT. If we are to take the public press as a guide, the President indorsed the currency bill as it passed the House, and he wanted action upon it as quickly as possible. I ask the Senator from Kansas if in his message that is the bill the

President requests immediate action upon.

Mr. THOMPSON. I simply refer the Senator to the language of the President himself in the matter of immediate action by the Senate, which has been delaying the legislation for some four or five months since its attention was originally called to this subject

Mr. SMOOT. That is upon the pending bill, the House bill? Mr. THOMPSON. Yes, sir; the Owen-Glass bill.

Mr. SMOOT. The House bill?

Mr. THOMPSON. The House bill, with such amendments as the Senate may see fit to make. What he demands is exactly what the people demand-action and not delay.

Mr. BRANDEGEE. I call the attention of the Senator from Kansas to the fact that since the committee reported the bill without recommendation the Senator from Ohio [Mr. Burton] has introduced a bill which is pending, and it may be that one the President is in favor of.

Mr. THOMPSON. That is a matter the Senate can decide in its own way. What the President asks is action, and we have not taken that yet.

Mr. BRANDEGEE, If the Senate prefers the Burton bill, I have no doubt the President will be satisfied with that action. Mr. THOMPSON. He will be satisfied with whatever bill the Senate finally passes, I think I can assure the Senator.

Mr. ROOT. May I ask the Senator from Kansas whether he speaks with authority when he says that the President will be satisfied with whatever bill the Senate sees fit to pass?

Mr. THOMPSON. I have no authority to speak for the President, but I have reason to believe that we will pass a bill that will be satisfactory to the President.

Mr. BRANDEGEE. The Senator has implicit confidence in the understanding that is assumed to exist as a result of the

conference of the Democratic Senators?

Mr. THOMPSON. I have implicit confidence in the Demo-

cratic Party which has charge of the currency measure—
Mr. BRANDEGEE. That it will pass a bill satisfactory to the President?

Mr. THOMPSON. And is trying to fulfill its pledges to the people of this country.

Mr. KERN. Mr. President-

Mr. CLAPP. Will the Senator from Indiana yield to me for just a moment?

Mr. KERN. The Senator from Kansas has the floor. Mr. CLAPP. I supposed the Senator had finished.

Mr. THOMPSON. No, sir; I have been interrupted. I will be through in a moment.

Mr. CLAPP. I desire to say a word when the Senator con-

Mr. THOMPSON. I started to say that I regret very much to disagree with my distinguished colleague on a mere question of procedure in the Senate, but his opposition to speedy action on the pending currency bill, seconded by his Republican brethren, is so contrary to the wishes of our constituency that I desire to say a few words in their behalf.

My colleague, in his opposition to the resolution, does not reflect the sentiment of the people of Kansas. The people of Kansas, from one end of the State to the other, are practically unanimous in demanding immediate currency legislation. They want immediate action and will not tolerate any unnecessary I have dozens of letters and resolutions, written and passed by the business men and bankers of my State, expressing this sentiment. I have just received a letter this morning from a distinguished progressive Republican of the State, a business man and ex-banker, Mr. H. D. Crosby, of Wichita, which I desire to read to the Senate as reflecting the true sentiment of the people of the State.

Mr. GALLINGER. Mr. President—
The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from New Hampshire?

Mr. THOMPSON. I do. Mr. GALLINGER. I observe the Senator just said that the President demanded immediate action and would not tolerate any delay. Will the Senator kindly tell me what course the President will pursue to prevent delay if this body sees fit to delay the bill?

Mr. THOMPSON. I was speaking of the people of my State, and I desire to show by this letter, and other letters and resolutions if necessary, the sentiment in Kansas.

Mr. GALLINGER. But I thought the Senator made the particular statement that the President would not even tolerate delay in the passage of the currency bill. Did I understand the Senator correctly?

Mr. THOMPSON. I said the people of Kansas would not

tolerate delay.

Mr. GALLINGER. I beg the Senator's pardon. Mr. THOMPSON. This letter is dated November 29, 1913, and is as follows:

WICHITA, KANS., November 29, 1913.

Senator W. H. THOMPSON, Washington, D. C.

Washington, D. C.

Dear Senator: Why can't the United States Senate determine upon a currency bill and pass it? Everyone knows the necessity of currency reform. Those now having it in their power to give the country relief have known for months or years that they would be called upon to act. Have they not had ample time for investigation? Business will mark time or worse than that until action is taken. Why not give the country relief without further delay?

H. D. Crosey.

Mr. President, this is the general sentiment as expressed in all the letters and resolutions from prominent business men and bankers, regardless of party, from every section of the State. In face of this sentiment I am surprised that my colleague would resist the resolution. For my part, I shall use all my power to aid the people of Kansas in carrying out their wishes in this respect. The Kansas farmer, for whom my colleague always claims a special tender regard, goes to work willingly every day at sunrise and works all day and until late at night, and he will not understand why a Senator who represents him and his interests is unwilling to do so for a short time, especially in cases of serious emergency. The currency bill is an emergency measure. The people of the United States throughout the country are demanding it.

We are not by this resolution, as claimed by my colleague, attempting in any way to shut off freedom of debate, but we are simply trying to force expedition by requiring that the debate shall begin and shall continue until completed. The greatest disappointment I have found since entering the Senate is in the apparent inability of the Senate under its present standing rules to act with expedition. By the adoption of this resolution and acting within its spirit we can accomplish more in the next three weeks than we could under the ordinary rules of the Senate in three months. So I earnestly hope that the resolution will pass and that my distinguished colleague will change his mind and join me in its support in compliance with the wishes of the people of our State and of the Nation.

Mr. CLAPP. Mr. President, the President of the United States does not stand in need of any defense at my hands, or that of anyone else probably, but I think the trend of the discussion this morning requires a statement as to his position

upon the primary question, as indicated by his message.

I do not think that the President's message can be construed as advocacy of a nation-wide primary. It has to be read in the light of the history and traditions of the country. A reading of the language, it seems to me, would not warrant the assumption that has been taken here that he stands for a nation-wide primary, obliterating all State lines in the primary, and its result. This is the President's language:

I feel confident that I do not misinterpret the wishes or the expecta-tions of the country when I urge the prompt enactment of legislation which will provide for primary elections throughout the country at which the voters of the several parties may choose their nominees for the Presidency without the intervention of nominating conventions.

Then follows his suggestion as to a convention to prepare a platform based upon the present basis of representation.

As I said, while I do not think the President requires any defense in the matter, it does seem to me the impression ought not to go out unchallenged in the declaration that he stands for a nation-wide primary, obliterating State lines and, in effect, the States, in their representation in nominating conventions.

Mr. KERN. I hope now, without wounding the sensibilities of any Senator, I may be permitted to call up the regular order.

The VICE PRESIDENT. If there are no reports of committees, the introduction of bills is in order.

#### BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. OWEN:

A bill (S. 3534) granting a pension to Emma Cain (with ac-

companying papers); and A bill (S. 3535) granting an increase of pension to Edward P. Champlain (with accompanying papers); to the Committee on Pensions.

By Mr. PAGE:

A bill (S. 3536) granting an increase of pension to Edward B. Sawyer (with accompanying paper); to the Committee on Pensions.

By Mr. WARREN:

A bill (S. 3537) granting a pension to Ellen Murphy (with accompanying papers); and

A bill (S. 3538) granting an increase of pension to Henry H. Helphenstine; to the Committee on Pensions.

By Mr. KERN: A bill (S. 3539) granting a pension to Harry A. Benedict (with accompanying papers);

A bill (S. 3540) granting an increase of pension to Mary J.

Peirce (with accompanying papers);
A bill (S. 3541) granting an increase of pension to Alfred

DeArmy (with accompanying papers); and A bill (S. 3542) granting an increase of pension to John E. Spratt (with accompanying papers); to the Committee on Pensions.

By Mr. DU PONT:
A bill (S. 3543) granting an increase of pension to Charles W. Stigers (with accompanying paper); to the Committee on Pensions.

By Mr. BURLEIGH:

A bill (S. 3544) granting a pension to Josie W. Witham; to the Committee on Pensions.

By Mr. GORE:

A bill (S. 3545) to provide for the highway-improvement work by the United States Department of Agriculture in cooperation with the highway departments of the several States; to the Committee on Agriculture and Forestry.

THE INITIATIVE AND REFERENDUM IN SWITZERLAND (S. DOC. NO. 253,)

I ask that a paper by Carl S. Vrooman, being a memorial relative to the initiative and referendum in Switzerland, or a political pilgrimage on the initiative and referendum

in practice, be printed as a public document.

The VICE PRESIDENT. Without objection the request of

the Senator from Oklahoma will be complied with.

# PRINTING OF MATTER AS DOCUMENTS.

Mr. SHEPPARD. Mr. President, a short while ago I asked permission to have certain matter referring to rural life and related problems made a Senate document. On the suggestion of a Senator I consented that the proposed matter should be referred to the Committee on Printing for a report. Shortly after that another Senator offered matter relating to another question and requested that it be published as a Senate document and no suggestion or objection was made,

I simply wish to say that hereafter I shall ask that all matters proposed to be printed as documents shall be referred to

the Committee on Printing.

Mr. SMOOT. I will ask the Senator who the Senator was to whom he refers as having had matter printed as a public document?

Mr. SHEPPARD. The Senator from Oklahoma [Mr. OWEN]. Mr. SMOOT. I will state frankly that I did not hear the request. I wish to assure the Senator that I did not hear it, or I would have objected.

Mr. SHEPPARD. I think it is a better practice that requests

for the printing of public documents shall go to the Committee on Printing, and I shall be glad to join the Senator from Utah in seeing hereafter that this course shall be taken.

Mr. SMOOT. I am very thankful to hear it.

### HOUR OF DAILY MEETING.

The VICE PRESIDENT. The Chair lays before the Senate a resolution coming over from a previous day, which will be

The Secretary read Senate resolution 225, submitted by Mr. KERN on the 1st instant, as follows:

Resolved, That the hour of daily meeting of the Senate be 10 o'clock a. m., and that the Senate shall on each day at 6 o'clock p. m. take a recess until S o'clock p. m. and adjourn at 11 o'clock p. m., until otherwise ordered.

The VICE PRESIDENT. The pending question is on the amendment proposed by the Senator from New Hampshire in line 2 to strike out the word "ten" and insert "eleven."

Mr. GALLINGER. Mr. President-

Mr. BRISTOW. Will the Senator kindly yield to me for just a moment?

Mr. GALLINGER. With pleasure.

Mr. BRISTOW. Mr. President, my colleague seems to be laboring under a misapprehension as to my attitude. I want to assure him that I have not the slightest desire to delay currency legislation. I think I am just as anxious as he that the legislation should be enacted, but I am exceedingly desirous also that when enacted it shall be the right kind of legislation.

He read a letter from a Mr. Crosby, a very worthy gentleman in our State. I also have had communications from the same gentleman, and he is just as anxious that the present bill shall be amended so that it will be a good measure as he is that

after being amended it shall pass.

My colleague refers to the Kansas farmer. I hope that he will join with me in a joint effort to amend the bill so as to make it helpful to the Kansas farmer. Under the provisions of the bill, as it passed the House and as reported to the Senate by the Senate committee, headed by the chairman [Mr. Owen], it does not permit the paper of the Kansas farmer to be rediscounted, because he knows as well as I that three months' paper is not the kind of paper that the Kansas farmer gives to

If my colleague will join with me in making the bill useful to the people of our State, I certainly will be delighted to join with him in hastening legislation.

Mr. OWEN. Mr. President-

The VICE PRESIDENT. Does the Senator from New Hampshire yield to the Senator from Oklahoma?

Mr. GALLINGER. I yield for any matter that will not take much time.

Mr. OWEN. The Senator may proceed.

Mr. GALLINGER. Mr. President, the resolution submitted by the Senator from Indiana [Mr. KERN] I proposed to amend by changing the hour from 10 to 11 o'clock. Some other Senator on the Democratic side proposed an amendment providing for evening sessions, and I think that it might be well for us in the beginning to understand whether that is to be the program,

Mr. President-

Mr. GALLINGER. Has the Senator modified his resolution? Mr. KERN. As the mover of the resolution, I accepted the amendment offered by the Senator from Mississippi [Mr.

Mr. GALLINGER. The Senator can not of his own volition accept an amendment. That is for the Senate to do. But the Senator can modify his resolution in any way he sees fit.

Mr. KERN. It is so modified.
Mr. GALLINGER. Mr. President, I dislike exceedingly to take a single moment of the time of the Senate. I am trying in every way to expedite the business of the Senate, and yet I feel constrained to say a few words on the resolution that is now before the Senate.

For the first time in our history, Mr. President, one session of Congress has merged into another. I judge from the ambitious program credited to the President that there is little hope of the adjournment of this session until late in the year, if indeed the experience through which we have passed is not to be repeated. As I understand the matter, it is not at all likely that there will be any holiday recess, and on yesterday the senior Senator from Mississippi [Mr. Williams] plainly told us that it was the purpose of the majority to hold sessions of unusual length with a view of exhausting the minority, and in that way forcing an early vote on the currency bill.

I realize, Mr. President, the futility of opposing a resolution

that was adopted in the Democratic caucus, and for that reason

will content myself by making a brief statement.

Mr. President, we were kept here during the entire summer on the plea that a tariff bill must be speedily passed so as to lift the burdens of taxation from the American people. I recall the fact that one distinguished Democratic Senator put the burden at \$400,000,000, and the consuming public was to be relieved of that burden through the legislation of the Democratic Party.

It will also be recalled in that connection that the new tariff law, among other things, was to reduce the high cost of living. In the Democratic national platform that boon was promised the American people, just as the boon of plentiful money and good times is now being promised if we rush through a currency

The President of the United States and the Senator from Oklahoma wanted the so-called Glass-Owen bill passed at railroad speed when it came to the Senate, but since then it has been so changed that those who wrote it must have difficulty in recognizing it in its present form.

The tariff bill was passed, and what is the result? Have Democratic predictions and promises come true? Let us see. Has the high cost of living been reduced by that legislation, which occupied our time during the heated term of the last summer to the detriment of the health of some of us and to the great inconvenience of all of us? I clipped from the Washington Post of Thanksgiving morning an item headed as follows:

DINNER COST A RECORD-THANKSGIVING FOOD IS HIGHEST HERE FOR 25

Thanksgiving dinner will be the most expensive meal the average American has eaten during the last 25 years. It will cost from 35 to 100 per cent more than it did 10 years ago, and from 15 to 50 per cent more than any Thanksgiving Day during the last six years, according to recently gathered Government statistics.

I also clipped from a recent issue of the Washington Times an editorial which reads as follows:

#### CANADA'S FOOD SUPPLIES.

When our new tariff took effect and Canadian meats were given admittance to the United States, an interesting thing happened. We had opened the way for cheaper meat by tariff changes, and what was the

Canadian meat animals came into our border States, but instead of pushing down the American price the free flow merely served to raise Canadian prices to our level.

It was as if a siphon connection had been established between the Atlantic Ocean and a municipal reservoir, in the hope that the reservoir would pipe in enough of the ocean's water to reduce the level of the ocean. Instead, it raised the level of the smaller to that of the vastly larger body, and otherwise had no effect at all.

Sir Wilfrid Laurier in a keynote political speech has presented the Canadian view of this situation in a striking way. The new tariff policy of the United States had drained away the food products of Canada, with the result that prices there have gone up to the United States standard. On this side the line we know that prices have not gone down because of the introduction of supplies from Canada. We have discovered that there is little chance that they will.

Mr. GRONNA. Mr. President, will the Senator from New Hampshire yield to me?

The VICE PRESIDENT. Does the Senator from New Hamp-

shire yield to the Senator from North Dakota?

Mr. GALLINGER. I yield to the Senator from North Dakota. Mr. GRONNA. Has the Senator from New Hampshire any information whether the price of cattle has advanced or decreased since the passage of the so-called Underwood-Wilson-Simmons tariff bill?

Mr. GALLINGER. I have only the information that I get from those who are making purchases, that the meat price has increased in the retail market. Beyond that I do not know.

Mr. GRONNA. Mr. President, if the Senator will permit me, want to say that since the passage of the Democratic tariff bill the price of cattle and hogs in our western country has

decreased from 1 to 2 cents a pound.

Mr. GALLINGER. That may be so; but, if so, the middleman and the retailer have not yet discovered that fact, though we were promised by our Democratic friends that the middleman and the retailer would discover it, so that we would have cheaper food products. Hundreds of thousands of men voted for President Wilson believing that the promise for lower food prices would be fulfilled; but, alas, the promise remains not only unfulfilled, but prices have increased.

Mr. McCUMBER. I hope also the Senator from New Hampshire will recognize the fact that every cereal in the Northwest has depreciated in price from 15 to 20 per cent since the tariff bill went into effect, and that while the raw food products of the farmer have depreciated the cost to the consumer

in the city has gone steadily up.

Mr. GALLINGER. That is a very significant fact, and it proves conclusively that this tariff law, which it was prophesied was going to lift these enormous burdens from the shoulders of the American people, has been a total and ignoble failure. It has reduced the income of the farmer, and it has increased the cost of living to the ultimate consumer; and that was prophesied during the debate. What a spectacle that is!

Mr. GRONNA. Mr. President—
The VICE PRESIDENT. Does the Senator from New Hampshire yield to the Senator from North Dakota?

Mr. GALLINGER. I yield to the Senator from North Dakota.

Mr. GRONNA. I wish to say to the Senator from New Hampshire that the products of the farm—what the Democrats call raw material I call the farmers' finished product, such as wheat, barley, rye, oats, and potatoes; in fact, everything that is produced on the farm-has declined in price.

I also wish to say to the Senator from New Hampshire that almost in one single day after the passage of the Democratic

tariff bill the price of barley was reduced 10 cents per bushel.

Mr. GALLINGER. Mr. President, that is only cumulative
evidence of the suggestion I made a moment ago that this wonderful tariff law has reduced the price of the farmer's products and at the same time has increased the cost of living to those of us who consume them.

Mr. GRONNA. That is correct.

Mr. GALLINGER. A few days ago, Mr. President, I took a little clipping from the Washington Post, a paper that is accurate in its statements as a rule, calling attention to a very remarkable fact. We have heard a great deal from our Democrtic friends about a free breakfast table, and there is one article that is frequently seen upon the breakfast table of Americans in the form of mackerel. This editorial says:

#### CONCERNING THE FREE LIST.

Mackerel was put on the free list, thus relieving that prized article of food from a tariff burden of \$2 a barrel. The catch this year was tremendous, being almost without a parallel in American waters, and the eastern markets report the receipt of exceptionally large quantities of the fish from packing points, indicating an oversupply. Nevertheless, the price of mackerel has gone up \$3 a barrel instead of going down \$2, as Congress counted on in framing a free list that purported to reduce the cost of living. The keeping qualities of salted mackerel make it the mainstay of the consumer in the spring months, particularly those who have no easy access to a daily supply of fresh meats.

Everybody is nonplused over the contrariwise operation of the new tariff, whereby prices are soaring upward not only at home, but in the markets of the countries of production. Canada is staggered to find that the open sesame to our markets gives her producers and middlemen an excuse for marking up prices to near the American level. In some lines of goods the European countries are similarly affected, owing, it is asserted, to the increased demand from America.

It thought Mr. Prayldent it might be improved in the table to the countries of the increased demand from America.

I thought, Mr. President, it might be important just at this time, when we are not only cautioned, but from certain quarters are threatened that we must rush through other legislation that is going to greatly benefit the American people, to take a moment to consider the result of the new tariff law, which we were over and over again told must be passed with great speed, because the American people demanded it and the welfare of the American people was at stake. And now, Mr. President, it is gravely proposed by the majority to keep the Senate in session 11 hours per day on the plea that the immediate passage of the currency bill is an absolute necessity. They are indulging the hope that the bad results of the tariff legislation may be antidated by currency legislation. My impression is that they will be disappointed in that regard.

The hours proposed in the resolution are unusual, unnecessary, and oppressive. They prevent Senators from attending committee meetings and giving proper attention to their cor-respondence. Night sessions, Mr. President, are especially to be deprecated, and they ought not to be insisted upon; but, as I have already suggested, the caucus flat has gone forth, and resistance on the part of the minority will be unavailing. that reason I propose to submit to the resolution without any special opposition.

The tariff bill has failed to justify the claims of its friends. Last month it produced a deficit of more than \$4,000,000 in our national revenues. The reduced duty on wool has just become operative, and the duty will soon be reduced on sugar. much the deficit will be when those two products are taken into consideration I am unable to tell. The fact is, however, that the high cost of living has not been reduced, but has been increased. The national revenues are being reduced to an alarming extent, and the new tariff law, which was claimed to be the great panacea for the ills that afflict the American people, is not working out to the satisfaction of anybody who is

willing to look at facts with an open mind.

Mr. President, while we are all anxious to hasten the passage of the currency bill, the probabilities are that that legislation will fail to accomplish the roseate results that are predicted by the Senator from Oklahoma [Mr. Owen] and those who agree with him.

gree with him. When that happens—
Mr. MARTINE of New Jersey. Will the Senator permit me just there?

Mr. GALLINGER. I am always delighted to yield to my good

friend from New Jersey.

Mr. MARTINE of New Jersey. The distinguished Senator from New Hampshire has pictured a horrible condition because there has not been a satisfactory result to his mind from the operations of the new tariff law in the time of about a couple of months, when the burden has been piled up on the American people by the handiwork of the Republican Party during 40 years of operation. The Senator says that everything is going to chaos. I have to-day in my hand the New York Journal of Commerce, devoted to the mercantile and commercial interests, and I find here that everything has not gone to ruin in Oregon City, Oreg., for in Oregon City they have subscribed \$200,000 to build a new flax mill.

The Senator says we will try a new banking plan, and apropos of his thought as to the tariff law I suppose he would like to see that bring ruin and a failure of our best hopes to materialize in the way the interests of the people have been demanding.

Mr. GALLINGER. The Senator from New Jersey is diverting me from the very brief observations I intended to make.

Mr. MARTINE of New Jersey. Oh, Lord, I would not for a farm divert the Senator. [Laughter.]

Mr. GALLINGER. That new flax mill in Oregon City, Oreg.,

will not reduce the cost of living.

Mr. MARTINE of New Jersey. But the Senator refers to the banks. He has gotten away from the controversy as to the high cost of living. Of course he is disappointed that it did not go down, but there are millions of people who are still hanging on tenterhooks praying for its reduction. Give us a little chance and we will reduce the cost of living.

Mr. GALLINGER. I fear the prayers of the Senator's friends will be as futile as the Democratic promises made during the tariff debate. The Senator is displaying a newspaper. Does the Senator intend to put that newspaper in the Record in the

midst of my speech?

Mr. MARTINE of New Jersey. No; I do not want to put it in the Record, but I want to put it in the Senator's mind that the proposed new banking system is not going to prove the failure he has been praying for. I see here at the head of a column in the New York Journal of Commerce of December 3, this headline:

Big banks to join new Federal system. Some which have criticized the plan will accept it. Situation pressing on account of impending adoption of bill.

Now, in Heaven's name, do not utter this horrid cry of desolation, murder, sadness, and woe, but join in the cry of frater-

nity and keep up with the march of the times.

Mr. GALLINGER. Mr. President, I knew when I yielded what I was "up against," and I am not disappointed at all. I have not denounced the currency bill or severely criticized it. I have simply taken the Democratic promises in their platform and their promises made in this Chamber and on the floor of the other House that the new tariff bill would reduce the cost of living, and I have shown that it has not done so; that the cost of living has increased and that the national revenues are being very severely depleted because of it; and I have merely suggested that there is no certainty that the Democratic promises about the currency bill will be any more realized than were their promises concerning the tariff bill.

Now, I will proceed. As I said a while ago, while we are all ready to hasten the passage of the currency bill, the probabilities are that that legislation will fail to accomplish the roseate results that are predicted by the Senator from Oklahoma and those who agree with him. When that happens we will then be told, as the President told us yesterday, that "private monopoly" is the evil that must be destroyed, and we will be kept here all next summer legislating against that enemy of good government. Probably the propaganda will be as successful as the prosecutions against the Standard Oil Co. and the Tobacco

Trust.

We were told, Mr. President, that those prosecutions were going to be of the greatest possible value to the American people, but I have failed to observe that the product of the Standard Oil Co. has been reduced in price, either in the matter of oil or gasoline. I observe that the same men who were running the Standard Oil Co. before those prosecutions were instituted are in command to-day. I understand that they are now making more money than they were before those prosecutions were inaugurated, and the ultimate consumer is the loser. So I say as to the program that is promised us for the heated months of next summer, that we are to do all sorts of things to private monopolies—and I suppose public monopolies as well—that the results may possibly be as disappointing as the results have been up to the present time from the passage of the new tariff law.

But, Mr. President, the Democratic Party is in power in the Senate, and as I believe in majority rule, I propose to submit without further comment to the resolution that was agreed upon in the Democratic caucus and which the Senator from Indiana has proposed. It ought not to pass; it is an unnecessary burden that is being placed upon the membership of this body to be kept here from 10 o'clock in the morning until 11 o'clock at night. Notwithstanding I happen to be the second oldest in years in the Senate, I think I can endure it, as I have

endured long sessions before; but I want to predict to my Democratic friends that their attempt to hold this body in session three hours after 8 o'clock in the evening will not be a phenomenal success, as they will discover after they have tried

it for a few days.

Mr. President, this resolution or any proposition that comes from the other side of the Chamber can not be successfully opposed unless those of us on this side should indulge in filibustering. That I have never done, and I trust I may never do, and for the reason, as I have stated, that the Democratic Party is in power in this body, and they can do with the minority pretty much as they please in the matter of hours of meeting. It would be futile for us to undertake to reverse any decision of the Democratic caucus. Feeling that way, Mr. President, I withdraw the amendment that I offered to the resolution and am prepared to vote on the resolution as it stands.

Mr. BRANDEGEE. Mr. President, yesterday I started to make a few brief observations upon the resolution of the Senator from Indiana [Mr. Kern], when that Senator, with his characteristic winning way, prevailed upon me to suspend, and we listened to the President's address. The Senator from New Hampshire [Mr. Gallinger] this morning has so well stated some of the things I intended to say, and perhaps more than I would have said had I continued yesterday, that I shall be ex-

ceedingly brief in what I have now to say.

On yesterday I stated that the resolution as submitted, with the amendments proposed and accepted, will necessitate that Senators leave their residences in the city at 9 o'clock in the morning, come to the Capitol, adjourn at 11 o'clock in the evening, and not return to their homes until 12 o'clock, and that that procedure shall be kept up continuously by this body until this legislation shall have been finally agreed upon.

legislation shall have been finally agreed upon.

In order that it may be clear exactly what the resolution is, I will ask the Secretary if he will kindly read to the Senate the

resolution as amended.

The Secretary read the resolution, as follows:

Resolved, That the hour of daily meeting of the Senate be 10 o'clock a.m., and that the Senate shall on each day at 6 o'clock p. m. take a recess until 8 o'clock p. m., and adjourn at 11 o'clock p. m. until otherwise ordered.

Mr. BRANDEGEE. I notice that one of the local papers last evening, in referring to the brief utterance I was privileged to make upon the subject yesterday, stated that I rose to oppose the resolution. I do not blame the paper for having drawn that inference from the part of my statement which I made, because

I did not have time to complete it.

I had no intention of opposing the resolution. I was calling attention to the terms of it, and drawing the attention of the Senate to exactly what it meant. The Senator from New Hampshire has amplified that. It means that every committee meeting must be absolutely cut out or else Senators can not be upon the floor to attend to the very duties provided by the resolution. It means that Senators can not attend to their correspondence; that they can hardly get the amount of sleep necessary between the debates of the Senate to keep their bodies and brains in condition to do decent work for their constituents and for the Government.

Personally, I do not think there is any necessity for the passage of this resolution at this time. The procedure of the Senate during the last few days shows there is no necessity for it. We have met at 10 o'clock, or at 11, and have adjourned along in the evening, sometimes at 11 o'clock and sometimes at 10.30, without any trouble. I do not think it is necessary to have a hard and fast binding rule upon us, as provided by the resolution. Nevertheless, I am not going to oppose it. I realize perfectly well that it is the wish of the majority, and I believe in

majority rule.

I do not think we shall do as good work for the country under the terms of this resolution if we are compelled to stay here until 11 o'clock every night, whether we feel in condition to perform our duties properly or not, or whether the time shall be occupied in continually calling the roll to demonstrate the presence of a quorum. I do not think we shall make any haste; and I think the fatigue and the dissatisfaction which will proceed from the enforcement of the order will detract from the fruits which we ought to anticipate from a full, free, fair, and comforting debate upon this question, if that word can be used in connection with the matter.

I am going to vote for the resolution if it is put to a vote;

I am going to vote for the resolution if it is put to a vote; for one reason, to show the majority that there is not the slightest disposition upon this side of the Chamber, so far as I have been able to ascertain, in any way to delay unnecessarily the proper consideration and speedy passage of such legislation as

a majority of the Senate decide upon.

I hope that if the resolution shall be found unduly oppressive the last three words of the resolution will be taken advantage of and that the condition that the hours provided by the resolution shall be observed "until otherwise ordered" may serve as a safeguard and a remedy to relieve us from the hard and fast conditions imposed in the other part of the resolution.

I think as the Senator from Colorado [Mr. Shafroth] said yesterday. He said:

Now, when we are perfectly willing to have debate without limit, having long sessions each day, to say that that is attempting to throttle any debate, it seems to me, can not be sustained.

Of course there is no accusation by anybody, as I understand, that there is any intention to throttle debate here. I think the Senator from Colorado is quite correct about that. I think the disposition of the other side will be to allow every Senator to take the proper amount of time to give the Senate the views he has upon this question. Of course the ordinary courtesy that prevails between gentlemen would dictate that policy, for one Senator stands upon an equality with another. Because a majority have met in caucus and have laid out their program, I do not think, and I do not believe any Senator on this side thinks, that it is their intention to deprive anyone of the minority of a chance to speak at such length as he chooses in order properly to present his views upon this subject to the Senate.

I will say, since I have the floor, that I hope the suggestion of the Senator from Colorado that this debate shall proceed without limit foreshadows a disposition on the part of his colleagues not to ask for unanimous consent for fixing a day or an hour for the final vote upon the currency bill, all amendments pending, and all amendments to be offered, without further debate, to its final disposition. I venture to express that hope, because I think one of the vicious practices of this body, or, if not one of the practices, one of the incidents which at times have been indulged in which I regard as bad practice, is the agreement to such unanimous consents. I have repeatedly seen here upon the floor, under such agreements, Senators not very faithfully attend the long-drawn-out debate of a week or so until the last day, and then all appear and all want recognition, some of them with lengthy addresses. Within 15 minutes of the time the gavel was to fall and debate thereupon terminate I have seen Senators in the past rise in this body and offer as amendments to the bill under consideration entire bills upon subjects entirely unrelated to the matter which had been discussed and drive Senators to a yea-and-nay vote—nail them to the cross, so to speak, "yes" or "no"—on a complicated bill that the Secretary had hardly had time to rattle through, fast as he might have read it. Sometimes they have been submitted without reading and just the general substance stated.

think it is unfair to Senators and unfair to the country to indulge in a practice of that kind. Legislation in this deliberative body, where debate has always been free, should not be jammed down the throats of Senators or of the country at the last minute like that—wadded into wads and rammed down through legislative processes when there has been no time for debate or even for explanation. Under that sort of unanimous-consent agreement a Senator is not allowed to state why he votes. He is not even allowed to say that he is in favor of the proposed amendment but is against its adoption as part of the pending bill because he may think it will kill the bill. He is not even allowed to say that. In order to prevent misinterpretation of his views and votes by his constituents, by the press, and by the country at large, he is compelled to stand up here subsequently, whenever he can get the floor, and explain his action. It may be that if that process has been indulged in upon the last day of a session he will have to wait six or eight months before he can get an opportunity to put in the RECORD a statement as to why he voted as he did on the bill.

So I say I shall object, if nebody else does, to unanimous consent being given for the taking of a final vote upon this bill and amendments to it, at least until it has been very fully and freely discussed and until we can see somewhere near the finish of it. Even then I think I shall object to voting upon amendments to be offered unless there is some condition attached that so many minutes shall be allowed to each Senator at least to explain his vote upon the question.

Mr. GALLINGER. Mr. President, just a word.

In reference to unanimous-consent agreements, I wish to say that no unanimous-consent agreement hereafter will be made on any important bill unless some such proviso as this shall be attached to it:

Provided, That on the day on which the vote is to be taken no Senator shall speak more than once nor for a longer time than 10 minutes.

There has been a very great and serious grievance when amendments have been pushed in here almost at the last moment. Frequently a Senator has taken the floor on the day on

which the vote was to have been taken, criticizing other Senators and occupying the entire time. So far as I am concerned, propose to endeavor to remedy that by some such proviso as have just read.

Mr. SMOOT. Mr. President, I do not rise to object to the resolution, for I intend to vote for it. If I did offer an amendment to the resolution, it would be to exclude from it the recess from 6 to 8 o'clock. As I said before, there is no Senator in this body who wishes to reach a vote upon the currency bill earlier than I do.

Last evening I had an appointment, made some 10 days ago, that required my absence from the Senate. I could not well break the appointment, or I would have been here. I noticed in the RECORD this morning, however, that my absence was referred to, as I am informed, in rather a sneering way.

Mr. OWEN. Mr. President

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Oklahoma?

Mr. SMOOT. I have only a few minutes, and I will yield the floor in a very few minutes.

I find in the RECORD this statement:

Mr. Owen. Mr. President, at 1.55 p. m. to-day the Senator from Utah [Mr. Sutherland] made the point of no quorum. There were 61 Senators present. At 2.45 p. m. the Senator from Utah [Mr. Sutherland] again made the point of no quorum. There were 65 Senators present. At 4 o'clock p. m. the Senator from Utah [Mr. Smoot] made the point of no quorum. There were 56 Senators present. The Senator from Utah [Mr. Smoot] again made the point of no quorum at 12 minutes past 5. There were 58 Senators present. Neither of those Senators is in his seat to-night.

Mr. Shively. Mr. President, does the Senator think he ought to make these observations in the absence of the Senator from Utah [Mr. Smoot]?

SMOOT]?

Mr. OWEN. It is very painful to make observations of this character in the absence of the Senator.

Mr. President, for the sake of truth and for the RECORD. I wish to make just a few observations in reference to that part of the Record just read.

When the Senator from Utah [Mr. SUTHERLAND] first called for a quorum there were 7 Democratic Senators in the Chamber, and there were not 61 Senators present. When the Senator from Utah [Mr. Sutherland] called for a quorum the second time there were 2, and only 2, Democratic Senators in the Chamber. In fact, the Senator from Utah thought there was only 1, and that was the Senator from Colorado [Mr. THOMAS . He had overlooked the Senator from North Carolina [Mr. Overman], as he was upon this side of the Chamber. The Senator from Oklahoma was not one of them.

The first time I called for a quorum-and I have never yet called for a quorum without having some purpose in it, and I do not propose to call for a quorum without a purpose-there were 7 Democratic Senators in the Chamber. time I called for a quorum there were 5 Democratic Senators in the Chamber. The Senator from Oklahoma, however, was here both times, as he was in the chair.

Mr. KERN. Mr. President, will the Senator allow me for a moment?

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from Indiana?

Mr. KERN. I desire to ask a question.
Mr. SMOOT. I will yield just for a question, if it is short. I have only a minute or two.

Mr. KERN. It is now within five minutes of the time when the resolution must go over. I wish to ask the Senator whether it is his purpose to force the resolution to go over without a vote?

Mr. SMOOT. It is not. I want a vote on the resolution, and I

assure the Senator now that I will close before 12 o'clock.

Mr. CUMMINS. Mr. President, there are others who desire to discuss the resolution. I know of at least one Senator who wishes to do so, and he has had no opportunity whatever to be heard so far.

Mr. KERN. Mr. President, it seems to me the discussion this morning, which has taken the range of every subject, from the high cost of living and the tariff to the presidential primary, indicates a willingness, and will indicate to the country, that there is a purpose here to defeat the passage of this resolution.

Mr. SMOOT. As far as I am concerned, I deny that charge. I do not believe there is a Senator on this side of the Chamber who has any such intention and no desire or intention of fili-bustering against the resolution. The Senator from Indiana ought to know that he can make a motion to meet at 10 o'clock to-morrow, and he can hold the Senate until 12 o'clock to-night if he desires. So a failure to act on the resolution to-day would not at all interfere with the proceedings of the Senate.

Mr. WILLIAMS. In that case the Senator could make a

motion to keep a quorum present every minute, as he knows.

Mr. SMOOT. Mr. President, I wish to go on and conclude

what I have to say.

I have been a Member of this body for nearly 11 years. I think the first time I was ever out of the city when the Senate was in session was during last September, when I went home to attend the marriage of my daughter. I should not have gone then if there had been any business requiring my presence in this body; but there was none. A year ago my married, but I did not go home to attend his wedding. Ever since I have been a Member of this body I have tried to be in my place when the Senate was in session; and it ill becomes Senator from Indiana or the Senator from Oklahoma to call attention to my absence last night in the way that it was done. If they had been as constantly in attendance in the Senate Chamber as I have been in the past, I think they would have been in the city a great many more months each

I have no feeling over this matter. I simply wanted to call attention to the way in which it was brought to the attention of the Senate, as I have been informed. I do not believe there is a Senator here who does not know that, as far as my attendance in this body is concerned, it can be compared most favorably with that of any other Senator of the United States not only during this session but during every session since I

have been a Member of the Senate.

Mr. CUMMINS. Mr. President, I am entirely willing that the time for the discussion of this resolution shall be extended so that we may dispose of it to-day, and in order to show that I am entirely sincere about that, I ask unanimous consent that the time within which the resolution may be discussed and considered shall be extended for 30 minutes.

Mr. WORKS. Mr. President-

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from California?

Mr. CUMMINS. I do.

Mr. WORKS. I shall be compelled to object to the extension of time to discuss the resolution. I do not want to take the Senator from Iowa off the floor, but I shall certainly object to further delay in taking up the bill that has been set for this time by unanimous consent. There is bound to be considerable discussion on that bill; it is a very important bill, and I think it ought not to be laid aside for the discussion of this resolution,

Mr. CUMMINS. It is of course not for me to say what disposition the Senate shall make of its time. I have a few words

to say with regard to the subject.

The VICE PRESIDENT. The hour of 12 o'clock having arrived, the Chair is compelled to lay before the Senate the un-

finished business, which is H. R. 7837.

Mr. GALLINGER. Mr. President, had I supposed that the few minutes I occupied this morning would have prevented a vote upon this resolution, I would not have said a word, because I think the resolution ought to be passed, as it is the wish of the majority. I feel quite sure that there will not be so much time occupied to-morrow morning, and I want to repeat the request I made yesterday, which was graciously granted, that the resolution may go over without prejudice until tomorrow, instead of going to the calendar.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it will be so ordered.

## BANKING AND CURRENCY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

The VICE PRESIDENT. In accordance with the ruling of the Chair heretofore made, the unfinished business, at the suggestion of the Senator from California [Mr. WORKS], will be temporarily laid aside, retaining its place as the unfinished business of the Senate, and the Chair now lays before the

Sepate House bill 7207.

# SAN FRANCISCO WATER SUPPLY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes.

Mr. WORKS. Mr. President, it was said yesterday by the senior Senator from Mississippi [Mr. Williams] that these long hours which are being imposed upon us were intended to wear out the minority Members of the Senate. If it is any

satisfaction to the Senator, I want to say that they came very near having that effect on me yesterday and last night. I am not feeling as fresh and vigorous this morning as I should like to feel for the further presentation of this important question, but I shall do the best I can.

Mr. BACON. I think the Senator ought to recognize the fact that, last night, when he stated that he preferred the Senate should adjourn in order that he might have rest, it was

acquiesced in, half an hour before the usual time.

Mr. WORKS. I do recognize that fact, Mr. President, and I express my appreciation of the courtesy of the Democratic Members of the Senate in allowing me to suspend my remarks. I was referring to the general proposition which has been advanced here by another Senator, and I am not saying that in any sense of complaint, either.

Mr. BACON. While advanced by another Senator, it was not acquiesced in by all.

Mr. WORKS. That may be.

Mr. President, I had supposed when I suspended my remarks last night that I had concluded all I desired to say upon the subject that I then had under consideration, but this morning I have received a little additional information that I desire to submit to the Senate. One of the documents received is a resolution by the board of directors of the Modesto irrigation district, which reads as follows:

#### Resolution.

Resolution.

The board of directors of the Modesto irrigation, in behalf of said district, hereby protest against the passage of the Raker bill, now pending before the United States Senate.

If the bill passes it will leave the water users of our district without sufficient water and it will seriously injure our district.

The amount of water needed by the water users of our district is far in excess of the amount allowed them by the Raker bill.

If San Francisco takes 400,000,000 gallons of water daily out of the Tuolumne River it will leave us without sufficient storage water to supply us in the last half of the season, and without sufficient water out of the natural flow of the river during the first half of each season. We doubt the sincerity of San Francisco in her pretense of protecting our interests. The utterances of her influential papers and citizens indicate that San Francisco will not be bound by the terms of the bill, but will test their legality in the courts.

If the Hetch Hetchy Valley is to be given away, the Modesto irrigation district and adjoining land will gladly take it and construct the necessary dam and public roads required by Congress, as we are amply able and willing to do so.

Eminent engineers inform us it is well within our means and financial ability to build the dam and public roads. It is the cheapest dam site on the Tuolumne River.

We therefore urge Congress to refuse to pass the Raker bill, or any similar bill which takes water out of this valley.

I, C. S. Abbott, secretary of the Modesto Irrigation district, do hereby certify that the annexed resolution was duly introduced and adopted at an adjourned meeting of the board of directors of said Modesto irrigation district, held on the 25th day of November, 1913, by a unanimous vote of all the directors of said district.

In witness whereof I have set my hand and affixed the seal of said district this 25th day of November, 1913.

C. S. Anbott.

I have another communication here in the form of a position.

Secretary Modesto Irrigation District.

I have another communication here in the form of a petition by Mr. William C. Alberger that discusses these questions and contains some information that I should like to bring to the attention of the Senate, and, if the Senate will allow me, I will have it read by the Secretary.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

# Petition.

To the Senate of the United States:

The undersigned respectfully petitions you in opposition to the pending bill (H. R. 7207), which proposes to grant Hetch Hetchy Valley in Yosemite National Park to the city of San Francisco for use as a reservoir site, and respectfully asks your consideration of the following grounds of opposition to this grant:

1. THE MAIN PURPOSE OF YOSEMITE NATIONAL PARK WILL BE DESTROYED BY THE USE OF HETCH HETCHY VALLEY AS A RESERVOIR VALUE OF THE USE OF HETCH HETCHY VALLEY AS A RESERVOIR STANDARD WAS GREATED HETCH WAS AS A RESERVOIR STANDARD WAS GREATED HETCHY VALLEY AS A RESERVOIR STANDARD WAS GREATED HETCHY VALLEY AS A RESERVOIR STANDARD WAS ASSETTED TO THE WAS GREATED HETCHY VALLEY AS A RESERVOIR STANDARD WAS GREATED HETCHY WAS GREATED HETCHY WAS GREATED HETCHY WAS GREATED HETCHY WAS GREATED WAS GREATED WAS GREATED HETCHY WAS GREATED WAS GREAT

STROYED BY THE USE OF HETCH HETCHY VALLEY AS A RESERVOIR.

Yesemite National Park was created to preserve Hetch Hetchy Valley in its natural state for the enjoyment of the people forever similarly as Yosemite Valley is preserved for their enjoyment.

Without Hetch Hetchy Valley in its natural state Yosemite National Park is shorn of its unique feature, which puts it in the same class of natural wonders with Yosemite Valley. There are many beautiful meadows in the high sierras of California. There are a number of places where the granite cliffs are awe inspiring by their height. But only in Hetch Hetchy Valley and in Yosemite Valley are they together—the high granite cliffs rising sheer from beautiful mountain meadows.

II. San Francisco Does Not Need Hetch Hetchy Valley in Order To Have an Adequate Water Supply.

There are several other sources from which San Francisco can obtain, when required, the same quantity, 400,000,000 gallons daily, which it is estimated the use of Hetch Hetchy Valley as a reservoir will provide, or a larger supply should 400,000,000 gallons daily become inadequate.

provide, or inadequate.

SPECIFICATION 1 The report of the Army board of engineers indicates that there are alternative sources to Hetch Hetchy Valley available to San Francisco for a supply of 400,000,000 gallons daily or a larger quantity, as follows: (1) Sacramento River.

(2) Feather River.
(3) Yuba River.
(4) American River.
(5) McCloud River.
(6) Yuba and American River tributaries combined.
(7) American, Cosumnes, and Mokelumne River tributaries combined.
(8) Sacramento River combined with tributaries of either of the Feather, Yuba, or American Rivers.
(9) Eleanor and Cherry Creek tributaries of the Tuolumne River combined with Stanislaus, Mokelumne, and Cosumnes Rivers, and a tributary of the American River.
(10) South Fork of Eel River supplemented with water from one or more of the other mentioned streams.

#### SPECIFICATION 2.

A water supply from any one of the eastern tributaries of the Sacramento River, should it ever become inadequate, can be supplemented continuously with water taken out of the Sacramento River, where it is crossed by the conduit from the tributary. This applies particularly to consideration of the use of tributaries of the Feather, Yuba, and American Rivers as the primary source of the city supply.

## SPECIFICATION 3.

There are other reservoir sites suitable for a very large storage of water available for San Francisco in place of Hetch Hetchy Valley.

The report of the Army board of engineers mentions Indian Valley, with 120 feet height of dam. making 600,000 acre-feet of storage capacity, and Big Meadows, with 85 feet height of dam, making 450,000 acre-feet of storage capacity, compared with Hetch Hetchy Valley, with 325 feet height of dam, making 344,000 acre-feet of storage capacity.

Within the limit of the 325 feet height of dam estimated for Hetch Hetchy Valley reservoir, there may be one or more other available reservoir sites which have never yet been considered. The report of the Army Board of Engineers indicates that they were not informed of the reservoir storage possibilities, if there are any, of very extensive areas in the Feather, Yuba, and American River watersheds.

#### SPECIFICATION 4.

The reports on alternative sources to Hetch Hetchy Valley farnished by the Army board of engineers by the San Francisco authorities are incomplete and did not thoroughly inform the Army board concerning them. The report, page 19, says:

"The reports have covered all sources of water supply that are considered as available. Some of the reports notably those on the Tuolumne and Sacramento Rivers, have been thorough and complete. Others have been much less so, due largely, it is thought, to the lack of importance and impracticability, from the point of view of the city authorities, of any source of supply other than the upper Tuolumne."

HI. SAN FRANCISCO DOES NOT NEED HETCH HETCHY VALLEY IN ORDER TO SAYE \$20,000,000 IN CONSTRUCTION COST BY USING IT INSTEAD OF ANY OTHER SOURCE FOR ITS WATER SUPPLY.

There are several projects of water supply available to San Fran-

To Save \$20,000,000 in Construction Cost by Using it Instead of any Others for its Water Suffly.

There are several projects of water supply available to San Francisco which will give the city more water, or as much water, as the Hetch Hetchy project at a less outlay of money.

This conclusion appears incontrovertible when the reports furnished the Army board of engineers by the city authorities on the various projects are completed by including omissions and excluding overstatements of estimates of cost.

The construction cost of the Hetch Hetchy project has been understated by the city authorities to the Army board approximately \$10,000,000 for the supply of 160,000,000 gallons daily, and proportionally more for the supply of 240,000,000 gallons daily, and proportionally more for the supply of 240,000,000 gallons daily, and proportionally more for the supply of 240,000,000 gallons daily and 400,000,000 gallons daily.

The explanation of the understatement is that the city authorities did not report to the board of Army engineers the estimated construction cost of Hetch Hetchy waterworks delivering water in San Francisco and in Oakland, but furnished their report on the estimated cost of construction of Hetch Hetchy waterworks delivering water into Crystal Springs reservoir of the Spring Valley Water Co., 23 miles short of San Francisco, and delivering water into Chabot Reservoir of the People's Water Co., 12 miles short of Oakland.

With \$10,000,000 added to cover the cost of extending the city authorities' project of Hetch Hetchy waterworks into San Francisco and into Oakland, the estimated construction cost of the Hetch Hetchy project for 160,000,000 gallons daily will be about \$47,500,000, in place of about \$37,500,000, stated in the summary of comparative construction costs in the Army board report (p. 49).

### SPECIFICATION 2.

The same omissions and consequent understatement of estimate of construction cost appears to be the case with the statements of estimated cost in the summary of comparative construction costs in the Army board report (p. 49) for the Eleanor-Cherry-Stanislaus-Mokelumne and American-Cosumnes-Stanislaus-Mokelumne projects.

On the other hand, the estimates of construction cost in the same summary of comparative construction costs for the McCloud River, Sacramento River, and Yuba River projects are for waterworks making the delivery of the water in San Francisco and Oakland.

SPECIFICATION 2

### SPECIFICATION 3.

The construction cost of the Sacramento River project has been over-ated by the city authorities to the Army board of engineers

The construction cost of the Sacramento River project has been overstated by the city authorities to the Army board of engineers \$19,725,000.

The explanation of this overstatement is that the city authorities included in their report on this project furnished the Army board of engineers as one of the items of cost an assumed capitalization of assumed operating expenses for filtration and pumping.

This guessed capitalization of guessed operating expenses is not money. San Francisco would not have to outlay it nor issue bonds on account of it.

Cutting out the overstatement, the real estimate of construction cost

account of it.

Cutting out the oversfatement, the real estimate of construction cost to supply San Francisco with one hundred and thirty-three and a third million gallons daily of water from the Sacramento River is only \$19,679,900, in place of \$39,404,900 stated in the summary of comparative costs in the Army board report (p. 49).

### SPECIFICATION 4.

The construction cost of a Yuba River project to supply 162,000,000 gallons daily has been overstated by the city authorities to the Army Board of Engineers between \$15,000,000 and \$20,000,000.

The explanation of the overstatement is, first, that the report of the city authorities furnished to the Army board estimates a double pipe line across the Sacramento Valley for a Yuba River project (p. 137 of Army board report), whereas their report furnished for the Hetch Hetchy project estimates a single pipe line across the San Joaquin

Valley (p. 130 of Army board report), the difference of estimated cost being about \$10,000,000 against the Yuba River project. There is no excuse for this. The quantity of water is the same. The altitude of the lalet to the pipe is lower on the Yuba project than on the Hetch Hetchy project, and the pressure heads are less on the Yuba project pipe line across the Sacramento Valley. And second, that the city authorities estimated on a very roundabout line for a Yuba River project conduit (p. 92 of report of Army board), about 30 miles longer than a direct line, the difference of estimated cost being between \$7,000,000 and \$10,000,000 in favor of the direct line which was avoided by the plan on which the estimate was made. There is no excuse for this. The crossings of Suisula Bay and San Francisco Bay for a direct Yuba River conduit line would be in the same places, or could be, of the Sacramento River project, so there is no reason in assumed insuperable difficulties for estimating on the roundabout line.

Cutting out the overstatement of the estimates of construction cost, a Yuba River project of water supply is possible for San Francisco at a cost between \$40,000,000 and \$45,000,000, in place of \$61.944,000 stated in the summary of comparative costs in the Army board report

#### SPECIFICATION 5.

The construction costs of Feather River and American River projects of water supply for San Fran isco, on which no reports were furnished by the city authorities to the Army board, should be little more or less than a Yuba River project. The Feather River is a few miles farther away and the American River a few miles nearer to the city. SPECIFICATION 6.

Increasing the construction cost of the Hetch Hetchy project, as reported by the city authorities, by the omissions from the estimate of their report and squeezing the "water" put by the city authorities in the estimates of their reports on the Sacramento River and Yuba River projects, the comparative construction-cost estimates are: \$47, 500, 000 10, 766, 000 42, 500, 000 Hetch Hetchy, about\_\_\_\_\_\_Sacramento River\_\_\_\_\_

Yuba River, about 42, 500, 000

Instead of being as stated in the summary of comparative costs in the report of the Army board of engineers: Hetch Hetchy \_\_\_\_ Sacramento River\_\_ Yuba River \_\_\_\_

#### SPECIFICATION 7.

The estimates on alternative sources to Hetch Hetchy Valley, and to the Hetch Hetchy Valley as well, furnished to the Army board of engineers by the San Francisco authorities are not reliable estimates of the costs of these projects. The report, page 51, says:

"Finally, the board wishes again to emphasize the fact that it does not present the various estimates given as reliable estimates of the different projects."

WM. C. ALBERGER.

#### SAN FRANCISCO, November 26, 1913.

Mr. WORKS. Mr. President, I come now to one of the most important questions involved in this controversy. I regret that it comes at a time when Senators are at their luncheon. It is the question whether San Francisco is now needing more water and whether she is able to procure it in adequate quantities from other sources than the Hetch Hetchy Valley. To my mind this is the vital question involved. If San Francisco is in need of water for domestic purposes and can not procure it elsewhere, she is entitled to this grant and should have it.

In that respect it makes no difference whether she has a prior or a subsequent filing upon the stream, because under the express terms of the law of California a claim upon the stream for domestic purposes takes precedence of a claim for irrigation, no matter whether the filing was first in time or not; and if this question were presented to the water commissioners of the State of California as between the irrigation districts, in so far as they propose to use the water for irrigation purposes, and the city of San Francisco, under the laws of California the board would be bound, as a matter of law, to recognize the rights of San Francisco as against the claim of water for irrigation purposes

Not only that, but as a matter of justice, as a matter of humanity, the waters of the State must of necessity go to domestic use to the entire exclusion of the use of water for irrigation purposes, no matter how great the loss to the irrigationist

But it is my purpose, Mr. President, to show in the first place that San Francisco has at her very door and under the system that is now in existence ample facilities for supplying her present needs and all her needs for years to come, and therefore that she has no just claim upon the Government to grant to her the right to the use of the Hetch Hetchy Valley for present

In addition to that, it would be impossible for San Francisco to procure a water supply from this source for at least 10 years if the grant were made at the present time. I think all the engineers who have expressed themselves upon the subject have agreed to the proposition that it would take the city at least 10 years to construct this system and conduct the water to the city. The conditions in San Francisco just now are peculiar. They have a water system known as the Spring Valley Waterworks. That system has been supplying water to the city for a half century. When this agitation commenced for the securing of another and different supply of water, naturally the Spring Valley Waterworks ceased to expend money for the

mere purpose of increasing the water supply for San Francisco for the future, because the confiscation of this plant stared it in the face, which would have resulted if San Francisco, as it threatened to do, put in a new distributing system through which it might supply water that it proposed to develop in the mountains

For that reason and for no other San Francisco, in some parts of the city, is short of water. If any arrangement had been made five years ago by which the city could take over the plant of the water company, it could have extended it and would have been amply supplied with water. That is what San Francisco is now endeavoring to do. It expects to secure its supply from the Spring Valley system. It has gone to this extent: It has entered into an agreement with the Spring Valley Waterworks to purchase its system. They have not been able to agree upon the price to be paid. They have agreed, however, that the city shall bring a condemnation suit and that three judges, to be agreed upon between them, shall sit and that three judges, to be agreed upon between them, shall sit and determine the one single question of the amount to be paid for the system of the water company. They have gone to the extent of bringing that condemnation suit. They have agreed upon the three judges who shall fix and determine the price to be paid for the water company's system, and they have prepared now and will undoubtedly within a very short time acquire the title to that water system, with all its water rights, that I am going to show the Senate are amply sufficient to supply San Francisco with all the water it needs for quite a number of years to come.

There has been one unfortunate feature of the investigations that have taken place in this matter. The water company has ceased to have any interest in making any kind of showing as to what water can be produced by this system, because it has agreed to sell its plant to the city. Nobody else has had any interest in all the investigations and hearings in the effort to show the present ability of the city to supply itself with water from that source. That has been mentioned, and we shall find it in different reports to which I propose to call attention; but that has not been a question regarded as of vital importance in dealing with this matter. I think it is exceedingly important that the Senate should know, when it comes to pass upon this question, whether San Francisco has some other source not only from which it can supply itself to-day, but from which it can supply itself permanently, without taking away from the farmers of the San Joaquin Valley the supply of water that is necessary for the irrigation of their lands and which they can not procure anywhere else. I call attention in this connection to a showing which was made by the Spring Valley Water Co. at a time when it was interested in this question as to its ability to supply the water. That was on an occasion when an investigation was proceeding before the then Secretary of the Interior, when a permit was being sought from the Interior Department of the Government to use the Hetch Hetchy. Then the water company had a vital interest in the controversy, and it made this showing to the Secretary of the Interior. As a result of the showings that were made at that time and subsequently the several Secretaries of the Interior have uniformly refused to give a permit to use the Hetch Hetchy for this purpose. If we had time to go into it, we should find that there was a most ex-baustive and complete examination at that time of the question as to whether San Francisco could procure water elsewhere, and it was doubtless upon the understanding of this by the then Secretaries of the Interior, that she could procure the water else-where, that these permits were refused. They subsequently made their appeal to Congress, and upon the basis of the showings that were made in that connection Congress refused to grant them the right to enter the Hetch Hetchy and construct a dam for the use of the city.

There are Members of this body who are more familiar with the proceedings that took place in Congress at that time than I, because some of them, at least, served upon some of the committees which then investigated this important question. I know that is true with respect to the Senator from North Dakota [Mr. GRONNA].

Now, let me call your attention to some of the evidence that was submitted at that time. I shall read from an abstract of reports made by F. C. Herrmann, chief engineer of the Spring Valley Water Co., and other engineers, relating to this subject It would be impossible to bring before the Senate a report of that entire investigation, covering hundreds of pages, which, if Senators desired to investigate the matter, might be found in the office of the Secretary of the Interior. I only want to bring to the attention of the Senate sufficient of this evidenceand I will confirm it by the report of the board of Army engineers and by other evidence—to prove to the Senate con-clusively that there is another source of supply of water for present needs, as well as for a permanent supply. I now read

from the report made by F. C. Herrmann, chief engineer Spring Valley Water Co., October 1, 1912—not so very long ago. He

THERE WILL BE ENOUGH WATER FOR SAN FRANCISCO UNTIL BEGINNING OF NEXT CENTURY.

NEXT CENTURY.

The purpose of this report is to present an estimate of the safe, dependable amount of water that may be delivered daily to the people of San Francisco by the complete and intelligent development of the present resources of the Spring Valley Water Co., and to determine at what time in the remote future additional water supply must be obtained elsewhere.

These resources extend over large areas adjacent to the region of San Francisco Bay, and although the most important of these will be operated in harmony, each assisting the other to the best advantage, they are divided into the following component parts for the purpose of analysis in this report:

Peninsula system:

Bay Slope, nearly complete, 35 square miles—

That is the drainage area:

Coast streams, reserved for future supply, 65 square miles.
Alameda system, partially developed, 620 square miles.
Coyote system, reserved for future supply, 115 square miles.
Alviso-Ravenswood wells, partially developed, subterranean.
Lake Merced, nearly complete, subterranean.
The Spring Valley Water Co. has secured water resources for the people of San Francisco that when completely developed will safely produce year in and year out 210,000,000 gallons daily.

That is more water than the city of San Francisco is entitled to take out of the Hetch Hetchy stream if its filings upon that stream were recognized as legal and valid. As I have said to you more than once in the course of this discussion, San Francisco at the present time is only legally entitled to take out of this stream, under the filings it has made upon it, 161,000,000 gallons of water daily, while this report shows that the city can procure from sources right at its door practically 210,000,000 gallons daily, or over five and one-half times

the present needs of the city.

Mr. POINDEXTER. Mr. President—

The PRESIDING OFFICER (Mr. BRYAN in the chair). Does the Senator from California yield to the Senator from Washington?

Mr. WORKS. I vield.

Mr. POINDEXTER. I have not closely enough followed the reading of the document which the Senator from California is now reading to understand whether it covers the Calaveras

source of supply.

Mr. WORKS. It has not done so thus far.

Mr. POINDEXTER. I refer to the Calaveras Dam. I am informed that the development of that additional source of supply by the Spring Valley Water Co. has been begun; that the dam is in process of construction; and that the Calaveras supply will add 40,000,000 gallons a day to the Spring Valley water supply in addition to what the Senator from California has stated

Mr. WORKS. It may be that that is commented upon further along in this report, but it is not included in the sources of supply that are named up to the present time. This statement continues:

In addition to this, other sources have been secured, which may be depended upon to supply 42,000,000 gallons daily for use within the proposed metropolitan district, making a grand total of 252,000,000 gallons daily, as fellows:

For the city of San Francisco.

(In million gallons.)

If no rain whatever fell for over 14 years, this storage would be sufficient to care for the present needs of the city during that time.

That is up to the end of the century.

Extensive underground storage, which is the source of subterranean waters at Pleasanton, Sunol, Alviso, and Ravenswood, is not included in the above, and in the aggregate furnishes storage in excess of the enormous storage of the surface reservoirs.

MR. MULHOLLAND'S ESTIMATE OF THE WORK OF F. C. HERMANN. (By Wm. Mulholland, chief engineer, Los Angeles Aqueduct, and J. B. Lipplicott, assistant chief engineer of the Los Angeles Aqueduct, p. 232b, same report.)

I know both of these gentlemen intimately, and have worked with them in various ways in dealing with water questions. Mr. Mulholland, with Mr. Lippincott as his assistant, has built the Los Angeles Aqueduct and the series of reservoirs that have just been completed to supply that city with mountain water. He is an able engineer and recognized by everyone who knows him as honest and reliable. He has no interest whatever in this controversy. I heard, when I was in Los Angeles, that he had made a report upon this question, and I took the matter up with him personally. He told me that he had made a full investigation of the waterworks system and stated that a large additional supply could be derived from that source. He did not say so to me, but I was told by others, that he had stated that the amount of water could be doubled through that system. The statement continues:

There has been presented to the board of Army engineers, as requested by the Secretary of the Interior, a number of reports dealing with the resources of the Spring Valley Water Co., of which one report by Mr. F. C. Herrmann, chief engineer of the Spring Valley Water Co., fully discusses the available water supply owned and controlled by the

### THOROUGH STUDIES MADE OF ALAMEDA SYSTEM.

Mr. Herrmann was born and raised at San Jose and received his engineering training at Berkeley, all practically in the district under discussion. His professional work has included official water-supply investigations for the Federal Government and responsible charge of extensive hydraulic works. He is surrounded by a corps of engineers, some of whom have spent years of study and observation of the Spring Valley system. To assist this regular engineering organization he has called in consultation Dr. J. C. Branner, vice president of Stanford University, and Dr. A. C. Lawson, professor of geology of the University of California, both eminent geological study thereof. He also has had in consultation the engineering staff of J. G. White & Co.; Mr. George G. Anderson, an eminent engineer of Denver; Capt. A. O. Powell, civil engineer of Seattle; and Gen. Hiram M. Chittenden, retired, of the Corps of Engineers of the University of Engineers of the Unived States Army. Gen. Chittenden has specialized for years on the hydrography of arid America. All of these gentlemen, together with Mr. Mulholland and Mr. Lippincott.

That is, together with Mr. Mulholland and Mr. Lippincott-

That is, together with Mr. Mulholland and Mr. Lippincott—have gone over the districts under discussion in the reports in detail with Mr. Herrmann and have conferred with him both in the field and in the office. The deliberations have been extensive, and a mass of data has been compiled by Mr. Herrmann and his assistants, which is presented in their reports. It therefore follows that the conclusions reached by Mr. Herrmann are worthy of respectful consideration and should be given weight in reaching final judgment.

Mr. Herrmann has presented a report which is a clear and concise review of much detailed matter contained in several appendixes and many maps and diagrams which are referred to therein. It is not in the nature of a report produced under high pressure in the short period of two or three months time by one who is a nonresident and but briefly familiar with Pacific coast conditions, and the ordinary sources of our domestic water supplies, covering one-third of the second largest State in the Union, involving estimates of construction cost running into staggering figures and unprecedented plans, but is rather the findings of men who have made good in their life work in this particular locality.

SAN JOAOUIN RIVER

(Page 82 of same report.)

The San Joaquin River is one of the largest rivers in California. It serves a catchment area of 6,000 square miles, carrying to the San Francisco Bay all the waste waters from that portion of the Sierra Nevada Mountains lying south of the Calaveras River.

ALWAYS AVAILABLE FOR DISTANT FUTURE.

It lies about 20 miles east of the Livermore Valley, and at such time in the remote future, when the needs of San Francisco shall have become equal to the safe, dependable yield of the resources of the Spring Valley Water Co., an almost unlimited supply of water may be readily obtained from this source.

By pumping and conveying only 20 miles this water may be delivered into the Livermore Valley, whence it may be filtered by the unlimited natural filtration gravels and conveyed to the city of San Francisco.

CONSUMPTION OF WATER,

The average daily consumption of water in San Francisco for the year 1911, as indicated by the records of the Spring Valley Water Co., was 37,700,000 gallons daily.

In the hearings which took place the present city engineer of San Francisco testified that the amount of water being used by that city at that time was about 42,000,000 gallons daily.

Mr. WEEKS. Mr. President—

The PRESIDING OFFICER. Does the Senator from Cali-

fornia yield to the Senator from Massachusetts?

Mr. WORKS. I yield to the Senator. Mr. WEEKS. Mr. President, at this time there are 13 Democratic Senators on the floor and 13 Republicans. I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from Massachusetts suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Smith, Ariz. Smith, Ga. Smith, S. C. Smoot Stephenson Sterling Sutherland Ashurst Bacon Bankhead Hollis O'Gorman Overman James Johnson Owen Brady Brandegee Page Perkins Pittman Poindexter Kenyon Kern La Follette Bryan Burton Chamberlain Chilton Poindexter Reed Robinson Root Saulsbury Sheppard Sherman Shields Shively Simmons Lane Lewis Lippitt McLean Thomas Thompson Thornton Vardaman McLean Martin, Va. Martine, N. J. Myers Nelson Norris Wash Warren Weeks Works Cummins Dillingham Gallinger Goff Gronna Simmons

Mr. KENYON. I have already made announcement of the absence of the Senator from Idaho [Mr. Borahl] on account of illness, and will let that announcement stand for the day.

Mr. KERN. The senior Senator from Mississippi [Mr. WIL-LIAMS] has been called from the Chamber on a pressing matter of important public business, and will be absent for a short

The PRESIDING OFFICER. Sixty-three Senators have answered to their names. A quorum of the Senate is present.

Mr. WORKS. Proceeding with the reading of this report:

Mr. WORKS. Proceeding with the reading of this report:

During the last few years the consumption has increased at the average rate of about 1,500,000 gallons daily per annum. For many years the future requirements for San Francisco have been the subject of careful analysis and thought by all investigators of the water supply of this city, and many elaborate compilations and deductions have been made. These results are based upon estimates of increased population and of industrial activity, and at best can be only approximations.

In estimates of the future consumption of water it has been customary to allow 100 gallons per capita per day, though in his report on "New York's water supply," Mr. Freeman estimated that with proper inspection and meters on all taps, from 42 to 67 gallons per capita per day would be ample. Similarly, in 1904, Mr. Dexter Brackett, chief engineer of the metropolitan water district, of Boston, in his report on "Measurement, consumption, and waste of water," said that the quantity actually required for all uses in the Boston district was 554 gallons per inhabitant per day, and that all use above that amount was waste.

We believe that an allowance of 100 gallons per capita per day is

was waste.

We believe that an allowance of 100 gallons per capita per day is a liberal one. At this rate of consumption, the 210,000,000 gallons daily of the Spring Valley Water Co. available for the city under complete development will serve a population of 2,100,000 people.

## PLENTY OF WATER FOR METROPOLITAN DISTRICT.

PLENTY OF WATER FOR METROPOLITAN DISTRICT.

If we take, in addition to this amount, that additional quantity available for the metropolitan district from Spring Valley Water Co. sources of 42,000,000 gallons daily, making a total of 252,000,000 gallons daily, and apply it at the rate of 100 gallons per capita per day to Mr. Freeman's estimate of the future population of the metropolitan district, as given on page 76 of his report above referred to, we find that water available from the Spring Valley Water Co. resources alone will serve this metropolitan district until the year 1975.

Mr. President, I want to say that this element of a metropolitan district in this controversy and in all of these investigations is a false quantity. There is no such metropolitan district, and in my judgment there never will be. They are undertaking to drag into this investigation the needs of 25 other cities which have no interest whatever in this controversy and could get no water from this source under the filings of the city of San Francisco.

Further, if to the ultimate development of the Spring Valley Water Co. we add that amount of water available from other sources serving, or available to serve, other communities within this metropolitan district, as indicated by reports for the city of San Francisco, it will make a grand total of about 350,000,000 gallons daily, which, when applied to Mr. J. R. Freeman's population curve at the rate of 100 gallons per capita per day, will supply this metropolitan area until about the year 2000.

EXCERPTS FROM A REPORT.

(By Hermann Schussler, consulting engineer Spring Valley Water Co.)

I know Mr. Schussler also, and have known him for a good any years. He was at the head of the engineering force of many years. the Spring Valley Waterworks for something like 40 years. He is one of the ablest hydraulic engineers in California and is thoroughly familiar with local matters of this kind.

THE SAN JOAQUIN RIVER AS A FUTURE ADDITION.

This latter source, which I investigated from time to time since 1877, and early came to the conclusion that by using the Alameda system, with its unparalleled gravel deposits acting as natural filter systems, and with its compact artesian and reservoir system lying just to the west of the San Joaquin Valley, through which latter from four to six months in spring and summer of each year a vast amount of waiter passes on its way from the melting snows of the Sierra to the sea, the natural next step of a successful water supply having the present Spring Valley system as a basis would be to make the floodwaters of the San Joaquin River tributary to the filter and reservoir systems of

the Alameda Creek region and to the Crystal Springs and San Andreas Reservoirs, on the peninsula.

Owing to the subterranean natural filtering system of the company in both Livermore and Sunol Valleys, and owing to the facility with which the waters from the San Joaquin could either be passed through the natural filtering process in Livermore and Sunol Valleys direct, or passed partly through the filtration and artesian process of the Livermore Valley, and partly (with or without the waters from Arroyo Valley Reservoir) into the San Antonio Reservoir, and from there to and through the company's natural filtering process in operation in Sunol Valley, this proposed addition of the San Joaquin during its freshet stage offered to the owners of the Spring Valley Water Co.'s properties on the Alameda system and on the peninsula a most effective, rapid, and economical addition to its works with a supply capacity of almost unlimited extent.

Before proceeding with a description of the proposed method of developing the San Joaquin branch of the system, and also before touching on the proposed preliminary development of the Alameda system and its ultimate development in connection with the San Joaquin River as a feeder, I shall quote from the records of the United States Senate Land Committee, before which, on February 12, 1909, I briefly referred to the San Joaquin River as the nearest additional large source of water supply to be connected with the present and proposed works of the Spring Valley Water Co.

I shall here quote from page 70 et seq, of the official record of this meeting in Washington in 1909:

HETCH HETCHY RESERVOIR SITE.

Hearing before the Committee on Public Lands, United States Senate,

HETCH HETCHY RESERVOIR SITE.

Hearing before the Committee on Public Lands, United States Senate, on the joint resolution (S. J. Res. 123) to allow the city and county of San Francisco to exchange lands for reservoir sites in Lake Eleanor and Hetch Hetchy Valley, in Yosemite National Park, and for other

purposes.

Question (by Senator Smoot). Is the Sacramento River feasible?

Answer (by Mr. Schussler). Yes; but it would be very expensive.
You would have to go a long way. But there is one source probably as good as any, except that the quality has been doubted, and that is the San Joaquin River. Now, the San Joaquin River lies right to the east of part of our headwaters on the Alameda Creek system. I discouraged our directors years ago not to make any investment whatsoever in the Sierra Nevada, because it was too expensive and because we could get all the water for many decades nearer home; but I have said to them if you want to increase your water supply over and above the capacity that we can develop the works, which with the coast streams on the Pacific coast is somewhere in the neighborhood of 135.000,000 gallons a day—

Senator Smoot. That is the San Joaquin?

Senator FULTON. No; he says that they could develop from what they have.

Senator Fulton. No; he says that they could develop from what they have.

Mr. Schussler. I have told them that if they wanted to go far beyond that, then they could go to the San Joaquin River across the range, not far from our easterly boundary, and do just the same that the city proposes to do—pump the water over Livermore Pass and run it onto the company's filter bed that we have—1,300 acres of deep gravel beds where we now filter our water. (The Sunol filter beds.)

Senator Smoot. Out of the San Joaquin, how much could you develop?

Mr. Schussler. One hundred and fifty million to two hundred million gallons a day.

Senator Newlands. Would that be less expensive?

Mr. Schussler. Very much less; but nobody could handle that comfortably unless they had the big filtration works that we have.

Senator Newlands. Are those filtration works natural or artificial?

Mr. Schussler. Natural filtration works. We simply ran a tunnel underneath this prehistoric lake bottom, which is filled with gravel, and which tunnel we have lined with concrete, and put in a good many thousand 1½-inch galvanized pipes, and through this tunnel we draw now (early in 1909) 14,000,000 gallons a day, which we can increase easily to 80,000,000 or 90,000,000 gallons a day.

Senator Newlands. And the filter bed would be adequate to all requirements for the future?

Mr. Schussler. We can filter 150,000,000 to 200,000,000 gallons daily.

daily

Mr. President, if the Senator will indulge me a moment, I think I will now put upon record the fact that there are seven Democratic Senators present in the Chamber and nine Republicans, not counting the Senator from Washington [Mr. POINDEXTER].

Mr. LEWIS. Mr. President, I desire to say, if I may in-

terrupt-

The PRESIDING OFFICER (Mr. BRYAN in the chair). The Chair thinks the Senator from New York has, in effect, suggested the absence of a quorum. The Secretary will call the

Mr. LEWIS. I desire simply to suggest that it being the luncheon hour, five minutes after 1, that fact very naturally explains the absence of Senators on both sides.

Mr. BRANDEGEE. Let us have the regular order.

The PRESIDING OFFICER. The Secretary will call the

The Secretary called the roll, and the following Senators answered to their names:

Perkins

Reed Robinson

Root Saulsbury Sheppard Sherman Shields

Ashurst Bacon Hollis James Bankhead Johnson Brady Brandegee Kern La Follette Bryan Lane Burton Chamberlain Chilton Clark, Wyo, Clarke, Ark, Dillingham Lewis Lippitt Martin, Va. Martine, N. J. Myers Nelson Norris O'Gorman Overman Gallinger Goff Gore Gronna Owen

Stephenson Sterling Sutherland Pittman Poindexter Thomas Thomas Thompson Thornton Vardaman Walsh Warren Weeks Williams Shively Simmons Smith, Ariz. Smith, Ga. Smith, S. C.

The PRESIDING OFFICER. Sixty-one Senators have responded to the roll call. A quorum of the Senate is present.

Mr. BACON. Mr. President, as the senior Senator from New York was very pointed in his enumeration of the number of Senators present, I wish to call attention to the fact that, as previously stated, most of the Senators were at lunch. Before the call of the roll was completed the Senator from New York himself disappeared from the Chamber to go and get his lunch, and he is now absent.

Mr. SMOOT. It might also be added that not a word has been spoken by the Senator from California, who has the floor, since the roll was called, and I notice there are but 10 Democratic Senators in the Chamber now.

Mr. O'GORMAN. Mr. President, in this connection I suppose it might be fair to call attention to the circumstance that there

may be about 10 Republicans in their seats.

I do not know what purpose is to be served by these frequent objections regarding the absence of a quorum, but it will be remembered that under the practice of the Senate no midday recess is taken, and Senators must leave at about this hour-it being now quarter after 1-to go to the lunch room to get luncheon. There is little excuse, it seems to me, for bringing Senators up from the restaurant during the 5 or 10 or 20 minutes they may take for luncheon.

Ten minutes ago the absence of a quorum was suggested by the junior Senator from Massachusetts [Mr. WEEKS]. Just as soon as a quorum was produced he vanished, and only a moment ago I was with him downstairs, having luncheon, just as I think my distinguished colleague, who a moment ago made this objection, has himself vanished, and is now taking his lunch. I propose now to take mine.

Mr. WILLIAMS. And there are 15 Republican Senators in

the Chamber at this moment.

Mr. O'GORMAN. A very fair average.

Mr. BRANDEGEE. I wish to state that the Senator from New York [Mr. Root] did not suggest the absence of a quorum. He called attention to the number of Democratic Senators and the number of Republican Senators who were in their seats. Chair himself stated that in the opinion of the Chair that was equal to the suggestion of the absence of a quorum. I do not think the senior Senator from New York intended to have a roll call.

Mr. O'GORMAN. No; I think it is very useless. much we may respect the learning of the distinguished Senator from California, who is entitled to the attention of the Senate at this time, I know that Senator is inclined to make allowance for the need of the temporary absence of his colleagues at this time of day.

Mr. SUTHERLAND. Mr. President, I should like to sug-

The PRESIDING OFFICER. The Senator from California is entitled to the floor. Does he yield to the Senator from Utah?

Mr. SUTHERLAND. I understood the Senator from California had yielded the floor.

Mr. WORKS. No; I have not yielded the floor. Mr. SUTHERLAND. Then will the Senator from California

indulge me for just a moment?

Mr. WORKS. Certainly; I yield to the Senator from Utah. Mr. SUTHERLAND. I should like to suggest to the Senator

from New York that his party associates, not to include himself, appear to be very hearty and deliberate diners, because yesterday there was a period of at least three hours when there were not to exceed four or five Senators present upon the Democratic side. I hope he does not insist that they were taking that time to satisfy the needs of the inner man.

Mr. O'GORMAN. If the junior Senator from Utah had happened to favor the Senate with his presence last night, he would know that for a period of three hours, from 8 o'clock on, there was a very considerable attendance, and the Senator from Callfornia received every attention in the presentation of his views. Of course, I am aware that the absence of the Senator from Utah last night may be very properly accounted for. I make no comment; but inasmuch as he called attention to the condition during part of yesterday I think to have it complete I might call attention to the condition during the three hours he was absent

Mr. SUTHERLAND. The Senator from Utah is not accountable to the Senator from New York for his absence. I think the records of this body will show that the Senator from Utah is in his seat, attending to his duties, quite as often as is the Senator from New York.

Mr. O'GORMAN. Then the Senator has a very fair average. Mr. SUTHERLAND. The Senator from New York happens to belong to the majority party, which has insisted upon rather unusual attendance, and he and his party associates ought not to break the rule they have themselves laid down.

Mr. O'GORMAN. Why, Mr. President, to show the favor with which the great majority of the Senators on the other side of the Chamber regard the program of the Democrats with respect to these long sessions, on Monday afternoon, when the proposal was made that we should have a night session, only five Republican Senators opposed it. All the rest of the Republican Senators acted in harmony with the Democrats, and voted for a night session. In view of the approval thus given by the great bulk of the Republican Senators to the program of long daily sessions, I marvel at the efforts made now and again by some few Republican Senators to interfere with this program of expedition respecting a very important piece of constructive legislation.

Mr. THOMAS. Mr. President, it seems to me we can make more progress, after the roll call is over and the presence of a quorum is disclosed, by proceeding with the business of the

Senate.

The PRESIDING OFFICER. The Senator from California

is entitled to the floor.

Mr. WORKS. Mr. President, at the beginning of my address this afternoon I expressed my regret that I was called upon to take up a very important branch of this discussion at a time when Senators would be absent at their lunch. I have had enough experience to know what is going to happen in the Senate Chamber about that hour of day. I should be very sorry to inconvenience any Senator at that time, but I remind Senators that this is a very important question, and its discussion upon both sides, in the interest of right and justice, should be listened to by Members of this body.

I do not suppose for a moment that any Senator has left the Chamber on account of any disrespect for me. It is 'not a question of importance to me personally. It is a question as to whether or not this important bill shall be passed, affecting, as it does, the interests of the people of California.

I will now proceed with the reading of this report.

I will now proceed with the reading of this report.

As will be seen from the above quotations, when on the subject of filtering the San Joaquin water I alluded solely to the proposed enlargement of the filtering capacity of the present Sunol filter beds, in order not to draw undue attention to the proposed extensive additional use of the San Joaquin water in the gravel beds and sinks of the Arroyo Mocho and Arroyo Valle, in Livermore Valley, which sinks are tributary to the company's artesian belt near Pleasanton, in the westerly portion of the Livermore Valley, and especially to the landholdings on and over this artesian belt, to which the Spring Valley Water Co., since the above-mentioned meeting of the Senate Land Committee, on February 12, 1909, has added many thousands of acres of artesian and other water-bearing land.

I also read an excerpt from the Report on the Water-Supply

I also read an excerpt from the Report on the Water-Supply System of the Spring Valley Waterworks, by H. M. Chittenden, who, as the report shows, is an Army engineer of long experience, and with personal knowledge of conditions in California:

ence, and with personal knowledge of conditions in California:

Because of the general roughness of the country, and particularly of the ground on which the city of San Francisco is located, the cost of delivering water under proper pressure to all portions is necessarily much greater than where the water can be pumped from an inexhaustible near-by source under practically uniform heads for the whole city, as in Chicago and Buffalo. The serious feature of this Sierra proposition is the large addition which it will make to a cost of service already unavoidably high.

The Spring Valley development involves no such increase. It can be taken up gradually in strict conformity to growing needs. But the initial cost of the Sierra project will be so great that the interest alone well suffice for the permanent development of the Spring Valley system. These are matters which the rate payer and the taxpayer should candidly consider whatever may be their desires under the enthusiasm of the moment.

SUMMARY OF CONCLUSIONS.

There is no substantial reason to believe that the consumption of water in San Francisco County will exceed 92,000,000 gallons daily by 1950, or 235,000,000 gallons daily for the five bay counties, apart from the supply from private wells.

The three main divisions of the Spring Valley system—the Peninsula, the Alameda, and the Coast streams—by careful development into a single unified system, are capable of a dependable supply of over 200,000,000 gallons daily.

By resort to the company's other sources and to the San Joaquin River the supply may be indefinitely increased.

So far as quantity is concerned there is no present necessity for a resort to the Sierra, and will not be for an indefinite period to come.

If there were no Sierra San Francisco could still face the problem of a future water supply with perfect equanimity.

As to quality the Sierra supply is softer but hygienically no purer and is less palatable as drinking water than the Spring Valley supply. The extra cost of the Hetch Hetchy system will virtually be the price paid for a gain in the quality of softness.

Whatever source is ultimately adopted, the great reservoir group proposed by the Spring Valley Water Co. should be made the mainstay of the system as a certain insurance against disaster.

The question discussed in the foregoing report is not that of the sufficiency or desirability of the Hetch Hetchy supply in itself, but that of the present necessity of such an outside vicinity. The resuit of the investigation has been to show that such a necessity does not now and possibly may never exist; that the supply would be in the nature of a luxury rather than a necessity, and a very costly luxury at that.

If this finding is correct, it involves a question of public policy of fundamental importance. The backbone of California's greatness is the agricultural development of her great central basin—a development impossible without water. Its claim upon the mountain supply is a preminent one. Metropolitan needs are perhaps supreme, and if San Fran

San Joaquin Valley, even those which already have priorities of flow, as the Turlock and Modesto districts, might have to step aside; but if it be a fact that the bay cities have a supply near at home in the Coast Range that is amply capable of serving their needs, and if there be not enough in the Slerra for both, then it would surely be wrong to deprive the valleys of the only source of supply which is available to them. The rights of the existing irrigation districts are not alone to be considered, but the future demands of the San Joaquin Valley on both sides of the river.

EXCERPT FROM THE REPORT OF THE PRESIDENT OF THE SPRING VALLEY WATER CO., SAN FRANCISCO, CAL., FOR THE YEAR ENDING DECEMBER

WATER CO., SAN FRANCISCO, CAL., FOR THE YEAR ENDING DECEMBER 31, 1908.

Since October, 1865, Mr. Hermann Schussler has devoted his able brain and his untiring energy to the creation of a water supply for San Francisco. Over 40 years he has spent in economically securing the best reservoir sites, the best sources of supply, riparian rights, watersheds, rights of way, and everything that could suggest itself to a most able engineer. It does not require an expert on value to realize that property thus acquired must have enormously increased in value. The actual expenditures for holdings and plant during the past 40 years amount to over \$28,000,000. January 30, 1903, City Engineer Grunsky estimated its value at \$28,024,389. Since then capital expenditures amounting to \$2,589,167 have been made. Large elements of value were eliminated by Mr. Grunsky, and since his original estimate of value was made, in 1901, there has been a very great increase in basic and other values. The value of the property is estimated at from \$48,000,000 to \$52,000,000.

The policy of the management that prevailed some years ago of keeping the resources of the company from public knowledge is in some degree responsible for existing conditions. That policy exists no longer. Representatives of civic associations, representatives of the public, and all those who desire will be afforded opportunity to learn for themselves all matters pertaining to the water supply of San Francisco. When knowledge takes the place of prejudice and misrepresentation, we have full confidence that the existing water supply of San Francisco when solves all matters pertaining to the water supply of San Francisco of pride to the community, which will then pay the tribute to Mr. Schussler that his work deserves.

The plant is now developed to supply San Francisco with 35,000,000 gallons per day, and this delivery can be quickly increased to more than 40,000,000 gallons per day. The water division can now supply more than 50,000,000 gallons per day and the resources now

Mr. President, these reports from distinguished engineers, who have thoroughly investigated this question, show with absolute certainty that San Francisco does not need any water from Hetch Hetchy, and that it will not need any for at least 50 years. Under the circumstances, why should we now be granting a privilege to this city that will absolutely deprive all of these broad acres in the San Joaquin Valley of the water they need for their cultivation? Whenever San Francisco reaches the point where it needs the water, it can apply for it just as well as it can now. As I said awhile ago, the fact that its filing upon this stream or its application for a permit to the water commissioners comes later than that of the irrigation district does not affect the question in the least, because under the laws of the State of California, no matter when a city applies for water for domestic purposes, its claim is superior to the claim of the district for irrigation. So San Francisco loses

Mr. THOMAS. Mr. President—
The PRESIDING OFFICER (Mr. Brady in the chair). Does the Senator from California yield to the Senator from Colorado?

Mr. WORKS. I yield to the Senator from Colorado. Mr. THOMAS. If the Senator will allow me to make a suggestion, while that is true, the municipality which needs water for a domestic supply can not take water theretofore used for irrigation without condemning it and paying the consequent damage. It goes without saying that 50 years from now water for irrigation in California will be many times more valuable and

expensive than it is at present.

Mr. WORKS. It is claimed, Mr. President, that the water which can be produced from the Spring Valley district is not as good water as that which can be obtained from the mountains. The statement has been made in this report that the only difference between the two is that water from the mountains is softer water than that produced by the Spring Valley system. To confirm that view of it I read a short extract from the report of Mr. Freeman, who has conducted the investigation for San Francisco in the attempt to secure the supply from the Hetch Hetchy. He says, under the heading "Quality of present supply of San Francisco":

The ground waters from Sunol and Pleasanton constitute nearly half the entire supply, and being purified by natural filtration, are exceptionally attractive in appearance, white and brilliantly clear, but, as elsewhere stated, rather too hard.

The surface supplies from the peninsula sources are given exceptionally good care at the gathering grounds of Crystal Springs, Pilarcitos, and San Andreas, and intercepting drains have been built for diverting surface drainage coming from the streets and populous regions near Lake Merced.

The bugs and algoe from the surface waters are carefully strained.

Lake Merced.

The bugs and algae from the surface waters are carefully strained out through cotton cloth near the Honda Reservoir, with a care not often given to public surface-water supplies, and so this surface water reaches the consumer in an acceptable condition, but in future, with the general tendency of the public to be more exacting as to the quality, all of this surface supply, including whatever is gathered in the Calaveras Reservoir, will require filtration.

The present quality of the water furnished by the Spring Valley Water Co. is, I believe, thoroughly wholesome and safe from the sanitary point of view, but mountain water will be softer and better, and to be kept at its best will require separate delivery, as elsewhere explained.

The fact is, according to this showing, that the only legitimate reason for attempting to secure the water from the mountains instead of using that from the Spring Valley system is that by

so doing the city of San Francisco can get water a little softer than that now in use by the city.

Mr. President, a good deal has been said in this discussion about the hearings which took place before the House Committee on Public Lands. I am going to review that hearing somewhat, but I want to say in the beginning that the hearing was a good deal of a farce. I am not meaning by that to cast any reflection upon the Members of the House constituting the committee, but as the question was presented to the House committee it was practically one-sided. The irrigators who are now here pressing their claim were not heard at that hearing.

The delegation that was sent here for the purpose of opposing this bill concluded rather to compromise the matter, and between them and the representatives of San Francisco and the Secretary of the Interior this bill was drawn, with the idea that the irrigationists would be protected, and everybody else, including the owners of 200,000 acres of land in the valley, were left practically without any defense or any hearing upon this question except a single statement made by one individual.

With respect to the claim, it was asserted by the committee that that was a matter of no consequence, because that 200,000 acres of land had no filings upon the stream and therefore the committee considered that they had no claims upon it whatever. The hearing commenced with a statement of the chairman of

the committee, in which he used this language:

The bill (H. R. 6281) represents the culmination of ideas of the departments, the representatives of the city of San Francisco, and the irrigation people of the San Joaquin Valley fully who have certain prescribed rights in the water. The chairman is informed that the record will show that this is the agreed bill between them.

The committee started out in its investigation of this question with the understanding, stated by the chairman of the committee, that this was a bill which was agreed upon, and therefore there was very little left to investigate or hear with respect to it. He says, further:

The bill involves the construction of a dam at the Hetch Hetchy dam site in California to catch the flood waters of the Tuolumne River. This is not a new matter. This bill in one form or another has been before Congress and the departments for the past 12 years. It has been investigated by numerous engineers, and within the past 2 years has been carefully and painstakingly investigated by a board of Army engineers headed by Col. Biddle, with two associate engineers, Col. Taylor and Col. Cosby.

Mr. President, you may search these hearings from beginning to end and you will find none of the facts I have disclosed in what I have been saying to the Senate with respect to the present water supply of San Francisco or its efficiency, except as they appear in the reports of the Army engineers, to which I propose to call attention a little later on.

Then followed the taking of the testimony of Franklin K. ane. Mr. Lane's office in this matter was as a representative of the National Government and to protect its interests. He makes

this statement in the course of his examination:

In the first place, the Turlock-Modesto irrigation people have met in conference with the San Francisco people and they have agreed upon those provisions of this measure which protect the irrigation districts and insure to them a continued flow of water. As I understand it, there is no objection now on the part of the irrigationists, and that was an absolutely overwhelming argument against the position taken by the city in times past, so far as Secretary Hitchcock was concerned.

And I may remark, Mr. President, that ought to be an overwhelming objection at the present time in the Senate.

That question of the irrigation of the lands below the dam seems to be out of the way. The question of the injury to the valley, I think, a question of judgment. My judgment is unequivocally in favor of the use of the floor of the valley. If San Francisco does not get it, one one else must; it is too precious a reservoir site to remain

It will be seen that in the very beginning of this investigation the Secretary of the Interior declared that the whole question as to the right of irrigation below this proposed dam had already been settled and that matter was no longer in controversy.

I refer to this further statement of the Secretary of the Interior:

Mr. Fergusson. At the first hearing I attended I was greatly perplexed by the fact that there seemed to be a conflict between the parties as to an insufficient supply of water for the irrigated lands and for the city, but I understand that is now no longer an issue; that that has been adjusted as between the city and irrigators.

Secretary Lane. I understand so.

Mr. Fergusson. Then, if that is true the only issue before us is whether we will go ahead now and vote to pass this bill or encourage a delay until next December in order to hear from those who oppose the making of a lake in this park on account of destroying the beauty of the park and certain other evils which might occur.

Secretary Lane. Yes.

Mr. Fergusson. The only thing before us is whether this part of the national park shall be devoted to a private enterprise; that is, supplying water to the city of San Francisco and other communities, with proper safeguards as to the rights of the Government and the public generally. Is not that the only question for us to act upon? Secretary Lane. I think that is the real question.

Now, this committee entered upon its hearings with the understanding that there was no question as to the rights of the irrigators. The evidence has shown beyond any sort of question that there were at least 200,000 acres of irrigable land in that valley that were not touched by the agreement that was made with respect to the passage of the pending bill.

It has further developed that this agreement was made without any authority from the water users, the real parties in interest, that they had no right to make a compromise with the city of San Francisco, and now we are to deal with it with that opposition in full force.

There is a very singular phase of this hearing to me. They called as witnesses the Secretary of the Interior, the Secretary of Agriculture, the head of the Geological Survey, and Gifford Pinchot. Mr. Pinchot did not know anything about it. Mr. Lane testified distinctly that his object was to protect the National Government, which was very proper, and that he did not know anything about the engineering features of the question. He did not undertake to deal with that question at all. Mr. Pinchot, who I suppose was called because of the supposed influence his name might have in a question of conservation, made this statement at the beginning of his testimony:

In this statement at the beginning of his testimony:

I presume that you very seldom have the opportunity of passing upon any measure before the Committee on the Public Lands which has been so thoroughly thrashed out as this one. This question has been up now, I should say, more than 10 years, and the reasons for and against the proposition have not only been discussed over and over again, but a great deal of the objections which could be composed have been composed, until finally there remains simply the one question of the objection of the Spring Valley Water Co.

That was a remarkable statement to make when the Spring Valley Water Works had already been compromised with by an agreement, as I have already said, with that company on the part of San Francisco to purchase the plant of the company, and it was no longer making any objection to the passage of this

I understand that the much more important objection of the Tuclumne irrigation districts have been overcome. There is, I understand, objection on the part of other irrigators, but that does not go to the question of using the water, but merely to the distribution of the water.

I do not know what Mr. Pinchot means by that statement, but it shows that Mr. Pinchot had no conception of the real question that was before the committee. He removed from it every question except that of the objection of the Spring Valley Waterworks, which was making no objection at all, and what are called the outsiders in this valley, whose interest he assumed amount to nothing whatever. I quote this further extract from the testimony of Mr. Pinchot:

The CHAIRMAN. I know you have given a great deal of attention to these matters, and I would like to know what you think of this bill from the standpoint of properly preserving the rights of the Federal Government in the matter of the power which is granted?

Mr. Pinchot. I think they are very well safeguarded. As I understand it, no charge is to be made for the power San Francisco uses for its own purposes; but as to power which it may dispose of commercially—that is, requires somebody else to pay for—the Government would get the benefit of the usual charge which is made in all other commercial cases.

The CHAIRMAN. Have you examined the bill sufficiently to say whether you approve of the provisions in reference to that particular point?

Mr. PINCHOT. In its present form it seems very good to me.
Mr. TAYLOR of Colorado. Ought there not to be some provision in the
bill regarding the rates or charges?
Mr. PINCHOT. I think it decidedly unwise to fix rates in this kind of
a bill.
Mr. TAYLOR of Colorado Ought.

a bill.

Mr. Taylor of Colorado. Ought we not to reserve such power in Congress?

Mr. Pinchot. Congress would always have the right, I judge, to fix the rates if it chose to avail itself of that right, but the bill simply authorizes the Secretary of the Interior to do that for Congress.

Mr. Taylor of Colorado. Would it not be better, if there is any question about it, to have such a reservation in the bill rather than to leave it to some other possible construction whereby some courts might hold they had a vested right and that there could not be any interference hereafter by Congress?

Now. Mr. Pinchot is just about as far off on the law of the

Now, Mr. Pinchot is just about as far off on the law of the case as he was upon the facts. He has been interesting himself very generally in the attempt to secure the passage of this bill. I imagine if a Senator should step out of the door of the Chamber into the corridors of the Capitol he might find Mr. Pinchot, now using his influence to bring it about. I know he was here only a very short time ago to-day engaged in that business.

Mr. THOMAS. Mr. President—
The PRESIDING OFFICER. Does the Senator from California yield to the Senator from Colorado?

Mr. WORKS. I yield. Mr. THOMAS. I merely wish to suggest that Mr. Pinchot is not the only man in the Marble Room or in the corridors upon this bill. For example, I met this morning Mr. Theodore Bell, who, I understand, is extremely active. While I have no doubt of the fact stated by the Senator, Mr. Pinchot has abundant company in the undertaking and on both sides.

Mr. WORKS. There is no doubt about that, Mr. President. There has been one of the most active lobbies in the corridors of this Capitol for months past that has ever been known in the history of the country attempting to force the passage of this

Mr. THOMAS. And opposing it,
Mr. WORKS. Part of the time only.
Mr. THOMAS. All the time, so far as my experience goes.

Mr. KENYON. I have ofttimes thought, Mr. President, the last week or so that the lobby investigating committee, not having closed their sessions, should devote a portion of the time to investigating the lobby that the Senator has referred to.

I think that is a most excellent suggestion. Mr. THOMAS. I hope that the lobby committee will heed the suggestion and

And I, Mr. President, join in the request. Mr. WORKS. am not attempting to defend Mr. Theodore A. Bell for any effort he is making to influence the action of an individual Senator.

Mr. THOMAS. I should not have mentioned Mr. Bell's name had not the Senator mentioned the name of another gentleman.

Mr. WORKS. I read further from the testimony of Col. John Biddle, of the Corps of Engineers of the Army. Col. Biddle was the chairman of the board of Army engineers that has been so much talked about in this discussion. In the beginning of his testimony he makes this statement:

The board met for a month in San Francisco in 1911 and for another month in 1912 and inspected the reservoirs within the Yosemite Valley and several other proposed sites, making a very comprehensive inspection of the available sites. In addition, Mr. H. H. Wadsworth, assistant engineer, United States Engineer Service, was secured by the board to make further investigations and examinations. Mr. Wadsworth has been in the employ of the engineer department in California and is largely familiar with the rivers and reservoir sites in central California, He spent about a year and a half on duty in this connection. The board submitted its report in February, 1913.

While the city of San Francisco makes the application, the other cities on the bay are also vitally interested, as in most cases the water supply in those communities is nearing its limit of development, and the more important ones have already taken such steps as seem desirable to join San Francisco in obtaining a new water supply.

It will be seen that the chairman of the war board, who was entering upon the investigation, did it with the understanding that they were investigating the rights of these other cities, not alone the rights and necessities of the city of San Francisco; but, as I have pointed out, those cities had no right under any circumstances to participate in the water that is appropriated by the city of San Francisco. Col. Biddle makes this further statement, after referring to different sources of supply:

There remain as possible sources the following:
The McCloud River.
The Sacramento River.
The Tuolumne River.
Any one of these would in itself give a sufficient supply.
The American-Cosumnes.
The Mokelumne.
The Stanislaus

The Stanislaus.
None of these latt latter would give an adequate supply, but might be

The mistake in declaring that these three last named would not furnish the necessary supply is that he was not dealing with the needs of San Francisco alone, the only matter that they had any reason to investigate at all. If that question alone had been submitted the probability is that the colonel would have said those three sources of supply would also have been amply sufficient for San Francisco. Again he says, on page 55:

page 55:

The Chairman. Did you examine all of the available sources of supply for San Francisco?

Col. Biddle. I have been to all of them.
The Chairman. You have been to practically all of them.
Col. Biddle. Not to practically all of them, but to all of them.
The Chairman. You have been to all of them?
Col. Biddle. Yes, sir.

The Chairman. How many rivers or water supplies did you find which would furnish an adequate supply of water, suitable in quality and quantity, other than Hetch Hetchy, for the city of San Francisco?
Col. Biddle. Four, anyhow.
The Chairman. You think there are four others from which an adequate supply could be obtained?
Col. Biddle. Yes, sir.

The chairman of the board says that there were at least four 'additional places from which San Francisco could obtain its supply, while they have been contending all along that the Army board determined that there was only this one source from which San Francisco could secure the water she needed. Mr. GALLINGER. Mr. President-

The VICE PRESIDENT. Does the Senator from California yield to the Senator from New Hampshire?

Mr. WORKS. I yield.

Mr. GALLINGER. The lunch hour has passed, and there are only 15 Senators in the Chamber. I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators

answered to their names:

Ashurst Bacon Brady Gronna Hollis Hughes Smoot Stephenson Sterling Owen
Page
Perkins
Pittman
Poindexter
Robinson
Root
Sauisbury
Shafroth
Sheppard
Shields
Shively Sterling
Sutherland
Thomas
Thompson
Thomton
Townsend
Vardaman
Walsh
Warren
Weeks
Williams
Works Brandegee James Brandegee
Bryan
Burton
Chamberlain
Chilton
Clapp
Clark, Wyo,
Clarke, Ark,
Cummins
Dillingham Johnson Kenyon Kern Lane Lewis Lippitt Martin, Va. Martine, N. J. Shirely Smith, Ariz. Smith, Ga. Smith, Md. Smith, S. C. Dillingham du Pont Gallinger Goff Myers Nelson Norris O'Gorman Gore Overman

Mr. SMITH of Maryland. I desire to state that my colleague [Mr. Jackson] is absent on account of illness.

The VICE PRESIDENT. Sixty-five Senators have answered to the roll call. There is a quorum present. The Senator from

California will proceed.

Mr. WORKS. Mr. President, I read further from the testimony of Col. Biddle. I am not proposing to take up what the colonel has said about all four of these systems:

The CHAIRMAN. What is the third supply you would say is sufficient a quality and quantity?

Col. BIDDLE. McCloud River.

The CHAIRMAN. Is it in any bark?

Col. BIDDLE. No, sir; although it rises in a forest reserve.

The CHAIRMAN. What would be the total expense of installing that

The CHAIRMAN. What would be the total expense of installing that system?

Col. BIDDLE. It would vary between \$58,000,000 and \$64,000,000, according to the place that it would cross San Francisco Bay.

The CHAIRMAN. What would be the conflicting rights there with which we would have to contend?

Col. BIDDLE. You know where the McCloud River is, do you not? The CHAIRMAN. I have seen the map.

Col. BIDDLE. It rises on Mount Shasta and empties into the Sacramento River. The water rights are estimated at \$5,000,000, and the total expense, you said, was \$58,000,000?

Cql. BIDDLE. It varies from \$58,000,000 to \$64,000,000.

Again, on that same subject in the cross-examination by Judge RAKER, the author of the bill, Col. Biddle has this to say: Mr. RAKER. Coming back to the McCloud River source of supply, understand from the report that the water would be taken from the cCloud River alone without any estimate or figuring as to the Pitt

River?

Col. Biddle. Yes, sir.

Mr. Raker. The water would be taken higher up on the McCloud River, and above the junction of the McCloud and Pitt Rivers?

Col. Biddle. Yes, sir; the water would be taken from the river higher up, about a mile above where it joins the Pitt River.

Mr. Raker. And you have not figured on locating it so as to take the water from the McCloud and Pitt Rivers together?

Col. Biddle. No, sir. Our estimate was made on the McCloud River.

Mr. Raker. Why was not the estimate made on both rivers?

Col. Biddle. Because there is plenty of water in the McCloud River for all needs. You see, that river comes from Mount Shasta, and the least flow is twice what San Francisco needs.

Mr. Raker. It is a continual flow, is it not?

Col. Biddle. In its lowest stages it is nearly twice as much as San Francisco needs.

Mr. Raker. There is no necessity for a reservoir on the McCloud for holding back the water?

Col. Biddle. No.

As the question of the appropriation of San Francisco has

As the question of the appropriation of San Francisco has been mentioned in this discussion, I will say that the notice of the filing of Mr. Phelan, from which the city obtained its rights by an assignment of rights under that notice, was set out in these hearings. It will be found on page 90 of the hearings. I am not going to read it all, though it is not long, but it shows the filing made to the extent of 10,000 miner's inches measured under a 4-inch pressure. I am informed, although I have not myself made the calculation, that that amounts to 161,000,000 gallons of water per day. I will also read a short extract from the testimony of M. M. O'Shaughnessy, who is the present engineer of the city of San Francisco, as to the amount of water that San Francisco is now using. He says:

At the present time the Spring Valley Water Co. is supplying about 41,500,000 gallons per day. Last year they supplied on an average of 39,124,000 gallons per day, and in 1911, 37,400,000 gallons per day. In addition to that source there is drawn from private, wells in various parts of the peninsula about 8,000,000 gallons per day.

I believe, Mr. President, that that is all I desire to call attention to in the report of the committee, which shows conclusively by the evidence taken that there are at least four different sources from which San Francisco can get an adequate supply, a much larger supply than it can get from the Hetch Hetchy Valley, and that probably there are half a dozen more, if you deal simply with the question of the rights of San Francisco.

I come now to a short consideration of what has been referred to so often as the report of the Army board upon this question. I want to say in this connection that at the beginning of this investigation, and before I had made a thorough inves-tigation in my own behalf in the effort to ascertain what I ought to do under the circumstances, I was told over and over again that the Army board had determined that San Francisco must have more water and that it must have it through the Hetch Hetchy Valley because there was no other source from which an adequate supply could be obtained. Now, I venture the assertion that every Member of this body has been told just that thing for the purpose of influencing his mind with respect to it; and I said, just as I think any other Senator would say, if the Army board, acting independently, having no interest in this matter whatever, had determined and reported that the city of San Francisco must have this water, I would support the bill if the objectionable features of it were removed; but, to my amazement, when I came to examine the report for myself I found that the Army board reached no such conclusion as that; that it had made no such statement as had been carried to me time and again. I think Members of this body have been misled by relying upon this report as entitling San Francisco to this amount of water.

If I were trying this matter in a lawsuit in a court of justice, I would be willing to submit the whole case upon this Army board report, and I want to call the attention of the Senate to some of the things that may be found in the report itself.

In the beginning, Mr. President, on page 11 of the report, it will be found upon what the board of Army engineers relied in reaching its conclusion. There are a number of reports from various sources affecting the Hetch Hetchy, the McCloud River, the Eel River, and various others of these sources of supply, many of whom were anxious to dispose of their interest to the city of San Francisco, and numerous other reports that have been made by various city engineers and assistant city engineers of the city of San Francisco. The Army board never made any surveys of its own; it was only out there about two months; it took the data that were furnished by other people, made its culculations on those data, and, with the exception of the fact that Col. Biddle had been stationed at San Francisco and had some personal knowledge of the various sites for a water supply, all of which he states in his testimony which I have quoted, he has seen at different times, and investigations that were made by Mr. Wadsworth—and I will call attention to them—none of the members of the Army board had any knowledge, except by riding around, as somebody says, in an automobile and looking at these places where it is proposed to develop the water, as to the value of any of these systems. I am not going to read the recital of the different sources of information that were resorted to by the board, but I am going to read a part of the report immediately following it, showing just the course that was taken by the board of engineers. They say in this report:

was taken by the board of engineers. They say in this report:

Besides the reports mentioned, a number of communications have been received bearing on the several phases of the investigations. In order to enable the board to carry out its instructions as to independent investigations, the services were secured of Mr. H. H. Wadsworth, assistant engineer, Engineer Department, United States Army. Mr. Wadsworth had been employed for about seven years previously under the Engineer Department, United States Army, on work in connection with the California Débris Commission and with river work in California, and is familiar with the general water-supply conditions in California, A general examination was made by him of all sources of water supply, and he personally inspected all the more important sources and surveyed many of the proposed reservoir sites; his report, prepared under instructions from the board, is appended. The board has considered carefully the data given in this report, as well as the documents submitted by the city and by the various opposing parties.

During the summer of 1911 the board personally visited the Spring Valley water system, the Hetch Hetchy and Lake Eleanor reservoir and dam sites, Lake Vernon, Cherry Creek, the principal reservoirs on the Mokelumne River, the suggested reservoirs on the Yuba, the Sacramento and the San Joaquin Rivers.

During August, 1912, the board inspected the People's Water Co.'s plant for supplying Oakiand and the other transbay cities, the Hetch Hetchy reservoir and dam sites accound time, the Tuolumne Meadows and other camping sites in the Tuolumne watershed, and the Turlock-Modelou watershed and the Feather River Watershed.

PRESENT WATER SUPPLIES OF SAN FRANCISCO AND OTHER BAY CITIES IN PROPOSED METROPOLITAN WATER DISTRICT.

PRESENT WATER SUPPLIES OF SAN FRANCISCO AND OTHER BAY CITIES IN PROPOSED METROPOLITAN WATER DISTRICT,

While the order of May 27, 1910, is directed to the city and county of San Francisco, and while most of the work done has been by San Francisco, yet the order contemplates that the water supply of the adjoining bay cities shall also be included in the investigation.

As I have a number of times stated, these other bay cities have no interest in this matter whatever, and there was no reason why an investigation should have been made of the water rights of those cities with respect to the granting of this permission to construct a dam.

This will comprise the territory from San Francisco around the bay, including San Jose, to the city of Richmond. While this includes a number of political entities which may always remain distinct, they are so topographically related that a common water system would doubtless prove of great benefit, and steps are being taken by some of them at least to consolidate into a general metropolitan water-supply district.

So far as I know, there is no foundation for the statement in the report that some of these cities are undertaking to consolidate. There has been some steps taken, as I understand, by the cities of Oakland, Berkeley, and Alameda for the purpose of securing their water supply jointly, but that does not include San Francisco or San Jose or any other of these cities.

Several of the communities, such as Oakland, Berkeley, Alameda, San Jose, Redwood, Palo Alto, have, through their mayors and councils, already indicated their desire to participate in the benefits of a common Slerra or mountain supply.

There is no doubt about that. These other cities around the bay would be awfully glad to have San Francisco spend \$100,000,000 of its good money, drawn from the taxpayers of the city, to bring down from the Sierra Mountains water in which they might participate; and I do not wonder that they are encouraging this movement or that they have expressed their willingness to render every aid possible to the bringing down of the water from the mountains.

Here is a summing up in this report with respect to the quantity of water that can be developed and procured from the systems already in operation in the city of San Francisco. in reading the statement of other engineers that I would confirm what they said with respect to it by the report of the Army board. They say in this respect:

To sum up: (a) All present near-by sources of water supply for the bay communities are now drawn on nearly to their economical limit with the exception of the Alameda system of the Spring Valley Water Co. and the coast streams; and (b) the total estimate of the economical development possible, including the amount now used, is:

(In million gallons daily.)

Spring Valley Water Co. resources.

Now, remember that at the present time the city of San Francisco is only using 42,000,000 gallons of water per day—less than one-third of the amount that the Army board finds can be produced and supplied by the Spring Valley water

San Mateo County-

Which is also a part of the Spring Valley water system and owned by it-

San Mateo County \_\_\_\_\_\_ Santa Clara County \_\_\_\_\_ Parts of Alameda and Contra Costa Counties \_\_\_\_\_

Yet they are telling the Senate that San Francisco is in need of water; that she is unable to procure it; and that the children of San Francisco are actually famishing for water.

The board wishes to emphasize the fact that it accepts these figures as to possibility of development of local sources only in the most general way. Sufficient data are not available to enable definite estimates to be made nor has the board had the time or facilities to make independent investigation.

The board does not, however, consider it essential for the purpose of this report to have accurate knowledge of quantities. There are sufficient data for the board to be able to state that outside sources of water supply must be obtained to provide the bay communities—

Now, mind you, the bay communities, not the city of San Francisco-

with sufficient water before the year 2000 A. D.

The city of San Francisco assumes the additional amount necessary as 400,000,000 gallons daily—

Remember, not for San Francisco; nobody claims that; no-body has claimed, so far as I know, that more than one-fourth of this quantity of water is necessary for the needs of San Francisco, but they are dealing all the time, as this statement shows, with the quantity of water necessary to supply all of the cities, amounting to 400,000,000 gallons daily—

being the difference between 540,000,000 gallons daily estimated as needed in the proposed metropolitan water district and the amount that it claims can be developed from near-by sources. The city also states that in time 500,000,000 gallons daily additional from outside sources might be used with advantage.

Again the report says, on page 19:

(d) McCloud River rises on the south side of Mount Shasta and, uniting with the Pitt River, forms the principal tributary of the upper Sacramento. Its least flow is about 1,200 cubic feet per second, or about 770,000,000 gallons daily, amply sufficient for all possible needs. The water appears to be good and pure. No reservoir would be necessary as far as quantity is concerned. If desired to hold in reservoirs for sanitary reasons, suitable sites could doubtless be found in Contra Costa County if not in the McCloud River basin. This source is considered a feasible one and it will be discussed in greater detail later in this report.

In this immediate connection they mention in the report as available sources of supply Eel River, Putah Creek, Clear Lake, and Cache Creek, McCloud River, Sacramento River, Feather River, Yuba River, American River, Lake Tahoe, Mokelumne River, Stanislaus River, San Joaquin River, and the Tuolumne River, and each of them is discussed in this report. I can not take up the time of the Senate to read all of the comments, but I think it would be good reading for any Senator who wants to inform himself on this subject. Then, they say in this reportFrom the above descriptions the practically available sources are considered to be as follows:

(In million gallons daily.)	
1. McCloud River	400 +
2. Sacramento River	
8. Tuolumne River	400 +
4. Yuba River	
5. American-Cosumnes	220
6. Mokelumne River	128
7. Stanislaus River	57

It will be seen by this enumeration that from every one of those sources, except the last two, San Fraucisco could procure all of the water that it needs for its purposes, leaving out the other cities which are not interested. Then, the report pro-

ceeds:
Thus from each of three possible sources the full supply of 400,000,000 gallons daily could be obtained. In the other cases, combinations could be made, such as the American-Cosumnes, Mokelumne, and Stanislaus, or else Lake Eleanor, Cherry Creek (tributaries of the Tuolumne), Stanislaus, and Mokelumne.

It is understood that these figures do not represent the total flow of these streams. Each of the four last named, except perhaps the Stanislaus, would probably give enough water for the city if the total flow were utilized. Due to existing rights, to location of reservoirs, to questions of pumping and filtration, etc., it is considered that it would be more economical for the city to combine several of these rivers rather than to take all the supply from a single one. Therefore the cost under the latter assumption has not been considered necessary to determine.

under the latter assumption has not been considered necessary to determine.

It is further understood that the seven sources named are not the only possible sources. They appear to be the most available and it is, therefore, among them that a supply would be sought. There would seem to be no necessity then of determining with further accuracy the cost and conditions of other sources as they would not be the sources developed if the Tuolumne River became unavailable.

#### M'CLOUD RIVER.

M'CLOUD RIVER.

The McCloud River is a branch of the Pitt River, which itself is a tributary of the Sacramento. McCloud River rises on the southern and southeastern slopes of Mount Shasta. It flows in part from glaciers and in part from large springs. The water is clear, cold, and palatable. The inhabitants of the valley drink it at any point and consider it of first-class quality. At some times of the year, said to be for only short intervals, it assumes a milky appearance. This seems to be due to a small tributary, Mud Creek, which at times carries considerable lava sand. On the day of the inspection by a member of the board, Mud Creek was carrying a large amount of this sand and the river was quite milky in appearance. It is not thought that this affects the hyglenic qualities. It seems probable that by damming Mud Creek and forcing the water to percolate through the soil this sand could be held back, or the water could be confined in a reservoir and allowed to settle. The minimum discharge of the McCloud River being about 1,200 cubic feet per second, or 770,000,000 gallons daily, the flow is ample without storage.

Again the report says:

Again the report says:

The city of San Francisco presented unfavorable reports on this source, and it is further unfavorably commented on by Mr. John R. Freeman. The reports are not, however, either comprehensive or complete.

Mr. Freeman dwells upon the possibility of infection of the water. With a large part of the watershed owned in fee by the city and another part within the national forest, proper policing should present no great difficulties, and additional protection will be given by the proposed storage reservoir north of Berkeley. There would be no power development under the plan submitted, though possibly some could be obtained by dams in the McCloud River, which question has not been thoroughly investigated.

While it is thought that in time most of the waters of the valleys of California will be needed for irrigation, the Sacramento Valley is better provided with water than is the San Joaquin Valley, and has a somewhat higher rainfall. As far as known there are no irrigation rights which would seriously interfere with the use of the water by the city for domestic purposes.

There is also, Mr. President, a statement in the report of the amount of water used by the irrigation districts, found on page 34 of the report, which I will ask to insert without reading

The VICE PRESIDENT. Without objection, that action will be taken.

The matter referred to is as follows:

The matter referred to is as follows:

4. Use of water at present claimed by other districts or companies for irrigation and power: The only definite figures for water rights before the board are the 2,350 cubic feet per second for the Turlock-Modesto Irrigation district, reserved in the Garfield permit, when there is that much water flowing in the river, and 60 cubic feet per second used by the La Grange Water & Power Co.

The city, in accordance with instructions from the Secretary of the Interior, submitted a statement by Mr. Percy V. Long, city atforney. In his conclusion Mr. Long states that it has been shown to a reasonable degree of certainty that 39,400 miner's inches, equivalent to 985 second-feet of water, reduced to beneficial use, is all that need seriously concern the city. Mr. Long further states that, considering even uncertain and probably invalid claims, the amount to be reserved would amount to but 115,400 inches, or 2,885 second-feet, and that the total discharge of the Tuolumne will provide for this and the city if adequate storage is provided.

Claims for water rights by other parties have been made. These, however, are for the city to consider and cut out, if necessary, and the city appears willing to accept the responsibility.

Mr. WORKS. Then follows a statement under the head

Mr. WORKS. Then follows a statement under the head "Comparison of costs of various projects":

The costs of these projects are difficult, if not impracticable, to determine with accuracy. Sufficient data are not available and the opinions of engineers as to unit costs vary greatly. For example, Mr. Freeman, basing his estimates on costs in the construction of the Los Angeles aqueduct, assumes for certain tunnels a cost of about

\$70 a linear foot. Messrs, Mulholland and Lippincott, who constructed the Los Angeles aqueduct, estimate the cost of the same tunnels at \$120 per linear foot. As the cost of the tunnel is nearly half of most of the projects, this would naturally affect the total cost. The engineers vary in their estimates as to size and cost of steel pipe, cost of concrete, difficulties of construction, and consequent contingent expenses to be allowed, etc. While actual estimates of costs present many difficulties, the comparison of relative cost is easier, as practically all the sources would be affected by the same considerations.

The board, therefore, submits its estimates are relative rather than actual.

And on the opposite page will be found a statement of cost in tabulated form, giving the number of millions of gallons of water produced, the cost of different portions, the total cost, the present amounts required for financing projects, and so forth. That is an estimate that would be interesting to Senators, I think. ators, I think. It shows very conclusively, to my mind, that the statement that it is going to cost the city of San Francisco a much larger sum of money to develop some of these other sources than this one is absolutely disputed in this table of figures given by the Army board itself. Quoting a little further the conclusions of the board:

The board is of the opinion that there are several sources of water supply that could be obtained and used by the city of San Francisco and adjacent communities to supplement the near-by supplies as the necessity develops. From any one of these sources the water is sufficient in quantity and is, or can be made, suitable in quality, while the engineering difficulties are not insurmountable. The determining factor is principally one of cost; in some cases, however, such as the Sacramento, sentiment must be taken into consideration.

#### And again:

The board further believes that there will be sufficient water if adequately stored and economically used to supply both the reasonable demand of the bay communities and the reasonable needs of the Turlock-Modesto irrigation district for the remainder of this century.

That is disputed from various sources, but I submit it to the Senate as a statement made by the Army board on the subject.

Further:

The water situation that will confront the communities around San Francisco Bay if the plan proposed by the city of San Francisco is adopted may be recapitulated as follows:

Purchase of Spring Valley Water Co., \$25,000,000 to \$40,000,000. Further development of this company's system to about half the extent proposed by the company, \$10,000,000.

Purchase of water systems of communities outside of San Francisco, no estimate made.

Construction of Tuolumne system as proposed by city of San Francisco, to be extended over about 50 years, \$77,000,000.

Against the above expenditures there will be developed 115,000 horsepower having an estimated capitalized net value of \$45,000,000.

Finally, the board wishes again to emphasize the fact that it does not present the various estimates given as reliable estimates of the cost of the different projects. Sufficient data are lacking as well as time and funds for making adequate investigations. The board believes, however, that the estimates are sufficient to permit such comparisons as are necessary to be made for judging the relative cost and merits of the different projects.

So far as this particular report is concerned, taken as a whole, it is against the contention made by the city of San Francisco, but at the same time the board of engineers say that they can not be definite, because the investigation has been insufficient for the purpose.

Then there is appended to the report of the board of engineers the report of Mr. Wadsworth, mentioned in the report itself, which contains a little data which I should like to call to the attention of the Senate. He says:

The "conservative" estimated growth of Greater San Francisco by John R. Freeman, consulting engineer, according to report submitted July 15, 1912 follows

duly 10, 1012, 1010WS.	
1939	1, 500, 000
1956	2,000,000
1975	2, 500, 000
1995	3, 000, 000

That calculation, like all of the others, does not relate to the city of San Francisco. It relates to the proposed municipal district, comprising 26 different cities.

## He says further:

This shows that for the metropolitan district a supply of 100,000,000 gallons daily will be needed by 1919, 200,000,000 gallons daily by 1938, 300,000,000 gallons daily by 1950, and 400,000,000 gallons daily by

That relates to all of the cities.

## He says:

For San Francisco alone there will be needed 100,000,000 gallons daily in 1936 and 200,000,000 gallons daily in 1955.

I have shown conclusively that the 200,000,000 gallons of water daily, and more, is right there in the Spring Valley water system at the present time.

Mr. Freeman's report contained an estimate of the future demands of the proposed metropolitan water district made by Prof. C. D. Marks, of Stanford University, showing a city consumption by the end of the century of 441,000,000 gallons daily, or, including water for irrigation within the district, a total of 550,000,000 gallons. On page 70 of the report he makes this further statementThe results as to the quantity of water from local sources which can be conserved for water supply for a metropolitan water district, includ-ing San Francisco and the bay cities, may be summarized as follows:

(In million gallons daily.) Peninsula system of Spring Valley Water Co...

Alameda Creek system of Spring Valley Water Co., or Spring Valley
Water Co. and Bay Cities Water Co...

People's Water Co... To this might be added such portion of the peninsula coast stream drainage as may prove to be reasonably economical, say\_\_\_\_\_Additional pumping from wells\_\_\_\_\_ 12 180

Making a total of. ADDITIONAL SUPPLY REQUIRED.

Comparing these figures with the diagram (fig. 5) showing the future needs of the district, it appears that if the local supply as given above were first developed there would be needed in addition 50,000,000 gallons daily in 1942, 100,000,000 gallons daily in 1942, 100,000,000 gallons daily in 1953, 200,000,000 gallons daily in 1955, 250,000,000 gallons daily in 1955.

If the population should increase as shown by figure 3 and the per capita consumption, by reason of metering and otherwise reducing waste, should not exceed 100 gallons per day, it would then be necessary to secure from other than local sources 200,000,000 gallons daily by the year 1974 and 400,000,000 gallons daily by about the year 1998.

Mr. Preseident I submit the case upon the report of the Army

Mr. President, I submit the case upon the report of the Army board. It shows conclusively that there is no necessity for San Francisco to resort to this source of water supply. It shows that it is not necessary for San Francisco to expend its money for any outside system for years to come. When it does, under the laws of the State of California it is entitled to develop only the additional amount of water it may need and will be compelled to use that which it has on hand at the present time and may develop in its present system.

I stated in the beginning that what I should say on this subject would be said in behalf of the city of San Francisco. The man who insists upon burdening that city with \$100,000,000 of indebtedness for what she can get out of this water supply is no friend of San Francisco. The Government of the United States, in granting the privilege to erect this costly dam upon the property of the National Government, is not befriending the city of San Francisco. It would involve that city in millions of dollars of expense. It would involve it in years of litigation. It will receive practically no benefit from the additional source of supply that it will obtain by the granting of this privilege.

Mr. President, I have occupied the peculiar position of being the only representative from the State of California who opposes this grant. The story has been circulated that perhaps I am influenced to oppose it because my home is in Los Angeles, a so-called "rival" city. Los Angeles is not the rival of San Francisco. The friends of the bill have procured from various of the civic organizations of my home city petitions asking that this grant may be made to the city of San Francisco. The pros-perity of San Francisco is a part of the prosperity of the city of Los Angeles. The prosperity of these two great cities, nearly 500 miles apart, is a large part of the progress and prosperity of the State which in part I represent on the floor of the Senate.

I represent in my official capacity the city of San Francisco. I have a right to defend her from the imposition upon her people of this enormous and useless debt. I should be derelict in my duty as her representative if I did not do so.

I am afraid some of the other representatives of the State have lacked the courage to stand up in the face of the state that are made to Congress in behalf of the city and defend the rights of her people. Not only am I here defending the city of San Francisco, but I am as well the representative of the farmers of the San Joaquin Valley, one of the richest valleys in my State and in patural advantages one of the richest valleys in my State and in natural advantages one of the richest valleys in all this country, thousands of acres of whose land, if this project is carried out, will be deprived of the only source of water to which they can resort, and their land will become barren and practically useless. I am here as a representative of the great State of California, in which these interests are to be found. I protest in the name of California that there should be no such disposition of the waters of the State as would deprive thousands of acres of land of irrigation for a useless purpose that would be of no value to the city of San Francisco.

Now, sir, I have performed what seems to me to be my duty in dealing with this question. The result must be left to the Senate of the United States, as the bill has already passed the House. But I desire to say that if the men who have been pursuing this matter and attempting to bring about this grant shall induce the city of San Francisco to embark upon this enterprise and spend its millions of dollars they will live to see the time when they will regret that they placed their city in this condition.

I have endeavored to the best of my ability to present fairly to the Senate the facts and data bearing upon this question, so that the Senate might intelligently determine whether there is sufficient reason for the granting of this privilege to the city of San Francisco. I am sorry, not on my own account, but on account of the interest of my State in the solution of this great problem, that so few Senators have honored me with their presence in the Senate during the discussion of this important question. I hope they may feel that at least they should look to these data when they appear in the RECORD before casting their votes.

Mr. PITTMAN. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst Bacon Brady Brandegee Gronna Hollis Hughes Page Perkins Pittman Stephenson Sterling Stone Sutherland James Poindexter James
Kern
La Follette
Lane
Lewis
Lippitt
McCumber
Martin, Va.
Martine, N. J. Thomas Thompson Thornton Bristow Robinson Root Saulsbury Sheppard Sherman Shively Simmons Smith, Ariz. Smith, Ga. Smith, Md. Smith, S. C. Robinson Burton Chamberlain Chilton Townsend Vardaman Clapp Clark, Wyo. Clarke, Ark, Colt Warren Weeks Williams Cummins Nelson Works Dillingham Gallinger O'Gorman Overman Owen Smoot

The VICE PRESIDENT. Sixty-one Senators have answered

to the roll call. A quorum of the Senate is present.

Mr. CLARK of Wyoming. Mr. President, I ask leave, out of order, to submit a proposed amendment to the pending bill, and

The VICE PRESIDENT. That action will be taken.

Mr. THOMAS. Mr. President, in his opening remarks upon this measure the Senator from California [Mr. Works] referred to a report that had reached him to the effect that it was an administration measure. He disavowed any belief in that statement, and it was of course very promptly disavowed upon this side of the Chamber. The fact that such rumors have been afloat, however, justifies me at the outset in assuring the Senate that if this bill is an administration measure, I am wholly ignorant of the fact.

My own experience with members of the executive departments concerning the bill is limited to a short conference with the Secretary of the Interior, which was held at my request. For my part, I have no other than a desire to cast my vote, when the time arrives to do so, in accordance with what seems to me to be my duty as a Senator under all the circumstances.

I may say that when this project was first brought to my attention by the bill which passed the House all of my impressions were against it. It contained some provisions which, candidly, I did not think should be there; and I felt that the excision of those provisions ought to be accomplished, if possible, before the bill was crystallized into a statute. Therefore I approached the examination of the questions involved with a mind somewhat adverse to the measure, and sought to give it the same careful scrutiny which an attorney should give to the examination of a measure submitted to him for an opinion.

With that end in view, I read the hearings before the House committee, familiarized myself with the report of the Army engineers, and also conferred with some of the Members of the House from the State of California. The first thing which impressed upon me a favorable view of the bill was the fact that every Member of the House from the State of California indorsed it and voted for it; also, after full hearings, the House

committee, without exception, reported it favorably.

That is somewhat unusual, I believe, not only as to an important measure like this, but as to any measure which becomes

the subject of the earnest consideration of a great committee.

Mr. CLARK of Wyoming. Mr. President—

The VICE PRESIDENT. Does the Senator from Colors Does the Senator from Colorado yield to the Senator from Wyoming?

Mr. THOMAS. I do. Mr. CLARK of Wyoming. Do I understand the Senator to say that every Member of the House committee favored the passage of this bill?

Mr. THOMAS. Such is my information.

Mr. CLARK of Wyoming. Do I understand the Senator to say that every member of that committee was in favor of the passage of the bill when it came up for passage in the House?

Mr. THOMAS. Oh, no; I would not say that, because I have no information upon it. The information which I possess may be inaccurate, but I give it as it reached me. Of course I was not present during the House committee discussion.

If my information be true, or substantially true, that fact in itself should rob this measure of every partisan aspect, because of course we know that the California delegation is composed of both Democrats and Republicans, and, as the Senator from North Carolina [Mr. Overman] suggests, a Progressive, while the House committee is made up of members of all parties.

Mr. NORRIS. Mr. President-

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Nebraska?

Mr. THOMAS. I do.

Mr. NORRIS. I should like to suggest to the Senator that in addition to the California delegation being composed of Republicans, Democrats, and Progressives, it has also one member who is independent of all those parties.

Mr. THOMAS. The Senator from Arizona [Mr. SMITH] expresses, sotto voce, a wonder as to what party that gentleman

Mr. NORRIS. He was not elected as a member of any party. He is absolutely independent.

Mr. THOMAS. We have then a consensus which includes one entire party upon the committee and that of course strengthens the conclusion which I stated before the Senator from

Nebraska interrupted me.

It may be, Mr. President, that my conclusions are erroneous; it may be that I have not grasped properly all or any of the facts appertaining to this subject, but as far as it has been possible for me to acquaint myself with them in connection with the demands of other important duties upon my time I have been impressed with the fact that this is not only a just measure but one most essential to the future welfare of the city of San Francisco and the other great urban communities which cluster around San Francisco Bay.

My judgment may perhaps have been warped to some extent by the fact that I come from an arid State and therefore appreciate the great value of water, which, while a necessity of life everywhere, is there absolutely indispensable to the existing civilization, and that I have also experienced what it means to the people of a great American city to be dominated by a water supply whose source lies in personal ownership and private control. But, on the other hand, this very experience, in my judgment, should confirm instead of weakening the conclusions arrived at after full consideration.

San Francisco, Mr. President, is located upon the northern extremity of a peninsula. It is bounded on the west by the Pacific Ocean and on the north by the Golden Gate, while along its eastern boundaries the waters of San Francisco Bay extend southward for about 100 miles. It is surrounded on three sides by salt water, and of course its supply of fresh water, as it continues to grow and expand, must be obtained, prima facie at least, from other than local sources. It is so peculiarly located, geographically, that every element of judgment and experience unite in requiring its citizens to safeguard against the future in their supply of water.

From its earliest beginnings San Francisco has been one of the prominent cities not only of the United States but of the world. It is our farthest western gateway and our greatest Pacific coast community. For many years it was the sole portal of our entire Pacific Ocean commerce. Therefore it grew and expanded more rapidly for a long period of time than any other city on the continent. It has a present population of about 425,000 people, the census of 1910 having given it something like 416,000 in round numbers. And it has barely reached the

threshold of its unrivaled career.

The climate of western California is somewhat peculiar. It is an arid country, but it has a wet season. Climate and geographical situation both bear very strongly therefore upon the water problem, not only as it affects the city of San Francisco but the great growing urban and agricultural population surrounding it whose united demand upon the water supply are of course much greater than those of the city itself.

In an arid country with a rainy season the water needs are much more urgent than in countries not similarly situated climatically. It is a fact, I think, which none dispute, that sometimes one and sometimes two years consecutively pass without any rainfall to speak of. Of course, I do not mean to say that there is no precipitation, but the normal supply is withheld, and this important fact must be taken into consideration in determining what maximum supply is sufficient for the future needs of a great municipality.

When the wet seasons do occur they result in large accumulations of flood waters, which run unused to the sea, save where impounded in reservoirs by the erection of dams. These, howimpounded in reservoirs by the erection of dams. ever, always involve large expenditures, so large indeed as to be prohibitive, generally speaking, to the owners of small quantities of land. A reservoir of any respectable size necessarily requires an impounding dam, which costs money, whether it be constructed of concrete or of stone or of earth. Dams are

enormously expensive in the aggregate, and as a consequence they can be constructed only by the use of huge aggregations of capital. This, to my mind, is one of the most important facts to be carried in the mind while considering this record.

Of course, when the waters are once impounded they become a great asset in the material development of an arid country. The demands upon water for irrigation during the past 25 years have been so enormous in California, Nevada, Utah, Colorado, and in other arid and semiarid States that huge sums have been expended in private reservoir enterprises, and the Government has inaugurated a reclamation system which in its general features have been, I think, of great benefit to the West, to the end that every drop of this precious element may be stored and utilized for the benefit of man. More valuable than our mines of gold and silver, more valuable than all our forest

resources, are the waters of the arid West.

Now, of course, all of what is called the "flow" of these streams has long ago been appropriated and utilized by the ranches and the farms along the valleys of the principal streams and their tributaries. So imperious is the demand for water that the old common-law rule of riparian rights never secured a foothold in any State west of Kansas and Nebraska, and does not apply to the extreme western portions of those Commonwealths. The man who has the water by prior appropriation and who makes a beneficial use of it is the owner of that water, even though the riparian owner is thereby denuded of the entire supply, illustrating the fact that the common law is flexible and that the Anglo-Saxon race accepts and also rejects every principle of that great code of unwritten rules governing human conduct as the needs and requirements of their particular communities demand.

Of course in the pioneer days of San Francisco's growth the supply from local sources was sufficient. It obtained it from Lobos Creek, piped around the shores of the Golden Gate, and obtained also, I think, a local supply within the precincts of the Presidio. But as the city grew and the pressure of population upon the water supply continued, a private company was organized, called the Spring Valley Co., which, through private capital, undertook the very laudable purpose of furnishing, and did furnish, the water supply. I can not conceive of a more attractive investment for capital than supplying the water needs of a great city in the semiarid region; but, of course, it inevitably leads to the private monopoly of a necessity of life, and San Francisco proved no exception. She and her people have been in the grasp of the Spring Valley Water Co. for many years and obliged to submit to whatever exactions this company has seen fit to impose in the cost and distribution of water to the consumers.

I am informed that the price of water in San Francisco has been larger than in almost any other city of any size in the country. I do not vouch for its accuracy, for my sources of information may or may not be infallible; but I never have known of a local proprietary control of the water supply of a city anywhere which did not result, whatever its benefits, in producing four undesirable conditions—high prices, poor service, insufficient supply, and, what is worse than all, municipal corruption. It may be that there are exceptions somewhere, but I have neither experienced them nor read of them.

Of course San Francisco, during the years that have gone by, has not been growing alone. The country has expanded; the State has expanded. The people have entered her valleys and occupied her lands. They have diverted the waters of her streams, spread them over her deserts and made them fruitful. They have made California one of the great States of the Union, in some respects the greatest of them all; but its greatest and most precious asset is its splendid population; and that should be the first item of conservation in every scheme or enterprise worthy of the name.

Of course the demands upon water for irrigation have increased pari passu with the demand for domestic uses by the cities, both of which increased the pressure upon the supply of this Spring Valley Co., which may not be altogether to blame for all the exactions to which they may have subjected the people of San Francisco, since it has been forced by these

conditions to consume as little as possible.

Now, Mr. President, I am told that as early as 1871 and 1872 farseeing officials of San Francisco began their first tentative investigation of sources of municipal water supply. knew that the future of the State was a splendid one, and they realized, as thinking men do, that time should be taken by the forelock and a necessity of municipal life provided against for the future. Beyond obtaining much information they accomplished no definite results. Then came the Spanish-American War, which gave to San Francisco an impetus en-joyed by no other city in the Union. It became the great

center of distribution for the Philippine campaigns. Through its portals passed practically everything that left the United States for the seat of war. The victorious troops of the Republic returned to their homes through its hospitable portals. It was headquarters for the Navy. It was the Nation's capital upon the Pacific seaboard. Its prosperity was unbounded. You could almost see it grow. In 1899 I visited the city as the governor of my State to welcome our troops back to their homes. The business and residence sections of the city readily suggested comparisons with previous recent years. It had fairly leaped forward, so to speak, in its march of progress. It was populous; it was prosperous. It was verifying the most enthusiastic prophecies of its future greatness.

But of course the pressure upon its water supply increased

in proportion to its own progress and growth and brought the problem of water to an acute phase, so that in 1900 and 1901, under the new charter which was about that time adopted, preliminary steps were taken to ascertain what other sources of

water supply might be found and secured.

Mr. President, I want to refer to manuscript matters in this discussion as little as possible. I am aware of the fact that all these hearings are available to Senators, and also of the fact that reading is at best very tedious, but some references are unavoidable.

Mr. GALLINGER. What year was that?

THOMAS. This was 1900 and 1901. I shall read from page 95, Senator, of the first part of the House committee hearings, the testimony of the Hon. Percy V. Long, city attorney of

The sum of \$50,000 was then set apart for that purpose, and the

The sum of \$50,000 was then set apart for that purpose, and the sources which were examined were:

First, the Spring Valley waterworks supplies, with 12 separate sources; second, Lake Tahoe; third, the Yuba River; fourth, the Feather River; fifth, the American River; sixth, the Sacramento River; seventh, the Eel River; eighth, Clear Lake; ninth, the San Joaquin River; tenth, the Stanislaus River; eleventh, the Mokelumne River; twelfth, the Tuolumne River; thirteenth, the Bay Shore gravels—in and around San Francisco and Alameda County; and, fourteenth, the Bay City Water Co,'s reserve.

These 14 different sources of supply were fully investigated at municipal expense 22 years ago, and the engineers reported in favor of the Tuolumne River project. At that time there certainly were not in active operation those elements of competition and opposition which have since been and are now so active in this matter. Possibly the Spring Valley Co. may have objected, but I think I am safe in asserting that the engineers of San Francisco then operated with a free hand and with an eye single to the welfare of the city. The first reason given for recommending this source of supply was "absolute purity by reason of the uninhabitable character of the entire watershed tributary to the reservoirs and largely within a forest reservation." That is a most excellent reason; as true to-day as it was then. The uninhabitable character of the source of supply of water to a great municipality is the surest guaranty for its permanent and continued purity. I think it will be conceded that the ultimate source of the streams covered by this bill is in an uninhabitable country away up in the Sierras near, if not beyond, the line of timber growth.

Second. Abundance far beyond possible future demands for all pur-

poses.

Third. Largest and most numerous sites for storage.

Fourth, Freedom from complicating "water rights." Right here let me say, lest I forget it, Mr. President, that every complication which the Senator from California [Mr. Works] has urged against this enterprise, and springing from the existence of water rights and water needs for irrigation is equally present and inseparable from every source of water supply. I think I can easily show that in the State of California there is not and for years there has not been a single drop of water in any of its flowing streams that has not been overappropriated for purposes of irrigation. I hope Senators will bear in mind the important and unavoidable fact that this problem of competitive irrigating conditions confronts every source of supply to which the city may be compelled to resort; it is not peculiar to the Tuolumne, but it is universal not in California alone but in every part of the arid West, and must always be so unless climatic conditions undergo a radical and

Fifth. Power possibilities outside the reservation.

It has the drawback of distance to overcome, requiring the construction of conduits aggregating 142 miles in length. But considering the partial pollution and the rapid rate of pollution to which all other sources may in the future be subjected, particularly near-by sources, the Tuolumne River is far superior to any other.

That report was made in 1901. The mayor of the city at that

time was the Hon. James D. Phelan. Municipalities could not then make direct appropriations of water in California, and so the mayor, as trustee for the city, under the laws of the State of California, on the 29th day of June, 1905, filed his notice of appropriation of 10,000 miner's inches upon the Tuolumne and 5,000 inches upon Lake Eleanor, making a total of 375 secondfeet, approximating 240,000,000 gallons daily.

Mr. SMOOT. To 160,000,000 gallons?

Mr. THOMAS. No; the appropriation from the Tuolumne alone is 160,000,000 gallons, on a calculation of 645,000 gallons

per day per second-foot.

Mr. WARREN. What were the figures the Senator from

Colorado gave in gallons per foot?

Mr. THOMAS. Six hundred and forty-five thousand gallons per day of 24 hours to the second-foot, which, I think, are Elwood Mead's figures.

Mr. SMOOT. That is near enough.

Mr. THOMAS. It is approximately, as the Senator from

Utah suggests, correct.

Of course, Mr. President, these appropriations were upon flood waters-please do not forget that. Long before that time all of the flow of the stream had been appropriated and utilized. They must, therefore, have been upon flood waters and entirely subordinate to every legitimate senior appropriation, whether of flood waters or of flowing waters. In other words, the rights of the city of San Francisco took their origin from the date of the location under the statute, and these were at once, or very shortly afterwards, assigned by the mayor to the city of San Francisco.

Mr. SMOOT. Mr. President-

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Utah?

Mr. THOMAS. I do.

Mr. SMOOT. I desire to ask a question in order that I may understand the position of the Senator. I should like to ask him does he hold that San Francisco is entitled to any more water than she or her trustee has appropriated or filed upon?

Mr. THOMAS. No.
Mr. SMOOT. That is all I wanted to know.
Mr. THOMAS. But I shall show hereafter that she has acquired over 1,100,000 inches of water by her own appropriation, supplemented by a purchase she was compelled by certain public functionaries to make.

I want Senators to bear in mind also that not until 1905, four years after these filings, did Hetch Hetchy Valley become a part of the Yosemite Park. That is a very important fact, for when San Francisco exercised her right of appropriation, through her mayor, she went upon the public domain and there located her points of diversion and of storage. It probably was a forest reserve, for God knows there is very little of the national domain west of Kansas and Nebraska that is not comprised within a so-called forest reservation.

Mr. SMOOT. Mr. President, I did not quite understand the Senator's statement in relation to Hetch Hetchy not being in

the Yosemite Park.

Mr. THOMAS. I said that Hetch Hetchy did not become a part of the Yosemite National Park until 1905, and then not by any recession from the State of California, but through the mere extension of its boundaries so as to include that valley. Before then this identical dam site had been recommended and referred to by various official reports as one of the most favorable locations for impounding the water to be found in the If it be true, as some contend, the Almighty made Sierras. Hetch Hetchy for some definite thing; he made it for the use of man above all other considerations, and if in forming the Sierras that gap was created designedly, it was not to be looked at through the centuries, but to use. And such use of it, to my mind, in no way interferes with the privilege of inspecting it nor mars or injures its natural attractions.

Let me say right here that the waters coursing through this valley do not belong to the United States, but have been the property of the people of the State of California since its admission into the Union. Of course, I do not forget the general proposition concerning national control of navigable waters, nor the fact that as to public lands in the Territories, unless there may be an appropriation, the waters may be said to appertain to the ownership of the soil; but it is a fundamental fact, and Senators must not overlook it, that the waters of the arid States belong to the people by the provisions of their constitutions duly accepted by Congress. It is true of Utah as it is true of California. Consequently, when San Francisco appropriated this water under the State statute it became hers, provided, of course, she followed up her appropriation by compliance with the requirements of the statute in regard to its application to beneficial uses.

Mr. CUMMINS. Mr. President—
The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Iowa?

Mr. THOMAS. I do.

Mr. CUMMINS. I should like to understand a little better than I do about the distinction between flood waters and what the Senator from Colorado has called "the natural flow.

Well, it is perhaps difficult, Mr. President, to say where one ends and the other begins, but

Mr. SMOOT. Both have to be appropriated.

Mr. THOMAS. They both must be appropriated, but in my State the natural flow of the stream is the normal flow of the stream, and the flood waters are the surplus contents of due to storms, wet season, cloudbursts, and so forth.

Mr. CUMMINS. But the natural flow in August would be

very different from the natural flow in April.

Mr. THOMAS. But it can be appropriated any time in the

Mr. CUMMINS. Under the law of California, in appropriating water, must the appropriator designate whether he is appropriating natural flow or storm water?

Mr. THOMAS. I will not speak confidently of California, but I think it is the case in my State. If all of the waters of the normal flow have been previously appropriated, then later ones must be upon the flood waters.

Mr. CUMMINS. The words "normal flow" do not convey any meaning to me. What would be a normal flow at one time of the year would be very different at another time of the year.

Mr. THOMAS. I am very sorry that I am unable perhaps to give a more distinctive view of the subject.

Mr. PITTMAN. Mr. President—— Mr. THOMAS. Just a moment—but in the State which I here in part represent the normal flow of a stream is found by determining the averages of the flow, except when unusual floods

Mr. CUMMINS. Then, the normal flow, as the Senator from Colorado understands, is the average flow throughout the year, which, of course, embraces the storm waters as well as the waters of the drier periods.

THOMAS. Well, throughout the irrigation season, would say. Of course, the Government has its gauges and the States have their gauges, and "the normal flow" may in some States be regulated by statute.

Mr. CUMMINS. I asked for information purely, because I do not live in a State in which there is any distinction made between storm water or flood water and water in a drier season.

Mr. PITTMAN. Mr. President—— Mr. THOMAS. I yield to the Senator from Nevada, who may

answer the Senator's question.

Mr. PITTMAN. I will state that, from my investigation of the laws of California on this subject, I find that the distinction between flood waters and normal flow never becomes material, except where there is a claim that some prior locator has appropriated all of the normal flow of the stream. Then, the question becomes material as to whether the flow has been increased from normal to an unusual flow.

I will state that in the application made on behalf of the city of San Francisco no reference is made to any particular flow, but it has, I believe, 260,000,000 gallons daily appropriated under the laws of California, which it contends to be prior to all claims, except those claims admitted as prior in this bill.

Mr. CUMMINS. Mr. President, I am very much obliged to the Senator from Nevada, because we now ascertain that there is really no legal difference between the two, and a notice of appropriation is not required to discriminate between the two.

My question was prompted by a statement that has been made. if not upon the floor of the Senate at least in the literature on the subject, that in 1889, 12 years before San Francisco, through her mayor, attempted to appropriate any water at Hetch Hetchy, the irrigation district below appropriated, or gave notice of the appropriation, of 9,500 feet of water, more, as almost everybody agrees, than runs in this stream at any time.

Mr. THOMAS. Oh, no; at some times there are thirty or

forty thousand feet of water there.

Well, I mean more than has hitherto been Mr. CUMMINS. used, and a great deal more than the 2,350 feet provided for in Now, I ask the Senator from Colorado, because I this bill. know his knowledge of the law on this subject is accurate as well as profound-

Mr. THOMAS. I thank the Senator.

Mr. CUMMINS. Have these districts the right to use 9,500

feet of water, and if not, why not?

Mr. THOMAS. It depends entirely upon whether the appropriations have been followed by diversion and application to beneficial purposes within the time limited by the statute. record, if the Senator will read it, will show that the maximum limit of the canals supplying these districts under their appropriation is 2,000 cubic feet; hence the other 7,500 feet never were applied to a beneficial use.

Mr. CUMMINS. It is admitted that these districts have not yet used 9,500 feet. I think it is very well established that their improvements are not sufficiently large to enable them to use 9,500 feet, but I do not find anything in the law of California that fixes the time within which an appropriation must be made, and I find a decision which seems to imply that the time may be a reasonable time. Now, what is a reasonable time under the circumstances that surround these people? It is understood perfectly that they can not utilize these waters, or all of the waters upon which they have filed, without some kind of impounding dam. Does not the same circumstance that will prolong the right of San Francisco to use these waters operate to prolong the time that will enable these landowners to use these waters, and therefore ought we to do anything that will interfere with or embarrass these landowners if they desire to take out of this stream by the erection of an impounding dam the 9,500 feet for which they filed in 1889?

That is the question that has been bothering me, because I fully appreciate the strength, indeed the conclusiveness, of the argument made by the Senator from Colorado with respect to the necessity of furnishing San Francisco water. If the city can not secure it from any other source reasonably, then she must have it from this source; but I do not want to cast a vote that would seem to interfere with the working out of a legal right which these districts may have to the use of the

water for which they originally filed in 1889.

Mr. WALSH. Mr. President-The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Montana?

Mr. THOMAS. I am more than willing to yield for a question, Mr. President, but I do not care to surrender the floor for a long discussion, as my strength to-day is somewhat over-

taxed. I yield to the Senator from Montana.

Mr. WALSH. I did not know that the Senator from Colorado was occupying the floor. I desire to address a question to the Senator from Iowa for the purpose of enlightenment. did not quite understand what is the feature of the bill that he apprehends might result in disaster or detriment to the rights of the irrigationists.

Mr. CUMMINS. Mr. President, I think there are features in the bill that will, if not destroy, at least embarrass the owners of the land if they are entitled to more water than the 2,350 feet, and, at certain seasons of the year, the additional 1,650 I do not want to take the time of the Senator from Colorado to go into an analysis of the bill to show why I think the parts of the bill that I have in mind will have that effect. I can not conceive of a legal procedure by which these people can get the water after it is impounded in this dam-a dam built by the capital and with the means of the city of San Francisco—without paying for the use of the dam, and paying for the structure which impounds the water for their use.

They say it is not necessary to incur this expenditure in order that the water may be impounded at another place. am not sure I am right about it. I want to hear what the facts are, or, rather, what the law of California is in regard to this water. That is the reason I asked the Senator from Colorado with respect to the right of these districts to have 9,500 feet of water.

Mr. WALSH. I think the Senator from Colorado certainly will be able to dispel any doubts that may be in the mind of the Senator from Iowa with respect to the matter, because there should be none, under the law.

Mr. THOMAS. Mr. President, I have no doubt the State of California has a statute which places a limitation upon the time after the filing of notice within which work of some sort must be bona fide commenced and completed. The Senator from Utah [Mr. Smoot] very kindly informs me that the limit in his State is four years. My recollection of the laws of my State is that there is a limit of one year from the approving of the plans; but it stands to reason that a reasonable time, whatever it may be, is not the long period elapsing from 1889 to the present. If it were otherwise, it would be perfectly easy for anybody to appropriate all the waters of a stream by complying with the first requirement of the law, and then developing them whenever it might suit his pleasure or his convenience or his pocketbook, no matter how much others might be in pressing need of them.

Mr. SMOOT. The city appropriation is in the same shape.

Mr. THOMAS. Yes; except that in California there is a statute on the subject, to which I will refer in a moment. Before doing so, I will call the attention of the Senator from Iowa to section 1416 of the Civil Code of California, which provides that within 60 days after the notice is posted the claimant must commence the excavation or construction of the works in which he intends to divert the water, or the survey, road or trail building necessarily incident thereto, and must prosecute the work diligently and uninterruptedly to completion, unless temperarily interrupted by snow or rain.

Mr. NORRIS. Mr. President-

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Nebraska?

Mr. THOMAS. I yield to the Senator from Nebraska.

Mr. NORRIS. I wish to call the attention of the Senator from Colorado to what is my recollection, that it was admitted before the Senate committee by those who are asking for this additional water that at the present time they have all the water to which they are entitled under the law of California.

Mr. THOMAS. I intended to refer to that matter later on. Section 1422 of the statutes of California reads as follows—

and this applies to the San Francisco appropriation:

and this applies to the San Francisco appropriation:

If the place of intended diversion or any part of the route of intended conveyance of water so claimed be within and a part of any national park, forest reservation, or other public reservation, and be so shown in the notice of appropriation of said water, then the claimant shall have 60 days, after the grant of authority to occupy and use such park or reservation for such intended purpose, within which to commence the excavation or construction of said works: Provided, That within 60 days after the posting of said notice of appropriation, as provided in section 1415 of the civil code, the claimant shall in good faith commence (and thereafter diligently and continuously, except when temporarily interrupted by snow or rain, prosecute to completion) such surveys and other work as under the regulations governing such park or reservation may be required as preliminary to or for use with an application for such authority; And provided also, That the claimant shall in good faith on completion of said survey and preliminary work apply to the officer, board, or body having charge of such park or reservation for such authority, and shall thereafter prosecute said application for such authority, and shall thereafter prosecute said application with reasonable diligence.

Mr. CUMMINS. Does that apply to a municipality alone?

Mr. CUMMINS. Does that apply to a municipality alone?

Mr. THOMAS. Oh, no.
Mr. CUMMINS. Then, of course, if the dam for the municipality could not be put in the Hetch Hetchy Valley without the consent of the Government, which we all agree, and if that fact had the effect of extending the time for the municipality, why does it not extend the time for the irrigators?

Mr. THOMAS. Because there is no record of any evidence that the other appropriators ever made application to the In-

terior Department for any privilege whatever.

Mr. CUMMINS. I accept the statement, because, of course, the Senator has examined the matter; but what led to my question was this

Mr. THOMAS. What is the Senator reading from?

Mr. CUMMINS. I am reading from a pamphlet I found on my desk this morning

Mr. THOMAS. What is the title of it? Mr. CUMMINS. It is called "Hetch-Hetchy." It is a pamphlet signed by Theodore A. Bell, attorney for the county of Stanislaus, the Modesto irrigation district, the San Joaquin Valley Water Problem Association, and the Turlock-Modesto Water-Users' Association. It contains this statement with reference to the law of California:

Section 1416 of the same code requires that—
"Within 60 days after the notice is posted, the claimant must commence the excavation or construction of the works in which he intends to divert the water."

Mr. THOMAS. I have just read that to the Senator.

Mr. CUMMINS. Yes. Now, suppose it to be true that within the 60 days these districts did commence their work at a point on the river below Hetch Hetchy and have prosecuted that work with reasonable dispatch-

Mr. THOMAS. Then they ought to have shown it before the

committee

Mr. CUMMINS. I have not quite finished my question. Is it true that the lapse of time would work a forfeiture of their rights to the 9,500 feet of water because they had not commenced the construction of a dam upon Government land in the Hetch Hetchy Valley?

Mr. THOMAS. No; not for that reason, but because they had not prosecuted the work to completion under the statute from

the time of its commencement.

Mr. CUMMINS. Suppose they have been going on as rapidly as they could under the circumstances, and in such a way as would fulfill the demands or requirements of this statute?

Mr. THOMAS. Of course, if the appropriator of water for irrigation tries to comply with the law, bona fide, and continues it for the amount of his appropriation, he ought to be protected by any system of laws applicable to the subject. I think I am safe in assuming, however, that such is not the case here, because, as was aptly stated by the Senator from Nebraska [Mr. Norris], it was conceded at the hearings before the Senate and House committees that the legal appropriation of water senior to the Phelan appropriation was 2,350 feet, plus 60 feet to the La Grange Water Power Co. In my State and in Utah I think it is entirely within reason to say that the appropriations filed upon the waters of the running streams are 1000 per cent

greater than the normal flow of the streams and very much more than the total flood waters.

Proceeding with the argument, I think this large filing was essential to the future needs of all the bay cities. The Senator

from Utah asked a very pertinent question the other day.

Mr. NELSON. Mr. President—

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Minnesota?

Mr. THOMAS. I yield.
Mr. NELSON. I desire to say that I do not think we need give ourselves any concern about the rights of the water users for irrigation purposes. Whatever rights they have acquired have been acquired not only under the laws of California but under the laws of the United States, and there is nothing in the pending bill that can divest them of those rights.

I desire to call the attention of the Senator from Colorado to section 2330 of the Revised Statutes, which is a reenactment of

the old law of 1866:

Whenever, by priority of possession, rights to the use of water for mining, agricultural, manufacturing, or other purposes have vested and accrued, and the same are recognized and acknowledged by the local customs, laws, and the decisions of courts, the possessors and owners of such vested rights shall be maintained and protected in the same; and the right of way for the construction of ditches and canals for the purposes herein specified is acknowledged and confirmed.

The next section shows how careful the Government is to protect these rights:

All patents granted or preemption or homesteads allowed shall be subject to any vested and accrued water rights or rights to ditches and reservoirs used in connection with such water rights.

Therefore, if the Senator from Colorado will allow me, under this statute I do not think we need give ourselves any concern about the rights of these farmers or irrigators. Whatever rights they have acquired by appropriation can not be taken away by any legislation of Congress, nor can we increase those rights. They can increase them only by prior appropriation.

Mr. THOMAS. Mr. President, I think that conclusion is absolutely correct, although I am informed that the Circuit Court of Appeals for the Eighth Circuit recently intimated that these sections have been repealed by subsequent statutes upon the same subject. I do not believe that opinion to be sound, and I fervently pray it will not receive the sanction of the Supreme

Court of the United States.

I have stated that these filings were made in 1901, for the city, by Mr. Phelan; that they antedated the extension of the boundaries of the Yosemite Park to include the Hetch Hetchy Valley; and when interrupted I was about to refer to the fact that during the course of the discussion the other day the Senator from Utah asked whether an appropriation could be made for a greater quantity of water than the city needed. In response to that question I interjected another, to this effect: "Is a city limited, in a filing upon water, to its immediate needs?"

This brings me to the assertion of what I think, under the statutes, a municipality has the right to do, and what it is its duty to do. It should make provision, as a prudent man does for his own old age and well-being, for a supply for future needs, taking into consideration its value, its growing scarcity or abundance, the prospective growth of the city, and the general

needs and welfare of posterity.

When San Francisco determined to increase its water supply, on the one hand, and to relieve itself from the exactions of this private monopoly, upon the other, it had the right to look far into the future. In this instance, with a clearness and generosity of vision that should be commended instead of condemned, it assumed as well some responsibility for its sister cities, clustering on the other shores of San Francisco Bay, to the end that some day they might become a great common municipality, like Greater New York, and all receive an abundant supply of water at its initial expense.

Mr. SMOOT. Mr. President—
Mr. THOMAS. That may not be a proceeding strictly under the law. I think it is, however. At any rate, it is certainly prudence, common sense, and the exercise of that ordinary precaution which every man gifted with common perceptions exercises with reference to his own private affairs.

I now yield to the Senator from Utah.

Mr. SMOOT. Mr. President, the Senator has virtually answered in his last remark what I was going to ask him. It was this: Does the Senator think San Francisco can file upon the waters of the State with the view of furnishing some other city or cities with water?

Mr. THOMAS. Yes; I do. Let me qualify that, however. Mr. SMOOT. Of course I can not agree with the Senator in

that position.

Mr. THOMAS. We disagree in a great many things, but it is certainly always a pleasure when the Senator from Utah and I can agree upon others. As a general principle I do not think she can do this; but here is a cluster of cities, municipal jewels, strung around the shores of the Golden Cate and San Francisco Bay, and yet one great municipality, all of them enjoying the same climatic conditions, suffering from the same climatic disadvantages, all of them subject to common impulses and ambitions, all of them growing and expanding. The consolidation of municipalities, like the consolidation of everything else, seems to be progressing in this country. Why may not San Francisco provide for the same needs that are now existent for herself prospectively for all who may be embraced within her future boundaries?

The Senator will admit that if San Francisco herself, based upon her past and present rate of growth, would upon the peninsula have 2,500,000 people in the year 2000, she could make appropriations of water commensurate for that growing population. What is the difference between that and extending her municipal boundaries so as to take in these other cities?

Mr. SMOOT. Upon the same argument, any citizen could make an appropriation of water in a stream to take care of his unborn son or his unborn relatives.

Mr. THOMAS. He frequently does it or ought to do it. Mr. SMOOT. I do not think the Senator will approve of such proposition.

Mr. THOMAS. Oh, of course, I make a distinction between the rights of appropriation for the use of a private individual and that by and for the needs of a great section of the Government, which this municipality is. We have heard a great deal about Los Angeles in this argument and perhaps we shall hear Los Angeles knocked at the doors of Congress in 1906, I think, for a similar concession and got it. She ought to have had it, and I am glad she got it. She has expended some \$25,000,000 in constructing a magnificent water supply and has more than she now needs. She is supplying the inhabitants of the San Fernando Valley with her surplus water for irriga-She has a perfect right to do it. She has more water than she now needs, and, of course, it is needed by agricultural consumers in that valley. Certainly the Senator will not say that the appropriation of Los Angeles was illegal beyond the point of its own necessities. It seems to me that this bill presents to some extent the same conditions.

Besides, Mr. President, who can gauge accurately the future needs of a population for a prime necessity of life? It is better to err on the side of abundance than on the side of insufficiency.

Mr. SMOOT. That question can only be decided by the appropriators themselves. I do not want the Senator to receive the impression that I am questioning the right of San Francisco to use all the water that she has appropriated. no question about her right; but I do say that San Francisco can not appropriate three times or five times the amount of water that she can use for a beneficial purpose and hold it against other citizens of the United States, compelling all arid lands from future development by irrigation.

Mr. THOMAS. I am coming to that phase of this question later on. While I am not presumptuous enough to imagine that I can change the opinion of my distinguished friend I certainly will give him the benefit of my own.

Just here and in this connection I want to repel the contention-I will not say that it is a contention upon this floor, but a contention nevertheless in the literature of the subject, if I may so dignify all the printed matter that has reached my -I want to repel the contention that San Francisco is a mendicant, knocking at the doors of the United States for favors, for something that it wants to get and does not want to pay for. San Francisco is either entitled to this water supply as a right That splendid city has never been a mendicant or or it is not. suppliant at the doors of any patron for privileges or advantages of any character. Her name has always been synonymous with openheartedness and generosity. She has financed the greatest modern exposition of the times at her own expense without asking for a dollar of assistance from the Government. In this particular she has complied with the statutes of her State, has knocked at the door of the Interior Department time and time again for permits to which the laws of the Nation entitle her, and is here asking for justice at the hands of the Senate, because the Interior Department sent her here.

I do not want any Senator to cast his vote for San Francisco upon the idea that he is conferring some benefaction upon her to which she is not legally entitled. I have no right to speak for the city of San Francisco, but I have a right to express my conviction that upon this phase of the subject I am correctly interpreting her attitude.

Mr. SMOOT. I want to say to the Senator that I approve of every word that he says relating to that particular point.

Mr. THOMAS. I am sure the Senator does from the bottom of his heart.

Mr. SMOOT. I believe that San Francisco ought to be protected in every right. I wish to ask the Senator this one question: Why not make this bill a direct grant to San Francisco of a right of way for pipe lines and canals over the public domain and grant her the right to build and construct a dam, and then let her secure the waters through the State law by appropriation, whether it be 100,000,000 gallons a day or 400,000,000 gallons a day

THOMAS. The Senator's question is a double one. San Francisco is proceeding under the laws of the State of California. In answer to the first part of the Senator's question I will say that nothing would please me better, but I am conscious of the fact, and I think the Senator is also, that such a bill can not be enacted; it can not pass the two Houses of

Congres

Mr. SMOOT. Why not, pray?

Mr. THOMAS. Simply because these requirements, many of which I object to most strenuously, have been imposed as precedent conditions in the bill; many of them by the very men who object to the bill now because they have been so That is the reason, and one which I hope to touch upon before I am through with this discussion.

Mr. President, there is another phase of this matter to which I must refer. I believe that the city of San Francisco, if the statutes of the State permit her, has the right to go into the courts of the country and condemn the Hetch Hetchy dam for her use. I have given a good deal of study to the question of the extent to which the States can exercise the power of eminent domain over the public domain, and as the result of such examination I am of the deliberate opinion that the States have the same right of eminent domain over the land of the United States-not, of course, our public-building sites and other local premises needed for public administration-that the United States has over the land of the States and their citizens. It has been so determined by some of the highest courts of the country, both State and National. As a consequence, San Francisco is simply asking for what she has the right under the constitution and laws of California to take by condemnation. Of course, that is an involved proceeding.

Among the other questions that would have to be predetermined would be the existence right itself. That takes time. She has waited long enough. She has preferred to proceed along the usual channels, and therefore prepared and filed maps, asking for the control of these rights of way and for this She proceeded as rapidly as possible. In 1903, after these assignments were made to the city, she made application for the approval of the maps and plats to Secretary Hitchcock. At that time the present Secretary of the Interior was her city attorney. He came down here and personally presented his application to Secretary Hitchcock. The Secretary declined to give the permit because the city of San Francisco had not asked the Spring Valley Co. to place a price upon its property. In other words, the actual decision of the Secretary of the Interior was that San Francisco should first get on its knees to a supply company which had it by its throat and ask permission to purchase its property before appealing to the Department of the Interior. The city attorney called the attention of the Secretary to the fact that under the charter of that company it was required to make a proposal of sale to the city every year, which it had consistently ignored. Now, the Senate can draw its own conclusion, but if that was the course of the then Secretary of the Interior with reference to the administration of the affairs of that department I can sympathize with the remark made by the late Representative Cushing when that Secretary was removed, and when the news of his removal reached that region of the country there was not a dry throat west of the Missouri River within half an hour afterwards.

Mr. President, this discloses the fact that San Francisco was diligent in making its application for relief. Mr. Hitchcock's ostensible reason for refusing the application was that he had no power under the statute to grant the request of the city of San Francisco, although the law upon the subject is perfectly

There occurred a significant thing very shortly after Secretary Hitchcock denied this application. The boundaries of the Yosemite National Park were enlarged so as to take in Hetch That may have been a coincidence, I do not know; but I am giving these things in their order of sequence, and we Mr. President, that the invisible government, like the Almighty, moves in mysterious ways its wonders or its blunders to perform. I mention it for the consideration of the Senate without any comment beyond the suggestion just made.

Then came the disaster of 1906, when, without a moment's warning, the foundations of the earth were shaken underneath that mighty metropolis, followed by the most awful municipal

conflagration of history, when its people, roused from their slumbers by the earthquake's convulsion, were stripped of all their possessions within the short space of a day and driven from their homes by rolling billows of consuming fire and gathered shivering and hungry on the following morn upon her hillsides to look down upon an appalling scene of waste and desolation. With bitter despair they perceived that it was not the shock of nature but the improvidence of man which had visited this article of the control visited this awful calamity upon them. It was not the earth-quake that destroyed San Francisco. It was lack of water, and lack of water due largely to the inefficient and decaying system of a private company, whose greed disdained to note the terrible contingencies and demands of a country subject

to these great geological convulsions, which are inevitably followed by widespread and devouring flames.

But San Francisco did not despair. Her indomitable people rose to the seriousness of the occasion—girded their loins and began the supreme task of reconstruction. And what a task it was. I was there in the succeeding August; I passed through what were once the streets of a mighty city. Ashes marked the sites of palaces and hovels alike and ruin stared stark and desolate from the midst of blackened walls and the accumulated rubbish heaps marking the sites of splendid edifices. But the people—the people, Mr. President—they were pressing onward. Hope, ambition, the joy of reconstruction all beckoned them to the performance of a welcome duty. The sound of saw and hammer and anvil filled the air with the sweet music of municipal resurrection. Men spoke and women sang of the future. Their hearts, quickened with joy and gratitude by the abundant generosity of a great people, had room for no other sentiment than progress, and their minds could not contemplate the contingency of any obstacles to the consummation of measures designed to meet and overcome the

contingency of the recurrence of similar catastrophes.

And their initial difficulty and problem was water supply. Some of this literature informs the Senate that these rights were at that time abandoned by a resolution of the San Francisco supervisors, and as a consequence they ceased to have any existence. Here is the sordid story: A group of men foregathered about that time and organized under the name of the Bay City Co., at the head of which was one of San Francisco's most prominent millionaires. This company acquired a collection of so-called water rights and privileges and then undertook to sell them to the city through the agency of the city boss, who is now enjoying a forced leisure at the expense of the State, for \$10,000,000, one-third of which should be his fee when duly earned. The city was then in the grip of the so-called Schmidt-Ruef machine. Pursuant to this plot an attempt was made to pass a resolution abandoning San Francisco's water rights in Hetch Hetchy as a prelude to the Bay City project. I am told that it did not succeed. It came very near it, but the conscience of the people even in that sordid situation was aroused sufficiently to protest against the universal corruption of the city government at that time, with the result that there was some sort of reformation effected by processes of indictment; and this is the abandonment,

Senators, of this important water right.

Will you confirm it by refusing to pass this bill, because a set of scoundrels in possession of a city government assume to exercise their power and authority for gain by legislating through a scheme in the interests of some of the wealthiest of

the people of that city? I do not think so.

Mr. President, there is nothing like a bitter experience to warn men and municipalities of their duty. San Francisco, after cleaning house, made haste to press this location of its water rights in the Hetch Hetchy and get it beyond the possibilities of further assault as soon as possible. Just here let me ask what we would think of ourselves if, while San Francisco is asking vainly for relief and with nothing but a 37,000,000gallon water supply daily, another convulsion of nature should occur and the new city again exposed to the disasters of certain conflagration? Some might roll their eyes to heaven and thank God because the mosquitoes of Hetch Hetchy survived the awful catastrophe and still stand guard over the battlements of that mighty pass, and that the verdure of the park still contrasts and harmonizes with the sublimity of their surrounding rocks for the delight and rapture of 279 visitors per annum; but we could not escape much of the responsibilities for the results of disaster by pleading that we should possess more information before taking final action.

We want to give the city what she wants now or tell her absolutely that she can not have it, that she may at once take

sky being the engineer who made the examination of 1900 and 1901. In 1908 Secretary Garfield issued a permit to the city, which is given at page 173 of the House record. I am not going to read it all to the Senate; I simply want to refer to it for a moment. The terms of the permit are set out very fully, and I want to emphasize its reference to San Francisco's ownership of real estate in Hetch Hetchy Valley. Provision was then made whereby San Francisco is permitted to construct a dam at Hetch Hetchy and another at Eleanor Lake, but upon the condition that the dam at Eleanor Lake should be first con-This was after a hearing held by the Secretary in 1907. So the Senate will perceive that the city lost no time in pressing her claims.

If Senators will read that permit and then apply what I am now going to say about it, I think they must draw the conclusion that it amounted to a contract between the United States of America, acting through the Interior Department, and the city of San Francisco. It required San Francisco to safeguard all vested irrigation rights, which it did; to supply them with electric power; to pump water at cost, which it is anxious to do.

Now, let me read before I forget it that underneath this magnificent valley at depths of 7 to 10 and 12 feet there is a large underground flow, needing only cheap power to bring it up to the surface for use and make it one of the most productive valleys in the world. They do not need dams and reservoirs so much as they do cheap power for the purpose of overcoming the laws of gravitation and bringing to the surface this water which nature has supplied so near to the surface.

Another condition of this permit required San Francisco to obtain all the lands held in private ownership in the park for itself. That was the term of the contract imposed by its language upon San Francisco. Yet we hear talk about San Francisco gobbling up a section of the national park for private pur-What it bought it was obliged to buy under the require-

ment of Mr. Garfield's permit.

Also, it was required that the proposition should be submitted to the people for ratification. What proposition? Eel River? McCloud River? Oh, no. That the Hetch Hetchy plan should be submitted to the people for ratification. It was submitted in the shape of a bond proposition and ratified by five to one, its principal opponents, strange to say, being the Spring Valley Co. And just here let me say, Mr. President, that both bond issues were required by Government authority to be validated by a vote of the people. Both are therefore for Hetch Hetchy; no other proposition at all has been submitted to the popular vote.

The other bond issue was one of \$45,000,000 and ratified by the voters of San Francisco under a similar requirement by Secretary Ballinger. If this measure is rejected, all that San Francisco has done toward voting bonds for this scheme amounts to nothing. Its expense was, of course, considerable, but there is no recourse; and other bond propositions for other schemes must necessarily be submitted and voted upon if they are to have any bond issues at all. Is it moral, is it just, is it right, Mr. President, for the Interior Department to require these things of San Francisco and then itself afterwards to repudiate its contract?

Let me proceed. Of course, as soon as San Francisco was required to purchase these grounds, they assumed a remarkable value. Some patriotic gentlemen, influenced more by selfish than by public motives, managed to get hold of them. Seven hundred and twenty acres of the land is right in the floor of the valley and has been a ranch for 50 years, held in private ownership; it never was a part of the National Park; it could not be; but San Francisco was required to pay for those 720 acres \$174,311.30. What the 30 cents were for I do not know, but it is quite evident that \$174,311 was a very considerable

price to pay for a practically worthless ranch.

San Francisco was also required to buy lands and water rights held in private ownership in and around Lake Eleanor. and here is where the other water rights were secured. The Senator from California called attention to and emphasized several times the fact that San Francisco is only entitled to 161,000,000 gallons of water per day under its appropriation. It is entitled, under its appropriations and the water rights which the Interior Department compelled it to buy, to over 18,000,000,000 gallons per day. It was required to get 1,100,000 inches, and at prices dictated by the owners. Of course, these appropriations have no value beyond the amount required for the water scheme.

Mr. GRONNA. Mr. President-

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from North Dakota?

such other steps as may be necessary.

Mr. President, every step that has been taken by San Francisco has been along the lines of the Grunsky report, Mr. Grun- information. May I ask the Senator from Colorado to what

he is referring when he states that San Francisco had to pay over \$175,000 for land? Was it for land in the Hetch Hetchy Valley

Mr. THOMAS. It is a part of the floor of the Hetch Hetchy

Valley, patented many years ago to private parties.

Mr. GRONNA. That, of course, was bought from home-steaders, people who secured the land under a patent from the Government of the United States.

Mr. THOMAS. Oh, no; it was patented by homesteaders, but it was bought from some gentlemen who got to the homesteaders before San Francisco did.

Mr. GRONNA. What I meant was that this was land that

had been patented by the Government of the United States to homesteaders

Mr. THOMAS. Yes, sir; that is correct.

So San Francisco had to hold a conference with the owners of land and water rights around Lake Eleanor, and finally got off by the payment of \$600,000. Then it was required to buy from the Government \$13,128.70 worth of timber, which it paid for, but the timber has never yet been delivered.

Mr. SMOOT. The Government was not to deliver it. Mr. THOMAS. Well, San Francisco has not got the timber, but the Government has got its money.

Mr. SMOOT. But San Francisco can go and get her timber.

Mr. SMOOT. But San Francisco can go and get her timber.
Mr. THOMAS. It then discovered that there were ranches
and land appertaining to the Cherry Creek reservoir site, with
sections of land below, and that San Francisco was also required to purchase, because it was in the Stanislaus Forest Reserve. There again it was required to pay \$600,000 more, not voluntarily, but by the mandate of the Interior Department. Its other expenses, exclusive of the cost of the land, amounted to about \$200,000.

I may say in passing that when the Interior Department afterwards required a general examination of the whole country by a board of Army engineers and also by other engineers, the city employed Mr. Freeman, and its general expenses in connection with these examinations were about \$350,000.

Let me say right here that Mr. Freeman, whom I have known for a long time, in my judgment is the greatest hydraulic engineer in this or any other country, and his work speaks for itself. He has been for years in charge of the great improve-ments which New York City is making for her future supply, and has been identified with many of the greatest engineering projects of his time. After a full examination he has pronounced in favor of this project as preferable to all others. am not going to read pages and pages of his report, but it is open to the inspection of everyone. From my knowledge of the man-and it gives me a great deal of pleasure to speak of him as a personal friend-his judgment appeals to me more strongly with reference to the expediency of this particular scheme than that of all the other engineers combined.

These items of expenditure, Mr. President, amount to a total of \$1,937,444.07, every cent of which is gone if you defeat this bill. It might just as well have been put into the bottom of the sea. Yet San Francisco was compelled to make these expenditures by the Government of the United States.

Mr. LIPPITT. I wish to ask the Senator a question, if I may be permitted to do so. He says these expenses were compelled by the Interior Department.

Mr. THOMAS. Yes, sir.
Mr. LIPPITT. Just how were they compelled?
Mr. THOMAS. By the permit. The Senator was not here when I explained that matter.

Mr. LIPPITT. Does the Senator mean the permit to which he previously referred?

Mr. THOMAS. They were compelled by the permit and by regulations and rules or requirements which the permit au-

Mr. SMOOT. The Senator will admit that not a dollar of that would be lost if we simply passed a bill granting the right of way, without all the other unnecessary regulations in the bill, which I do not believe the Senator himself thinks it should contain.

Mr. THOMAS. Not a dollar would be lost if the gentlemen who have got the money in their pockets would pay it back, and not a cent would be lost if the Treasury Department would reimburse the city of San Francisco, and not a dollar would be lost if it could get the money to buy the water somewhere else; but I am unable to perceive where it is going to get it. I submit the matter just as one of plain, common, everyday justice to honest men whether this municipality should have been dealt with in this way and now left in the lurch.

Mr. SMOOT. I do not think the Senator intends to leave San Francisco in the lurch, and I do not.

Mr. THOMAS. I know the Senator does not, because his objections to the bill are not as to the purpose which is sought to be subserved, but as to certain provisions in it.

Mr. SMOOT. There are provisions in the bill for which I

could not vote.

Mr. THOMAS. I understand that fully.

Mr. SMOOT. I do not want Congress to impose upon California a law that I would not vote to have imposed upon my

own State, to be pointed to as a precedent hereafter.

Mr. THOMAS. I understand that, and I shall have something to say upon that subject before I shall have concluded.

Mr. Ballinger became Secretary of the Interior afterwards. I do not know what reason impelled him to do so, but Mr. Ballinger, becoming dissatisfied with this permit of his predecessor, went to San Francisco, instituted an investigation, and then determned to revoke the permit. One of his objections, as I gathered from the record, was that the people might not be behind this immense expenditure—that they might not approve of the plan; and he required this \$45,000,000 bond issue to be submitted to the people for a popular vote. The election was held, and the taxpayers voted upon the question, which may be thus substantially formulated: Shall this bond issue be authorized for the building of the Tuolumne water project? There were some 2,100 votes against it, in round numbers, out of a total, as I now recall, of 30,000. That answered Mr. Ballinger's objection; but still Mr. Ballinger was not satisfied, and consequently he had further hearings. Before his mind was ultimately made up, however, he was succeeded by Mr. Fisher. It was Mr. Fisher, I think-although perhaps I am mistaken as to that-who required the Army engineer board to examine the project. Mr. Fisher required further examination by outsiders, by a board of Army engineers, presumably impartial, absolutely upright and honorable. Thank God, whatever may be said of other portions of our people, we all know that there is a standard of honor and integrity in the officers of the Army and Navy of this country that can not be surpassed anywhere in the civilized world. This board was headed by Col. Taylor, as I remember, and consisted of himself and two others of equal probity. Mr. Wadsworth, under them, also an Army engineer, made a careful, comprehensive, complete, exhaustive examina-tion of this entire problem, and all of them reported in favor of Hetch Hetchy. I have yet to recall the name of a single engineer of known prominence, who was not in private employ with reference to some other plan, who has not turned to the Hetch Hetchy source of supply, just as the needle turns to the pole.

Mr. CLARK of Wyoming. Mr. President, before the Senator passes from the bond issue, for my information—I am not informed as to the bond issue, except as I have heard it from the Senator-do I understand that a vote was taken on the question

of the issuance of \$45,000,000 of bonds?

Mr. THOMAS. Yes, sir.

Mr. CLARK of Wyoming. Now, I want to ask the Senator whether or not the project which was under consideration at that time was the project that is under consideration in this bill, or whether

Mr. THOMAS. It was the identical project.

Mr. CLARK of Wyoming. Or whether it did not refer to the exercise of the permit which had been given by Secretary Gar-

Mr. THOMAS. The permit covered what this bill does.

Mr. CLARK of Wyoming. The permit covered what this bill does?

Mr. THOMAS. Yes; the difference being that the permit required San Francisco first to improve the dam and reservoir at Lake Eleanor.

Mr. CLARK of Wyoming. Has the Senator anywhere in his papers-I know he has made a very close examination of this subject-a copy of the permit?

Mr. THOMAS. The Garfield permit?

Mr. CLARK of Wyoming. Yes. Where can that be found? Mr. THOMAS. That will be found on page 103 of the first number of the hearings before the House committee.

Mr. CLARK of Wyoming. I thank the Senator for the information.

Mr. THOMAS. Secretary Fisher, before he left office and after this report came in, sent the whole matter to Congress. He would not presume to pass upon it; and it was by his direction, Mr. President, and not of her own volition, that San Francisco has come to the Congress of the United States. She was forced to come here after appealing to every Secretary of the Interior who held office after these filings were made. Granted certain rights by some Secretaries, accompanied by the imposition of large expenditures, they were repudiated by others, and,

finally, kicked out of the Interior Department completely, she must come to Congress, and come she did, as her last alter-

Mr. SMOOT. Mr. President, as I understand the reason why San Francisco came to Congress it was that under the laws of the United States the Secretary of the Interior has no right to grant an irrevocable permit. All permits now granted are revocable, and San Francisco did not want a revocable permit; and I do not blame her.

Mr. CLARK of Wyoming. A revocable permit.
Mr. SMOOT. A revocable permit; and I do not blame her.
Mr. THOMAS. I do not, either.

Mr. SMOOT. And I believe the reason that she came to Congress was that it was necessary that she should have an irrevocable permit or she could not place her bonds.

Mr. THOMAS. The record does not show that, Mr. President. Mr. SMOOT. I have been so told, and I think this is the fact

of the case.

Mr. THOMAS. The record shows that she came here because

Secretary Fisher directed her to do so.

I have referred to Mr. Freeman and to the board of engineers. Mr. Grunskey, Mr. O'Shaughnessy, and Mr. Manson, all eminent engineers—city engineers of San Francisco—in their various investigations also reported in favor of this particular plan.

If Senators can find in the record any single instance of noncompliance by San Francisco with every requirement imposed upon her, I will agree to vote against this bill. If she has failed to comply with every requirement as fast as she could after the requirement was made, the record ought to disclose it; I have been unable to discover the fact.

The other sources were all objectionable for reasons that were satisfactory to the engineers; and if they were not satisfactory, certainly San Francisco would be very unwise if she did any-

thing but follow their recommendations.

Just here, lest I forget it, let me digress by calling the attention of Senators to a formidable physical obstacle which encounters every other project proposed, the Spring Valley project alone excepted; and that is that the pipes or conduits of any water supply, other than Hetch Hetchy and the Spring Valley, must either be laid under the waters of Carquinez Straits and San Francisco Harbor before they reach the city, or else make a detour of over a hundred miles to Dumbarton Point, and then across the bay at that point. These things, I presume, can be done, because nothing is impossible in modern times to engineering science; but think of the expense, particularly the expense of repairs, of such a system. In the event of an earthquake shock, however slight, the pipes would be wrenched to pieces, in all probability, and the city would be left without any water supply whatever. To my mind that is an absolute obstacle—I will not say "obstacle," I will take that back; but a most formidable obstacle, sufficiently so to amount to an insuperable objection to a resort of any other supply unless it is absolutely necessary to resort to it.

think, if we lived in San Francisco and were taxpayers there, we would feel very much about it as these engineers do. My reading of the reports of the engineers has caused me to emphasize this particular obstacle, which stands out as a feature of practically all of these alternate sources, and, of course, it

is very prominent and should be avoided.

Mr. President, a great city in search of a water supply will always encounter certain obstacles. There are those who oppose the acquisition of the supply she determines to secure; there are those who have other sources of supply for sale; and there are still others who own the present sources of supply. In this instance there is another element of opposition, which comes from good people all over the United States, who seem to feel that nature will be desecrated and the refined sensibilities of the people outraged by converting a mosquito swamp into a lake.

Mr. President, I shall not spend any more time than I am obliged to spend in a detailed reference to these particular matters, and perhaps what I say will not be presented in anything like systematic order. But before leaving the subject I wish to emphasize the fact that this land and timber which San Francisco has been obliged to purchase have no intrinsic value except for the purposes for which she was obliged to pay

extortionate and speculative prices.

Lest I forget it, let me call attention to the fact that if San Francisco wanted to do so she could go into the Hetch Hetchy Valley to-morrow and cut every standing tree and shrub from her patented property in that valley. It has no protection whatever from the Government of the United States. The city It has no protection has the same right in that regard that the Senator from Utah would have if he owned the timber in fee. As a consequence,

the desecration of which we hear so much might come about independently of this bill if San Francisco were so minded. Certainly she would commit no such act of vandalism either in a spirit of malice or resentment or otherwise, but as a matter of right she might easily accomplish the very thing which it is said will be accomplished by the enactment of this bill.

In addition to that the city will be deprived of its water filings if this bill be rejected, because if it can not use them its appropriation fails. If its right be denied to devote them to the beneficial purpose for which the appropriation was made,

the filings are lost.

Mr. President-The PRESIDING OFFICER (Mr. SAULSBURY in the chair). Does the Senator from Colorado yield to the Senator from Indiana?

Mr. THOMAS. I do. Mr. KERN. If the Senator from Colorado will yield to me for the purpose, which he has consented to do, I will ask unanimous consent that when the hour of 6 o'clock arrives the Senate shall take a recess until 8 o'clock.

The PRESIDING OFFICER. Is there objection? The Chair

hears none, and it is so ordered.

Mr. CLARK of Wyoming. Mr. President—
The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from Wyoming?

Mr. THOMAS. I do. Mr. CLARK of Wyoming. I should like to ask the Senator from Colorado a question right on that point. I understood from the remarks of the junior Senator from California [Mr. Works] that San Francisco has an appropriation of something like 160,000,000 gallons of water per day of this water supply.

Mr. THOMAS. Yes. The Senator spoke of the appropriation

Mr. SMOOT. Those are the only waters involved in this case.
Mr. THOMAS. Oh, no; those of Lake Eleanor are involved, and of Cherry Creek as well. They are in the Hetch Hetchy

Mr. CLARK of Wyoming. I do not know but that he also spoke of the Lake Eleanor appropriation. I am not sure whether What I wish to ascertain, however, is this: How much does the Senator from Colorado understand to be the present appropriation, under the law of California, for the purpose of the proposed water system of San Francisco and the bay

Mr. THOMAS. The appropriations made by San Francisco, or by her mayor for San Francisco, plus the water rights she was compelled by Mr. Garfield to buy from private sources

Mr. CLARK of Wyoming. And which she did buy. Mr. THOMAS (continuing). And which she did buy, exceed 100,000 inches. There are 40 inches to a second-foot. The 1,100,000 inches. Senator can make the calculation. It is over 18,000,000,000

gallons per day. It is over 1,100,000 inches.

Mr. CLARK of Wyoming. How much?

Mr. THOMAS. Eleven hundred thousand inches—infinitely more than she could use or wants to use or that could be secured from the watershed.

Mr. CLARK of Wyoming. Is the Senator familiar with the laws of California with relation to the appropriation of water?

Mr. THOMAS. Only in a general way. Mr. CLARK of Wyoming. Of course in some of the States, and in the State which I have the honor in part to represent

Mr. THOMAS. To be precise, she has appropriated and acquired 1,159,000 inches, 200,000 inches being on the Tuolumne, 207,000 inches on Eleanor Creek, and 752,000 inches on Cherry River.

Mr. CLARK of Wyoming. How many gallons does the Sena-

Mr. CLARK of Wyoming. How many gallons does the Senator say that figures out per day?

Mr. THOMAS. According to a rough calculation which I made, it is over 18,000,000,000 gallons per day.

Mr. CLARK of Wyoming. Does the Senator know what the supposed capacity of that watershed is?

Mr. THOMAS. No; I do not. I do not think it has any capacity like that, except possibly in times of extreme flood. San Francisco does not contend that she has a legal right to that water to use it for mynicipal purposes. San Francisco was that water to use it for municipal purposes. San Francisco was obliged by the Interior Department to buy these water rights.

Mr. CLARK of Wyoming. Does the Senator understand that under any system of water laws in any State more water can be appropriated than it is possible to store or more than is run-

ning in a natural stream?

Mr. THOMAS. I do not think any person can or ought to appropriate any more water than he can apply to beneficial uses; but I do think a municipality has and ought to have the power to provide against future contingencies, just as Los Angeles has made an appropriation for the use of very much more water than she now uses

Mr. CLARK of Wyoming. I confess I am astounded at the figures the Senator gives.

Mr. THOMAS. So was I. Mr. CLARK of Wyoming. I can hardly think it possible that such an appropriation as that has been legally made.

Mr. THOMAS. I do not think it was. I do not pretend it I am simply calling attention to the fact that it was physically made, and that the Secretary of the Interior compelled San Francisco to buy it whether worth anything or not.

Mr. SMOOT. Mr. President, the total amount of 400,000,000 gallons of water a day is what we all agree this project will

develop.

Mr. CLARK of Wyoming. I understand that.

Mr. SMOOT. Now, according to the Senator, San Francisco has appropriated forty-five times more than the whole project is capable of developing.

Mr. THOMAS. Oh, no; the Senator misstates me. I did not

say she had appropriated it.

Mr. SMOOT. Then she has purchased it.

Mr. THOMAS. She had to purchase it. She purchased it

under duress

Mr. CLARK of Wyoming. My question is this, in short: I do not care whether it is by appropriation or by purchase from prior appropriators who lawfully made the appropriation. der the laws of California, how much water is the city of San Francisco entitled to draw from this water supply?

Mr. THOMAS. She is and ought to be entitled to draw every bit of water that she needs to supply herself for the coming

century, or longer.

Mr. CLARK of Wyoming. I assume, then, that the Senator is not informed as to the amount she can legally draw from this

supply?

Mr. THOMAS. I can not answer that question any more definitely. I will answer it as definitely as I can. I do not think any city, especially in a country like that, ought to be limited to an appropriation merely for her immediate purposes.

Mr. CLARK of Wyoming. Of course; but the Senator knows very well that all appropriations of water are not made in a lump, but are made as appropriations of so much water, either in inches, acre-feet, gallons, or in some other way.

Mr. THOMAS. Yes; almost all of them.

Mr. PITTMAN rose.

Mr. CLARK of Wyoming. What I am trying to ascertainand perhaps the Senator from Nevada can answer my inquiry, which I make in absolutely good faith-is, how much that amounts to?

Mr. PITTMAN. I will state for the Senator's information that there is an act of the State of California which anticipates just such conditions.

Mr. CLARK of Wyoming. I shall be very glad to hear what it is.

Mr. PITTMAN. The statute prescribes that when a municipality has acquired water it may dispose of the surplus water until it is required for its own use.

Mr. CLARK of Wyoming. That still does not relieve my mind. I wish to know exactly how much right San Francisco has, legally, in the waters of this watershed.

Mr. PITTMAN. San Francisco has all of the water that it has appropriated, or so much of it as the stream will supply.

Mr. CLARK of Wyoming. How much has it appropriated?

That is what I am trying to ascertain.

Mr. PITTMAN, The Senator from Colorado has correctly stated the appropriation, because the appropriations of others inured to its benefit when it purchased them. The amount that the engineers estimate will be actually supplied is about 260,-000,000 gallons daily.

Mr. CLARK of Wyoming. Then do I understand from the Senator from Nevada, who is in charge of the bill, that the appropriation of San Francisco in this water supply is 260,000,000

Mr. PITTMAN. No; that is not the appropriation.

Mr. CLARK of Wyoming. Can the Senator inform me what the appropriation is?

Mr. PITTMAN. The appropriation has been accurately stated

by the Senator from Colorado.

Mr. CLARK of Wyoming. Will the Senator from Colorado please state it accurately again?

Mr. THOMAS. I do not know that I understand the Senator's question. Possibly the answer I gave was based upon a misconception.

Mr. CLARK of Wyoming. My question is simply this, and I ask it of the Senator the same as I would ask him if it were an

much a certain rancher had appropriated out of the waters of a river, he might answer me either in inches, or in acre-feet, as they do in some places, or in gallons per day, as they do in others.

What I want to ascertain is, how much has the city of San Francisco, under lawful appropriations or by purchase of other appropriations lawfully made, in the water supply of the Hetch Hetchy Valley?

Mr. THOMAS. I can not give a mathematical answer to the question; but I will say that she has a right to appropriate as much as her engineers' estimates tell her is necessary for the municipal purpose for which the appropriation is made.

Mr. CLARK of Wyoming. What has she made in the way of

such an appropriation?

Mr. THOMAS. She has made an appropriation which, to-gether with a part of her purchase—and, of course, the greater part of this purchase is of fictitious water, because it is not there, never was there, and never will be there—is the equivalent of a supply of 400,000,000 gallons per day.

Mr. CLARK of Wyoming. I can not understand the fictitious

appropriation of water.

Mr. THOMAS. I do not say it is a fictitious appropriation

made by San Francisco.

Mr. CLARK of Wyoming. I am not speaking of that. I am speaking of the appropriation that San Francisco bought. The Senator says it is a fictitious appropriation.

Mr. THOMAS. Anybody who knows anything about the western rivers knows that billions of inches of water are appropriated. It is like the watered stock in some of the modern

corporations

Mr. CLARK of Wyoming. Mr. President, I do not assume to know accurately much about the appropriation of water under the laws of California, but I do assume to know that in some jurisdictions an appropriation of water is not allowed unless the water is in the stream or can be put into the stream. If this fictitious appropriation of water was made, it is certainly valueless under any jurisdiction and in any State. In the Senator's own State a fictitious appropriation is valueless. What I am trying to find out is how much of real appropriation San Francisco has in the water of the Hetch Hetchy Valley,

Mr. THOMAS. I have answered that question as best I could,

and I think I have answered it correctly.

Mr. CLARK of Wyoming. I think probably I am obscure in my way of asking for the information.

Mr. THOMAS. No; I said it was the equivalent of 400,000,000 gallons. I think that can be easily made a matter of calcula-

Mr. WALSH. Mr. President, I think the matter can be cleared up by a suggestion. The Senator from Wyoming evidently is governed in his views by the law of his State. law requires every one desiring to appropriate to go to the State engineer and there make his filing. The State engineer determines how much water there is in the stream, and he will allow no appropriations or filings to be made in excess of the amount he finds to be flowing in the stream. That system does not pre-vail generally throughout the West, as the Senator doubtless recognizes. The prevailing system is that anyone may go and make a filing on water to any extent that he cares to do so. It does not make any differences how much it is. That system is apparently the one which has prevailed in the State of California, so the filings upon this water have accumulated to the enormous amount given by the Senator from Colorado.

An appropriation under that system consists, first, of the filing; second, of the construction; third, of the appropriation to the beneficial use. When those three elements are combined, an appropriation is made. When the Senator asks how much has been appropriated in the State of California he wants to know the result of those three elements.

So much has been filed on. The appropriation, of course, when it is completed, never can exceed the amount of water that is in the stream, so the actual appropriation completed never can exceed the amount of flow in the stream. If the beneficial use is less than that, the appropriation will be reduced to correspond to the amount which can be subjected to beneficial

So at the present time it is utterly impossible to answer the Senator's question as to how much the city of San Francisco has appropriated, because it has neither developed the works nor applied the water to a beneficial use. The only answer the Senator from Colorado can make to the Senator from Wyoming is to give him the figures of the filings,

Mr. CLARK of Wyoming. Mr. President, that is a new way to appropriate water. To say that, without any intention of applying the water to beneficial use, I can go in and keep out appropriation of water in his own State. When I asked how men who want to apply it by appropriating or making a claim

to all the water running in the stream is a new thing to me. Of course, I have to put it to beneficial use at some time, I suppose; but in every place I know anything about—of course, my experience is very largely confined to my own State—no man is allowed to appropriate the waters of the State and turn them over at his sweet will to others, whether he wants to use them or whether they want to use them or not.

I am sure there is some way of determining under the laws of California just how much of the water running in the Tuolumne River and in that watershed the city of San Francisco has a right to. There must be some way of finding out. I shall try to ascertain it in some way. I hope I shall be successful, because it will go a long way toward determining my

attitude on this bill.

Mr. THOMAS. Mr. President, I venture the assertion that in the Senator's own State the waters of the flowing streams have been appropriated four or five times over, so far as filings are concerned. The actual appropriation made in that State is just as it is in others and, as the Senator from Montana states,

it is the amount that is applied to beneficial use.

Mr. President, there is a strong family resemblance between the irrigation codes of all the Western States. They have their origin in the early life of California and Colorado. It is a universal principle everywhere that appropriations must be initiated by filings, and must be followed by beneficial use and practical application.

Mr. CLARK of Wyoming. Why, of course. Nobody denies

that.

Mr. THOMAS. Those are the tests; and if a man makes a filing in the Senator's State, with all due respect to his view, I think it becomes effective to the extent to which it is bene-

ficially applied.
Mr. WALSH.

I can add something to that. I had occasion to examine the laws of the State of Wyoming some time ago, in a case I presented to the Supreme Court. The law to which the Senator refers, as my recollection now serves me, was en-acted in the year 1890. Since that time you must proceed, as I have indicated, by making your application to the State engineer, who will not permit you to make a fixing for water beyond the capacity of the stream. Prior to 1890—and I dealt with rights acquired prior to that time-the rule in the Senator's State was exactly the same as in all the other States. There was no specific law of his State upon the subject, and the customs of the Western States prevailed there as well.

Mr. CLARK of Wyoming. Mr. President, in order that I may not be entirely overwhelmed by the legal opinions of the Senators from Colorado and Montana, and that it may not be assumed that I know nothing about the early dealings in

Mr. THOMAS. O Mr. President, I do not think either of us intimated that. On the contrary, I wish to bear testimony to the Senator's knowledge of the law and understanding of the

situation in the arid States, including his own.

Mr. CLARK of Wyoming. I want to make it perfectly clear, so that there will be no misunderstanding between the Senator from Montana and myself, that in all those States, in the early years, much difficulty arose over the conflicting claims to the waters running in the various streams. The fact of the matter is that one reason why this bill is so important is because I think it involves the principle of regulation of the waters of a State. In the early years in all those States much difficulty occurred, much hard feeling occurred, much bloodshed occurred, over the distribution of water, and provisions were gradually crystallized into statute law, until, I think, about the year which the Senator suggests, perhaps a little before that time, the State of Wyoming began a measurement of the flow of all the streams in the State. It was no inconsiderable job, but wherever the State of Wyoming found that water flowing in a stream of the State was overappropriated they began to adjudicate the rights of every man upon that stream. They adjudicated it with reference to individual rights, the one to the That has gone on from that time to this. There never has been a permit allowed for the appropriation of a drop of water that the stream did not carry, either from its natural flow or of surplus flood water. That was, of course, for the purpose of avoiding strife, lawsuits, and bloodshed over the water. I was trying to ascertain from the Senator from Coloradoand I am sure it must appear somewhere-just how much water has been appropriated by San Francisco and how much water she has acquired by purchase from other legal appropriations.

Mr. THOMAS. Mr. President, the Senator has not only vindicated himself, but I think he has vindicated me. I followed him pretty closely and yet falled to perceive any great difference between the irrigation code of Wyoming and those

with which I am better acquainted than in that State. It goes without saying, I should think, that as a general proposition everywhere one can not gauge with mathematical accuracy the amount of water San Francisco needs. Those are matters concerning which much latitude must necessarily be given.

Now, with reference to the statutes of California, I am told that much of the statute law which was read here by the Senator from California [Mr. WORKS] is not the law at all, by which I mean that the statute is the subject of a referendum and depends upon its ratification or rejection at the next gen-

eral election for taking effect.

Proceeding, Mr. President, let us assume that San Francisco is denied the rights that are desired under this bill and is driven to some other source of supply, is there a single objection urged against this measure, a single conflicting water condition, a single line of protest from other users, that it would not encounter all over the State in its effort to obtain a supply, not encounter an over the state in its enor to obtain a sapply, no matter where that supply is? If it is required to go to Mc-Cloud River, to Eel River, to the Mokelumne, to any of the sources of supply, it is confronted by the same conditions. All the running waters of the stream are appropriated and used upon the ranches and farms of the people.

The same swelling procession of agriculturists insisting that their rights are being disregarded, their property destroyed, their valleys made desolate, must come, no matter where it gets its water. It must therefore encounter and overcome these con-

ditions.

The Senator from California, in expatiating upon the extent of the resources of the Spring Valley Co., ignored completely the fact that every additional gallon of water which that system acquires is taken at the expense of the agriculturists of the valleys around San Francisco and San Jose. I am told the drain at present is so great that the level of the subsurface water has been lowered several feet, requiring additional pumping to secure the surface flow. It is threatening the source of the water supply. If the pressure upon that supply is doubled and the magnificent orchards and farms in that section of the country are consequently destroyed, where is the saving to San Francisco or to the people of the State, and where is there any avoidance of litigation by resort to this source?

The Senator's own city took the waters of Owen River for

its own needs, and every ranchman upon that river, from one end of it to the other, was up in arms, declaring—I think with much truth—that it meant absolute destruction to the valley itself, making it practically uninhabitable. I have no doubt Los Angeles did justice to all those claimants who were bona fide. She got the water, but she encountered the eternal fact that whenever any great municipality needs an added water supply it can only acquire it for domestic and municipal purposes by depriving other users of water of the right to it, which

means controversy and litigation, perhaps bloodshed.

In my State, and, with great deference to my friend from Wyoming, I think in his State as well, while the domestic is superior to the agricultural interest in water, you can not take it for a domestic supply without condemning the value of its use to the owner of the water for agricultural and power purposes and compensating him for it. So it is an expense everywhere. San Francisco has been for 13 mortal years trying to get this source of supply-persistently, consistently, continuously. Are we to tell her now that she has other sources of supply nearly as good, or equally as good, and expect her to resort to them without encountering the same troubles, difficulties, and the same delay that has occurred in her pursuit of this one?

Mr. SMITH of Arizona. And then get inferior water. Mr. THOMAS. And then get inferior water. I will come to that. She would be like the Ancient Mariner, with-

Water, water everywhere, Nor any drop to drink.

In fact, I have been amazed and delighted by the assurances that have poured in my office from people who are, of course, disinterested of the existence of magnificent supplies of water around San Francisco. Neah's flood was an ordinary affair compared with the abundant waters of the multitudes of swelling streams that are now running waste to the sea, and from which San Francisco could easily supply herself without money, without price, without objection, and without opposition.

Mr. GRONNA. Mr. President-

The VICE PRESIDENT. Does the Senator from Colorado yield to the Senator from North Dakota?

Mr. THOMAS. Certainly. Mr. GRONNA. The Senator from Colorado referred to inferior water. I do not suppose the Senator pretends to leave the impression that water from the McCloud River is inferior to water from the Mokelumne River. Mr. THOMAS. I do not think it is.

Mr. GRONNA. If the Senator will permit me, I should like to read a short extract from the report of the Army engineer. Mr. THOMAS. Certainly.

Mr. GRONNA. It is found on page 19 of the Army engineer's report, and is as follows:

(d) McCloud River rises on the south side of Mount Shasta, and uniting with the Pitt River forms the principal tributary of the upper Sacramento. Its least flow is about 1,200 cubic feet per second, or about 770,000,000 gallons daily, amply sufficient for all possible needs. The water appears to be good and pure. No reservoir would be necessary as far as quantity is concerned. If desired to hold in reservoirs for sanitary reasons, suitable sites could doubtless be found in Contra Costa County, if not in the McCloud River Basin. This source is considered a feasible one and it will be discussed in greater detail later in this report.

Mr. THOMAS. Mr. President, as I remember it, the initial cost of that source of supply is less than Hetch Hetchy, but there are three fundamental differences between the two sources of supply, and perhaps more. One is that from the McCloud source the entire system must be constructed at once, instead of in units, as is the case with Hetch Hetchy, requiring an immediate outlay of \$54,000,000.

Mr. GRONNA. If the Senator will permit me, I will say that that is less than the cost of the Hetch Hetchy project.

Mr. THOMAS. It is some \$13,000,000 or \$14,000,000 less that is, on the face of it-but the other system can be constructed in units, and the unit first constructed will assist in paying for the second and the outlay be distributed over a large number of years. There is one immense advantage, which more than equalizes the difference in first cost.

Another difference is that there are no power possibilities from the McCloud source of supply. San Francisco needs electric power, and California needs development in electric power just as much as she needs ownership in water, not only for her own purposes, but for the uses to which I have referred, and also for the purpose of paying or assisting to pay the expense of operation.

San Francisco owns a street railway system. Her people are engaged in many diversified industries requiring cheap power. She is anxious to extend her spheres of municipal usefulness, but she is in the grip of a power monopoly as well as that of

the Spring Valley Co.

That is true. The third is—and I direct the attention of the Senator from North Dakota to it-that the supply from this source must be carried under the waters of Carquinez Creek and San Francisco Bay at very considerable expense, involving vast engineering difficulties and menaced with practical destruction by the slightest convulsion of nature.

Mr. NORRIS. Mr. President

THOMAS. As a consequence, I do not hesitate to say that the engineers were right, for those three reasons, in re-jecting this particular source of supply. There is another reajecting this particular son to which I wish to refer. son to which I wish to refer. Does the Senator from Colorado

yield to the Senator from Nebraska?

Mr. THOMAS. Certainly.
Mr. NORRIS. The Senator has just called attention to what was going to call attention to-that the engineers who wrote the report from which the Senator read rejected that proposi-

tion in favor of Hetch Hetchy.

Mr. THOMAS. McCloud River supplies the Sacramento River, if my recollection serves me right, with about onefourth of its water supply. The Sacramento River is a navigable river, and, to use a western expression, it is "sure enough navigable." It is used for purposes of commerce, and boats actually ply upon its waters as far as Redbluff

Now, with all due deference to the Government of the United States, let me say with much truth that whoever in the West appropriates water or demands a supply of it for beneficial use and comes in contact with the commerce clause of the Constitution of the United States needs for the attainment of his ends all the help he can get from the Lord and from other sources, if there are any, because, Mr. President, there are more intricate, expensive, and foolish obstacles interposed by the departments through the exercise of this so-called power over navigable streams and their tributaries in determining the privilege as they call it, the right as I insist, of diverting waters to beneficial use than are found anywhere else in the administration of public affairs.

I can illustrate what I mean perhaps better than I can explain it. Some time last March the engineers of the Dolores River, or the Dolores Valley Land Co., the property of the company being located near the headwaters of the Dolores River in my State, and the Dolores River being a tributary of the San Juan, which in turn is a tributary of the navigable Colorado, applied to my colleague and myself to aid the company in securing permits for the diversion of some of the waters

of the Dolores River into their ditches. He informed us that the plans and plats of this enterprise had two years before been approved by the State engineer, and had then been sent to Washington for approval by the Interior Department, and not getting satisfactory information as to causes of delay he was sent to the city of Washington for the purpose of ascertaining what the trouble was. We discovered that the field notes and plans had been submitted to the Geological Survey, and the Geological Survey after careful and prayerful deliberation had determined that there was nothing objectionable in them so far as that bureau was concerned.

The survey then sent the papers and plats to the Reclamation Bureau, and there, after more careful and prayerful consideration, the Reclamation Bureau determined that the Nation's welfare would not be permanently endangered by approving them. It did so, and sent the documents to the Forestry Reserve Bureau of the Agricultural Department, where they rested serenely on the occasion of the engineer's visit to Washington.

We got some affirmative action there, and were then blandly informed one morning that the Forestry Reserve Bureau had approved the plans and had sent them to the Secretary of War. because the Dolores was a tributary of a navigable stream, and that the diversion from it of a little water for farming purposes from a tributary 2,000 miles away from the head of navigation might seriously affect the navigability of the stream, and that in consequence of this, the War Department would have to be consulted in order to determine whether, in the opinion of the Secretary, this diversion could be made without imperiling the navigability of the great Colorado River.

We got to the department before the papers did, and the new Secretary of War could hardly credit us when we informed him that it was his duty under his oath of office to pass upon this tremendous question. He sent for the papers. They did not immediately come. He gave orders to have them laid upon his table at once. About that time we discovered that the company had another formidable step to take, because the Dolores was not only a tributary of a navigable stream, but of an international navigable stream, and as a consequence the offices of the Secretary of State must be invoked as a final determination of this water right.

In this instance, Mr. President, we secured a conference with quartet of Secretaries one afternoon in the Department of War-the Secretary of the Interior, the Secretary of Agriculture, the Secretary of War, and the Secretary of State. great functionaries spent an hour in determining whether the diversion of a few inches of water from an insignificant tributary way up in the Rocky Mountains, 2,000 miles away from the head of navigation, according to the meanderings of the stream, should be permitted to a few citizens of the United States for the fertilization of their soil; and inasmuch as very serious problems, both economic and political, were involved which might result in international complications of a farreaching order, to say nothing of the possible destruction of navigation in the Colorado River, the matter went over to another session, which thus far has not been held.

Mr. President, do you wonder why the people of the West have some question about the soundness or expediency of socalled conservation? If the Dolores Co. has any money left after incurring all the expense consequent upon this series of appeals and counter appeals, it is luckier than most of them are. We of the West, Mr. President, do not propose, if we can avoid it, to permit conditions of that kind to continue any longer than are absolutely necessary.

Now, let us suppose that San Francisco is relegated to the McCloud River for its water supply. What must it do? I have given you the course of procedure, and I think that by the time it got an ultimate favorable opinion the year anno Domini 2,000 will have arrived and the question of its water supply still remain an unsettled problem, for San Francisco would still be without an adequate water supply. So much or that particu-

lar source of supply.

There are some other sources. I refer at this juncture to one which has been sprung upon the city somewhat recently. It is called the Putah Creek and Eel River enterprise, which seems to be fostered by a gentleman of Scotch origin by the name of McDonald, and which we are told with great solemnity and seriousness will furnish San Francisco with a better and cheaper supply than she can get here, and thus leave the irri-

gators of the San Joaquin Valley absolutely undisturbed.

This, I say, is something new in so far as its present aspects are concerned. It is true that this system has been hitherto the subject of investigation, but it has only recently assumed the attractive proportions of a desirable municipal enterprise. Mr. Henry M. McDonald is at its head, and I shall refer to it at some little length on account of the prominence which it has had

in the discussion of the Senator from California [Mr. Works]. Mr. McDonald wrote a letter to me upon the subject, and I pre-gume that a similar one was transmitted to other Members of this body, bearing date of November 25, 1913. It is so eminently fair, it breathes such a spirit of patriotism and disinterestedness, that perhaps the Senate will pardon me for reading it into the RECORD. Mr. McDonald says:

Recorp. Mr. McDonald says:

Referring to an argument against the selection of Hetch Hetchy as a source of water supply for San Francisco, which I recently had the honor of submitting for your consideration, I may say that, while the question of the source from which San Francisco shall obtain a supply of water is strictly economic, considerable partisan politics has apparently been developed in connection with the consideration by the Senate of the Hetch Hetchy proposition as embraced in the provisions of House bill 7207, known as the Raker bill. At least Mr. J. O. Davis (a Democrat), collector of the port of San Francisco, who recently returned from Washington, was quoted a few days ago by the San Francisco newspapers as stating that "all the Democratic Senators were, with one or two exceptions, lined up for Hetch Hetchy." Ex-Congressman J. C. Needham, a Representative from California for several congressional terms, told me, upon his return from Washington about 30 days ago, that the Raker bill had been made a Democratic Party measure, and that President Wilson had indicated that he would, if necessary to secure the enactment of the bill, send a message to the Senate recommending its enactment.

I controverted the statement of Mr. Needham saying that my knowledge of President Wilson's method of procedure upon public and other questions, derived from a three years' acquaintance with him when we were—1875 to 1878—costudents at Princeton College, and from some familiarity with his record as president of Princeton University and as governor of New Jersey, assured me that the President would "keep an open mind" on the Raker bill, as well as all bills considered by Congress, until a measure should, if enacted, be placed before him for official action.

In view of the statements of Mr. Davis and Mr. Needham, I think it

governor of New Jersey, assured me that the President would "keep an open mind" on the Raker bill, as well as all bills considered by Congress, until a measure should, if enacted, be placed before him for official action.

In view of the statements of Mr. Davis and Mr. Needham, I think it can be said that the impression—no doubt to a certain extent fostered by Republican politicians—that the Raker bill has been made a Democratic Party measure is widespread throughout the country.

To the point, the Democratic platform adopted by the Baltimore convention, under the caption "Conservation," declares: "We believe in the conservation and development for the use of all the people of the natural resources of the country." Water, particularly in a semiarid State like California, is unquestionably a natural resource in the fullest possible sense of the term.

I have endeavored to show conclusively in my argument (pp. 11 and 12) that if San Francisco is given Hetch Hetchy either about one year in five the crops upon more than 250,000 acres of fertile land will be ruined, involving a loss of \$25,000,000 or more, or that if the water diverted by San Francisco were applied to the irrigation of 157,000 acres of land not embraced in the Modesto and Turlock irrigation districts, but tributary to the Tuolumne River, these lands would produce yearly crops worth in the market not less than \$15,000,000. Does not the maintenance of the party's declaration upon the conservation of natural resources demand that the entire flowage of the Tuolumne River be conserved for use in irrigating the lands tributary to the Tuolumne as well as other lands in the San Joaquin Valley, which will otherwise remain unirrigated and unproductive—particularly when we can not defend the diversion of the Tuolumne River water for use by San Francisco on the ground that Hetch Hetchy furnishes the only adequate source of supply for that city?

It should be borne in mind that the question of the enactment of the Raker bill has become one of Nation-wide interes

Whatever that is-

in every doubtful congressional district and would undoubtedly lose us many of these districts.

Possibly that may appeal to my friend from Utah [Mr. Smoot] and prompt him to change his mind with reference to this bill. Of course, that is jocular.

In conclusion, I should state-

And this is what I want to impress upon Senators-

And this is what I want to impress upon Senators—
In conclusion, I should state that I have not written you with a view of influencing in the least your judgment upon the merits of the Raker bill, but simply thinking that by bringing to your attention the political results which will attend the passage of the bill by the Senate you may possibly deliberate more carefully upon its provisions when the measure is being considered than otherwise might be the case. I may add that the sole reason which has impelled me, as a life-long Democrat, to address you on the subject of this letter is an overweening desire that the Democratic Party, through wise action of the legislative department of the Government on all important questions of public policy, shall so merit the confidence of the voters of the country that the administration of its Government shall be committed to our party for many years.

Yours, very truly,

This is the same gentlement where convectioned area introduced.

This is the same gentleman whose correspondence was introduced into the Record the other day, who, after this bill was postponed and fixed for determination for the present week, employed an engineer to investigate this water supply, and who employed an engineer to investigate this water supply, and wild promised to double his compensation if Mr. McDonald could succeed in making the city of San Francisco buy it, who afterwards defaulted upon his check, and who, after that, on or about the 10th of November, employed a Mr. Nickerson to make "a preliminary report" upon this thirty-eight or forty million dollar

scheme, which report I hold in my hand, and which I received about 10 days afterwards. That is the most comprehensive 10-day report I ever saw. I think that even my distinguished friend from Utah would hardly object to my putting it in the Record, which I do not propose to do, however, as an illustration of what a 10-day engineer can do when he is hard pressed, and particularly when a \$38,000,000 job is involved. That comes to us, Mr. President, and behind it are gentlemen who have been employed—and I presume that the employment is legitimate—to convince individual Senators that San Francisco should be turned out of doors and made to resort to this particular scheme to supply with water the people of the coming century who inhabit the shores of San Francisco Bay.

Mr. President, I am somewhat weary, and I therefore ask the consent of the Senate, promising them that I will read very little more than this in the course of my remarks, that the Secretary may be permitted to read in my behalf a report upon this particular enterprise, which I personally requested Mr.

O'Shaughnessy to make.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read.

The Secretary read as follows:

PUTAH CREEK IRRIGATION LANDS.

Putah Creek is a tributary of the Sacramento River, which has dependent on it an area of delta lands 30 miles long by 10 miles wide, or 192,000 acres, for irrigation requirements. Only a small portion of this land has now been brought into use for this purpose, but a very comprehensive plan for extending the limits of same has been designed by the Sacramento Land & Water Co., a corporation organized under the laws of the State of California, for the purpose of irrigating the delta lands of Putah Creek in the counties of Yolo and Solano.

WATER NEEDED FOR IRRIGATION,

The quantity of water necessary for irrigation purposes is about 2 feet in depth each year on the soil. It will be necessary to provide 384,000 acre-feet of water yearly to adequately irrigate the land. In order to provide this quantity of water, arrangements have been designed by this company to develop it from two sources—first, by building a dam across Putah Creek at Devils Gate, elevation 230 feet above the sea, and storing water in what is known as the Monticello Res ervoir.

UNITED STATES GEOLOGICAL SURVEY STUDIES,

UNITED STATES GEOLOGICAL SURVEY STUDIES.

This project has previously been considered by the United States Reclamation Service in their fifth annual report (p. 95), in which they state that with a dam 150 feet high a reservoir of 130,000 acre-feet capacity could be constructed, from which the probable annual amount of water to be obtained would be 130,000 acre-feet.

As this quantity of water would be inadequate to serve the agricultural lands tributary to Putah Creek, this company very wisely procured a permit from the Army engineers, in the name of R. T. Stone, its general manager, to take out 800 second-feet of water from the Sacramento River near the mouth of Feather River, about 12 miles above the city of Sacramento.

This project is described in the report of the advisory board of Army engineers on the Hetch Hetchy Valley on page 24.

To utilize this latter water it is the intention to pump it by a succession of low-lift pumping stations separated at different points up to an elevation of about 100 feet, and thus relieve the shortage of water supply which reliance on Putah Creek alone would provide.

HENRY M'DONALD.

HENRY M'DONALD.

At a recent public meeting in San Francisco Mr. Stone, the promoter and creator of this project, only denounced one Henry M. McDonald, who is now advocating this source as a supply for San Francisco. Mr. Stone stated that he employed McDonald as a broker to sell the bonds of his project, and that while ostensibly serving him he enparties file on same.

OBJECTIONABLE CHARACTER OF PUTAH CREEK WATER,

The waters of Putah Creek while suitable for irrigation uses are objectionable in quality for domestic supply. The sources are polluted by quicksilver and other mines, as well as by dense farming conditions, so that the water from this source is of a very inferior character and would not be acceptable for an expensive development for a pure domestic supply of water. The word "Putah" is of Spanish origin, implying filth, so that the earliest inhabitants of California were very familiar with the objectionable character of this supply.

DEFICIENT SUPPLY.

During the season 1911-12 only 51,000 acre-feet ran off the shed. During 1912-13 only 50,000 acre-feet was the run-off, so that not alone was there not enough for irrigation, but there was hardly an adequate supply for drinking purposes for the people living along the stream. With the requirements of the farming lands below, between the Devil's Gate dam site and the Sacramento River, who desire now to take every drop of this water that is available for use, it is a piece of the boldest effrontery on the part of irresponsible promoters to attempt to introduce this source as being adequate for the use of San Francisco.

EEL RIVER DEMANDS.

In order to confuse the Issue, it is suggested that Eel River might be combined with Putah Creek, but Col. Biddle disposes of this possibility on page 91 of the hearing before the Committee on Public Lands, Sixtythird Congress, H. R. 6281, when he states that the Russian River Valley will need not only all the water from Russian River but a part of the supply of Eel River. At the present time there are many towns such as Petaluma and Santa Rosa, containing over 10,000 people, that have now inadequate supplies of water, as during the past year there was a water famine in Petaluma, and that town is now in dire straits for want of water. They would be perpetually deprived of the possibility of securing some of the waters of Eel River which they are now using if they were diverted, as suggested in the proposed scheme of Engineer Nickerson. The waters of Eel River are now diverted through a tunnel a mile long into Potter Valley where there is a drop of 470 feet and an expensive hydroelectric plant of 7,150 hersepower installed.

N'ONALD PROJECT.

Nickerson's scheme suggests the abandonment and destruction of this plant and constructing a new diversion of feel liver waters through a sign River of the possibility of ever getting any Bel River water which it new so badly needs. One of the most humorous features of Nicker and the property of the possibility of ever getting any Bel River water which it never so badly needs. One of the most humorous features of Nicker Lake, which are filthy from decaying tule weeds, besides being heavily charged with salts of magnesia. So objectionable is the character of Nicker and Controlled the property of the property of the purplying San Francisco with water, thought to secure this supply for that purpose. They purchased in fee the lands which controlled the onticle of Clear Lake at Cache Creek, some 500 acres, but after water they relinquished same on account of its absolute lack of merit, and the controlled on Cache Creek, the original owners of shore lands surrounding the lake water they relinquished same on account of its absolute lack of merit, and the controlled on Cache Creek, the original owners of shore lands surrounding the lake and the controlled on Cache Creek, the original owners of shore lands surrounding the lake and the controlled on Cache Creek, the original owners of delta lands at the mouth of Cache Creek, and the owners of shore lands surrounding the lake and the controlled on the co

The whole project as described in the preliminary report submitted by George S. Nickerson, consulting engineer, under date of November 12, 1913, addressed to Mr. Levi Winklebleck, president of the Modesto Water Users' Association, bears the unmistakeable impress of inexperi-ence in municipal water supply design on a large scale, and is plainly visionary and full of absurdities and unworthy of serious considera-

visionary and full of absurdities and unworthy of serious consideration.

No engineer of any large experience in building water supplies for cities or for irrigation projects, other than those engineers employed by promoters, has criticized the reports submitted by the city of San Francisco. San Francisco's investigations were made by the most noted professional men obtainable, and their work was supervised and analyzed by Army engineers, two of whom had been previously charged with the responsibility of directing the water supply of the city of Washington, and one—the chairman—had had long experience with the rivers of California.

After all this work had been done and the committees of the House and Senate had acted thereon delay was occasioned, whereupon unknown and untried engineers suggested another alternative source—the Putah Creek-Eel River project.

It is ridiculous to suppose that the proponents of this project could make any kind of showing which is creditable in the short time in which they have undertaken to do the work. Engineers started out with a typewriter and a surveyor's compass to upset the result of 12 years' earnest, scientific investigation. Isn't it absurd that this sort of engineering should be given even momentary consideration? The Putah Creek promoter is building paper dams and does not know anything about the geological conditions and other factors which enter into an engineering project of this magnitude, and the chief foundation of his engineer is the hope of a contingent fee.

Mr. THOMAS. Mr. President, it appears from that report,

Mr. THOMAS. Mr. President, it appears from that report, which is absolutely reliable, that the waters of this proposed system are unfit for domestic use. Some of them contain quicksilver, others salts of magnesia. It also discloses the fact that the very name of the stream is the Spanish derivative of the word "filth"—"Filthy Creek." It is filthy water from a filthy source. It bears a filthy name, and is the appropriate asset of a filthy and malodorous enterprise.

Of more importance certainly from an engineering standpoint are the two facts prominently mentioned—the one that in the short space of time this engineer has had to give to the matter it has been impossible for him to make any borings whatever, or to determine even superficially the situation of the country with reference to the proposed dam; and the other the construction of an unknown, unheard of, and impossible conduit under the waters of San Francisco Harbor into the city of

San Francisco.

Besides, Mr. President, we must not overlook the fact that this scheme conflicts with a praiseworthy and legitimate enterprise. I refer to the Sacramento Valley Land & Water Co., the owner of much of this water useful and necessary for irrigation, but wholly unserviceable for municipal purposes. Mr. McDonald knew of this enterprise, for he undertook to market its securities. He now seeks to stab it in the back.

What I said with reference to the McCloud River project and the obstacles which it would present in connection with Government interference through its control for navigable purposes is equally applicable to the Sacramento River itself. course the city of San Francisco, upon settling with the irrigators in the Sacramento Valley, could utilize that source of supply. There again, however, there is a lack of any power facilities; while the system itself must be built as a single unit, which includes both filtration and pumping, and at certain seasons of the year in all probability would interfere with navi-gability, the expense of operation and maintenance would make the cost of it, everything considered, out of all proportion to the

plans which these engineers have agreed upon.

In connection with the Putah Creek proposition, however, and before leaving it I wish to read a very short letter from Mr. H. A. Powell, a citizen of San Francisco, a very reputable man, who knows by actual experience and residence of what he speaks. This letter is addressed to Hon. John E. Raker, a Member of the House, and is dated November 21 of this year.

It is as follows:

SAN FRANCISCO, CAL., November 21, 1913.

Hon. John E. Raker, House of Representatives, Washington, D. C.

House of Representatives, Washington, D. C.

Sir.: I have just received a communication from the city of Stockton urgently advocating a water supply for San Francisco from Eel River and Putah Creek. The project is absurd.

Putah Creek is dry in ordinary years in much of its length and Eel River at points reachable from San Francisco is nothing but a small creek. The Eel River-Putah Creek project can not be made in good faith by anyone who knows those streams.

I have lived in northern California for over 50 years and know the streams of both the Coast Range and Sierra Nevada. Hetch Hetchy is the only practical supply adequate for the cities around the Bay of San Francisco.

Yours, truly,

H. A. Powelle.

During the hearings before the House committee it received one day a dispatch from a man by the name of Sullivan, who informed the committee that a great scandal over Hetch Hetchy was in its incipient stages in San Francisco, and who desired to be heard. As a consequence, the committee adjourned to accommodate this gentleman, who subsequently appeared before it.

After accusing everybody of improper motives, after attacking the integrity of all the engineers, both in the Army and outside of it, and accusing them of bad faith, and accusing officials of the city of San Francisco of suppressing a certain report, it developed that this gentleman had a water scheme of his own called the Sierra and Blue Lakes Water Co., which he also declared to be more capacious in the amount of its water flow than Hetch Hetchy. In addition to that, he claimed that it could be built much more cheaply and was in many respects much more reliable.

In order to dispose of that proposition, to which no one thus far has called attention, which does not surprise me, and also, as far as possible, to forestall any reference to it, I will expose the nature of the scheme and the character of the man by reading a letter found on page 350 of the House hearings. letter is written by the firm of Cullinan & Hickey, a reputable firm of attorneys in San Francisco, and is addressed to the mayor, on the 30th of June, 1913. It is as follows:

firm of attorneys in San Francisco, and is addressed to the mayor, on the 30th of June, 1913. It is as follows:

Hon. James Rolfi, Jr., Mayor, San Francisco.

Dean Sur: In response to your inquiry we send you the following statement of the facts regarding the loan made by the late Mand M. Treadwell to Eugene J. Sullivan, concerning the interest of Mand Treadwell in the alleged water rights and other property of the Slerra Blue Lakes Water & Power Co.

Maud M. Treadwell was an unmarried woman who had some good real property in San Francisco and Eugene J. Sullivan was apparently her business agent. At the suggestion of Eugene J. Sullivan supparently her business agent. At the suggestion of Eugene J. Sullivan supparently her business agent. At the suggestion of Eugene J. Sullivan supparently her business agent. At the sum of \$30,000 loaned to Eugene J. Sullivan sullivan, was apparently and the said Eugene J. Sullivan, Malter E. Sullivan, was apparently and the said Eugene J. Sullivan, was agreed within two years of that date, namely, by November 11, 1912, to refund to Maud Treadwell the \$30,000 which had been advanced as a loan to Eugene J. Sullivan.

The agreement provided that the said \$30,000 should be used to pay off judgments and claims existing against the Sierra Nevada Water & Power Co. They agreed also to give to Maud Treadwell the sum of \$100,000 upon the saie of the property known as the Sierra Nevada Water & Power Co. Jocated in Calaveras County, Cal. The agreement provided that in case no sale was made of said property within the property in the sum of \$100,000 upon the saie of the property known as the Blue Lakes, situate in Alpine County, Cal., said property, comprising all water rights in an area of 384 square miles." Upon the death of Maud Treadwell, Public Administrator M. J. Hynes was appointed administrator of her estate. In the matter of the estate this

CULLINAN & HICKEY,
Attorneys for Public Administrator M. J. Hynes.

Here is the agreement. Bear in mind, now, that this man was acting as confidential agent of the woman with whom this agreement was made.

RECESS.

The PRESIDING OFFICER. The hour of 6 o'clock having arrived, the Senate will stand in recess until 8 o'clock.

The Senate thereupon, at 6 o'clock p. m., took a recess until 8 o'clock p. m.

## EVENING SESSION.

The Senate reassembled at 8 o'clock p. m.

Mr. BRANDEGEE. Mr. President, noticing that there are only about six or eight Senators on the floor, I would suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. SAULSBURY in the chair)

The absence of a quorum is suggested. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Kenyon	Page	Smith, Ariz.
Bacon	Kern	Pomerene	Smith, Ga.
Brady	Lane	Reed	Smith, Md.
Brandegee	Martin, Va.	Robinson	Smith, S. C.
Bryan	Martine, N. J.	Saulsbury	Smoot
Clapp	Myers	Shafroth	Thomas
Colt	Nelson	Sheppard	Thompson
Gallinger	O'Gorman	Sherman	Thornton
Hollis	Overman	Shively	Vardaman
Johnson	Owen	Simmons	Williams

The PRESIDING OFFICER. Forty Senators have answered to their names-less than a quorum.

Mr. GALLINGER. Let the absentees be called.

The PRESIDING OFFICER. The Secretary will call the names of the absentees

The Secretary called the names of the absent Senators. The PRESIDING OFFICER. There have been no responses on the call of the absentees. There are only 40 Members of the Senate present.

Mr. BACON. I move that the Sergeant at Arms be directed

request the attendance of absent Senators.

Mr. GALLINGER. Pending that motion, as it is now 16 minutes past 8, and we lack a good many of a quorum, I move that the Senate adjourn.

The PRESIDING OFFICER. The Senator from New Hampshire moves that the Senate do now adjourn.

The motion was not agreed to.

Mr. OWEN. I call attention to the fact that there are only Members of the opposite party on the floor.

Mr. BRANDEGEE. I think it is up to the Senator to produce

his quorum. [Laughter.]

Mr. SMOOT. I think that is about one more than the number present on the other side when the Secretary commenced calling the roll.
Mr. BACON.

Mr. BACON. Let the question be put on my motion. The PRESIDING OFFICER. The Senator from Georgia moves that the Sergeant at Arms be directed to request the attendance of absent Senators.

The motion was agreed to.

The PRESIDING OFFICER. The Sergeant at Arms will execute the order of the Senate.

Mr. Chilton, Mr. Warren, Mr. Lewis, Mr. Goff, and Mr. Hughes entered the Chamber and answered to their names.

After a little delay, Mr. Weeks, Mr. Pittman, Mr. Shields, and Mr. Walsh entered the Chamber and answered to their names. The PRESIDING OFFICER (at 8 o'clock and 45 minutes p. m.). Forty-nine Senators being present, there is a quorum for the transaction of business. The Senator from Colorado is recognized.

Mr. BACON. I move that the order directing the Sergeant at Arms to request the presence of absent Senators be vacated.

The motion was agreed to.

## AMENDMENT OF THE RULES.

Mr. BACON. Mr. President, before the Senator from Colorado resumes, I beg leave to submit out of order a resolution proposing an amendment of the rules, notice of which I gave on the 10th of June last. I ask that the resolution be referred to the Committee on Rules.

Mr. SMOOT. Mr. President, I am not going to object, but I simply wish to call the attention of the Senator from Georgia to the fact that it is against the rules to submit a resolution at this time

Mr. BACON. No; the Senator from Colorado has not taken

Mr. SMOOT. The Senate has been in recess; an adjournment was not taken; and he is still upon the floor of the Senate.

Mr. BACON. He is not upon the floor until he addresses the Chair.

Mr. SMOOT. I am not going to object.
There being no objection, the resolution (S. Res. 227) was read and referred to the Committee on Rules, as follows:

Resolved by the Senate, That Rule XIV of the standing rules of the Senate be amended as follows, to wit:

At the conclusion of the second paragraph of said Rule XIV, strike out the period and insert a semicolon in lieu thereof, and add the following proviso, to be thereafter a part of said second paragraph, to wit:
"Provided, That the first or second reading of each bill may be by title only, unless the Senate in any case shall otherwise order."

### SAN FRANCISCO WATER SUPPLY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes.

Mr. THOMAS. Mr. President, when the recess was taken I was about to read the agreement between Eugene J. Sullivan and his associates and Mrs. Treadwell. That agreement is as

This agreement, executed this 11th day of November, 1910, between Eugene J. Sullivan, Walter E. Sullivan, Adelaide F. Sullivan, and A. F. Martel, of San Francisco, Cal., parties of the first part, and Maud Treadwell, of the same place, party of the score witnesseth:

That the said parties of the first part in consideration of the sum of \$30,000 cash in hand, to them paid this day, the receipt whereof is hereby acknowledged, and for other good and valuable considerations, covenant and agree to give said party of the second part, or her helf, the sum of \$100,000 upon the sale of the property known as the Sierra Nevada Water & Power Co., located at Calaveras County, State of California.

Nevada Water & Power Co., located at Calaveras County, State of Sornia.

The parties of the first part further agree to refund to party of the second part, within two years from date hereof, the said \$30,000, which has been advanced as a loan to said Eugene J. Sullivan, and it is distinctly understood that said \$30,000 is to be used by said parties of the first part in paying off judgments and claims now existing and against the Sierra Nevada Water & Power Co.

In case no sale is made of said property within two years from date hereof, then and in that event the said parties of the first part agree to deed to said party of the second part, or her heir, one-sixth interest in the property known as the Blue Lakes, situated in Alpine County, Cal., said property comprising all water rights in an area of 364 square miles.

EUGENE J. SULLIVAN.

W. E. SULLIVAN.

ADELAIDE F. SULLIVAN.

That enterprse was represented as being one sufficiently adequate to supply the city of San Francisco with all needed water for her purposes. It is one of the sources of supply which was examined by the board of engineers, and upon investigation it was ascertained to be practically of no value whatever; for, while there was a water supply, the Blue Lakes Co. had no reliable title. In spite of this, it has been attempted—at least by the circulation of literature-to impress the Members of this body with the fact that the Sierra Blue Lakes Co. could furnish the city of San Francisco with a sufficient water supply at a much less price and in more adequate volume and without the disturbance of any rights whatsoever.

I believe I have referred to the greater portion, and certainly as fully as the time at my disposal justified, to practically all the sources of supply to which San Francisco is invited by the opponents of this bill to resort, and by that means to make it unnecessary to build the dam for which this bill provides or to

obtain any supply from this source.

So far as the Spring Valley Co. is concerned, it is true, as was stated by the Senator from California [Mr. WORKS], that the city of San Francisco proposes, as a part of its general scheme of water supply, to take over the affairs and property of that company. I am informed that at the present time a hearing is in progress and not yet completed, known as the "water-rate hearing," before the courts of San Francisco, the purpose of which is to determine the value of this property, after which the negotiations doubtless will be concluded be-

tween the city and the company.

But it is not true, Mr. President-at least I think I am justified in making the statement from the facts in my possessionthat the company itself has ceased its opposition to this measure, because, of course, as long as it is in the enjoyment of its franchise, as long as it can dictate and control the situation, so long is its property valuable and profitable. If this bill is defeated, the value of that property will be enhanced to the extent to which it may be more difficult to procure the necessary supply from any other source than Spring Valley. Therefore it is perfectly natural, it is human, for the company to be interested now, as it has been interested heretofore, in preventing San Francisco from obtaining its supply from any other source than the one which has been furnishing it with water for so long.

The other cities of the bay, or at least the larger ones, receive their supplies from the People's Co. The People's Co. is also a private corporation, and of course if this supply is obtained by San Francisco and the ultimate design is carried out by which the supply will be available to all the cities around the bay the system of the People's Co. must be either absorbed or its value greatly decreased. Therefore it, too, is interested in defeating the project now before the Senate, its reasons, of course, being identical with those of the Spring Valley Co.

Something was said by the Senator from California about outside influences being exerted here in favor of the measure. Something was said also by myself in response about influences

which were opposed to the measure.

I am sorry that matter was mentioned on this floor, notwithstanding that the statement is an accurate one, but inasmuch as it has been brought to the attention of the Senate I think I am justified in making some further statements with reference to the People's Co. I am informed that yesterday morning the engineer of that company in the rooms of the Committee on I

Public Lands, mistaking the city clerk of San Francisco for the clerk of that committee, introduced himself and declared that he was here in the interests of the People's Co., that the interest of the People's Co. in defeating this measure was second only to that of the Spring Valley Co. The Senate can imagine his confusion when he was informed that he was addressing his remarks to the city clerk of San Francisco.

These statements are preliminary to the assertion that the source of the opposition to this bill, whether working in concert or separately, are interested not so much in this, that, or the other project as they are in the defeat of this particular measure. The owners of other sources, the owners of land valuable only in proportion as it can be irrigated, the owners of water power developing electric energy which are knit together in that State in a close system of unification, and the so-called nature lovers, each for different reasons, perhaps, are all bent upon the accomplishment of the same object; and as a consequence Senators have been flooded with literature bearing upon the general situation coming from every section of the Union and appealing to Senators from different viewpoints to defeat this measure.

Mr. President, I believe that those who oppose the grant to the city of San Francisco of the right to construct a dam at Hetch Hetchy because of their belief that it will destroy the natural beauty of the valley, thus permanently injure a part of a great national park set aside for and belonging to the public, are perfectly sincere in the opposition which they have made to this bill. I believe that they are actuated by the loftiest of motives and spurred by the honest belief that they are discharging a great public duty in their efforts to deprive San Francisco of this valuable right. But I do not think that that excuses them for lending themselves to so much misrepresentation and misstatement as has been made upon this subject. I am convinced that the great flood of literature, the vast number of contributions to the newspapers, which have in turn been circulated all over the country and sent here to Washington day by day, has been inspired by the sinister motives of those who have a direct personal property interest in the defeat of this measure.

Generally speaking, the crook has a natural affinity for the sentimentalist. He knows that he can utilize the sincerity of the latter's conviction and the simplicity of his nature by making it a commercial asset. I recall some time ago a citizen of Colorado of somewhat shadowy reputation, when reproached for simulating religious fervor, said that he always attended prayer meetings when in the East, because his prayers powerfully promoted the stock market. I have no doubt that wherever the sentiments, the conscientious belief of an individual possessed of lofty ideals and convictions of duty, come in contact with those who for selfish and sinister purposes desire to accomplish the same end, the combination is not only complete, but the former becomes the best possible instrument in the hands of the latter for the purpose of effecting the general object.

Mr. SMOOT. Mr. President—
The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Utah?

Mr. THOMAS. I do.

Mr. SMOOT. I think I have received more than 4,000 protests from the so-called nature fakers the Senator refers to.

Mr. THOMAS. Nature lovers.

Mr. SMOOT. I misunderstood the Senator.

Mr. THOMAS. I did not say "fakers."

Mr. SMOOT. I beg the Senator's pardon; I misunderstood him. He said lovers of nature. I thought he said nature fakers.

Mr. THOMAS. I did not.

Mr. SMOOT. I will correct that and say lovers of nature. I know over a thousand of those people, and I do not believe, beginning with R. U. Johnson and going down the list, that any are influenced in any way whatever by the Spring Valley Water Co., or the People's Water Co., or any sinister motive what-

Mr. THOMAS. I agree to that. Mr. SMOOT. I know how interested they are in preserving the natural beauties and wonders of this country, and it is for that reason only that those people have been protesting against

Mr. THOMAS. The Senator and I are at one. Absolutely, I believe as he does. But the very enthusiasm of such gentlemen makes them easy and credulous instruments in the hands of sinister interests.

Mr. SMOOT. What I wanted to say is that I do not believe they are in the hands of any sinister influence. That is the only point that the Senator and I disagree upon,

Mr. THOMAS. I hope that is the only point we shall ultimately disagree upon.

Mr. SMOOT. I have reference to this particular question. do not believe that those good people have been approached by a single person in the United States who has a cent of interest in the question as to whether the city of San Francisco

should be granted this right or not. Mr. THOMAS. Now, let us see. It was Mr. Sullivan who made the charge that a report of an engineer by the name of Bartels had been intentionally suppressed and was not exhibited to the Army engineer by the city of San Francisco. He had to admit upon his cross-examination that the Army engineer had access to everything in the possession of the city of San Francisco. He had to admit that Mr. Wadsworth had Mr. Bartels before him and questioned him thoroughly concerning his information and experiences, and that as a consequence his charge was a cruel slander upon both the city of San Francisco and the Army engineer. Yet Mr. Johnson in some of his circulars and in his statement before the Senate committee deliberately repeated that charge and founded it upon the testimony of a man absolutely without character and without standing in his own community, if one may judge from the testimony which he gave.

Now, what I say is not intended as any reflection upon any person here involved. I assert a general proposition I believe to be universally applicable under similar conditions. The enthusiast is everywhere the unconscious instrument of the designing when both are bent upon obtaining the same object. Somebody has paid for this great mass of literature.

Mr. SMOOT. I was a member of the Public Lands Committee at the time of the hearings some seven years ago, before ever the gentleman the Senator referred to was heard of, and I know that Mr. R. U. Johnson then appeared before that committee in opposition to granting San Francisco the same privileges as contained in this bill.

Mr. THOMAS. Oh, I have no doubt this gentleman has been active for a long time in his opposition to this measure, as he is active, and commendably so, in his opposition to anything that looks like a desecration or injury to any of the national parks in the country.

Such men are useful citizens. They have their place in society, and it is a most honorable one, but their enthusiasm always causes them to overshoot the mark and become in

consequence, as I have stated, the instrument through which men not possessing such lofty motives operate.

In proof of this I shall refer to two or three matters bearing upon that subject. The New York Independent is a weekly magazine of very high standing and character. In its issue of the 30th of October, 1913, it has an illustrated article entitled "Save Hetch Hetchy." The headnote makes the statement that "the San Francisco dailies alone are favorable to the project," thus carrying the inference that all the press of the United States, with the single exception of the daily papers in San Francisco, were a unit against this project. It also publishes an outline map of the Yosemite National Park, consisting of 788,000 acres, and then shades more than one-half of it and marks the shaded half as "the part of the park that will be destroyed as a public playground in the event that this bill shall be passed"; that we are going to take almost 400,000 acres, fully one-half of a great national park, and that the rights of the Government and of the people over this great public heritage are going to be surrendered in order to give San Francisco a water supply which she can get somewhere else.

The fact is that this reservoir will cover less than 1,400 acres, which is an infinitesimal portion of the great Yosemite National The city is required to exchange acre for acre from its other holdings with the Government, for every acre that it does not now own in the park which will be submerged by its

Bear in mind that it was required to purchase all private holdings in the Stanislaus Forest Reserve near the park and all private holdings in that portion of the park which will be covered by the proposed reservoir. Is it fair, is it just, to thus slander and belie the purposes and the effect of this measure?

Upon the next page is a beautiful picture showing the Wampana Falls, which it is said "will be destroyed by the San Francisco plan." The fact is that the surface of the water of the proposed lake will be below the foot of the falls; it not only does not destroy the falls, but it does not touch them. They are preserved in their natural condition and are just perfect after as before the construction of the dam and the filling of the reservoir.

Some time after that number was issued a constituent of mine wrote asking me to oppose this measure.

Mr. THOMPSON, Mr. President-

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Nebraska?

THOMAS. I do.

Mr. THOMPSON. In order that the record may be straightened as to the figures, I think the Senator will recall that the evidence shows that only 1,320 acres will be covered by the reservoir when it is flooded, and more than one-half, 720 acres, are owned in fee simple by San Francisco.

Mr. THOMAS. Only 720 acres are owned in fee simple by San Francisco in the Hetch Hetchy Valley. The balance of its ownership is around Lake Eleanor and also includes what is called the Tiltill Meadows. They are to be surrendered to the Government and used as camp grounds or for any other pur-

poses that may be desired.

Mr. BRANDEGEE. Let me ask the Senator was this article

Mr. BRANDEGER. Let me ask the Senator was this article from which the Senator has been quoting signed by anyone?

Mr. THOMAS. I think it was not. That is my recollection.

I would be glad to have the Senator examine it. When interrupted, I was about to say that I called the attention of my correspondent to the fact that the falls would not be destroyed; that we only took less than 2,000 acres of land; and that we made good to the Government acre for acre every acre of land not already possessed. My letter was sent to the Independent. Its reply to that letter was that while it was true that the falls would not be touched, they could not be seen after the lake was constructed.

Mr. President, here is Bulletin No. 2 of the National Committee for the Preservation of the Yosemite National Park. It is a somewhat formidable looking document, but it contains the same diagram that appeared in the New York Independent. If gentlemen who have also received it doubtless care to examine it fully and closely, it will be discovered that there are just about the same exaggerations and misstatements and ignorance of the character and purposes of this bill as in the general run of literature upon this subject. I quote from my letter:

Sixth. The statement that the building of the dam and reservoir will injure Wampana Falls is entirely without foundation. The level of water will be below the bottom of the falls.

The comment is:

There will, however, be no place from which to see the falls, for the valley floor will be flooded, and the opposite wall is too precipitous for

I might occupy the time of the Senate at great length-

Mr. SMOOT. I will ask the Senator before he leaves that subject, Is not the comment of the New York Independent

Mr. THOMAS. No. Its first statement was false. Its second

begs the question.

Mr. SMOOT. That it will be impossible to see the falls. The floor of the Hetch Hetchy Valley, of course, will be covered by the lake, and the sides of the valley, after it becomes a lake, are so precipitous that it will be impossible for a road to be built. People will at least travel on or stop in the valley above the lake

Mr. THOMAS. There is no question, Mr. President, but that the walls of the mountains are very precipitous, but this bill requires the city of San Francisco to construct and keep in repair roads around the lake or at least upon one side of it. That will give every needed opportunity for views of the falls as well as the rest of the valley, and will for the first time make the valley accessible to the public. I do not know whether it is true or not, but I am satisfied that it will not be necessary to embark in boats upon the surface of the lake in order to view the falls of Wampana.

Mr. LIPPITT. Mr. President—
The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Rhode Island?

Mr. THOMAS. I do. Mr. LIPPITT. I should like to ask the Senator how far above

the dam the falls are?
Mr. THOMAS. The falls are 1,700 feet high, and the bottom of the falls is considerably above the level of the lake, but I can not give the Senator the number of feet.

Mr. LIPPITT. I mean how much farther up the stream are

the falls than the dam?

Mr. THOMAS. My information is that they are up some distance, but they are not above the eastern end of the lake.

Mr. LIPPITT. The lake is about 4 miles long, I understand? Mr. THOMAS. Yes; I would say, speaking roughly, it would

Mr. THOMAS. Yes; I would say, speaking roughly, it would be perhaps halfway.

Mr. SMOOT. About 2,000 feet?

Mr. THOMAS. About halfway.

Mr. SMOOT. Then there is provision, as I remember, that no one is allowed within 300 feet of the lake.

Mr. THOMAS. Oh, no. There are regulations for sanitary purposes that extend for 300 feet from the lake, but that does

not prevent people from going on the lake. They can not camp in this zone or utilize it for any purpose that would render the water itself insanitary or expose it to any sort of

pollution, which is a perfectly proper and necessary safeguard.

Mr. MARTINE of New Jersey. I presume it is about the same sort of a regulation that is applied to other reservoirs.

Mr. THOMAS. I presume that is applied to other reservoirs.

Mr. THOMAS. I presume that is the case.

Mr. MARTINE of New Jersey. You can not sail on the reservoir of the city of Washington, neither can that be done in that of the city of New York.

Mr. THOMAS. There are a great many cities in which it is done, especially when the reservoirs are far distant from the

place of distribution.

Mr. MARTINE of New Jersey. The cases are very rare, Mr. THOMAS. I do not think so. I think it is quite frequently the case. But it makes no difference whether that be so or not, the fact remains that the falls are not destroyed or injured, and that the park will be accessible for the first time in all its history.

Another complaint made by these gentlemen who are interested in the preservation of the national park is that San Francisco is endeavoring to secure a great water power gratis from the Government and that that is the secret of the scheme. In this connection I was surprised as well as amused to receive a copy of the Pelham Record, of Pelham, N. Y., through the columns of which the public is informed that—

An important portion of this wonderful park is the Hetch Hetchy Valley (through which flows the Tuolumne River), the Tuolumne Grand Canyon, and the camping grounds of the Tuolumne Meadows. Some San Francisco politicians, with some railroad water-power interests lurking in the bankground, seek the privilege of constructing a great dam and converting the Hetch Hetchy Valley into a reservoir to supply San Francisco with water. There are nearer and more economic sources of supply, but for some reason that does not appear on the surface a great agitation has arisen and powerful aid summoned to destroy the beautiful valley in the interest of only one of the many cities of the Nation, and, more than probable, in the interests of the Southern Pacific Railroad, which covets the water power and its resultant economic electric power in the operation of the railroad.

Mr. SMOOT. Is that a failw one greatly on a greatly of the summand.

Mr. SMOOT. Is that a daily or a weekly or a monthly?

Mr. THOMAS. I never saw it before, and I hope I will never see it again.

Mr. SMOOT. I never saw it.

Mr. THOMAS. I should imagine, replying directly to the Senator, that it is a weekly, spelled with an "a." Its contribution might be called the straw that breaks the camel's back. The city of San Francisco, the half-century victim of the Southern Pacific Co., one of the great centers which it has exploited for many years, the nucleus of all its political and material power, is now charged with being its ally for the purpose of robbing the United States of a great power property of enormous value.

Mr. President, the Government of the United States owns no such power, in my judgment, either in the waters of the Tuolumne River or in any other river in this country. It is true that the Supreme Court of the United States has recently decided to the contrary as regards the waters of a navigable stream, but it is a principle which can not be recognized or admitted without giving the Government of the United States an ownership in the waters of this country that is ultimately destructive of private ownership, and through the exercise of which it could acquire universal power, irrespective of the States, everywhere. The Senator from California quoted some remarks of mine which I made upon that subject last February, which he said were good law. I believed it was then. I might retort by quoting from the decision of the Supreme Court of the United States since then, but I will not do so, because I entertain the same views on this subject now that I entertained then. Hence I make the assertion that the city of San Francisco is not attempting, and could not if it would attempt, to secure a grant from the Government of the United States of any water power whatever.

The source of that charge, to my mind, is easily perceivable. It comes from the great hydroelectric power companies of the State of California, who are directly interested in preventing that competition with their monopoly which will come from a great municipal hydroelectric power plant dispensing power at cost to the consumers of the bay cities and to the irrigators in the valley. That power, Mr. President, comes from the storage of water belonging to the city of San Francisco. If these appropriations are good for anything, they belong to the developer of the power they contain, and waters are subject to appropriation for that purpose under the laws of the State of California.

When Mr. Phelan filed upon this water he expressly declared that he did so, among other things, for power purposes. pages 96 and 97 appear these filings:

The water is claimed for irrigation, manufacturing purposes, water power, and domestic use, and the place of intended use is in and near

the city and county of San Francisco, Cal., and along the line of the proposed conduit.

It is the most valuable part of this enterprise, of this particular water scheme, and by virtue of its possession the city of San Francisco is invested with an ownership that will enable it to utilize that power for the purpose of meeting the expenses of operation of its perfected system.

Mr. SMOOT. Mr. President, does not the Senator from Colorado think that if the power question were eliminated entirely, San Francisco would not care very much about the water from

the Hetch Hetchy Valley?

Mr. THOMAS. No; I would not say that, because San Francisco needs the water; but I do think that one reason why her engineers determined on this particular source was the hydroelectric-power possibilities connected with it that were not to be found in conjunction with any other scheme. I think that.

So, Mr. President, the construction of the dam, the impounding of the water, and the law of gravitation combine to give to the city of San Francisco what it is here charged with trying to filch from the Government of the United States, some going so far as to say under false pretenses. To my mind, the most attractive feature, from the standpoint of a public utility, of this source of supply is its hydroelectric-power possibilities. Among its other uses, there is nothing in the irrigation world outside of water which is so valuable as cheap and abundant power.

Underneath many portions of this magnificent San Jeaquin Valley, at a distance of from 7 to 10 feet beneath the surface, nature has stored great quantities of water, which only needs bringing to the surface to make those acres fruitful and valuable, and the city of San Francisco is required by this measure to furnish that power at cost, which means much to the owners of land that can not be otherwise irrigated except by the expenditure of enormous amounts of capital in building

dams and reservoirs.

It is claimed that this water is needed for irrigation. There is no doubt about that. There is not a drop of water in the State of California that is not needed for irrigation. If the waters of the Pacific Ocean could be distilled, as suggested in a question to Mr. Robert U. Johnson, and half the distillation could by some process be lifted from the sea and spread upon the land, there would be use for it. So there is no dispute between us about the need of this water for irrigation; but, Mr. President, it is equally necessary for municipal purposes and for community life. These irrigation conditions are no more true now than they always have been, and, if carried to their logical consequence, San Francisco never should have taken up any water at all, and Los Angeles should have been denied by the Congress of the United States the privilege of constructing that magnificent water system which has been so expensive, but, at the same time, so beneficial and so profitable to her citizens now and hereafter.

Something was said this afternoon by the Senator from Iowa [Mr. CUMMINS] about previous appropriations of 9,500 feet of water for irrigation prior to the San Francisco appropriations. Much of it must be flood water. Why were not those appropriations carried out and made effectual?

The answer to a western man is perfectly easy. The cost of reservoir and dam construction is usually prohibitive to private enterprise unless it be made collective through the formation of irrigation districts; and, even then, such an undertaking as the Hetch Hetchy reservoir dam is practically beyond the reach of private capital except in such large quantities as would make the hydroelectric power development the chief attraction. Consequently these appropriations necessarily lapsed, the cost of using them being prohibitive, its average cost per acre making the interest that the acreage might possibly earn too small to attract the needed expenditure. But, Mr. President, this bill makes provision by means of which every previous legal agricultural appropriation has been more than cared for.

I now reach that part of the bill from which my friend from Utah [Mr. Smoot] totally dissents. Why were these provisions inserted in the bill? It was not done at San Francisco's instance. It was done by the insistent demands of the owners of these rights.

Mr. SMOOT. Some of the owners.

Mr. THOMAS. By the owners of these rights themselves, speaking through their organized districts and their duly employed attorneys. That is the reason they were put there, and also because the Interior Department seems to have insisted upon a recognition of these rights as a precedent condition to their approval of the bill itself.

If the position taken by the Senator from California [Mr. Works] is correct, and if it be true that the rights of these irrigators have been sacrificed or disregarded or neglected, then the charge is a grave one against two of the most eminent members

of the California bar. It reflects directly upon their professional character and integrity. I do not know either of them very well. I only know one of them slightly. Mr. Needham has been a Representative in the Congress of the United States from his district for a great many years. Presumably he is an honorable, reputable, capable, and conscientious gentleman; presumably his associate, Judge Fulkerth, is equally above suspicion; and yet, if it be true that the rights of these irrigators have been neglected and disregarded and sacrificed, then it must follow that these two gentlemen have been guilty of professional misconduct, have betrayed their clientage, and have failed in the discharge of the highest duty that can fall upon the shoulders of an attorney.

The statement of Mr. Needham is very short, and it is due to

him, irrespective of what the Senate may do with this bill, that he should be heard upon this subject. This is his statement:

him, irrespective of what the Senate may do with this bill, that he should be heard upon this subject. This is his statement:

Mr. Needham. Mr. Chairman and gentlemen of the committee, speaking for those present, after consultation with them who represent the Turlock and Modesto irrigation districts, and without intending in any way to violate the good faith which has entered into the negotiations between the representatives of the city of San Francisco and the irrigation districts. I desire to state as a matter of record the reasons why we are not at this time opposing this measure.

Heretofore the irrigation districts have always opposed the legislation which has from time to time been presented in behalf of San Francisco for a water supply upon the Tuolumne watershed, and although I have followed this matter very closely, both in Congress and in the Department of the Interior, the city has never before come to a point where it has been willing to make the concessions which it has now made and which are incorporated in this bill. We are not at this time opposing the bill because it specifically sets forth in the bill conditions which we feel protect the prior rights of the Turlock and Modesto irrigation districts. As long as our prior rights are fully recognized and protected and the city agrees never to interfere with these rights, we feel that the districts themselves, in behalf of the territory within their limits, possibly could not consistently object or present an objection which will permit the water to be taken from the Tuolumne watershed to a distant territory which is not adjacent to it or directly dependent upon it. We simply leave this question with this committee and Congress, in so far as Congress has jurisdiction.

The theory of this bill is that the Congress of the United States grants to the city of San Francisco certain rights of way for conduits and dams within the Yosemite National Park and over the national forests and public lands upon certain expressed conditions. Those conditions which

Now, that is precisely the position, as I understand, of my friend from Utah.

We would be unalterably opposed to such a grant, and we take the position that the grant, if made, should be made upon conditions, and if these conditions, which are embodied in the bill, should be in any way materially modified so far as they relate to the rights of the irrigation districts, such modification might, of course, compel us to object to the bill.

In other words, the men who are now asking the Senate of the United States to reject this measure are the men who before that committee took the position that if these provisions were not put in the bill they would fight it in the House of Representatives and before that committee. And so they were put in to prevent a fight there. Now it is demonstrated that by putting them in we have a fight here. It seems to me to be a perfect case of "You shall and you shan't; you will and you won't; you will be damned if you do, and you will be damned if you don't."

If the bill should be passed without conditions-

Without these conditions, of course-

it might mean long, tedious, and expensive litigation-

The Senator from California says if the bill passes with these conditions it will mean long, tedious, and expensive litigation. The assumption, therefore, must be that litigation is bound to follow, no matter what sort of bill we pass

follow, no matter what sort of bill we pass—
possibly involving a Federal question, which might make it necessary to
take the matters in issue to the Supreme Court of the United States,
and we feel that if the prior rights which we have and claim are fully
recognized and made a condition precedent to the grant, that we are
protected and unnecessary litigation will be avoided.

Another reason, and a very strong reason, why we are willing to
withhold objection to the bill, is because the issue between the city of
San Francisco and the irrigation districts as to the water of this watershed has been in constant agitation for 10 years or more, to the great
detriment of the irrigation districts, causing uncertainty and depreciation of land values in the irrigation districts. This agitation has been
used by other communities to the great disadvantage of these districts,
and we have felt that if the matter could be definitely settled in such
a manner as to safeguard our rights and to obtain from the chief party
claiming against us an admission of our priorities, and safeguarding our
rights in the waters of the Tuolumne watershed, especially in an act of
Congress, that it would be to the great advantage of the districts.

Mr. Needham adds:

Mr. Needham adds:

In conclusion I desire to add that the representatives of the city of San Francisco, Mr. Long, the city attorney, and Mr. O'Shaughnessy, the city engineer, while persistent in advocating the rights of the city

of San Francisco, have evinced a spirit of fairness toward the irrigation districts.

Judge Fulkerth's statement was practically to the same effect. I am informed that these gentlemen kept constantly in touch with the officers of the districts which employed them, and only consented to the final arrangement when their clients authorized them to do so.

Mr. President, I do not think I speak too severely when I say that the present attitude of the irrigators in those districts is one of perfidy and bad faith, and that they do the gentlemen who represent them a most irreparable wrong in thus practically reflecting upon their professional integrity and

sincerity of purpose.

Mr. SMOOT. Mr. President—
The PRESIDING OFFICER. Does the Senator from Colo-

rado yield to the Senator from Utah?

Mr. THOMAS. I do.

Mr. SMOOT. The Senator is a member of the Public Lands Committee, is he not?

Mr. THOMAS. Yes. Mr. SMOOT. I want to ask the Senator if he ever before attended a public hearing given by any committee of Congress where there were present proponents and opponents of a measure, and at the first meeting, when the chairman of the commit-tee notified the opponents of the measure that they would be heard, a representative arose and said that they had nothing special to say; that there had virtually been an agreement reached; and that, therefore, they would not oppose the bill if it passed in the form in which the House of Representatives sub-

passed in the total sequence sequently passed it?

Mr. THOMAS. My experience—

Mr. SMOOT. While I am on my feet I will ask another questions. The sequence of tion, so that I will not interrupt the Senator again: Is it not true, as the Senator from California [Mr. Works] said on the floor of the Senate yesterday, that when the representatives of the irrigation districts reported to the farmers of those districts the agreement that was made and the amount of water granted to them under this bill, immediately opposition sprang up; that at least one of the irrigation districts put in operation the recall as to their representatives and elected a new set of directors; and that they immediately, on learning the conditions as they really existed, began to protest by wire and by letter to every member of the committee against the action of their representa-

tives in reaching the compromise or agreement?

Mr. THOMAS. Mr. President, I do not believe I can give a satisfactory answer to the Senator's first question. I have not had the good fortune that has attended him, and have been in public life but a very short time. I have attended very few committee meetings. I think, however, if the Senator wants my opinion about it, that the attitude taken by these gentlemen was the only one they could have honorably taken before our committee. They had contended that certain things should be placed in the bill. Their contention had been fingle, closed placed in the bill. Their contention had been finally allowed. The bill had passed the House in consequence of their agreement that if those provisions were placed in the bill they would not oppose it. They simply came before us to say that much. It was the only thing they could honorably do.

With reference to the other question, my information is that it appeared from the testimony in the water-rate case, now pending in San Francisco, that attorneys were sent down into these districts in the interest of the Spring Valley Water Co. for the purpose of stirring up this identical strife, and they succeeded

beyond their fondest hopes.

With reference to the "recall," my information is that the Senator is mistaken, and that the officers who were in office then in the districts occupy those offices now. Whether it be true or not I am not prepared to say, but I do not think it cuts any figure whatever in this matter. I believe these two gentlemen did what they were expected to do. I believe they got all that they demanded, and they reported the fact to their clients. That is my belief about it.

Mr. SMOOT. So that there will be no misunderstanding with the Senator or with the Senate in regard to my position, I will state that I believe the two gentlemen mentioned acted in accordance with the desires of the directors of the Water Users' Association; but if I am informed correctly, and if the Senator from California made the statement correctly upon the floor of the Senate, they in turn did not represent the sentiments of the farmers in the two water districts.

Mr. THOMAS. In other words, they represented the corpora-tion but not the stockholders. I do not see how they could have appeared here in any other capacity than as attorneys for the districts.

have another item of information, which I will give for what it is worth, and that is that these water users' associations came into existence after this bill passed the House of Representatives or about that time.

Mr. SMOOT. Does the Senator mean to say— Mr. THOMAS. I refer to the voluntary associations that are represented down here. I do not mean the districts.

Mr. SMOOT. I understood the Senator to say "the districts." Mr. THOMAS. Oh, no; I do not mean the districts at all. Mr. SMOOT. The reason they were organized into a water users' association was for the purpose of raising the money necessary to pay the expenses of their representatives in coming to Washington to look after legislation affecting their interests. The Senator would not for the world, I think, condemn the farmers of that district because they felt that their homes were in jeopardy, and they organized in a mutual water users' association for the purpose of having their case represented here in

Mr. THOMAS. Oh, no; I have not condemned the farmers for that, but I certainly would condemn the influences that produced such a state of mind in the communities where these farmers lived in order to attack this bill from the rear, by appealing to the natural sentiment which all of us entertain and which prompts us to stand by the farmer and by the individual in his unequal fight, and using it as a means of defeating this measure, fearing, perhaps, that all other influences might fail.

Now I come to the provision itself.

The residents of these districts had made legal appropriations of 2,350 second-feet of water prior to the San Francisco appropriation. They had constructed conduits and reservoirs with a capacity of 1,800 second-feet of water—550 feet less than their lawful appropriation—and had actually cultivated 119,000 acres of land. The districts include 300,000 acres of land, however; and the city of San Francisco agreed to recognize their prior right in this bill to the entire 2,350 feet of water to which they are entitled before San Francisco can use a solitary drop, and, in addition to that, have made provision for 4,000 secondfeet of water during the flood seasons of each year as soon as they would establish reservoirs sufficiently large to hold it.

Mr. SMOOT. The Senator does not believe San Francisco

Mr. Saloot. The Schalt does not believe Sala Francisco has that right, does he?
Mr. THOMAS. What right?
Mr. SMOOT. The right of saying how the waters of the State of California shall be distributed. San Francisco could not say that any irrigation district shall have so much water. People do not get from San Francisco the right to the water. The only way they secure a right to the water is by filing upon it, appropriating it, and using it. If they have made that filing, that appropriation, and that beneficial use, San Francisco can not take it away from them, nor can any other city or corpora-

Mr. THOMAS. That is quite true, Mr. President. Mr. SMOOT. I think it is wrong in principle for Congress to say that San Francisco shall have the power to distribute the waters of any stream within the State of California. Congress has not the right, San Francisco has not the right, and Con-

gress can not give San Francisco the right.

Mr. THOMAS. Mr. President, I do not know of anything that has occurred so far that justifies the Senator in becoming so excited. I have not asserted, and I do not propose to assert, that San Francisco has the right to say how much water these districts shall have. What I say is that the districts made this demand and San Francisco yielded, and the provision went into the bill.

Mr. SMOOT. The Senator said San Francisco granted them

all they asked.

Mr. THOMAS. If I used the words "granted them all they asked," I did not mean that it made a grant of the water, but a grant of the request. If the Senator should ask me for almost anything I have, except my wife and children, I should be glad to grant it to him—any sort of a privilege. I might grant him something that I did not even possess, if it would be That would be a matter of contract-a request on the one side and a grant on the other.

Of course, San Francisco does not own these water rights,

but San Francisco is subject to them if they are senior to her own. Consequently, I can perceive no objection to the situa-One thing is certain, however, San Francisco does have and did have the right to grant and to give out of her own water supply, in flood season, this extra 4,000 second-feet of water.

That is my conclusion. I may be mistaken, of course. I am not infallible; neither is the Senator. But I think if I had a reservoir containing a certain amount of water and my friend the Senator should want some of it, and I should let him have it, that would be a grant of something which I possessed.

As far as San Francisco was able to act, therefore, I say she has been overgenerous with these farmers. She has granted them all they asked and more than they ever had used or claimed.

Mr. SHEPPARD. Mr. President—
The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Texas?

Mr. THOMAS. I yield. Mr. SHEPPARD. Is all the land in this valley included in existing irrigation districts?

Mr. THOMAS. Oh, no. The valley contains 6,000,000 acres. Mr. SHEPPARD. What provision is made for the land that is not included in the existing irrigation districts?

Mr. THOMAS. None, except that they can all get power at cost for pumping the subterraneous waters. I will say to the Senator from Texas that that is the only way they ever can get water for the purpose, because the waters are all appropriated. The people living in a valley lying beyond the reach of water supply with all the waters appropriated will not get any water at all unless the Almighty changes the arid condi-

tion of the country or unless it can be obtained by pumping.

Mr. THOMPSON, Mr. President—

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Kansas?

Mr. THOMAS. Yes; I yield. Mr. THOMPSON. Is it not true that only a very small portion of this tract is irrigable, anyhow?

Mr. THOMAS. Not much of it is irrigable, in the sense that

as compared with the extent of land the supply of water is very

Mr. THOMPSON. Only a small amount would be irrigable

from the natural streams?

Mr. THOMAS. Yes. There are millions of acres in my State, and in the State of the Senator, that are irrigated; but when compared with the amount of land that might be cultivated if you could get water for it, they look like little ribbons upon the map, hugging the banks of the streams, and running with them in every direction.

The contention is made that San Francisco has no right to

400,000,000 gallons a day under its appropriation.

Mr. BRANDEGEE. Before the Senator passes to that branch of the subject, will he state whether there is any evidence as to whether or not the provisions in the bill reserving certain amounts of water to these irrigation districts, as agreed to by their directors and by their representatives, are sufficient?

Mr. THOMAS. Sufficient for their lands?

Mr. BRANDEGEE. That is what I mean.
Mr. THOMAS. Yes; provided they will construct the necessary reservoirs for the excess amount of water. In other words, the concession is equal to the area of the two districts.

Mr. SMOOT. The area that is under cultivation to-day? Mr. THOMAS. No, no. There are only 119,000 acres under I refer to the area of the entire districts. cultivation to-day.

Mr. BRANDEGEE. So that, in the Senator's opinion, the farmers themselves—who, if I understand the Senator correctly, have repudiated the action of the directors of their companies and their attorneys-are mistaken in claiming that they have

not been amply protected?

Mr. THOMAS. Yes, as far as this bill can protect them. Of course, it is claimed, and there is much merit in the contention, that these provisions are ultra vires. If so, of course San Francisco might not be held to anything that it is beyond the power of Congress to do. As I say, there may be some strength in that contention, but the position of the proponents of the bill is that San Francisco should not be punished in the Senate for consenting to the insertion in the bill of provisions demanded by the very interests that now seek to defeat the bill because they are

Mr. BRANDEGEE. In the opinion of the Senator, would it not be true that whatever the authority of the Government may be to make this grant, if San Francisco accepts it she is bound

by the conditions of the grant?

Mr. THOMAS. I think so. I think San Francisco could not be heard to question it. My general recollection of the law is that if an unconstitutional law is passed for the benefit of a particular individual or interest, that individual or interest can not question the legality of the statute.

Mr. STERLING. Mr. President—
The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from South Dakota?

Mr. THOMAS. I do.

Mr. STERLING. Mr. President, I do not think I heard the statement as to the number of acres of irrigable land in the Modesto and Turlock districts.

Mr. THOMAS. About 300,000 acres.

Mr. STERLING. As I understand the Senator now, there are about 119,000 acres of that area under cultivation?

Mr. THOMAS. That is the amount given in the House hearings.

Mr. STERLING. Is the Senator able to state what proportion of the irrigable land can be irrigated by this 2,350 feet of

Mr. THOMAS. If 1,800 feet irrigate 119,000 acres, 2,350 feet would irrigate a proportionately increased amount. I can not give the Senator the figure offhand. It would not be the

total 300,000 acres, however, nor anywhere near it.

Mr. STERLING. If the Senator will permit me, I should like to ask another question, although I had expected to ask it at a later time. I note this statement on page 51 of the report of the Board of Army Engineers, in the summary made by the

Purchase of Spring Valley Water Co., \$35,000,000 to \$40,000,000. Further development of this company's system to about half the extent proposed by the company, \$10,000,000.

I understand that the Spring Valley Water Co.'s supply is the only supply of water that the city of San Francisco now has.

Mr. THOMAS. That is correct.
Mr. STERLING. I should like to ask the Senator if he can say whether or not the plant of the Spring Valley Water Co. is purchasable by the city?

Mr. THOMAS. The city is now arranging to purchase it by

condemnation, but it is not sufficient to supply the future needs

Mr. STERLING. With the extension of that plant as pro posed, would there be a sufficient supply for the city? Adding \$10,000,000 for extension purposes to the amount of the pur-

chase money of the Spring Valley Water Co.'s plant, would that be sufficient to supply the city?

Mr. THOMAS. No. It might be sufficient to supply it immediately, but only immediately. As far as my view of the matter is concerned, however, I think that is immaterial. San Francisco has a right to take the water from this place if she has legally appropriated it, especially in view of the fact that by direction of the Government she has spent \$2,000,000 in the acquisition of other water rights and properties.

Mr. STERLING. For information, I should like to ask the Senator a further question in connection with this statement of

the board of Army engineers:

The Tuolumne River could, if not used for city supply, be used to irrigate a large amount of fertile land, as could almost any river in the Valley of California if means are found economically to store the

Suppose means could be found economically to store the water. From the economic standpoint, and for the future welfare of San Francisco as well, if San Francisco could get a water supply from other sources, would not that be better than to rely on this source?

Mr. THOMAS. Mr. President, if means could be found, as I stated before, we could distill enough ocean water to irrigate all the land in California. When the Senator places the little word "if" before his proposition the entire proposition disap-

Does not the Senator understand that this system is going to cost somewhere in the neighborhood of \$77,000,000? Distribute that over this land, and what is it worth per acre? Is it economically possible? If it is, why has it not been done some time ago?

Mr. STERLING. I have seen the statement that it will cost

probably \$77,000,000.

Mr. THOMAS. Yes; and let me press this matter upon the Senator's attention: A great part of the objection to this measure is applied as much against the use of the water for irrigation as it is against its use by San Francisco. A great part of it is based upon the proposition that we should not use it at all; that we must not desecrate the park; that it is better to go up there occasionally and be eaten by mosquitoes for two months in the year and wither under the heat of the remaining summer months and look at the falls and listen to nature's sounds than

Mr. STERLING. Mr. President, I am aware of that objection to the use of Hetch Hetchy, but it does not appeal to me nearly so strong as the other objection, namely, that from the economic standpoint. If San Francisco can derive a sufficient water supply from other sources, it would be better than to take the waters from the Tuolumne River if they can be used for irrigation purposes and if the means can be found to divert the waters

for such a purpose.

Mr. THOMAS. I think if means could be found to make this great improvement and make it economically profitable, they would have been found some time ago. But the Senator must not lose sight of the fact that wherever San Francisco goes to increase her water supply she is going to deprive farmers of water. Do not forget that. And she will, relatively speaking, deprive more farmers of water by enlarging the Spring Vailey Mr. THOMAS. I beg the Senator's pardon; I supposed he Co.'s supply to a sufficient extent to provide for her present and had some apprehension that that might be the result,

future wants than there are farmers in the valley of the Tuolumne, because they are near by; it is an older part of the State, and already the drain upon their supply has reduced the water level below the surface a number of feet.

Mr. STERLING. Not depending, now, upon the Spring Valley Water Co.'s supply or the sources from which it furnishes a supply, may there not be a sufficient supply furnished by going to the McCloud River at an additional cost of \$20,000,000?

Mr. THOMAS. I am afraid the Senator was not here when I

discussed that phase of the matter.

Mr. STERLING. I will say to the Senater that I did not hear his discussion upon that point; but I will not ask him to repeat any statement already made,
Mr. THOMAS. If the Senator will do me the honor to read

my remarks when they are published, he will find what I had to

say on that subject.

I come now to a consideration for a short time of the contention that San Francisco has no right to the water because it does not need it.

Mr. LIPPITT. I wish to ask the Senator a question. understand the conditions which are made in this bill, the authority which the United States gets for exacting those conditions in regard to furnishing the water to the two water districts is that they are as a return payment for certain rights of way.

Mr. THOMAS. Oh, no.

Mr. LIPPITT. Perhaps I do not make my question clear. Mr. THOMAS. I think the Senator can say that that is one

of the conditions granted.

Mr. LIPPITT. What I wanted to ask the Senator is whether in making that condition the United States necessarily assumes any right to control the waters of the State of California? As I understand the way the act is drawn, the United States gives a right of way to the city of San Francisco, and that is substantially all it gives.

Mr. THOMAS. And the dam site.
Mr. LIPPITT. And the dam site. I understand, as a condition of giving that right of way, the act says that the city of San Francisco must do certain things with a pertion of the water which it obtains.

Mr. THOMAS. No.
Mr. LIPPITT. I would be glad to have the Senator explain

Mr. THOMAS. It must recognize the prior appropriation of

water belonging to others.

Mr. LIPPITT. That is another way of stating the same thing.

Mr. THOMAS. No; it does not require San Francisco to give any of the water. I will take that back, with reference to the excess of 4,000 feet of water during the two months of flood

time. Yes; the bill does require that.

Mr. LIPPITT. And the bill requires that San Francisco shall recognize the rights of the irrigation districts to the

regular flow of the river.

Mr. THOMAS. To the extent of 2,350 feet plus 60 feet to a power company.

Mr. LIPPITT. I understand that the basis of the right of the United States to make that stipulation is because it gives the right of way and not because the United States necessarily claims legal power over the waters of the State of California.

Mr. THOMAS. It has no power over the waters of California at all.

Mr. LIPPITT. That is what I understand. I also understand that it is not necessary for her to make any stipulation.

Mr. THOMAS. In making that stipulation she puts into the

law an agreement of the parties interested in the distribution of

Mr. LIPPITT. I should like to ask the Senator whether in his opinion, that being the situation, there is any ground for the fear that on account of steps the United States does take in this matter she thereby puts herself in the position of claiming control over the waters of a State?

Mr. THOMAS. If the Senator will read the eleventh and last section of the bill I think he will find that it answers his question. There it is expressly provided that there shall be no interference with the laws of the State of California.

Mr. LIPPITT. I merely wanted to ask the Senator for his opinion.

Mr. THOMAS. My opinion is that the eleventh section provides against the very thing the Senator may apprehend.

Mr. LIPPITT. I will say to the Senator I did not apprehend it; I only wanted the Senator to state it.

Now, with reference to this supply of 400,000,000 gallons of water, I do not think it is at all excessive for the city of San Francisco, and particularly for the other bay cities, when you contemplate the fact that she is making provision for the next century to come. As I stated, that is an arid country. quently, for two successive years there will be hardly any water Unless the reservoirs are of that capacity it would be difficult to furnish the supply to the city of the water that is actually needed. Reserve water for a community supply is a good deal like a reserve in a bank, of which we have heard, and which for the next few weeks we will hear so much. might not need it, but, like the old saying of the man with a pistol in Texas, "You may never need it, but if you should need it you will need it badly." The reservoir should be ample, so that it may respond to every possible demand for an extra supply, which will be the test of the capacity of the system. I think it is the exercise of the highest degree of prudence to provide a sufficient supply of water, the climate and conditions and possible sudden demands upon the supply being considered.

Mr. President, I think there will be no difference between my friend the Senator from Utah and myself upon the fundamental proposition that the water which San Francisco owns, if she does own it, is due to her appropriation under the laws of California, and that is the only way she can get it, unless she gets it by purchase of some legal right from some other party. But the Government of the United States owns the land upon which the dam is to be erected, and it also owns the land through which the flumes and tunnels and the rights of way are to be constructed. What this bill gives is not water to San Francisco, but an easement in territory owned by the United States in fee.

If I am right in that assumption, I think I am right in its postulate, that the Government may attach to the use of that easement, to the enjoyment of that easement, such conditions as it sees fit. They may be onerous, they may be unjust, they may be unnecessary, but we can not escape from the fact that a Government's proprietary ownership of land and an individual ownership of land are practically identical. If my friend the Senator from Utah owned that dam site and San Francisco came to him to bargain for it and he proposed to give them a perpetual easement in it and wrote into the contract the matters that appear in this bill, they would be legal. Therein lies the distinction between this situation and the Connecticut River dam situation, as I understand it, a distinction so fundamental to my mind that the two do not belong to the same class.

Mr. SMOOT. I can not agree with the Senator on the second proposition, but I can on the first. The case of an individual owning a dam and the water is hardly to be compared with the present position of the Government of the United States in this case. The Government of the United States does not own any water.

Mr. THOMAS. I said nothing about the water. I said the Government owns the land,

Mr. SMOOT. San Francisco could purchase from an individual a dam site and water rights and then do with both as she pleases, but she can not purchase water from the Government of the United States, as the Senator knows, of course. We agree upon that.

Mr. THOMAS. If I have said she could, I want to make haste to take it back. I did not know I had said it, and I do not think I did.

Mr. SMOOT. I do not think the Senator did say that.

Mr. THOMAS. No; I do not think I did.

This scheme appeals to me, Mr. President, so far as the power is concerned, because the city of San Francisco as a municipality will be the owner of it, the manufacturer, the distributer of it. During the discussion of the Connecticut River dam case the Senator from Connecticut [Mr. McLean] asked me a question which I think is appropriate in connection with the quotations from the speech made by the Senator from

Mr. McLean. Before the Senator passes to the other objection, I should like to ask if he would be willing to give us his opinion as to how he would circumvent this impending monopoly of water power? Do I understand him to say that he thinks such corporations should be under State ownership and State control?

Mr. Thomas. My own belief as to this and kindred matters, Mr. President, is that no public utility whatever should be committed to the keeping of private individuals. I believe that this, being a natural monopoly, should be under the control, if not the ownership, of the respective States where the power plants are located. I will go further and say that if the States should prove to be unable to control the monopoly, and it should appear that the power of control can only be found in the Government of the United States, then measures should be taken, if necessary, by an amendment to the Constitution, whereby the American people in their sovereign capacity should take charge of and control them; and, if necessary to such control, ownership appears

to be essential, then such ownership should follow on the general proposition that the welfare and the necessities of the public and of the individual should be the supreme consideration of the national authority.

I have no doubt that this quantity of water, the 400,000,000 gallons daily capacity, is desirable for the generation of the large amount of horsepower mentioned in the bill, and every part of which can be made serviceable to these communities and these irrigationists. I regard it the most beneficent provision of the entire measure, and one which makes it so superior to all other sources of supply as to give it a unique position of its own.

Now, Mr. President, a word as to the effect of this improvement upon the valley. Of course there are differences of opinion concerning it. But what is the Hetch Hetchy Valley? think it is the most talked of and the least frequented place on this continent. It is practically inaccessible and always has Few people can get there. Few people do go there. is divided from the Yosemite by a range of mountains, not in-accessible, but nearly so. It is 20 miles away. It is infested by mosquitoes during the earlier months of the summer, and the heat is almost unbearable the rest of the season. tionably it is a beautiful spot, but it is not unique. I am satisfied that in my own State and in the Senator's State of Utah there are bits of mountain scenery that surpass Hetch Hetchy and equal anything in the Yosemite Valley. The natural bridges in the southern part of the Senator's State are among the most wonderful of the natural formations of this country. When I say that I do not detract from the beauty of the place.

But this bill provides that San Francisco, in consideration of this easement, shall expend \$600,000 in the construction of roads and trails, making this valley for the first time accessible to all sorts and conditions of men. Young and hardy adventurers can perhaps find some pleasure in going to Hetch Hetchy now, but it is as useless in its present condition to the general mass of mankind as though it were not in existence at all.

In addition to that, the city of San Francisco must pay after the lapse of five years \$15,000 a year for the next five years, and after that \$13,000 per year, to be used in keeping these roads and trails in repair. Every cent must be expended for that purpose.

Beyond this immediate valley are the Tuolumne Meadows, the Tiltill Valley, and a number of other places that will be accessible at all times when these roads are completed to Hetch Hetchy. I want to say right now to my friend, the Senator from Utah, that if this bill exacted a farthing from the city of San Francisco, going to the Treasury of the United States as rent or royalty, I should feel about the bill very much as he does.

Mr. SMOOT. I was going to ask the Senator if he was going to differentiate between the money going to the Government of the United States and to the development of roads within a State?

Mr. THOMAS. I do, Mr. President.

Mr. SMOOT. But is not the principle the same?
Mr. THOMAS. No; I think not. These roads are given by
San Francisco to the Government and the city is to keep them in repair.

Mr. SMOOT. I want to say, so that the Senator will under-

stand my position— Mr. THOMAS. I think I understand it quite fully by this time.

Mr. SMOOT. I would prefer a thousand times to vote for an appropriation every year to the State of California for the building of roads than to vote for the regulating provisions in the bill, thus setting a precedent for the Government of the United States to charge for water or for the right of way over the public lands within any of our land States.

Mr. WALSH. Mr. President-

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Montana?

Mr. THOMAS. I do.

Mr. WALSH. I should like to understand the Senator's position with regard to that matter. What is the difference whether the city of San Francisco pays \$500,000 for this land now or pays the same amount in installments annually, as specified in the bill?

Mr. SMOOT. I did not understand the Senator's question. Mr. WALSH. What is the difference between the city of San Francisco paying \$500,000 for the land that is to be utilizedthe easements that are granted here—in one lump sum and paying \$15,000 and \$30,000 annually to be spent on roads? In either case it is the consideration which San Francisco pays for the land which she gets.

Mr. SMOOT. The principle is entirely different. Mr. WALSH. In what respect?

Mr. SMOOT. In this respect, that San Francisco should not be charged one dollar more than any individual asking the same privileges from the Government. In other words, San Francisco should not be compelled to pay any more than the land that she uses is worth.

Mr. WALSH. These lands are very valuable.
Mr. SMOOT. Oh, not at all, Mr. President; the mere right of way over Government lands within forest reservations is not very valuable.

Mr. WALSH. No; but we are speaking about a dam site.

I do not think the value of the land on which Mr. SMOOT. the dam site is to be located amounts to-oh, it is so insignificant it is not worth consideration.

THOMAS. What would the Senator take for it if he

owned it'

Mr. WALSH. What would a similar dam site in the Senator's State cost?

Mr. SMOOT. That is not the question. We are talking now

about the value of the land.

Mr. WALSH. That is what I am talking about. Suppose

you had land in that situation in your State, and you owned the land on both sides of a great valley of that kind that was capable of producing power, the basis for a great dam site, what would you like to ask for it?

Mr. SMOOT. I would prefer to answer that by asking the Senator a question. I would like to ask whether the Senator believes that the Government of the United States ought to charge a man who enters land the value of the lands based on

their value after cultivation and development?

Mr. WALSH. Mr. President, I will answer that question very The Government of the United States can sell the land which it owns on the Pend Oreille River in my State easily for \$2,000,000. It is just a strip on each side of the river.

Mr. SMOOT. I can not see that that answers my question,

Mr. THOMAS. I am very much obliged-

Mr. SMOOT. I will not interrupt the Senator from Colorado any further.

Mr. THOMAS. I am very glad to yield to both the Senators,

because it gives me a little respite.

Mr. BRANDEGEE. Does the Senator from Utah contend that this bill imposes conditions that are too onerous upon the city of San Francisco; that the Government ought to be more liberal with them than it is?

Mr. SMOOT. I certainly think so. I think that the Government has no right to impose a charge upon San Francisco for waters owned and controlled by the State of California.

Mr. BRANDEGEE. The grant runs forever, I suppose. Mr. SMOOT. The grant does, but under the provisions of the bill after a certain number of years Congress can change the amount that is to be paid each year.

Mr. THOMAS. In that respect I quite agree with the Sen-

ator. I myself think the provisions of the bill are too onerous. I would very gladly see them simplified and reduced; but I am unable to deny the power of the Government to make these conditions to accompany the enjoyment of the easement.

Mr. WARREN. If I may interrupt the Senator a moment, it may not be important, but a moment ago the question of the amount of this annual rental came up, and my observation was that it was \$15,000 a year, but the Senator from Utah said it

was \$10,000 a year. I do not find that in my copy of the bill.

Mr. THOMAS. The amounts are progressively advanced. Mr. WARREN. But they commence at \$15,000 after five

Mr. THOMAS. That may be, but my recollection is that

the amount is \$10,000 after five years.

Mr. WARREN. All the roads to be constructed under this project are assigned free to the United States, and, in addition, after five years the grantee commences to pay the United States \$15,000 a year for 10 years, then \$20,000, and then \$30,000.

Mr. THOMAS. I accept the Senator's correction. There are three installments. The first payment is to be \$15,000 for a five-year period; the second \$20,000; and after that \$30,000 for

the preservation and repair of the roads.

Mr. BRANDEGEE. I apologize for interfering with the Senator or for interrupting him, because he has been very courteous and I know he is tired, but I will be very brief if he will allow me to interrupt him.

Mr. THOMAS. On the contrary, Mr. President, I have got to

the point now where I welcome interruptions.

Mr. BRANDEGEE. The Senator, I thought, complained a while ago that he was tired.

Mr. THOMAS. I was tired then, but I am weary now; so I gladly yield to the Senator.

Mr. BRANDEGEE. I shall try not to add to the Senator's weariness, which is not in his mind I know from what he says; but he referred to the fact that he could support this proposition in this bill imposed by the Government, to wit, that certain money should be paid annually for the construction of roads, whereas he could not support the proposition embraced in the bill authorizing the construction of a dam across the Connecticut River because payments were provided by the Government. I fail to see the distinction which he attempts to make between those two cases, because, if I recall it correctly—and I think I do-the provision in the Connecticut River bill was that the moneys that were to be paid to the Government were to be at once spent upon the improvement of the navigation of the river immediately adjacent to where the dam was proposed to be built, just as this money is to be spent upon the roads upon the site.

Mr. THOMAS. The difference is this, Mr. President: In the Connecticut River dam case the Government was leasing or disposing of what it did not own, while in this instance it is selling or disposing of what it does own.

Mr. BRANDEGEE. Of course, Mr. President, the Senator from Colorado will not claim that the Government was disposing of any property in the granting of a permit to maintain a dam across a navigable river.
Mr. THOMAS. Not at all.

Mr. BRANDEGEE. Nobody claims that the Government

owned any property there.

Mr. THOMAS. Not at all. My contention was that the company which constructed that dam was entitled to the water power as its property, or that it belongs to the riparian owners and not to the Government of the United States.

Mr. BRANDEGEE. Whatever may have been the truth about that, it certainly was not entitled to build a dam without

getting the consent of Congress.

Mr. THOMAS. I think that is true.

Mr. BRANDEGEE. Then the question arises whether, in granting the permit, the United States might attach any condition to the issuance of a permit?

Mr. THOMAS. It might attach any conditions, of course, to the building of a dam, provided that the conditions did not involve the sale or the lease of any property that it did not

own. That seems to be the distinction.

Mr. SMOOT. In order that I may understand precisely the position of the Senator, I should like to ask him a question. Does the Senator claim that the United States Government has a right to impose a charge upon power created by water that is within a State if perchance to develop that water it is necessary

that they should have a right of way over the public domain.

Mr. THOMAS. Well, that is a very close question.

Mr. SMOOT. I understood the Senator to say that there was no doubt about it, and that is the reason why I asked whether I correctly understood him.

Mr. THOMAS. There is no doubt about the power to do so?

whether I correctly understood min.

Mr. THOMAS. There is no doubt about the power to do so?

Mr. SMOOT. Yes.

Mr. THOMAS. I do not think I so stated.

Mr. SMOOT. I wanted to ask the Senator so that there would be no question about his position.

Mr. THOMAS. I do not think I so stated.

But, Mr. President, proceeding with the discussion of the bill, I believe that, as a general proposition, the construction of improvements which will make this national possession accessible and therefore enjoyable is a desirable thing to do, and I believe that to supplant the surface of the ground with a beautiful lake blending its waters with the surrounding mountains would be to enhance and immeasurably improve the beauty of the place.

I am aware of the fact that others entertain a different opinion, but the photographs which were here in evidence when this bill was first considered, showing the valley with and the valley without this reservoir, to my mind proved beyond per-adventure the added attractions and beauty which this spot will possess if this bill is enacted and the improvements are made.

Some time ago one of our painters sketched this valley, and to make it more attractive he sketched the lake within it. presence of water appealed to his artistic sense, and the improvement suggested by it to my mind immeasureably enhanced its attractiveness. But, if there is any question about it, it ought to be resolved in favor of the utilization of it for the benefit of the people of the State.

Water is a scarce article in that country, and the first consideration ought to be to impound it, so far as possible, to the end that it can be made to supplement the natural flow of the streams, increase the fertility of the acreage of the State, and add to its wealth.

The campaign of the men and women all over the United States against this measure has been a powerful adjunct to the local interests which are united against the bill. Their protest against the invasion of what they call a natural park and what they declare to be the destruction of its beauties, appeals to a sentiment that is entertained by every properly constituted human being; but I think these sentimental considerations should always be taken in connection with the purposes to be effected, the necessities of the situation, and the general benefit to the people who are interested in the improvement.

I think I have said enough to demonstrate the fact that the waters of these streams are not the property of the owners of the park; that they are not the property of the Government of United States, but are the property of the people of California, and, while I would object as strenuously as anyone to an unnecessary invasion of the national parks of this country, I do not hesitate to say, Mr. President, that when the uses of man require it every drop of water in every national park in the United States should be taken and devoted to the service of mankind. That time may never come, but I believe it will come, for it so happens that these spots are in the arid or semiarid regions of the country, where larger drafts are made upon the water resources than are made in the more humid parts of the country. The waters are perhaps more essential to the growth and well-being of the State than is the soil itself.

A few years ago the British Government built the greatest dam in existence. It stretches across the stream bed of the Nile. It has impounded an enormous reservoir of water and brought under cultivation hundreds of thousands of acres of land in Egypt. It has transformed that ancient country and made it one of the wealthiest, most fertile, and productive regions of the world; but, Mr. President, in order to accomplish that great and essential improvement it was necessary to submerge the ruins of Philæ, which stand upon an island in the Nile and which are said by good judges to have been the most exquisite and beautiful of all the ruins of antiquity. The same note of protest arose against the submergence of that marvelous survival of antique architecture that we hear with reference to the Hetch Hetchy; but the British Government, intent upon the accomplishment of a great humanitarian purpose, with its eye fixed singly upon the economic welfare of an ancient people, proceeded with its mighty task, heeded no protest against its delay or its accomplishment, and brought the work to completion. The verdict of the British Empire and of the world has approved its course. We should follow the same policy here and make man and his needs the chief object of conservation. We should make his welfare, his well-being, and his happiness the principal object and purpose of all social and political and economic endeavor; and that is what is sought to be done, in my judgment, by the provisions of this bill.

Now, Mr. President, I want to notice for a moment what seem

to me two most incongruous objections to this measure. One is that San Francisco is trying to get a very valuable concession for nothing; that she is too niggardly to pay for it; and that if this bill is passed the Government will endow her with hydro-electric-power possibilities of enormous dimensions and enormous value. Another objection is that if this bill passes, it will saddle upon San Francisco a debt that will probably put her into bankruptcy. Both of these propositions can not be true. She can not be trying to obtain a valuable property for nothing on the one hand and inviting bankruptcy by assuming a huge burden of debt upon the other.

Another incongruous position taken, at least by the lovers of nature, which denies to San Francisco the right to build this dam because it will desecrate the park, and at the same time declares that the water is needed for the irrigation of the land. If there is to be any destruction of the natural beauties of the park, it will follow just as certainly the construction of a reservoir for the irrigation of the land as will follow the construction of a reservoir for supplying the city of San Francisco with its needs.

I was very much impressed, Mr. President, with a statement made by one of our Secretaries of the Interior, and, I think, emphasized by the report of the Army board, to the effect that the strategic and splendid advantages of this gorge for reservoir purposes will make the demand for its use so irresistible that sooner or later the Government must yield and permit its use for that purpose; in other words, the people of California, the public needs, and the requirements for this water behind them must necessarily bring about and force a pressure of public opinion upon the Government which will make the construction of this dam absolutely inevitable sooner or later. The people of California will never permit, and ought not to permit, this splendid source of wealth and of prosperity to remain idle and

unused while populations are crowding upon that arid soil, anxious and willing to develop it.

Mr. President, I wish now to refer for a moment to another phase of this matter. I shall not detain the Senate very much That is impossible, both because the hour of adjournment is approaching and because I have reached the limit of my endurance. Inasmuch, I owever, as the Senator from California [Mr. Works], as one of the representatives of that State, appealed so eloquently before taking his seat, and appealed in behalf of San Francisco, not to inflict this bill upon her, I think I am justified in calling the attention of the Senate to the fact that while some sentiments adverse to this measure have proceeded from the Senator's own city of Los Angeles, the officials of that city, with a generosity and public spirit which is commendable, have cordially indorsed this splendid enterprise. The same is true of the mayors and presidents of the chambers of commerce of many of the cities of southern California.

I should like to insert, without reading all of it, the document I have in my hand, which refers to and quotes from the statements of many of these officials. The name of the paper in which it was printed does not appear.

The PRESIDING OFFICER. In the absence of objection,

permission is granted.

The matter referred to is as follows:

SOUTHERN CALIFORNIA TO HELP SAN FRANCISCO IN FIGHT-MAYORS, CHAMBERS OF COMMERCE, BOARDS OF TRADE, AND BUSINESS MEN A UNIT IN APPROVING HETCH HETCHY BILL.

Los Angeles, December 1, 1913.

CHAMERS OF COMMERCE, BOADES OF TRAINS, AND BUSINESS MEN A UNIT IN APPROVISO HEFCH HEFCHY HILL.

LOS ANGELES, December 1, 1918.

Prominent men and officials of the great civic and commercial bodies of every city in the south are unanimously firm in the belief that the passage of the Hetch Hetchy bill will harm no one, that it will do a great and necessary good for San Francisce and posterity, and that its passage will be only ample justice toward the San Franciscans. Following the commerce of the control of the commerce of the control of the commerce is an experiment of the Hetch Valley which insure a good water supply to our northern neighbor. I hope that the Senate sees fit to take a favorable action on the matter. There is plenty of other space available for a national park without that few acres of fand which the city needs to store water from the Sierra Mountains."

Secretary C. W. McLeod, for the Santa Moniea Bay Chamber of Commerce: "Those who oppose the Hetch Hetchy project are not the people who have the interest and welfare of the Hetch Hetchy bill and those everything to gain by the passage of the Hetch Hetchy bill and everything to gain by the passage of the Hetch Hetchy bill and the secondary of the passage of the Hetch Hetchy bill and the secondary of the passage of the Hetch Hetchy bill and the secondary of the passage of the Hetch Hetchy bill and the secondary of the passage of the Hetch Hetchy bill and proper and adequate water supply. Los Angeles Federated Improvement Association: "Tossibly the greatest question that the West and Southwest half to december 1, 1918.

H. S. McCallium, president of the Los Angeles Federa

W. A. Zimmerman, president of the Orange County Savings and Trust Association, Associated Chambers of Orange County: "The people of San Francisco demonstrated by their vote on the bond issue to provide funds for bringing the waters of the Hetch Hetchy to that city for domestic use that it was a matter of serious and important moment, and the United States Senate should not block or delay them in acquiring the needed supply of pure water."

William L. Peters, mayor of Riverside: "I am heartily in sympathy with the justice of the position assumed by the people of San Francisco, and desire to see the United States Senate pass the Hetch Hetchy bill giving to San Francisco the right to construct a storage reservoir in the Government preserve."

W. A. Vandergrift, mayor of Pomona: "There are perhaps no people who can sympathize more keenly with San Francisco in her fight to bring the Hetch Hetchy plan to a reality than the people of southern California. We give the most hearty indorsement to the action being taken by the Hearst papers in thus coming to the aid of our sister city in her fight."

Charles F. Johnson, president Kern Board of Trade: "It seems a pity that San Francisco should have to fight for the right which should be hers for the asking, for no city in the world needs an adequate water supply so much as she does. I am heartily in sympathy with San Francisco's fight for an adequate municipal water system."

H. H. Rose, mayor of Los Angeles: "I am for it strong. San Francisco is just as much entitled to secure a water supply as Los Angeles is. We got the Owens River, now San Francisco is after a supply. I hope San Francisco will be successful in this undertaking."

Mr. THOMAS. Let me say that the Mr. Mulholland re-

Mr. THOMAS. Let me say that the Mr. Mulholland referred to in one of these statements is the identical engineer whose report upon the Spring Valley possibilities was read by the Senator from California [Mr. Works].

Mr. President, I believe the hope expressed by Mayor Rose is the hope of a majority of the Senator. I believe the

Mr. President, I believe the hope expressed by Mayor Rose is the hope of a majority of the Senate. I believe they are impressed, as I am, with the fact that San Francisco seeks to carry out and perfect a greatly needed public improvement. I believe they realize that it is not only a greatly needed public improvement, but one which is absolutely essential to the welfare and future of San Francisco and the other great cities that cluster around the shores of San Francisco Bay.

There are to-day 750,000 people living in those cities. the years go by they will increase and multiply. If they increase proportionately as they have increased during the past quarter of a century, the year 2000 will find more than 2,000,000 inhabitants, all perhaps gathered under one great, magnificent

municipality.

The water supply of that city has been extremely small for years. Of recent years it has been so small that part of the city has no water, but must depend for its supply upon the carriage of water by hand and by wagon into their dwellings. The Spring Valley Water Co. has been compelled to lay an interdict upon the use of its water supply beyond the absolute necessities of the inhabitants.

These cities occupy a part of the country sometimes visited by earthquake shocks, which are nearly always followed by great conflagrations. Their need for water therefore is immeasurably greater than that of other cities, because of these unfortunate geological conditions. The people of these cities are a splendid type of American citizenship. They are progressive in business, in social and in political affairs, and in economic growth. They crown the most magnificent harbor upon the Pacific Ocean.

Mr. President, in future years, when they are in the enjoyment of a splendid and adequate water supply, when their highways and habitations are filled with prosperous and happy men and women, looking into the faces of smiling children, may they look back in grateful remembrance of the Sixty-third Congress of the United States and bless its Members for conferring upon them this great measure, which will surely guarantee their prosperity, their growth, their welfare, and their happiness.

### BANKING AND CURRENCY.

Mr. OWEN. Mr. President, it is within a few minutes of 11 o'clock, and I suppose no Senator is ready to go on to-night with the discussion of the Hetch Hetchy bill. I should like to call up House bill 7837, with a view to moving the printing of an amendment on page 25, line 13, of the amendment I have heretofore offered and modified.

Mr. SMOOT. There is no necessity of calling up the bill. The Senator can offer it as a proposed amendment to the bill.

Mr. OWEN. I wish to have it printed simply as an insert. It is not worth the while to reprint the bill, I take it. It is just a short amendment.

Mr. SMOOT. The Senator can simply make the request, then. Mr. OWEN. I ask unanimous consent that my amendment

shall be considered a part of the bill when it comes up.

The PRESIDING OFFICER (Mr. ROBINSON in the chair) The Senator from Oklahoma asks unanimous consent to modify his own amendment. Without objection, it will be so ordered.

### ELECTION OF SENATORS.

Mr. WALSH. Mr. President, before adjournment I desire to give notice that to-morrow, at the conclusion of the morning moneys at Eureka, Cal., vice George H. Kimball, term expired.

business and before the regular order is taken up, I shall ask unanimous consent for the consideration of Senate bill No. 2860, the bill in relation to the election of United States Senators reported from the Committee on Privileges and Elections some time ago. In all probability it will give rise to no discussion.

Mr. SMOOT. I wish to say to the Senator from Montana that it will be impossible at that time to consider the bill under the unanimous-consent agreement we have. At the conclusion of the morning business the Hetch Hetchy bill will be laid before the Senate under the unanimous-consent agreement.

Mr. WALSH. During the morning hour, then, it would be

proper, would it not?

Mr. SMOOT. The Senator can call up the bill during the morning hour, but I understood the Senator to say "at the conclusion of morning business.'

#### BANKING AND CURRENCY.

Mr. OWEN. Mr. President, I wish to give notice to the Senate that at the first moment the business of the Senate will permit I expect to call up the banking and currency bill for consideration and action.

#### EXECUTIVE SESSION.

Mr. BACON. Mr. President, if there is no desire on the part of any Senator to proceed immediately, there is some little business for us to attend to in executive session. It will take but a few minutes. I therefore move that the Senate proceed to the consideration of executive business.

Mr. SMOOT. I wish to ask the Senator one question before that is done. The Senator does not desire an executive session

for any confirmations?

Mr. BACON. No; there are none on the calendar. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened.

Mr. KERN. I move that when the Senate adjourns to-day

it adjourn to meet at 10 o'clock a. m. to-morrow.

The motion was agreed to.

Mr. BACON. I move that the Senate adjourn.

The motion was agreed to; and (at 10 o'clock and 55 minutes p. m.) the Senate adjourned until to-morrow, Thursday, December 4, 1913, at 10 o'clock a. m.

### NOMINATIONS.

Executive nominations received by the Senate December 3, 1913.

### AMBASSADOR.

Henry M. Pindell, of Illinois, to be ambassador extraordinary and minister plenipotentiary of the United States of America to Russia, vice Curtis Guild, resigned.

## MINISTERS.

Brand Whitlock, of Ohio, to be envoy extraordinary and min-

ister plenipotentiary of the United States of America to Belgium, vice Theodore Marburg, resigned.

George Fred Williams, of Massachusetts, to be envoy extraordinary and minister plenipotentiary of the United States of America to Greece and Montenegro, vice Jacob Gould Schurman, resigned.

## MEMBER OF THE PHILIPPINE COMMISSION.

Winfred T. Denison, of New York, to be a member of the Philippine Commission and secretary of the interior, vice Dean C. Worcester, resigned.

## PROMOTIONS IN THE ARMY.

### FIELD ARTILLERY ARM.

First Lieut. Henry S. Kilbourne, jr., Fourth Field Artillery, to be captain from November 22, 1913, vice Capt. William I. Westervelt, Second Field Artillery, detailed in the Ordnance Department on that date.

Second Lieut. Albert K. C. Palmer, Sixth Field Artillery, to be first lieutenant from November 22, 1913, vice First Lieut. Henry S. Kilbourne, jr., Fourth Field Artillery, promoted.

### INFANTRY ARM.

Second Lieut. Seth W. Scofield, First Infantry, to be first lieutenant from November 25, 1913, vice First Lieut. Hugh M. Kelly, unassigned, who died November 24, 1913.

## RECEIVER OF PUBLIC MONEYS.

# HOUSE OF REPRESENTATIVES.

Wednesday, December 3, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the fol-

lowing prayer:

Great God our Father, source of all good, we seek Thy wis dom, power, and goodness that we may think clearly and act nobly in the drama of life. The scenes are continually shifting, the call for action is insistent, the thought of yesterday is inadequate to meet the demands of to-day. We must move forward or retrograde. So fill us with wisdom, so guide us by Thy power, and quicken every noble impulse that we may keep step in the onward march of progress that our souls may be satisfied and Thy demands fulfilled. In the Christ spirit. Amen.

The Journal of the proceedings of yesterday was read and

approved.

#### CALENDAR WEDNESDAY

The SPEAKER. This is Calendar Wednesday, and the unfinished business is Senate joint resolution No. 5, providing for the appointment of a commission to consider the need and report a plan for national aid to vocational education.

Mr. MANN. Mr. Speaker, a parliamentary inquiry. The SPEAKER. The gentleman will state it.

Mr. MANN. Is there any unfinished business which comes up automatically?

The SPEAKER. The Chair did not understand the gentleman

exactly.

Mr. MANN. Is there any unfinished business which comes up automatically?

It has been decided by Speaker Cannon and The SPEAKER. It has been decided by Speaker Cannon and the present occupant of the chair, both, that where a bill or anything was unfinished on Calendar Wednesday that on the next call of Calendar Wednesday it came up as unfinished business.

Mr. MANN. Will the Speaker permit me to call his attention to the situation, then? I fear such a ruling might land us in confusion hereafter. There was unfinished business from the Committee on Education, and the call of the committees was proceeded with. That bill came up automatically and the House went into the Committee of the Whole automatically. Thereupon, the gentleman in charge of the bill moved that the committee rise. The committee rose, and the Speaker directed that the call of committees proceed, and the call of committees did proceed. I am not sure but there has been a call since then. I know there was a further call that day.

The SPEAKER. That was the last call.

Mr. MANN. Now, if a committee declines to call up a bill when it is reached, which is unfinished business, does that give prior right over the other committees? The Chair will see where it will land us. Suppose a chairman of a committee, when the committees were called, called up a bill and as soon as the House went into the Committee of the Whole moved that the committee rise and decline to further call it up, and then another committee was called and the same procedure was followed. We might have a dozen bills as unfinished business on the calendar so that we never could proceed further with the committee calls, so that it seems to me that when a committee declines to proceed with its right and the Chair directs that the call of committees proceed and other committees were called, that committee lost the right to call up its bill until it was reached in order again. The call now rests with the Committee on the Judiciary.

The SPEAKER. Well, the Chair will state-

Mr. FITZGERALD. Will the gentleman yield for a question?

Mr. MANN. Certainly.
Mr. FITZGERALD. Does it not make considerable difference that no other committee has been called?

Mr. MANN. But other committees were called. I beg the gentleman's pardon; that is just it, the committee call was pro-

ceeded with and the committees were called around.

The SPEAKER. The Chair will state that he was unfamiliar with the facts about this. It happened to be the only day the Speaker was absent during that extra session, and that was when he was sent, along with 14 others, to go to the Knox-ville Exposition. The Chair will see what the RECORD shows: VOCATIONAL EDUCATION.

Mr. HUGHES of Georgia rose.

Mr. FITZGERALD, Mr. Speaker, the gentleman from Georgia [Mr. HUGHES] did not call up his bill.

I will read what the Speaker pro tempore said. The Speaker

Mr. FITZGERALD. Mr. SHERLEY of Kentucky.

The SPEAKER. Here is really where it begins:

VOCATIONAL EDUCATION.

The Speaker pro tempore. On the last Calendar Wednesday the House had under consideration Senate joint resolution No. 5. Under the rule the House automatically resolves itself into Committee of the Whole House on the state of the Union for the further consideration of said resolution as the unfinished business on Calendar Wednesday, and the gentleman from Tennessee [Mr. Garrett] will take the chair.

Now, there is no dispute between the Chair and the RECORD and the gentleman from Illinois [Mr. MANN] so far.

Mr. Hughes of Georgia rose.
Mr. Fitzgerald. Mr. Speaker, the gentleman from Georgia [Mr. Hughes] did not call his bill up.

That is, this vocational education bill.

That is, this vocational education bill.

The Speaker pro tempore. The understanding of the Chair is that automatically on Calendar Wednesday the House resolves itself into the Committee of the Whole House on the state of the Union for the purpose of considering unfinished business in order on Calendar Wednesday.

Mr. Fitzgerald. It does not, Mr. Speaker.

Mr. Mann. It does.

Mr. Fitzgerald. Under the rule the committee must be called, and the gentleman has not called his bill.

Mr. Mann. The gentleman from New York is mistaken.

The Speaker pro tempore. The Chair thinks that the gentleman is mistaken, but would be glad to hear him if he can cite any authority.

Mr. Hughes of Georgia. Mr. Speaker, I move that we lay that resolution aside temporarily.

The Speaker pro tempore. The gentleman's motion is not in order. The Chair holds that automatically the House resolves itself into Committee of the Whole House on the state of the Union for the further consideration of Senate joint resolution No. 5.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of Senate joint resolution No. 5, with Mr. Garrett of Tennessee in the chair.

The Chairman. The House is in Committee of the Whole House on the state of the Union for the further consideration of Senate joint resolution No. 5, which the Clerk will read by title.

The Clerk read as follows:

"Joint resolution (8. J. Res. 5) providing for the appointment of a commission to consider the need and report a plan for national aid to vocational education."

Mr. Hughes of Georgia. Mr. Chairman, I move that the committee do now rise.

The Chairman. The gentleman from Georgia [Mr. Hughes] moves that the committee do now rise. The question is on agreeing to that

now rise.

The Chairman. The gentleman from Georgia [Mr. Huches] moves that the committee do now rise. The question is on agreeing to that

The CHAIRMAN. The gentleman from Georgia [Mr. Hughes] moves that the committee do now rise. The question is on agreeing to that motion.

The question was taken, and the Chairman announced that the ayes seemed to have it.

Mr. Mann. A division, Mr. Chairman.

The committee divided; and there were—ayes 119, noes 35.

Accordingly the committee rose; and the Speaker pro tempore [Mr. Sherley] having resumed the chair, Mr. Garrett of Tennessee, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration Senate joint resolution No. 5, and had come to no conclusion thereon.

The Speaker pro tempore. The Clerk will preceed with the call of committees.

Mr. Mann. Mr. Speaker, a parliamentary inquiry.

The Speaker pro tempore. The gentleman will state it.

Mr. Mann. The call of committees having passed beyond the committee that called up that vocational educational bill, I suppose that is dead until that committee is reached again.

The Speaker pro tempore. The Chair will rule on that matter when it is presented, and would not care to express an opinion prior to that time.

The Clerk proceeded with the call of committees.

it is presented, and work time.

The Clerk proceeded with the call of committees.

The Committee on Appropriations was called

Mr. Garrett of Tennessee. Mr. Speaker, I make the point of order that there is no quorum present.

Mr. HUMPHREYS of Mississippi. Will the gentleman withhold that for a moment?

moment? Mr. Garrett of Tennessee. I will.

So the statement of the gentleman from Illinois [Mr. MANN] as to what happened that day is correct. The Chair will repeat that he was not here at that time. It seems to the Chair that the Committee on Education lost its footing.

Mr. TOWNER. A parliamenary inquiry, Mr. Speaker.
The SPEAKER. The gentleman will state it.
Mr. TOWNER. This bill, I believe, is on the Union Calendar, carrying appropriation. Upon the call of the committees, if it should be the regular order to-morrow, would it be the unfinished business when this committee is called, or will the committee have to wait until the Calendar Wednesday when it can be reached?

The SPEAKER. That is just exactly what the Chair was deciding. He had not quite finished. One can not call up a bill on the Union Calendar on the ordinary call of committees in the morning hour. You can wait until the call is exhausted or at the end of 60 minutes and make a motion to go into the Committee of the Whole House on the state of the Union. That is under the ordinary call of committees in what is called the morning hour.

Mr. TOWNER. Then the only way in which this will be unfinished business will be that it will be unfinished on the call of committees on Calendar Wednesday?

The SPEAKER. Oh, no; it would not. It must be called

Mr. MANN. Mr. Speaker, I did not raise the point for the purpose of endeavoring to prevent the consideration of the bill.

The SPEAKER. The Chair understands that perfectly well. If the gentleman from Georgia [Mr. HUGHES] at that time had

so desired, the Chair thinks it would have been competent for him to have asked and got the consent of the House to have it continued as unfinished business, and if the committee should have risen and under that arrangement had quit considering that bill at that time it might have come up as unfinished business on next Calendar Wednesday. But he did not do anything of the sort. As the gentleman from Illinois [Mr. Mann] suggested, if, when the Committee of the Whole House on the state of the Union is considering a bill on Calendar Wednesday, it simply rises without any agreement as to what is to happen to the bill it has under consideration; if you were then to make that the unfinished business you might clutter up this Calendar Wednesday business so that you would never get anywhere. So the Chair holds that that committee lost its privilege that day on that bill, and that the call now rests with the Committee on the Judiciary. The Clerk will call the committees.

The Clerk proceeded with the call of the committees.

MINISTERS TO PARAGUAY AND URUGUAY.

Mr. FLOOD of Virginia (when the Committee on Foreign Affairs was reached). Mr. Speaker, I am directed by the Committee on Foreign Affairs to call up Senate bill 2318, an act authorizing the appointment of envoys extraordinary and ministers plenipotentiary to each Paraguay and Uruguay.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

An act (8, 2318) authorizing the appointment of envoys extraordinary and ministers plenipotentiary to each Paraguay and Uruguay. Be it enacted, etc.,

Mr. MANN. Mr. Speaker, a parliamentary inquiry. The SPEAKER. The gentleman will state it.

Mr. MANN. This bill being on the Union Calendar, is it to be read in full in the House before we go into committee?

I think not. It is a Union Calendar bill.

The SPEAKER. That is true. The House automatically resolves itself into the Committee of the Whole House on the state of the Union, and the gentleman from Georgia [Mr. CRISP] will take the chair.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. Crisp in the chair.

The CHAIRMAN. The House is now in Committee of the Whole House on the state of the Union for the consideration of the bill S. 2318, which the Clerk will report.

The Clerk read as follows:

The Clerk fead as follows:

An act (S. 2318) authorizing the appointment of envoys extraordinary and ministers plenipotentiary to each Paraguay and Urugnay.

Be it enacted, etc., That the President is hereby authorized to appoint, as the representative of the United States, an envoy extraordinary and minister plenipotentiary to Paraguay, who shall receive as his compensation the sum of \$10,000 per annum.

SEC. 2. That the President is hereby further authorized to appoint, as the representative of the United States, an envoy extraordinary and minister plenipotentiary to Uruguay, who shall receive as his compensation the sum of \$10,000 per annum.

Mr. FIJOOD of Virginia Mr. Chairman, the purpose of this

Mr. FLOOD of Virginia. Mr. Chairman, the purpose of this bill is to create a legation at both Paraguay and Uruguay. At present this country accredits one minister to these two countries. He lives in Uruguay, at the capital, Montevideo, and occasionally visits Paraguay; very occasionally, though. The result of this is that Paraguay is practically without a representative from this country.

If this bill, which was passed by the Senate last summer, is passed it will remedy this condition. It is the policy of this country to encourage in every way possible the friendly feelings that exist between this country and all our Latin-American neighbors to the south of us, to strengthen the ties of friendship as far as it can be done. We have paid less attention to Paraguay than to any other country in South America. The administration is anxious that this bill be passed and that this consideration be shown to Paraguay.

The Government and people of Paraguay are anxious that we send a minister to them. Nearly two years ago they accredited a minister to this country. A number of years ago we had a minister to Paraguay, but not for quite a number of years has that country had a representative from this country.

The people of Paraguay are particularly anxious that this country should give them this recognition. They have great faith in the ability of the United States to help them, and believe that if our country will take a proper interest in their development many of the evil conditions under which they have

suffered will be remedied.

Mr. GOULDEN. Mr. Chairman, will the gentleman pardon me for an interruption?
The CHAIRMAN. Does the gentleman yield?

Mr. FLOOD of Virginia. Certainly.
Mr. GOULDEN. What is the distance between the capitals of the two republics concerned?

Mr. FLOOD of Virginia. About a thousand miles.

Mr. BURNETT. Mr. Chairman, may I ask the gentleman a question?

Mr. FLOOD of Virginia. Certainly.
Mr. BURNETT. What is the population of Paraguay?
Mr. FLOOD of Virginia. The population is 750,000.

Mr. BURNETT. What evil conditions could be remedied by having a minister down there?

Mr. FLOOD of Virginia. I will explain to the gentleman.

That is a wonderfully rich country, and—
Mr. BURNETT. Is that the evil condition to which the gen-

tleman refers? [Laughter.]

Mr. FLOOD of Virginia. No. sir. I do not expect to answer any question that the wisdom of the gentleman from Alabama may propound in one sentence. [Laughter.]

Mr. BURNETT. Certainly.
Mr. FLOOD of Virginia. That is a wonderfully rich country, but the people there are very ignorant, and they have been isolated-

Mr. BURNETT. I know; but-

Mr. FLOOD of Virginia. I can not answer any question the

gentleman may propound even in two sentences.

Mr. BURNETT. Then had we not better send them a missionary instead of a minister?

Mr. FLOOD of Virginia. I leave that to the church to which the gentleman belongs, and I will add I think his missionaries

will accomplish much good.

Mr. BURNETT. I belong to the Methodist Church, which not only believes in falling from grace, but practices the faith.

Mr. FLOOD of Virginia. The gentleman is a living illustra-

tion of the faith which he professes. [Laughter.]

Mr. MURRAY of Oklahoma. Mr. Chairman, will the gentleman yield for a question?

Mr. FLOOD of Virginia. I will.

Mr. MURRAY of Oklahoma. I want to ask the gentleman if we have not consuls in Paraguay?

Mr. FLOOD of Virginia. We have one at Asuncion.

Mr. MURRAY of Oklahoma. What representative has Great Britain there?

Mr. FLOOD of Virginia. No diplomatic representative. Very few of the countries of the world have diplomatic representatives in Paraguay. I believe Italy is the only European power that has.

Mr. MURRAY of Oklahoma. I want to ask if Great Britain quit the country in 1868, or about that time, when they put the consul on a mule, face backward, and compelled him to ride through the streets in that way?

Mr. FLOOD of Virginia. Great Britain has never taken her consuls from Paraguay. They have been there all the time. The trade of Great Britain with Paraguay is many times what the trade of this country is with Paraguay. In the interest of our trade we ought to encourage this struggling little nation in South America. [Applause.]

As I began to say, it is a wonderfully rich country. It has a remarkably fertile soil. It produces every known food produet that is produced in any other country of North or South America. It is sparsely settled because it is isolated and has not attracted the character of people that my friend from Alabama [Mr. Burnett] wants to keep out of this country

Mr. BURNETT. Do not you also want to keep out the same class?

Mr. FLOOD of Virginia. I want to keep out some of those that the gentleman from Alabama wants to keep out.

Mr. CANDLER of Mississippi. Will the gentleman yield for

a question?

Mr. FLOOD of Virginia. I will.

Mr. CANDLER of Mississippi. I notice that this bill provides for the appointment of a minister to Paraguay and a minister to Uruguay. At this time we have only one minister to both countries?

Mr. FLOOD of Virginia. That is true. Mr. CANDLER of Mississippi. What is the salary of this minister?

Mr. FLOOD of Virginia. Ten thousand dollars a year. Mr. CANDLER of Mississippi. And this provides for a minister to each country at \$10,000?

Mr. FLOOD of Virginia. It does.

Mr. CANDLER of Mississippi. Does the gentleman think

that would be a good investment down in Paraguay?

Mr. FLOOD of Virginia. I think so; the President of the United States thinks so; the Secretary of State thinks so; the Senate of the United States thought so; the Committee on Foreign Affairs thought so. The bill is here, having passed the Senate, having been reported by the Committee on Foreign Affairs.

Mr. CANDLER of Mississippi. Has this bill passed the

Mr. FLOOD of Virginia. It has passed the Senate and has been on our calendar for three or four months.

Mr. CANDLER of Mississippi. Did it pass the Senate by a pretty unanimous vote?

Mr. FLOOD of Virginia. I understand that it passed the Sen-

ate by a unanimous vote.

Mr. CANDLER of Mississippi. Do you think the trade relations existing between that country and this will justify the ex-

Mr. FLOOD of Virginia. I think the possibilities of trade between this country and Paraguay are enormous. It is a rich country that can be developed.

Mr. BURNETT. How much in the way of imports have we received from that country in the last 12 months?

Mr. FLOOD of Virginia. The amount is rather small com-

pared to what it ought to be, probably \$100,000. Mr. BURNETT. And what are our exports to that country? Mr. FLOOD of Virginia. About \$200,000.

Mr. BURNETT. And their exports to this country are prac-

Mr. FLOOD of Virginia. Oh, no. Compared with what we export to them, they export to us a very respectable quantity, probably \$100,000 worth of product.

Mr. MOORE. Will the gentleman yield for a question?

Mr. FLOOD of Virginia. I will.
Mr. MOORE. The report of the committee does not indicate whether the State Department has made any suggestion concerning these appointments. Has the committee any informa-

tion from any of the departments in regard to it?

Mr. FLOOD of Virginia. The committee has information from the Secretary of State that the State Department desires

to have this bill passed.

Mr. MOORE. The report does not indicate that the bill originated anywhere except with the committee. I wanted to know whether there was anything to support the proposition in the way of information from the department.

We did not originate the bill; it

Mr. FLOOD of Virginia. came to us from the Senate.

Mr. MOORE. It proposes to create two ministers, with a compensation of \$10,000 each?

Mr. FLOOD of Virginia. It proposes to create one additional minister at \$10,000 a year. The gentleman says that the report does not indicate that it originated anywhere but in the committee. The bill shows on its face that it passed the Senate, and I have stated that I know that the Secretary of State is anxious that it shall become a law, and I believe the President is also.

Mr. MOORE. Did the committee have any information from

the Secretary of State?
Mr. FLOOD of Virginia. It did have information from the

Secretary of State.

Mr. MOORE. I am exceedingly anxious to develop South American trade, but I would like to ask the gentleman how far two ministers at \$10,000 each would encourage United States trade with Uruguay and Paraguay?

Mr. FLOOD of Virginia. The gentieman knows that that is a problematical question. We can speculate on it. I believe it will greatly increase the trade.

Mr. MOORE. That is true of both countries; they are both

rich in soil.

Mr. FLOOD of Virginia. Yes; but I refer to Paraguay because the additional minister will go there. The industrial developments of Paraguay have been retarded by lack of people and encouragement from its richer neighbors.

Mr. MOORE. I think that condition holds throughout entire Will the gentleman kindly indicate how we South America.

are represented in Uruguay and Paraguay now?

Mr. FLOOD of Virginia. In Uruguay by a minister, who is also accredited to Paraguay, at a compensation of \$10,000 a

Mr. MOORE. And he performs both functions at the com-

pensation of \$10,000 a year?

Mr. FLOOD of Virginia. He does, but he rarely goes to Paraguay because it is 1,000 miles by the river, and the result is we practically have no representative in Paraguay.

Mr. MOORE. Then we are creating a new place at \$10,000

a year for Paraguay?

Mr. FLOOD of Virginia. Yes; that is it.

Mr. MOORE. Will the gentleman state how we have been represented in Paraguay heretofore?

Mr. FLOOD of Virginia. By this minister to Uruguay and Paraguay, who lives in Montevideo, visiting Paraguay occasionally. casionally.

Mr. MOORE. Have we a consular service in Paraguay? Mr. FLOOD of Virginia. Yes; we have one consul in Para-

And it has a population of about 700,000?

Mr. FLOOD of Virginia. Seven hundred and fifty thousand. Mr. MOORE. About twice as many as we have in the District of Columbia, and you propose to give a representative \$10,000 a year to look after the trade of a people whose population is not in excess of twice the number in the District of Columbia?

Mr. FLOOD of Virginia. I do not know that we are creating this minister to look after the trade; perhaps the consuls would do that. Sending a minister there would have a good moral effect and would make the people of that country feel more kindly to us, and probably in that way we would derive a good deal of trade from it. Germany gets the great bulk of the trade now, and England gets much more than we do.

Mr. MOORE. Does the gentleman from Virginia know what

the pay of the minister to Holland is?

Mr. FLOOD of Virginia. Twelve thousand dollars.

Mr. MOORE. And the minister to Belgium? Mr. FLOOD of Virginia. Twelve thousand dollars.

Mr. MOORE. Can the gentleman state the population of those countries?

Mr. FLOOD of Virginia. I will say that we pay no envoys extraordinary and ministers plenipotentiary who get less than extraordinary and ministers plenipotentiary who get less than \$10,000, and the compensation of the proposed minister to Paraguay is to be at \$10,000, the lowest salary paid.

Mr. STAFFORD. Will the gentleman yield?

Mr. FLOOD of Virginia. Certainly.

Mr. STAFFORD. Can the gentleman inform us what the practice of other governments is as to having a minister in

practice of other governments is as to having a minister in

Paraguay and Uruguay?
Mr. FLOOD of Virginia. I think a great many governments have ministers to Uruguay, but only a few of them have ministers to Paraguay.

Mr. STAFFORD. And the minister to Uruguay performs the

duties as to Paraguay? Mr. FLOOD of Virginia. As to representatives of other countries? No; I think not. Some have no kind of a diplomatic representative there.

Mr. STAFFORD. Is it not the custom to have a representa-

tive at Paraguay?

Mr. FLOOD of Virginia. Very few countries have a representative there

Mr. STAFFORD. A further inquiry: I assume that there is a substantive law for an American minister at Uruguay and Paraguay.

Mr. FLOOD of Virginia. For the two.

Mr. STAFFORD. As carried in the diplomatic bill?

Mr. FLOOD of Virginia. Yes.

Mr. STAFFORD. If you provide for a minister to Paraguay and also a minister to Uruguay, the question arises whether you would not have on the statute books a provision for a minister designated to both countries unless you repealed that substantive provision?

Mr. FLOOD of Virginia. I think this would repeal that.
Mr. STAFFORD. There is substantive law providing for a
minister to both Paraguay and Uruguay, and would not this
still be in existence? Would it not be better legislation to insert a repealing clause as to that former minister acting for both countries?

Mr. FLOOD of Virginia. I do not think that is necessary. Mr. STAFFORD. I submit the idea to the gentleman. Mr. GILLETT. Mr. Speaker, will the gentleman yield?

Mr. GILLETT. Mr. Speaker, Mr. FLOOD of Virginia. Yes.

Mr. GILLETT. Mr. Speaker, I would like to ask the gentle-man if this bill should pass, if he thinks that would give us any assurance that there would be enough patronage then to go around, so that incidents like the Pindell incident of dividing up an ambassadorship between two different men would not have to again occur?

Mr. FLOOD of Virginia. Mr. Chairman, the gentleman from Massachusetts need not be alarmed about the patronage ques-Massachusetts need not be alarmed about the patronage question. The Democratic administration, which is likely to stay in power for many years to come, will attend to that without the aid of the gentleman from Massachusetts. [Applause on the Democratic side.]

Mr. MANN. Mr. Chairman, I would like to call the attention of the House to the full and elucidating report which has been reader may be held by the House Committee on February.

been made upon this bill by the House Committee on Foreign Affairs. It is Report No. 38, first session of the Sixty-third Congress. That report is as follows:

The Committee on Foreign Affairs, to which was referred the bill (S. 2318) authorizing the appointment of envoys extraordinary and

ministers plenipotentiary to each Paraguay and Uruguay, having had the same under consideration, reports it back without amendment and with the recommendation that the bill do pass.

Having received that great amount of information from the House report, I sent for the Senate report upon the same bill, and I will read to the House the very elucidating and full Senate report. It is as follows:

The Committee on Foreign Relations, to which was referred the bill (S. 2318) authorizing the appointment of envoys extraordinary and ministers plenipotentiary to each Paraguay and Uruguay, having had the same under consideration, report said bill favorably.

The House report is a little fuller than the Senate report. The Senate report occupies four lines on a report page, and the House report occupies five lines, and I congratulate the distinguished gentleman in charge of the bill for the additional information furnished in his report over the information furnished in the Senate report.

Mr. PAYNE. Mr. Chairman, will the gentleman yield?

Mr. MANN. Certainly.

Mr. PAYNE. What more does the gentleman want? How could either of these committees state that there was a gentleman waiting to take this extra job? It would not look well in a report. [Laughter and applause on the Republican side.]

Mr. MANN. Mr. Chairman, I first wondered why the House committee or the Senate committee had not filed a more complete report and furnished additional information. When it is proposed to establish two ministries, appoint two officers in place of one to these two Republics, every Member of the House would naturally be prompted to inquire what commerce had they with the United States, what reasons are there for the United States being represented at each of the capitals, what business is being conducted in these countries, what relations have we with these countries? Yet when you investigate a little bit you will learn the reason why the committee did not give this information. We have no commerce with them; we have no possibility of any commerce to speak of with those

The country of Paraguay is principally noted, I believe, for the fact that owing to frequent revolutions in that country and the disasters which accompany those revolutions that they have 13 women to each man and boy, and old men and boys-13 women to each. I do not know whether the distinguished gentleman from Alabama [Mr. BURNETT], in charge of the immigration legislation of the House, desires to establish relations so that we may help out Paraguay by importing the surplus women there into the United States. There can be no other women there into the United States. There can be no other excuse. We have now one minister to those two countries. That minister is not overburdened. He has no work to perform except to kill time and draw his salary. Now, I appreciate the fact that with a new administration the desire for office is very great. We have already acted on one bill in the House reported from this distinguished committee to increase the salary of our diplomatic representative to Spain from \$10,000 to \$17,500, and perquisites. A distinguished citizen of the United States of eminent ability is waiting at the threshold of this door for the appointment as minister to Paraguay.

Mr. FLOOD of Virginia. May I interrupt the gentleman?

Mr. MANN. Certainly.

Mr. FLOOD of Virginia. Is the party to whom the gentle-man refers a constituent of the gentleman?

Mr. MANN. He is not. Mr. FLOOD of Virginia. I would like to know who he is. Mr. MANN. I would like to tell the gentleman and I would

be very glad to tell him privately.

Mr. FLOOD of Virginia. I have not heard of the gentle-man; if so, I will say to the gentleman he has been waiting a long time, because this bill has been on the calendar here for several months.

Mr. MANN. And the distinguished gentleman waiting for the place has been so impatient that even I have learned who he is. [Laughter on the Republican side.] That is not anything against him. I think if the place were to be filled that distinguished gentleman, and there may be a number of them, I do not know how many they have promised it [laughter], will fill the bill as well as anybody else. Why, Mr. Chairman, there are a great many functions and duties to be performed by these representatives of ours in foreign lands. For instance the distinguished gentleman-and he is a distinguished gentlemannow ambassador to Germany is having his difficulties there owing to his great popularity socially, and I read from a dispatch from Berlin dated November 29, two days after Thanks-

Thanks to Ambassador James W. Gerard's tact the friendly rivalry between the American colonies in Berlin and Hamburg as to which was to have the honor of entertaining him Thanksgiving Day was stilled most agreeably. most agreeably.

Think of it! We have a very distinguished ambassador to Germany, and the only duty which he has to perform is to "still" the rivalries between the American colonies in the different cities who desire the privilege of entertaining him. What a wonderful thing it is to have an opportunity to look at his face, to feed him with food, and let him drink the wine furnished by our people there. Oh, we ought to establish a new minister to Paraguay so that the one American citizen who may penetrate that country, in addition to the one now there, may have their rivalries stilled when they desire the privilege of entertaining the minister. [Applause on the Republican side. 1

Mr. Chairman, I reserve the balance of my time.

The CHAIRMAN. The gentleman has used 10 minutes. Mr. MURRAY of Oklahoma. Mr. Chairman and gentlemen, the chairman of the committee who offered this bill gives some information touching the peculiar purpose of this bill, but not all of it. So far as Uruguay is concerned, we ought to send to that country a minister. It is a country densely populated, with a great commerce, with a great Government. It is the only Government in the world where the paper money is worth more than the American gold dollar, so perfect is their system of paper money. But so far as Paraguay is concerned, a country, to compare concretely, which is more than half the size of Texas with something like 500,000 people.

Mr. MANN. Mr. Chairman, will the gentleman yield for a

question?

Mr. MURRAY of Oklahoma. I will.

Mr. MANN. I understood the gentleman to state that the Uruguay paper money was worth more than American gold.
Mr. MURRAY of Oklahoma. Yes, sir.
Mr. MANN. May I ask how that measure of value is fixed

and what it is measured in?

Mr. MURRAY of Oklahoma. It is measured in gold. [Laughter.]

Mr. MANN. I thought possibly it was worth more because

it was so bulky.

Mr. MURRAY of Oklahoma. I could give the gentleman that information, but I am not discussing the money question just now.

Mr. MANN. I thought the gentleman always discussed the money question as one which is uppermost in his mind.

Mr. MURRAY of Oklahoma. I do when it is important. think of it every day, especially when I want to pay my debts. But, Mr. Chairman, if this creation of an extra office is for the purpose of promoting commerce, then we are going at it The duty of a minister is not to look after the commercial interests of a country. The prime object of a minister is to look after the political side, the treaty-making side, the protection of citizens in foreign countries, and keeping tab upon the secret diplomacy of the prince and cabinets of the countries to which he is sent. Commerce is built up through our consuls and consular agents and mercantile agents from this country to other countries. We have these officers, and perhaps we may need more, but I can not see the necessity for sending a minister to a country like Paraguay, that has no railroad, that has, as stated by the gentleman from Illinois [Mr. MANN], 13 women to one man. As a matter of fact, they were compelled to pass a law providing that every Paraguayan woman that had two children by a foreigner should have a pension for life, in order to prevent imbecility as a result of the war spoken of by the gentleman from Virginia [Mr. FLOOD], which lasted for 20 years. I do not see the necessity from any standpoint for our appropriating extra money to create an office that can be of There is certainly no need for watching the diplomacy around the capital of Paraguay. There is no need certainly, of showing any particular good will when, as a matter of truth, they think more of us now than any other South American country does, due to the fact that there are less of Germans and English and other foreigners there, while the papers down in Uruguay are teeming with statements that the United States could not intervene in Mexico, as they stated months ago, because it would take 30,000 soldiers. That absurd statement cause it would take 30,000 soldiers. was made by foreign influence in order to break us down in But that feeling does not exist in Paraguay. The Uruguay. people of the latter country have heeded the wishes of this Government more than any other, and it occurs to me that the wisest policy is to let well enough alone, since the appointment of an additional minister would not result in the increase of commerce or increase of trade. Now, there could be only one good purpose in sending a minister to Paraguay, and that is, if we want to work off a surplus population in a country that is rich, where they grow tobacco wild, and the women make cigars which they sell at 1 cent apiece, and where wine is cheaper than water; if we want to work off a surplus popula-

tion, we could well afford the creation of this office, but, so far as the increase of commerce is concerned, there is nothing in the proposition. Therefore for one I shall vote against this bill. I happen to know a good deal about that country, because there are men, citizens of my section, who live there now. Others have gone and have returned during the present year. I understand that country thoroughly, and, knowing it, I do not bow to the wishes of any man, however great, who requests me to vote for this bill when I know that it is an expenditure of money for a mere show without any beneficial

return therefor. [Applause.]
Mr. MANN. Mr. Speaker, I yield to the gentleman from Pennsylvania [Mr. Moore] 10 minutes.
Mr. MOORE. Mr. Chairman, if our well-read and learned friend from Oklahoma [Mr. MURRAY] had made that speech two months ago, I would have suspected that it had induced a very distinguished citizen of the United States to visit that most interesting country. What he has said to-day has already whetted the appetites of some of the younger Members of Congress, who are inclined, in view of the paucity of compensation for serving the people here, to take advantage of this festive, this cheap, and happy life that he attributes to the people of

Mr. MURRAY of Oklahoma. I have no assurance "that

some one" of these men will be appointed.

Mr. MOORE. Some of them are on the other side, and have been considering the matter since the gentleman began to speak. But I thoroughly agree with the gentleman from Oklahoma [Mr. MURRAY] that there is too much of tinsel in some of our foreign diplomatic representatives and too little of the real commercial spirit to promote the industries of the United States.

What would be the effect of appointing a minister to a country like Paraguay, such as the gentleman, after all his careful reading, has described? It would be to put there one who would merely extend and be the recipient of courtesies at the hands of the people; one who would stand for show and glitter, and who perhaps would not remain in that country at all, but would find it convenient to be away on vacation most of his

A minister is not the man to promote the commerce of this country. He is a man to deal with social and diplomatic ques-He is very much in the class of the retired rear admiral. It is the consular representative who does the commercial work, and it is the consular representative who gets the least attention

when it comes to an increase of salary.

But the proposition here is this: That notwithstanding we hear much against "dollar diplomacy" just now, we find, after pretenses on that line have made their impress upon the country, that the party making them proposes, when men are beginning to ask for work in the mills, to create new places at \$10,000 a year for gentlemen to bask in with dress suits and gold tinsel and braid. If we are going to promote trade with Paraguay, let us see that we have a consular representative there whose business it will be to promote trade and improve our commercial interests. But if any gentleman in this House believes that it is necessary to appoint a \$10,000 man to do the society act down in Paraguay, where they have just twice as much population as there is in the District of Columbia, it seems to me he is breaking away a little bit from the true, oldfashioned Democracy about which we hear so much.

Now, I desire to ask the gentleman from Virginia [Mr. Flood], the chairman of this committee, for whom I have a high regard, what is the extent of our trade and commerce with Paraguay?

Mr. MURRAY of Oklahoma. Mr. Chairman, will the gentle-

man yield?

The CHAIRMAN. Does the gentleman from Pennsylvania yield to the gentleman from Oklahoma?

Mr. MOORE. I do.

Mr. MURRAY of Oklahoma. I want to call the gentleman's attention to the fact that the Democratic Party has usually said that we are in favor of "few or no diplomatic establish-

I understand that is the old theory of the Democratic Party, but now you need places in which to put \$10,000 men; and whereas the workingmen of the country, in my State and elsewhere, are beginning to ask where they will get their daily wage, you propose to create new places at \$10,000 per annum for high-grade men who never promoted trade at home, in order that they may have fine and dignified positions abroad.

Now will the gentleman from Virginia [Mr. Flood] tell us about the commerce and trade that we now have with Paraguay? Mr. FLOOD of Virginia. I would say to the gentleman from

Pennsylvania that I stated to the gentleman from Alabama [Mr. BURNETT] what our trade with Paraguay was.

Mr. MOORE. I did not so understand the gentleman.

Mr. FLOOD of Virginia. And I did not understand that the gentleman from Pennsylvania asked me that question.

Mr. MOORE. But if the gentleman from Alabama [Mr. BURNETT] asked it, I did not hear him. Since that question has arisen, however, and it is a vital question in connection with \$10,000 places, I will try to answer it. I have looked up the record and so far as I have been able to find it regarding Paraguay, and the statistics are very meager about that country, I find that in 1911, which is the latest statistical abstract can get on the subject, we exported to Paraguay just \$86,986 worth of goods for the year. Why, gentlemen, there is not a first-class business house on Pennsylvania Avenue that does not do more business than that within its own walls.

Mr. HARRISON. Mr. Chairman, will the gentleman yield? The CHAIRMAN. Does the gentleman from Pennsylvania

yield to the gentleman from Mississippi?

Mr. MOORE. Certainly.

Mr. HARRISON. Is it not true, though, that the commerce between Paraguay and the United States has increased within

the last few years?
Mr. MOORE. Within the last two years?

Mr. HARRISON. Within the last few years.
Mr. MOORE. That may be. I should hope so, because the figures for two years ago are so deplorable as to make it ridiculous to propose to send a \$10,000 minister down there to perform under the pretense of creating or improving trade. I find that not only was the total of our exports to that country the paltry sum of \$86,000, but that we imported from Paraguay goods to the value of only \$34,516. Now, that sort of a business would not reflect at all upon a 5-cent lunch counter in the District of Columbia; it would not reflect at all upon any of the 10-cent stores in any of the large cities. Any one of them would probably do more business than that, yet it is proposed, in spite of Democratic simplicity, to send a \$10,000 gold-braided official down there to encourage that trade. If the Democratic Party wants to take the responsibility, let it do it. I believe that such a minister ought not to be appointed at this time.

Mr. FLOOD of Virginia. I yield five minutes to the gentleman from Mississippi [Mr. Harrison].

Mr. HARRISON. Mr. Chairman, I am surprised that my friend from Pennsylvania [Mr. Moore], who has graced the Foreign Affairs Committee and who now graces the great Committee on Ways and Means in this House, should take the position that this bill was introduced for the purpose of sending certain young men from this country into Paraguay because there were a lot of ladies there. Certainly the gentleman does not believe that. Certainly the gentleman has a higher notion of the purposes of the Democratic administration than that. The gentleman ought to go further and not present here such puerile arguments as that

Mr. MOORE. Will the gentleman yield?

Mr. HARRISON. Yes. Mr. MOORE. The subject of ladies in Paraguay was introduced altogether by the gentleman from Oklahoma [Mr. Murbay], who knows much more about the subject than I do.

Mr. HARRISON. Ah, the gentleman from Illinois [Mr. MANN] first made that argument, and the gentleman from Penn-

sylvania [Mr. Moore] was backing him up in it.

Not long ago in the city of Mobile the President of the United. States made a great speech, in which he advocated closer and more friendly relations with South American countries. He pleaded for that ideal in this country that would bring about a closer relationship with all South American countries—not with any country in particular, but with all of them. It was a won-derful speech, a speech that will go down in history as one of the greatest ever made by any President in this country. And at this time, when we are trying to build up such a relationship with these countries, I can not for the life of me understand how such men as the distinguished leader of the Republican Party [Mr. MANN] and his friend from Pennsylvania [Mr. MOORE] can use such arguments as they have in opposition to this bill. You know that it is not for the purpose of creating some job for some man who desires it. You know that the Democratic administration would have no such idea, because if they had we would have to create thousands, and, I might say, millions of jobs. I know from experience in my own district. [Laughter.]

Gentlemen, in every South American country except Paraguay we have a minister. I can not understand why you can object now to us trying to build up this closer relationship with

those countries in commercial matters and object to sending this minister to Paraguay.

Mr. MANN. Will the gentleman yield for a question?

Mr. HARRISON. Yes.

Mr. MANN. Do we not have a minister to Paraguay now? Mr. HARRISON. We have, but he is also the minister to Uruguay.

But we are not without representation there? Mr. HARRISON. In no other instance do we send a minister to two countries jointly.

Mr. MANN. That may be, but the gentleman's statement would leave the inference that we were not represented in Paraguay by a minister.

Mr. HARRISON. We are not represented by a resident minister. I understand that we have a minister to Uruguay and

Paraguay who serves both of those countries.

I appeal to the membership of this House not to vote against this bill on any party grounds or because you think some fellow is going to get a job, that one more Democrat is going to get a position. That has not entered into our consideration at all. It is because we want to accept the opportunities now offered to us by South America and build up a closer relationship with those countries that we desire this ministry created, and I ask the membership of this House to vote for this resolution.

Mr. FLOOD of Virginia. I promised to yield to the gentle-man from Texas [Mr. Slayden], but he does not seem to be

in the Hall at the present moment.

Mr. Chairman, I listened with interest to the remarks of the gentleman from Oklahoma [Mr. MURRAY] on this subject, and what he said reminded me of a book I have read on the subject of South America, written by a Mr. Boyce, who took a trip to South America and who was in Paraguay only a short time. The book is very readable, but is not entirely accurate, nor is the information of the gentleman from Oklahoma, which was evidently obtained from this book, entirely accurate. The gentleman from Oklahoma is mistaken as to the extent of the bad conditions in Paraguay, although I recognize that they are bad enough. This war the gentleman speaks of did not last 20 years. It did last five years, and it was carried on with such devotion to country by the people of Paraguay that when it ended it was estimated that three-fourths of the men had been slain in battle or had died as an incident to the war.

Mr. MURRAY of Oklahoma. Will the gentleman yield for a

question?

Mr. FLOOD of Virginia. Yes.

Mr. MURRAY of Oklahoma. It depends on what the gentle-man means by the word "war." There was a bandit warfare going on for 20 years during the reign of Lopez and Lynch. Lopez was the President, or dictator, and Lynch was his paramour from France, and they destroyed the family as a unit of state, and that condition lasted for 20 years

Now, if he means actual battles in the field he is right about it, but I insist that there was a bandit warfare going on for 20

years such as we find to-day in northern Mexico.

Mr. FLOOD of Virginia. The gentleman refers to Lopez the

Second, who was not on the throne 20 years.

Mr. MURRAY of Oklahoma. It began before he went upon the throne.

Mr. FLOOD of Virginia. No; it did not. His father was the dictator of Paraguay until he died, and they had peace with the world. Uruguay is a prosperous and rich country, but a country that has constantly been at war among themselves and with the surrounding nations for several hundred years. But in Paraguay there has been no war but this one. It was brought on by Lopez and his French paramour. It was aggressive and resulted in the destruction of the male population, and that is the reason there are so many more women than men, Now, the weakness of the gentleman's argument lies in this: This great Nation ought to extend help to the weak and not to the strong. It is a fixed policy, a wise policy, of this Government to encourage in every way the Republics of South America. Those that need the most encouragement are those that are weak, not those that are strong. · [Applause.]

The gentleman from Pennsylvania says that we want it for the patronage that is in it. The action of the present administration in applying civil-service rules to the consular and lower diplomatic officers is a sufficent answer to such an argument. The gentleman from Pennsylvania says that our commerce in 1910 was only \$68,000. I want to call his attention to the fact, as did the gentleman from Mississippi [Mr. Harrison], that in the past two years that commerce has trebled and more than trebled, but the gentleman is of that stand-pat character of politician who does not keep abreast of these progressive times and does

not know that the world is moving.

I want to tell him that in 1910 Great Britain, by reason of her kindly offices to this isolated country, had a commerce of over \$1,000,000. It is time that this country was taking advantage of the work that we are doing to uplift and help these people to get what advantage we can for our commerce.

It is true the diplomatic representative is not the business agent of a country. The consul is supposed to do that, but, as the gentleman from Mississippi [Mr. Harrison] so well said, if we send this representative there not dressed in gold braid, as the gentleman from Pennsylvania has pictured him, but send him there as a plain American citizen, it will encourage the people of that country to look to this country for their trade and exchange and will tend to establish good will, good feelings, and commerce between these countries.

Mr. MOORE. Will the gentleman yield?

Mr. FLOOD of Virginia. I do. Mr. MOORE. Speaking of the commerce of Great Britain, does Great Britain have a minister there?

Mr. FLOOD of Virginia. No; they have consuls there, and

have had them for many years.

Mr. MOORE. That is just the point. The consul is the business agent and the minister is not. It seems that Great Britain has got this trade in spite of the fact that she has not had a minister there.

Mr. FLOOD of Virginia. We want to do what we can to aid the country. We know its weakness, and we want the moral effect it will have on the people of that country for this great Nation to recognize them and return the compliment of their sending a minister here.

Mr. Chairman, I see nothing in the arguments that have been advanced against the passage of this bill.

Mr. KINDEL. Will the gentleman yield? Mr. FLOOD of Virginia. I will.

Mr. KINDEL. I would like to inquire of the gentleman what are the freight rates with reference to commercial conditions between Paraguay and this country?

Mr. FLOOD of Virginia. I suppose the merchant marine of

England has something to do with the great commerce that they have had there, and that their rates are lower than ours.

Mr. KINDEL. I want to say to the gentleman that the freight rates are about one-half of our rates, and we would not be in it at all.

Mr. FLOOD of Virginia. We hope to establish a merchant marine of our own.

Mr. KINDEL. How about the parcel post? What international arrangement have we upon that question?

Mr. FLOOD of Virginia. I will let the gentleman find that out from others.

Mr. KINDEL. I would like to know before I vote upon this matter, for as I feel now I would vote against it. Mr. MURRAY of Oklahoma rose.

The CHAIRMAN. Does the gentleman from Virginia yield to the gentleman from Oklahoma?

Mr. FLOOD of Virginia. Certainly.

Mr. MURRAY of Oklahoma. Mr. Chairman, I wanted to ask the gentleman from Virginia if he was not aware that Brazil holds the bonds for many hundreds of thousands of dollars of that little country Paraguay, which are due?

Mr. FLOOD of Virginia. I am aware of that fact.

Mr. MURRAY of Oklahoma. And that Argentine Republic stands in exactly the same relation?

Mr. FLOOD of Virginia. Yes.

Mr. MURRAY of Oklahoma. And that each of these great countries has said, "Pay me what they owe me and take the country"? I ask the gentleman if he does not think that is one of the reasons why we have not tried to busy ourselves in the policy affairs and diplomacy of Paraguay, for fear that we would bring on a difficulty and occupy the same relation to them that we have now with Mexico—have an obligation that we can not meet?

Mr. FLOOD of Virginia. Mr. Chairman, I do not, because I believe in all of South America there is not a population as

peaceable and peace loving as that in Paraguay. Mr. MURRAY of Oklahoma. If his object is to main-

Mr. FLOOD of Virginia. Oh, let me answer the gentleman's question.

Mr. MURRAY of Oklahoma. Very well.

Mr. FLOOD of Virginia. In the 300 years or more that that country has been settled by white men it has had but one war.
Mr. MURRAY of Oklahoma. That is true.
Mr. FLOOD of Virginia. And that was the war to which the

gentleman alluded, which was a war of extermination carried on by the most powerful countries of South America. exact these bonds, but they do not expect to collect them. I think that we would remove the possibility of any such obligation as that to which the gentleman refers by giving that coun-

try proper recognition.

Mr. MURRAY of Oklahoma. If the purpose of this country is to maintain as an integral republic the Republic of Paraguay

as against Argentina and Brazil, your minister is all right; but if you do that it carries with it the responsibility to back it with arms and not follow the policy that befalls us now in Mexico; and when you do it you bring on these new obligations that you can not meet.

Mr. FLOOD of Virginia. Mr. Chairman, I do not understand the gentleman's argument. He has just stated that neither the gentleman's argument. Brazil nor Argentina would have Paraguay, and in the next breath he states that if we extend this recognition to Paraguay we will have to maintain the integrity of her territory with our Army.

Mr. MURRAY of Oklahoma. The gentleman misunderstands what I said about either country. They can not agree upon the separation. I apprehend that under the A B C alliance of South America there will be a partition of this country, or that one of those large countries will pay the other for it and take it.

Mr. FLOOD of Virginia. I do not think there is any ground

for the gentleman's fears.

Mr. MURRAY of Oklahoma. Evidently the gentleman from Virginia never read anything about South America except the newspaper report, but I happened to have found other authorities upon the subject.

Mr. FLOOD of Virginia. I think I have studied the history

of South America very carefully.

To sum up the situation, I will make a brief statement, some

of which may be a repetition.

Paraguay has an area of 171,204 square miles and had a population in 1910 of 752,000. Spanish rule in Paraguay continued until 1811, when Paraguay declared its independence. ernment from 1811 to 1840, under the direction of Dr. Francia, pursued a policy of isolation, and this policy was continued by Carlos Antonio Lopaz, who was elected President in 1844. Upon his death, in 1862, his son, Francisco Solano Lopaz, succeeded to power and began a dispute with Brazil which resulted in war and the union of the Argentine, Brazilian, and Uruguayan forces against Paraguay. After a struggle of more than five years Lopaz was defeated and killed in 1870. A new constitution was proclaimed, the legislative authority was vested in a Congress of two houses, and the executive authority intrusted to a President elected for a term of four years. The war devastated the country, and in it most of the men were either killed or died of hunger and sickness.

The country has great possibilities in an agricultural way and offers an excellent field for cattle raising. It also possesses very extensive forests of valuable woods. It exports dried meats, hides, Paraguayan tea, oranges, tobacco, timber, and quebracho extracts, and imports textiles, provisions, hardware, spirits, drugs, and clothing. The imports for 1910 amounted to spirits, drugs, and clothing. The imports for 1910 amounted to \$6,247,987.42, and the exports for the same year amounted to \$4,785,623.64. The exports to the United States for 1912 amounted to \$161,661, as against \$51,917 in 1906, showing a large increase in the trade with this country. The imports into Paraguay from the United States for 1911 amounted to \$86,986. The exports of Great Britain to Paraguay for 1910 amounted to \$1,066,478.88. The Brazilian Steamship Co. is understood to be extending its service, which is already in operation between New York and Buenos Aires, about 3,000 miles up the Plata River, carrying passengers and cargo, and stopping at Asuncion, the capital of Paraguay. The bulk of the trade of Paraguay is with Germany, Argentina, Brazil, and Great Britain, in the order named.

Not only is there opportunity to increase trade with Paraguay, but already there are large American investments in that country, which will likely be added to in the near future.

The United States sent Edward A. Hopkins as special agent to Paraguay on June 10, 1845, and on April 27, 1852, it empowered John S. Pendleton, then charge d'affaires of Argentina, and Robert C. Schenck, then minister to Brazil, to negotiate a treaty of commerce. On August 5, 1856, it empowered Richard Flizpatrick to exchange the articles of ratification of the treaty concluded by Pendleton. On September 9, 1858, James B. Bow lin was made commissioner to Paraguay. He was succeeded June 8, 1860, by Cave Johnson, as commissioner to adjust certain claims of the United States and Paraguay Navigation Co. On June 8, 1861, Charles A. Washburn was made commissioner and afterwards minister resident to Paraguay.

On June 27, 1868, Martin T. McMahon was made minister resident, and he was succeeded on April 28, 1870, by John L. Stevens, who was accredited as minister resident to both Uruguay and Paraguay. He was succeeded on January 8, 1874, by John C. Caldwell as minister resident to Uruguay and Paraguay. On September 23, 1890, George Maney was appointed envoy extraordinary and minister plenipotentiary to Uruguay and Paraguay, and this Government has continued

ever since to accredit its minister to both countries, the minister

There are many reasons why the United States should accredit a separate mission to Paragnay. The United States maintained separate diplomatic representation to Paragnay practically from 1844 to 1869. Since 1912 Paraguay has maintained an envoy extraordinary and minister plenipotentiary and legation staff in the United States, which had been discontinued since 1893. Brazil, Argentina, Italy, and Peru all maintain separate missions in Paraguay. Each of the South American Republics feel a certain degree of pride in having a mission Paraguay is the only Latin-American country to which the United States does not send a separate minister.

Paraguay is a wonderland; the soil is rich; the rainfall is

normal and sure; the elevation makes a healthful and pleasant climate; and it produces nearly every variety of food products

raised in any country of South or North America.

Oranges and bananas grow in great profusion; corn is produced wherever planted; grass is fresh and green the year around; cattle are free from disease and can be produced in great numbers; the lumber supply is of the finest character and is almost unlimited in quantity.

The population is sparse, there being only about 750,000 people in a territory of 170,000 square miles—a territory larger than the States of Iowa, Indiana, and Illinois combined, but

they come of patriotic and heroic stock.

When this thinly settled country thought her rights were being invaded by Brazil, Argentina, and Uruguay, she declared war and bravely carried on that war until probably three-fourths of her men were killed. Greater patriotism and heroism has never been displayed by any nation in the world's

These people are now to a great extent ignorant. Outside aid must assist in the uplift of the people and the development of the resources of the country, and this Nation could do no better act—no act that would accomplish more for humanity and be of greater service to Latin-America-than to lend every

aid and encouragement possible to Paraguay. [Applause.]

The CHAIRMAN. If no other gentleman desires to address the committee, the Clerk will read the bill for amendment under

the five-minute rule.

The Clerk read the bill.

Mr. FLOOD of Virginia. Mr. Chairman, I move that the committee do now rise and report the bill with the recommendation that it do pass.

The CHAIRMAN. The gentleman from Virginia moves that the committee do now rise and report the bill with the recom-

mendation that it do pass. The question was taken, and the Chairman announced that

the ayes had it-Mr. MURRAY of Oklahoma. Division, Mr. Chairman.

The CHAIRMAN. Does the gentleman from Oklahoma insist on a division?

Mr. MANN. This is in Committee of the Whole House on the state of the Union.

Mr. MURRAY of Oklahoma. Then let it go.

The motion was agreed to.

Accordingly the committee rose, and Mr. Hay having assumed the chair as Speaker pro tempore, Mr. Caisp, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill S. 2318, and had directed him to report it back to the House without amendment, with the recommendation that the bill do pass.

The bill was ordered to be read a third time; was read the

third time.

The SPEAKER pro tempore. The question is on the passage of the bill. The question was taken, and the Chair announced the noes

seemed to have it. On a division (demanded by Mr. Flood of Virginia) there

were—ayes 64, noes 62.

Mr. MANN. Mr. Speaker, I ask for the yeas and nays.

Mr. MURRAY of Oklahoma. Mr. Speaker, I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 162, nays 155, answered "present" 3, not voting 114, as follows:

So the bill was passed.

The Clerk announced the following pairs:

For the session:

Mr. Adamson with Mr. Stevens of Minnesota.

Mr. BARTLETT with Mr. BUTLER. . Until further notice:

Mr. AIKEN with Mr. AINEY. Mr. ALEXANDER with Mr. DUNN.

Mr. Bell of Georgia with Mr. Graham of Pennsylvania.

Mr. Brown of West Virginia with Mr. Barchfeld, Mr. Burgess with Mr. Britten.

Mr. Cantrill with Mr. Falconer.
Mr. Clark of Florida with Mr. Guernsey.
Mr. Carlin with Mr. Howell.
Mr. Covington with Mr. Hughes of West Virginia.

Mr. Curley with Mr. Langley. Mr. Dale with Mr. Martin.

Mr. Dupré with Mr. Lindquist.
Mr. Edwards with Mr. McGuire of Oklahoma.
Mr. Faison with Mr. McLaughlin.
Mr. Goldfogle with Mr. Miller. Mr. HAMLIN with Mr. MORIN. Mr. HARDY with Mr. NORTON.

Mr. Hardy with Mr. Norton.
Mr. Helm with Mr. Parker.
Mr. Holland with Mr. Platt.
Mr. Howard with Mr. Poeter.
Mr. Humphreys of Mississippi with Mr. Roberts of Nevada.

Mr. Lever with Mr. Roberts of Massachusetts.

Mr. McCoy with Mr. SHREVE. Mr. McClellan with Mr. Vare. Mr. Sparkman with Mr. Towner. Mr. WEBB with Mr. WOODRUFF.

Mr. Connolly of Iowa with Mr. Moss of West Virginia.

Mr. O'BRIEN with Mr. BARTHOLDT. Mr. TEN EYCK with Mr. EDMONDS.

Mr. CLANCY with Mr. HAMILTON of New York.

Mr. METZ with Mr. MERRITT.

Mr. BUTLER. Mr. Speaker, did the gentleman from Georgia,

Mr. BARTLETT, vote?

The SPEAKER. He did not.
Mr. BUTLER. Mr. Speaker, I have a general pair with him. I voted "nay." I wish to withdraw that vote and vote "present."

The name of Mr. BUTLER was called, and he voted "Present."

Mr. EAGAN. Mr. Speaker, I wish to vote "aye."
The SPEAKER. Was the gentleman in the Hall listening

when his name should have been called?

Mr. EAGAN. I was not.

The SPEAKER. The gentleman does not bring himself within the rule and can not be recorded.

The result of the vote was announced as above recorded. On motion of Mr. Flood of Virginia, a motion to reconsider the vote by which the bill was passed was laid on the table.

VOLUNTEER FORCES OF THE UNITED STATES.

The SPEAKER. The Clerk will resume the call of committees. Mr. HAY (when the Committee on Military Affairs was ciled). Mr. Speaker, I call up House bill 7138, a bill on the called). Union Calendar.

The SPEAKER. The House automatically resolves itself into Committee of the Whole House on the state of the Union,

with the gentleman from Tennessee [Mr. Houston] in the chair.
Mr. HAY. Mr. Speaker, pending the action of the House in
going into the Committee of the Whole House on the state of the Union, I ask unanimous consent that general debate on this bill be for two hours, one hour to be controlled by the gentle-man from California [Mr. Kahn] and the other hour to be controlled by myself.

The SPEAKER. Pending the going into Committee of the Whole House on the state of the Union, the gentleman from Virginia [Mr. Hav] asks unanimous consent that general debate on this bill be limited to two hours, one hour to be controlled by himself and the other by the gentleman from California [Mr. KAHN]. Is there objection?

Mr. MURDOCK. Reserving the right to object, Mr. Speaker, I would like to ask the gentleman from California [Mr. KAHN]

if I can have some of that time.

Mr. KAHN. I have no demands for time as yet. I can give the gentleman some time, certainly.

Mr. MANN. Reserving the right to object, Mr. Speaker, I will ask the gentleman from Virginia whether, after this bill is passed, it is the intention that the House then adjourn, or proceed further with the call of committees?

Mr. HAY. I presume that the House will then adjourn, as it will be 5 o'clock at least, with two hours for general debate

and then reading the bill for amendment.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none. The gentleman from Tennessee [Mr. Hous-TONI will take the chair.

The House resolved itself into Committee of the Whole House on the state of the Union for the consideration of the bill H. R.

7138, with Mr. Houston in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 7138, which the Clerk will report,

The Clerk read the title of the bill, as follows:

A bill (H. R. 7138) to provide for raising the volunteer forces of the United States in time of actual or threatened war.

Mr. HAY. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from Virginia [Mr. HAY] asks unanimous consent that the first reading of the bill be spensed with. Is there objection?
Mr. SLAYDEN. Mr. Speaker, I object. I would like to have dispensed with.

the bill read.

The CHAIRMAN. Objection is made. The Clerk will read

The Clerk read as follows:

The Clerk read as follows:

\*\*Be it esacted, etc., That the land forces of the United States shall consist of the Regular Army, the organized land militia, and such volunces stated in the state of the Regular Army, the organized land militia, and such volunces of the Regular Army, the organized land militia, and such volunces of the Regular Army, the organized land militial, and such volunces of the Regular Army, the organized land militial, and such volunces will even is imminent, and only after Congress shall have authorized the President to raise such a force: \*Provided\*, That all calistments in the War of the War of

officers so appointed, including all such officers of the Organized Militia called into the military service of the United States, shall not exceed the ratio of 1 officer to 200 enlisted men for all militia and volunteer forces called into the military service of the United States: Provided further, That the number of volunteer staff officers appointed in any grade in the various staff corps and departments shall not exceed in any staff corps or department the proportionate strength of regular officers of the corresponding grade as established by law for the corresponding staff corps or department of the Regular Army: Provided further, That the President may appoint, by and with the advice and consent of the Senate, volunteer chapians at the rate of one for each regiment of Volunteer Infantry, Cavalry, and Field Artillery, and one for every 12 companies of Volunteer Coast Artillery raised, with rank corresponding to that established by law for chapians in the Regular Army.

sponding staff corps or department of the Regular Army; Provided further, That the President may appoint, by and with the advice and consent of Volunteer Classification, by and with the advice and consent of Volunteer Classification, and the provided of the provided further classification of the provided further classification of the provided further. That is appointing the volunteer officers authorized by this act the President may select them from the Regular Army, from those duly qualified and registered pursuant to section 23 of the act of Congress approved January 21, 1903, from the country at large, from the organized land militia of the District of Columbia, and, upon the recommon of the several States and Territories in proportion, as far as practicable to their respective populations, and as far as compatible with the interers of the military service, from the localities from which the troops with which the officers appointed upon said recommendation are to the country at large preference shall be given those who shall have had shonorable service in the Regular Army, the National Guard, or the volunteer forces, or who shall have been graduated from educational right, and the sample of the country at large preference shall be given those who shall have had shonorable service in the Regular Army, the National Guard, or the volunteer forces, or who shall have been graduated from educational right, and not to exceed four Regular Army officers shall, at the property of the property vacuates their field and staff; And provided further, That Regular Army officers appointed as officers of Volunteers under this act shall not thereby vacuate their field and staff; And provided further, That Regular Army officers appointed under the result of the Regular Army, through appointments of the Regular Army, through appointments and the property vacuates in the field and staff; And provided fur

ized land militia organizations in the service of the United States from said State or Territory.

Sec. 11. That in the organization of a recruiting system, after Congress shall have authorized the raising of volunteer forces, the President is authorized to employ retired officers, noncommissioned officers, and privates of the Regular Army, either with their rank on the retired list or, in the case of enlisted men, with increased noncommissioned rank; or he may, by and with the advice and consent of the Senate, appoint and employ retired officers below the grade of colonel, with increased volunteer commissioned rank not to exceed one grade above that held by them upon the retired list, or retired enlisted men

with volunteer commissioned rank not above the grade of first Heutenant: Provided, That retired officers and enlisted men while thus employed shall not be eligible for transfer to the field units, but shall receive the full pay and allowances of the respective grades in which they are serving, whether volunteer or regular, in lieu of their retired pay and allowances: Provided jurther, That upon the termination of the duty or, in case of those given volunteer rank, upon muster out as volunteers the officers and men shall revert to their retired status.

SEC. 12. That, except as otherwise specifically prescribed by law, all officers provided for in this act shall be subject to such assignments of duty and such transfers as the President may direct: Provided, That medical officers of Volunteers when detailed as consulting surgeons shall not exercise command over the hospitals to which they may be assigned for duty, except that by virtue of their commissions they may command all enlisted men: Provided further, That medical inspectors shall be detailed for duty with each army, army corps, and division, and for the base and lines of communications, and that no officer shall be detailed for duty as a medical inspector except he be experienced in military sanitation.

SEC. 13. That all officers and enlisted men of the volunteer forces shall be in all respects on the same footing as to pay, allowances, and pensions as officers and enlisted men of corresponding grades in the Regular Army.

SEC. 14. That the commander of a division or higher military unit is authorized to appoint, from time to time, military boards of not less than three nor more than five officers of the volunteer forces to examine into the capacity, qualifications, conduct, and efficiency of any commissioned officer of said forces within his command: Provided, That each member of any such board is adverse to the continuance of any officer, and if the report be approved by the President, such officer shall be discharged from service in the volunteer forc

Page 12, strike out section 14 and add as a new section the fol-

lowing:
"Sec. 14. That all laws and parts of laws in conflict with the provisions of this act be, and the same are hereby, repealed."

Mr. HAY. Mr. Chairman, this is a bill for the purpose of raising volunteer forces in time of war or when war is threat-It will not cost a cent in the event there is no war, but nobody can say what it will cost if there should be a war.

The necessity for a law of this kind has been recognized ever since the Spanish War, and from time to time efforts have been made to pass a law of this character. A bill of this character was introduced in the Fifty-ninth Congress, also one in the Sixtieth Congress, and one in the Sixty-first Congress, and one in the Sixty-second Congress which was reported from the Senate Committee on Military Affairs but did not pass the Senate.

The advantages of the proposed law are that it makes certain and puts into operation a scheme by which, in the event of war, volunteer troops may be called out without confusion. Those of us who were here when the Spanish War began remember that the volunteer law at that time was adopted only three days before the war began and was very imperfect and unsuitable to the occasion, and that amendment after amendment was necessary to be made while the war was going on.

This bill has been very carefully studied by the War Department, by the War College, and by the Committee on Military Affairs, and is so drawn as to meet all the emergencies and contingencies that may occur in the event of war.

This law, as I have said, will not cost a cent, and it has these advantages, which have been pointed out by the War College:

(1) It will enable plans to be formulated and put in workable shape, so that Volunteers can be speedily organized at the outbreak of war.

(2) It should prevent the payment of bounties.

(3) It will do away with short-term service with all its evils.

(4) By procuring the necessary number of men at the beginning of a war for a long period drafting should not be necessary.

(5) The law should contribute toward the saving of men and money during a war and a decrease in the pension list thereafter.

(6) No appropriation of money is involved in the proposed law.

Some features of this bill are a little different from those of any other Volunteer bill which has ever been passed. For one thing the period of enlistment is for the war.

Gentlemen will remember that during the Spanish War the period of enlistment was for two years. The result of it was that during the Philippine insurrection a great many regiments were depleted. Some men came home, although there were those who stayed beyond their term of enlistment to perform a patriotic duty.

But it has been the history of every war, from the Revolutionary War down to the present time, that short enlistments were most detrimental to the Army and to the cause for which the Army was fighting. In the Revolutionary War the continental troops of the line did not become effective and veteran soldiers until Congress enlisted them for the war. The same was true during the Mexican War. The same was true during the Civil War. They had to come at last to enlisting men for the war. So in the light of the experience of the past this bill provides that the enlistment shall be for the war.

There are other features in the bill which I shall be very glad to explain if anybody desires to ask me any questions on

the subject.

Mr. MURDOCK. Will the gentleman answer a question?

Mr. HAY. I will if I can.

Mr. MURDOCK. It is a very simple question, and yet I want to be certain about it. This bill does not interfere, either by inference or otherwise, with the State militia?

Mr. HAY. Not at all. It has nothing to do with the State militia. The State militia will continue as an organization.

Mr. MURDOCK. In the event of war would not the present officers of the State militia be rather cut out and eliminated in view of this new volunteer force?

Mr. HAY. As the law now stands and under the Constitution, if there was a war, the only way that the Organized Militia could get into it would be by volunteering.

Mr. MURDOCK. I understand that.
Mr. HAY. And therefore they would have to come under the provisions of this bill.

Mr. MURDOCK. But ordinarily, as in the case of the Spanish War, do not the officers of the State militia pass into the

service of the United States?

Mr. HAY. They do not unless they volunteer.

Mr. MURDOCK. Did not that happen in a great many cases in the Spanish War?

Mr. HAY. It happened under the provisions of the bill of April 22, 1898, in which there was a provision that where units came in, for instance, a company or a battalion or a larger unit, then they came into the service of the United States, and the United States accepted all of them as they came in with the rank that they had.

Mr. MURDOCK. Is a repetition of that precluded by this

Mr. HAY. It is not, for the reason that it was found by the experience of that war that it was not a good thing to do; that a great many of the officers who came in in that way were not as efficient as they ought to have been; and that it did not work well; and, besides, a volunteer army is a Federal force and not a State force.

Mr. MURDOCK. I understand that.

Mr. HAY. It is absolutely a Federal force, and therefore should be officered by the President of the United States.

Mr. MURDOCK. Under this bill, in case of war, the gift of

colonelships and majorships, and so forth, will be in the Presi-

dent and not in the governors of the States?

Mr. HAY. That is true, except that there is a provision in this bill which recommends to the President that he select these officers from officers of the National Guard or Organized Militia and from military schools.

Mr. MURDOCK. I noticed that paragraph in the bill as the Clerk read it. How binding is the expression in the bill that preference shall be given to them?

Mr. HAY. The gentleman can answer that as well as I can. I presume that the President, whoever he might be, when a war occurred would feel himself bound not only by the language of

the bill but by the exigencies of the situation-Mr. MURDOCK. I suppose the latter more than the former.
Mr. HAY (continuing). That he would feel bound to appoint men who had been in the National Guard and who had received instruction at our school at Fort Leavenworth and the service schools throughout the country generally.

Mr. BURKE of Wisconsin. I should like to ask the gentle-

man a question.

Mr. HAY. I yield to the gentleman.

Mr. BURKE of Wisconsin. If the bill now pending before the committee becomes a law, can the gentleman tell me if it is within the purpose of his committee to sidetrack or smother the so-called Federal pay bill?

Mr. HAY. Does the gentleman mean the bill for the pay of the Organized Militia?

Mr. BURKE of Wisconsin. Yes.

Mr. HAY. I will state to the gentleman that this bill has nothing whatever to do with the Organized Militia, nor does the committee intend to smother any bill. But the gentleman will observe that this bill will only go into effect in time of war. The militia-pay bill proposes to begin now, in time of peace, to pay the members of the Organized Militia a certain per cent of what is paid to the Regular Army.

Mr. BURKE of Wisconsin. One question more. The gentle-

man does not consider that this bill in any way conflicts with

the so-called militia-pay bill?

Mr. HAY. It does not in any way.

Mr. GOULDEN. Will the gentleman yield for a question? Mr. HAY. I will yield to the gentleman from New York.

Mr. GOULDEN. On page 2, line 20, there is this provision:

Provided further, That all enlisted men received into the service in the volunteer forces shall, as far as practicable, be taken from the several States and Territories and the District of Columbia in proportion to the respective populations thereof.

I want to ask the gentleman, suppose one or more of the States fail to give the quota which is required of them in order to comply with this condition, would a draft be instituted by the Government?

Mr. HAY. A draft could not be instituted under this bill. There is no provision by which any draft could be put into

Mr. GOULDEN. How would you make up the deficiency? Mr. HAY. That would be for Congress then in session to determine. This bill is a purely volunteer bill, and no man

could be drafted under any provision in it.

Mr. GOULDEN. As an illustration, one-half of the States might fail to fill their quotas, and something would have to be

Mr. HAY. Something would have to be done by the Congress then in session.

Mr. GOULDEN. There is no provision in the bill for it Now, another question: Is there any proposition in your bill which provides for properly officering the various regiments and companies of the volunteer forces except that you say preference should be given to those in the National Guard?

Mr. HAY. No. There is a provision in the bill which says, on

page 6, line 22:

Provided, That in appointments from the country at large preference shall be given those who shall have had honorable service in the Regular Army, National Guard, or the volunteer forces, or who shall have been graduated from educational institutions in which military instruction is compulsory.

Mr. GOULDEN. That answers my question. I think it is a very wise provision and the bill, as I understand it now, an excellent one.

Now, Mr. Chairman, unless somebody else desires Mr. HAY.

to ask a question, I reserve the balance of my time.

Mr. KAHN. Mr. Chairman, I have no requests for time on this side except from the gentleman from Illinois [Mr. Mann] and the gentleman from Pennsylvania [Mr. HULINGS]. now yield five minutes to the gentleman from Illinois [Mr. MANN].

Mr. MANN. Mr. Chairman, with reference to a bill of this kind I am quite willing to follow the advice of the distinguished gentleman from Virginia [Mr. HAY] and the distinguished gentleman from California [Mr. KAHN] and the rest of the Committee on Military Affairs who, I suppose, have been properly aided by the military authorities of the Government.

It seems to me that perhaps this bill comes in at a rather apt time. I have refrained during the year from any discussion of the Mexican situation, and I do not intend to discuss it now. Of course, the gentleman from Virginia [Mr. Hay], the administration, and all other gentlemen connected with the bill will deny vigorously that this bill is presented now because it is

preparing for a war with Mexico.

I remember very well when the first proposition was presented to this House in reference to the War with Spain. The gentle-men from Illinois, my colleague, Mr. Cannon, chairman of the Committee on Appropriations, arose one day in the House and presented a bill to appropriate \$50,000,000 and place it in the hands of the President of the United States. I was one of the new Members of the House. I received one minute of time. I took that one minute of time to say that at least there was one man in the House who was not attempting to deceive himself, while all the others had said that this was not in expectation of war, but to prevent war, I knew that it was because we were expecting war.

I fear that the same situation arises now. I should greatly regret a war with Mexico. I have no complaint to make of the attitude which the President has taken in his dealings with Mexico, although I confess that I can see no end to the road which he is now pursuing. He said yesterday to us that the Huerta government in Mexico would fall soon. Very likely; I think that any government in Mexico which does not receive the moral support of our Government will not last a great length of time, and I doubt whether any government in Mexico constituted by the so-called constitutionalists, or the other revolutionists, will last with or without the support of our Govern-

I do not see any escape from chaos and anarchy in Mexico under the plan which we are now pursuing. Of course, if that runs on very long it means war; so that I think the gentleman from Virginia [Mr. Hay] is justified in introducing this bill on the first day of the session-if that is when it was introducedcalling his committee together at least on the second day of the session, ordering it reported on the second day of the session and calling the bill up for consideration on the third day of That haste, it seems to me, is justified by theory of the administration. Of course I am aware that this bill is not an orginal measure in this Congress-that a bill like it has been introduced heretofore-and I will ask the gentleman from Virginia if I am not correct in supposing that a bill like this has been floating around in Congress for a number of years?

Mr. HAY. I just stated that ever since the Fifty-ninth Congress a bill of this character had been before Congress.

Mr. MANN. That only emphasizes what I am saying. we have a bill like this which has been floating around Congress since the Fifty-ninth Congress, which was not considered in the last Congress, although that House was Democratic, as is this House; yet in this session is reported on the second day of the session and called up for passage on the third day, following the message from the President of the United States on yesterday.

Mr. Chairman, I hope that we will avoid trouble with Mexico, but I do not believe we will if we follow the lines we are now

pursuing.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. KAHN. Mr. Chairman, I yield 10 minutes to the gentle-

man from Pennsylvania [Mr. HULINGS].

Mr. HULINGS. Mr. Chairman, this bill, as I understand it, is designed to provide a volunteer force in case of the imminence of war or on the declaration of war. It will, if put into effect, provide a body of raw troops that will be of little or no account for six or nine months after they are enrolled.

Under the Constitution of the United States, when the President makes a call for troops, of which he is the Commander in Chief after they get into the service, the governor of each State is empowered to appoint the officers. That is a constitutional provision that would be hard to get around except by amending the Constitution. That fact, throughout all these years, has created a jealousy between regular officers and officers of the militia or of the National Guard.

By act of Congress, after war was declared in 1898, it was provided that the National Guard organizations could be enlisted in a body, providing that the officers, below the rank of general officers, should be the officers of the troops enlisted, but in every case it still required the man individually to enlist, and when they were mustered in the officers who had been their former National Guard officers were commissioned. That state of affairs created considerable friction. It was only natural that a man who had given up his whole life to the profession of arms, and who had achieved the rank of captain or of first lieutenant, should feel somewhat rankled when he went into the service to find himself in company with a lot of youngsters, volunteer officers, superior in rank who obviously were deficient in military knowledge.

The Dick Act attempted in a way to provide for the service of the Organized Militia in case of war, but the Attorney General has decided that under the present law and the Constitution National Guard troops who consider themselves in the first line of defense can not be sent out of the country. They could be used within the country, but they could not be sent

abroad.

A bill has been before Congress for years which asked for payment of the National Guard troops during attendance at drill. Everyone appeared to be in favor of that, but when the War Department got hold of it it put into the bill amendments which practically gave the Secretary of War the veto power over the constitutional right of the governors of the different

States to appoint the officers. This would seem to be entirely reasonable were it not for the constitutional inhibition, for without doubt there are many officers in the National Guard who are not proficient, who are not as good as the average trained Army officer. Nor should they be expected to be, for they have spent all their lives in civil life, and the knowledge

of arms and military science is merely incidental,

We have now this bill, and it simply sidesteps that situation. It takes away from the governor the right to appoint the officers. It puts into the power of the President the appointment of the officers, and although he may appoint from where he chooses, as I understand it, the whole bill simply means to put into the hands of the President the officering of the troops who may volunteer in case of war. It is true he may appoint but four regulars to any regiment, but in case of war there would not be enough regulars to officer a large army, and the President would appoint the others from whence he liked, and with the Presidential appointments in the Spanish War in recollection, I am thoroughly of opinion that governors of States would be quite as qualified to make good appointments as a President. If the House is ready to take the appointments from the governors, here is their opportunity. For my part I do not see that this bill in any particular is an advantage over the present law and the present situation. This bill does not propose to organize troops until war is declared-

Mr. HAY. Or imminent.

Mr. HULINGS. And then they are to be enrolled and mus-red. The same thing can be done now with the National Guard that is already organized. Those same men could be enlisted and sent to a foreign war, and the only difference would be that the governors would appoint the officers. Under the law as it is at present any volunteer force can be enlisted under the call of the President, but the governors of the States would appoint the officers.

Mr. HAYDEN. Will the gentleman yield?

Mr. HAYDEN. Whi the gentleman to say it was a Mr. HAYDEN. I understood the gentleman to say it was a provision of the Constitution of the United States that the governors of States should name the officers of volunteers.

Mr. HULINGS. The officers of the militia.

Mr. HAYDEN. There was some confusion, it seems to me, between volunteers and militia. There is no doubt about the right of governors of States to name the officers of the militia.

Mr. HULINGS. If I am to understand a volunteer is only militiaman who does volunteer, then there would be no difference.

Mr. HAYDEN. That is the point I desired to bring out.
Mr. HULINGS. But with a bill of this kind, where a distinction is made between Organized Militia, between the militia and the Organized Militia, and between both of them and a volunteer force such as is provided for in this bill, then there would be a distinction-

Mr. HAYDEN. The gentleman does not insist-

Mr. HULINGS (continuing). But until this bill is passed there is no such distinction, and the governor does have the right to appoint officers. The bill when passed, as I understand it, only changes the situation by giving the appointment of officers to the President of the United States instead of-

Mr. HAY. I would like to say to my friend that he misunder-stands the purposes of the bill. The bill provides that these officers shall be named by the President, and the recommendation is put in there as to which people he should prefer in naming them; but in the present law, the law of 1898—the law under which we are now living—there is no provision in that law where governors of States can name officers of volunteer organizations. The only proment of the National Guard-The only provision of that bill is when a regi-

Mr. HULINGS. Enlist in a body.

Mr. HAY. Volunteers in a body; then the governor can name the officers. Here they could come in and be named by the President, not the governors.

Mr. HULINGS. I was not speaking of the act of 1898-

Mr. HAY. What other act is it? Mr. HULINGS. But of the Constitution itself.

Mr. HAY. The Constitution never provided, and there is no clause in it which provides, for the naming of officers of the volunteer force, a Federal force, by the governors of States. If the gentleman can show me, I would like to see it.

Mr. HULINGS. The only reference, as I understand it, in

the Constitution is to the militia.

Mr. HAY. Of course not. Mr. HULINGS. It is all militia or Regular Army.

Mr. HAY. Of course not. This bill is under the provisions of the Constitution which authorizes the Congress to raise armies. Mr. KAHN. Will the gentleman yield?

Mr. HULINGS. Certainly.

Mr. KAHN. It has been the experience in the five great wars that this country has had that only 71 per cent of the men who went into the wars were Regular Army men. Twenty-two and a fraction per cent were Organized Militia men and 69.7 were volunteers, volunteers of the character that are provided for in this bill, so that more than two to one of the men who have fought our battles have come into the service at the outbreak of the war, and have gone, not into the Regular Army, not into the Organized Militia, but into the volunteer forces of the United States. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. HAY. Does the gentleman desire more time? Mr. HULINGS. Yes.

Mr. HAY. How much? Mr. HULINGS. Five minutes.

Mr. HAY. I yield the gentleman that much time.

Mr. TRIBBLE. Mr. Chairman, I am opposed to this bill, unless it is amended. The Army is seeking and receiving too

much power from legislation in this House. here I propose to resist these encroachments on the rights of the private citizen. I would like to ask the gentleman if it is not a fact that these military organizations in the past in this country have been raised by young men usually who aspire to military honor, and if it is not the purpose of this bill to exclude the private citizen from sharing military honors?

Of course, in entering the service they are inspired by a feeling of patriotism; but, after all, they wish to rise to military honor and afterwards to rise to honor in the community in which they live by reason of the fact that they have served with so much distinction in the Army. Is not that usually the case of the leaders who raise these companies in the various

communities?

Mr. HULINGS. Very likely, sir.

Mr. TRIBBLE. That is usually the case. This bill provides for the appointment by the President of all officers for the volunteer forces and requires that preference in their selection be given to those who have had military training and instruction in the Regular Army, National Guard, or military schools.

Now, is it not a fact that, if this bill is passed, the young men who raise the companies in volunteer service—get up the companies, work them up, and volunteer, expecting the governor to issue them a commission-will be absolutely excluded from any military honor by being officers of the companies

which they raise? Mr. HULINGS. I do no think they would be excluded. I think many of them would be selected. The President of the United States in making these appointments would naturally choose the appointees from those who would be best qualified.

Mr. TRIBBLE. The bill says that he shall give preference to these men who have been given military service and trained in the schools. That is what the bill says.

Mr. HULINGS. The bill says "from the Regular Army,"

and that, I think, is the purpose of the bill.

Mr. TRIBBLE. Yes, sir; to turn the whole thing over to the Regular Army.

Mr. HULINGS. That is it; exactly.

Mr. TRIBBLE. Have the Regulars or the Volunteer soldiery

fought the battles of this country in the past?

Mr. HULINGS. Well, in a country where we do not have much of a Regular Army, if we ever do have a war, of course, it must be the volunteers, as it always has been, who will do the fighting.

Mr. TRIBBLE. Yes; the volunteer soldiers should share the honor and glory of the service as well as bear the burden at I have a letter on my desk in my office from a the front. distinguished young man in Texas, written in the last 70 days, asking me to notify him of the fact as quickly as I can if we have war with Mexico. He is a private citizen. He says, "I desire to raise a company. I desire to go to the front. I want to be captain of that company." Is that not the spirit and the feeling that inspires almost all young men who go to the front? Is it not a feeling and a hope that they will be promoted or that they will be advanced in the future, and is it not a fact that they have received distinction in the past by honorable, patriotic service, and is it not a fact that they raise these companies with that hope, desire, and expectation?

Mr. HULINGS. That may very likely be true, but I notice these companies are raised when there is not any prospect of In all of the great States there is a National Guard, whose proficiency is the continuing wonder of the inspecting officers

of the Regular Army.

Mr. TEMPLE. Will the gentleman yield?

Mr. HULINGS. Yes.

Mr. TEMPLE. I would like to call attention to the provision on page 7, lines 6 and 7, as follows:

And not to exceed four Regular Army officers shall, at the same time, hold commissions in any one regiment of Volunteer Cavalry—

Now, that is not turning the whole regiment over to the

Regular Army.

Mr. HULINGS. Which simply means, Mr. Chairman, that the colonel and the three battalion commanders in all these organizations will hold these field offices. The others may and probably will be political appointees.

Mr. McKENZIE. I would like to ask the gentleman a ques-

The CHAIRMAN. Will the gentleman from Pennsylvania [Mr. HULINGS] yield to the gentleman from Illinois [Mr. Mc-

Mr. HULINGS. I will.
Mr. McKENZIE. You have had an experience in Army life?
Mr. HULINGS. Very little.
Mr. McKENZIE. I want to ask you if in your judgment, after having had that experience, it would not be the part of wisdom to have at least one regular officer in every regiment

of volunteer soldiers?

Mr. HULINGS. Well, I do not know but that the gentleman is right. It is just the most natural thing in the world that men who devote their whole lives to the profession of arms will be more competent at any time than the ordinary average man who would enlist. That is his trade. And yet at the beginning of the Spanish War, if there was ever any such hopscotch, loose-ended work that was ever done in any military expedition in the whole world, it was in that expedition that went to Santiago from Key West.

The CHAIRMAN. The time of the gentleman from Pennsylvania [Mr. HULINGS] has again expired.

Mr. HULINGS. I would like enough time to say this—

Mr. KAHN. Mr. Chairman, I yield two minutes to the gentle-

man from Pennsylvania. The CHAIRMAN. The gentleman from Pennsylvania is rec-

ognized for two minutes more.

Mr. HULINGS. I want to say this, that I have a realizing sense of the work that is being done by the officer of the Regular Army. He has made enormous progress since 1898. I do not believe there is a body of trained soldiers in the world equal to the Regular Army officers of to-day, but there is not enough of them to officer even a small army, and the deficiency would be

made up of political appointees.

If a force led and officered by such men as the trained officer of the Regular Army were the issue here, I would say pass the bill. You can get the same kind of men in the ranks without passing this bill—men who have already had long training in the National Guard, already officered by men of high military spirit. You can weed out the incompetent officers, but if you pass this bill, I think you will find difficulty in enlisting men who have no voice in choosing their officers.

Mr. GOULDEN. Mr. Chairman, I would like to ask the gen-

tleman from Pennsylvania just one question.
The CHAIRMAN. Does the gentleman yield?

Mr. HULINGS. Certainly.
Mr. GOULDEN. As an old and experienced national guardsman who knows what he is talking about, and is therefore familiar with the formation of regiments, battalions, and companies, does not the gentleman think that it is a wise provision to have these Regular Army officers take charge of a regiment or of the three battalions until those Volunteers are whipped into line and properly disciplined?

Mr. HULINGS. That depends altogether on whom you pick out. I think you can pick out volunteer officers who are just as good battalion officers as any you could get from the Regular Army; but what is far more to the point, I think the average militia officer is far superior to the average man who would

be appointed under this bill.

Mr. GOULDEN. The experience of the Civil and the Span-

ish-American Wars does not carry out my friend's contention.

Mr. KAHN. Mr. Chairman, I now yield 10 minutes to the gentleman from Pennsylvania [Mr. TEMPLE].

The CHAIRMAN. The gentleman from Pennsylvania [Mr.

TEMPLE] is recognized for 10 minutes.

Mr. TEMPLE. Mr. Chairman, this bill divides the land forces of the United States into three classes—the Regular Army, the Organized Land Militia, and such volunteer forces as Congress may provide.

This bill has to do with the third of these classes; not with the Regular Army, not with the Organized Militia or National | he saw after he was appointed.

Guard, but with the volunteer forces which are to be raised by enlistment from the unorganized militia. It further provides that the raising of the volunteer forces shall not take place until after the Organized Land Militia, known as the National Guard, has been called into the military service of

the United States.

The bill does not provide for the transfer of any Regular Army officers to State troops-that is, to the National Guardbut provides that each of these volunteer regiments yet to be organized may have not to exceed four Regular Army officers. Now that will not interfere with any young man who wishes to raise a company and perhaps to get a commission as captain of that company, provided he has had any military experience either in the Regular Army or the National Guard or is on the list of eligibles which the existing law provides shall be made

or has had training in a military school.

Mr. TRIBBLE. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Pennsylvania

yield to the gentleman from Georgia?

Mr. TEMPLE. Yes. Mr. TRIBBLE. But he must have had that training. he has not had that training, he can not get in under this bill. Mr. TEMPLE. He must be competent, and I think that is a

very wise provision. Mr. KAHN. Mr. Chairman, will the gentleman yield? Mr TEMPLE. Certainly.

Mr. KAHN. Does the gentleman think that the young man who desires to be an officer of a company, who "seeks the bubble reputation at the cannon's mouth," but has had no training whatever, should be given charge of a company or a regiment of men? Is it not a fact that most of the deaths that have occurred in our wars have been due to the fact that untried officers have been appointed over men and have not been able to take care of the men? And is it not much better for the service that men who have had some military training should be appointed to those positions?

Mr. TEMPLE. I should think that is undoubtedly the right

policy.

Mr. MURDOCK. Mr. Chairman, will the gentleman yield to

The CHAIRMAN. Does the gentleman from Pennsylvania

yield to the gentleman from Kansas?

Mr. TEMPLE. Very willingly.
Mr. MURDOCK. Does the gentleman intend to say in what he has said here to us that a young man in a community who gets up a troop or company and gets into the State militia can, under the provisions of this bill, become a volunteer colonel?

Mr. TEMPLE. Certainly; the thing is possible. But it de-

pends on the man and on circumstances.

Mr. MURDOCK. I understood from the statement of the gentleman from Virginia [Mr. Hay], the chairman, that these officers would be appointed by the President from the Regular Army officers of the United States.

Mr. TEMPLE. Not to exceed four from the Regular

Mr. GOULDEN. In any one regiment.
Mr. TEMPLE. Yes. Some appointments may be made from the Regular Army, but there can not be more than four of them to any one regiment of volunteers. The other officers of the regiment, more than 50 of them, must be men who have had experience in the National Guard, or training in a military school, or must have had their names enrolled, according to the law already existing, on the eligible list. So long as those men last, they are to have the preference, and then the President, if he needs to do so, may appoint men who have not had military training.

Mr. TRIBBLE. Mr. Chairman, will the gentleman yield? Mr. TEMPLE. Yes. Mr. TRIBBLE. If this bill had been on the statute books when Col. Roosevelt got up his regiment or when Mr. Bryan was appointed as a colonel, could either one of them have received a commission as colonel in the Spanish-American War?

Mr. TEMPLE. I think Mr. Roosevelt had had experience in the National Guard of New York.

Mr. TRIBBLE. When?
Mr. TEMPLE. Previous to that time.
Mr. PLATT. He did not receive his commission as colonel. Mr. TRIBBLE. And what experience had Mr. Secretary Bryan for military service?

Mr. TEMPLE. I do not know whether he had any experience. Mr. TRIBBLE. He would have been excluded under this

Mr. TEMPLE. I think very likely he would, and he would have seen just about as much service if he had been excluded as

Mr. TRIBBLE. He would have seen service in the Spanish-American War if he had been given the opportunity.

Mr. LOBECK. Does the gentleman think that John A. Logan had had any military experience before the Civil War?

Mr. TEMPLE. I do not know.

Mr. LOBECK. He had not, and there was no better leader than Black Jack John A. Logan, of Illinois.

Mr. TEMPLE. I have no objection to men without experi-

ence having an opportunity to get experience.

Mr. LOBECK. And you would not have finished the Civil War so soon if it had not been for the men without military experience, but with unlimited patriotism and commanding ability as leaders, whose efforts induced the boys to enlist.

Mr. TEMPLE. I will ask the gentleman if he is in favor of abolishing West Point because there are occasional men like

John A. Logan? Mr. LOBECK. There is no intention to abolish West Point.

Mr. TRIBBLE. Nobody wants to abolish West Point. Mr. LOBECK. You are anxious to get your boys in there.

Mr. TEMPLE. I see I should have made my point a little

Now, I should like to ask the chairman of the committee, Mr. Hay, whether I misunderstood his statement a little while ago in which, as I understood him, he said that the present National Guard can not get into the service of the United States

without volunteering?

Mr. HAY. I said so; in time of war, yes; except, of course, under the provisions of the Constitution which authorized the President to call them out to enforce the laws of the United States, to suppress insurrection, and to repel invasion; but the present National Guard can not go into the service of the United States for the purposes of war, to be sent out of the country, unless they volunteer.

Mr. TEMPLE. To be sent out of the country?

Mr. HAY. Yes.

Mr. TEMPLE. I do not know whether the law of May 27, 1908, has been repealed.

Mr. HAY. It has not.

Mr. TEMPLE. The law of May 27, 1908, section 3, amending section 4 of the law of 1903, provides:

That whenever the United States is invaded or in danger of invasion from any foreign nation, or of rebellion against the authority of the United States, or the President is unable with the regular forces at his command to execute the laws of the Union, it shall be lawful for the President to call forth such militia of the State or of the States or Territories or of the District of Columbia as he may deem necessary to repel such invasion, suppress such rebellion, or to enable him to execute such laws and to issue his orders for that purpose through the governor.

Section 4 of the law of May 27, 1908, amending section 5 of the law of 1903, provides:

That whenever the President calls forth the Organized Militia of any State, Territory, or the District of Columbia to be employed in the service of the United States he may specify in his call the period for which such service is required, and the militia so called shall continue to serve during the period so specified, either within or without the territory of the United States, unless sooner relieved by order of the President.

The same law, amending section 7 of the law of 1903, pro-

That every officer and enlisted man of the militia who shall be called forth in the manner hereinbefore prescribed shall be mustered for service without further enlistment, and without further medical examination previous to such muster except for those States and Territories which have not adopted the standard of medical examination prescribed for the Regular Army: Provided, That any officer or enlisted man of the militia who shall refuse or neglect to present himself for such muster, upon being called forth as hereinbefore prescribed, shall be subject to trial by court-martial and shall be punished as such court-martial may direct ject to trial may direct.

Mr. HAY. Mr. HAY. The gentleman is referring to the Dick law? Mr. TEMPLE. The Dick law as amended by the law of May 27, 1908.

Mr. HAY. I understand that is the law, but so far as it provides for the service of the National Guard outside the limits of the United States that law is unconstitutional, and the late Attorney General gave an opinion that it was unconstitutional.

Mr. TEMPLE. There has never been any court decision on

that point, has there?

Mr. HAY. There has never been any court decision, because there has never been any occasion for it; but anybody who reads the Constitution is bound to come to the conclusion that you can not send the Organized Militia of the country without the limits of the United States.

Mr. TEMPLE. Now, I should like to call attention to the fact that this bill is not to be put into operation at the pres-

ent time.

Mr. HAY. You mean the bill now under consideration? Mr. TEMPLE. The bill under consideration. Mr. HAY. Of course not; because it can only be put into operation in time of war.

Mr. TEMPLE. Or when war is imminent.

Mr. HAY. Or when war is imminent. Mr. TEMPLE. But the point I want to make is this: That even then the President can not put this law into operation until Congress authorizes him to do so. On page 2, line 24, of this bill it is-

Provided further, That when the raising of a volunteer force shall have been authorized by Congress, and after the organized land militia of any arm or class shall have been called into the military service of the United States, volunteers of that particular arm or class may be raised and accepted into said service in accordance with the terms of this act, regardless of the extent to which other arms or classes of said militia shall have been called into said service.

After Congress authorizes the President of the United States, when the emergency arises, and after the Organized Militia has been called into the service, then this plan which we prepare now at our leisure can be put into operation with speed. We shall not have to wait at that time until we invent a system.

Mr. KAHN. The gentleman understands that the President of the United States would not have any money to pay the

Volunteers unless Congress acts.

Mr. TEMPLE. Exactly so. It seems to me that there is a great deal of wisdom in this bill. It may not be the best bill that can be devised, but I feel, if I am competent to express any opinion, that it is the best plan that has yet been devised, and think it is very well worth a trial.

Mr. KAHN. Will the gentleman from Virginia now use some

of his time?

Mr. HAY. Mr. Chairman, I have had no request for time on this side. When the gentlemen get through I may say a

few words myself.

Mr. KAHN. Mr. Chairman, I believe that some of the criticisms that have been aimed at the bill by several gentlemen are not based upon facts. The volunteer forces of the United States in our wars heretofore have been the backbone of the American Army-not the organized State militia, not the Regular Army, but the volunteers. At the present time, under the law of 1898, the President is allowed to appoint one Regular Army officer to a regiment of volunteers. That is a serious defect in that law. Under the provisions of this bill he is permitted to appoint one to each separate battalion of volunteers, and not to exceed four Regular Army officers to each regiment of volun-It has been the experience of this country in time of war that great numbers of enlisted men have died in the military camps because the officers did not know how to take care of them. One of the complaints that I heard after the Spanish War when the volunteer regiments returned from the field of operations was that the volunteer officers, or rather the officers of the militia companies who had been placed in command of enlisted men, did not know, in many cases, how to look after the welfare of those enlisted men. I believe that under the provisions of this bill there will be no complaints of that kind in the future. I believe that the officers will be men who will have had enough military training and experience to know how to take care of the enlisted men who are under them, the fight-

The main advantages that will accrue to the country under this bill were explained quite fully by the chairman of the

committee

Mr. HULINGS. Will the gentleman allow an interrogatory?

Mr. KAHN. I will; yes.
Mr. HULINGS. I would like to ask the gentleman from California in what respect the volunteer forces, if we should declare war to-morrow-in what respect the volunteer forces when enlisted under this bill would differ from those if enlisted under the law as at present, except as to the appointment of officers?

Mr. KAHN. There are quite a number of differences, which are set out in the report.

Mr. HULINGS. I mean, as to the method of getting the men. Mr. KAHN. As to the method of enlisting the men there is practically no difference. The men would enlist under this bill just as they have enlisted heretofore; but the men who will be appointed to commissioned rank, in my judgment, will be better trained men than those who have heretofore been appointed to commissioned rank whenever we have had a war on our hands.

Mr. HULINGS. Does the gentleman understand that the Santiago expedition, manned by regular officers almost entirely, regular troops, some 17,000 of them, who were down there two or three weeks, did not know how to take care of their men and keep them from getting sick; and did not they sign a round robin to get the whole of them sent back?

Mr. KAHN. I am perfectly familiar with the conditions that prevailed down there at that time. But this country has made wonderful progress in military affairs since that war. That war certainly educated our officers and enabled them to realize the defects of our military system. In addition to that, when there have been wars in other parts of the world since then we have had American officers attached to the contending armies for the purpose of observation, and the reports they have made to this Government on the military operations of the contending forces have been of inestimable value to the officers and the men who are in the Army.

Mr. HULINGS. Does the gentleman understand that in these great advances in knowledge, especially of camp sanitation, that has taken place since the War with Spain, the regular officers got very many of their ideas of camp sanitation from the Na-

tional Guard of Pennsylvania?

Mr. KAHN. I am glad to hear that they did; but if any Member of this House has had an opportunity to attend one of the joint maneuver camps of Regular Army and Organized Militia organizations that Congress has provided for since the War with Spain, and has had an opportunity of seeing how modern sanitary methods are employed in the field, he will realize the great advance that has been made in camp sanitation since the Spanish War.

I do not have the apprehension that the distinguished leader of the minority [Mr. Mann] has about war with Mexico. I do not fear that there is anything of that kind in prospect. Personally, I am absolutely opposed to intervention in Mexico. [Applause.] But I also believe that we have absolutely no right to interfere in the internal affairs of any sister Republic or of any foreign country. [Applause.] I feel that this bill has been demanded for many years. I believe it to be a step in the right direction, and I earnestly hope that the House will pass it without much delay. [Applause.]
Mr. HAY. Mr. Chairman, is the gentleman from California

through upon his side?

Mr. KAHN. Yes; I do not desire to take up any further

Mr. HAY. Mr. Chairman, I do not desire to take up any further time in respect to this bill, as there seems to be very little opposition to it. However, I wish to correct an erroneous impression sought to be made by the gentleman from Illinois [Mr. Mann] that this bill is brought in now because of the conditions which now exist in Mexico. I desire to say that this bill was introduced last August, and if there had been any need for it it would have been brought here long before this. It seems to me from what the President said to us on yesterday, and from the conditions now prevailing, that war is much further away from us now than it was last August. I do not believe that there is going to be any war with Mexico, and the introduction of this bill and its early passage has been because I am anxious to get through the work which is imposed upon my committee as soon as I possibly can, in order that we may get away from here at some decent time next summer and not sit here all of the year. [Applause.] For that reason I pre-pared this bill, I got the War Department to make a report upon it, and I asked the committee to act upon it as soon as possible. If the committee had had the power, under the conditions prevailing during the extra session, I should have asked for action then, and, as I say, action is not taken now with a view to the conditions in any other country. Mr. Chairman, I ask the Clerk to read the bill for amendment under the fiveminute rule.

The Clerk read as follows:

The Clerk read as follows:

SEC. 4. That the volunteer forces shall be subject to the laws, orders, and regulations governing the Regular Army in so far as such laws, orders, and regulations are applicable to officers or enlisted men whose permanent retention in the military service, either on the active list or on the retired list, is not contemplated by existing law; and no distinction shall be made between the Regular Army, the Organized Militia while in the military service of the United States, and the volunteer forces in respect to the conferring upon officers or enlisted men of brevet rank, medals of honor, certificates of merit, or other rewards for distinguished service, nor in respect to the eligibility of any officer of said Army, militia, or volunteer forces for service upon any court-martial, court of inquiry, or military commission: Provided, That the organization of all units of the line and of the signal troops of the volunteer forces shall be the same as that prescribed by law and regulations for the corresponding units of the Regular Army: Provided further, That when military conditions so require the President may organize the land forces of the United States into brigades and divisions and such higher units as he may deem necessary, and the composition of units higher than the regiment shall be as he may prescribe: Provided further, That to each regiment of Infantry, Cavalry, and Artillery, and to each battalion of Engineers and Signal Corps troops organized under this act, there shall be attached the same personnel of the Medical Department as are attached to like organizations of the Regular Army: Provided further, That the organization of the Coast defenses, of machine-gun detachments, establishments of the Medical Department, remount depots, military trains, secret-service agencies, military prisons, lines of communication, including their supply depots, and of other adjuncts that may be necessary in the prosecution of war, and the organization of which is not otherwise provided for by l

The CHAIRMAN. The Clerk will report the committee amendments.

The Clerk read as follows:

Page 3, line 14, strike out the words "Organized Militia." and insert e words "organized militia."

Mr. HAY. Mr. Chairman, the purpose of that amendment is simply to strike out the use of the capital letters in the spelling of the words "Organized Militia."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was ageed to. The Clerk read as follows:

Page 3, line 16, after the word "respect," insert the words "to promotion or."

The CHAIRMAN. The question is on the amendment.

The amendment was agreed to.

The Clerk read as follows:

The Clerk read as follows:

Sec. 6. That to provide the staff officers that will be necessary in the various staff corps and departments in time of war or white war is imminent, and that are not otherwise provided for in this act, the President is authorized to appoint, by and with the advice and consent of the Senate, such number of volunteer staff officers of grades authorized by law for the Regular Army as he may find necessary for such corps and departments: Provided, That the total number of such staff officers so appointed, including all such officers of the Organized Militia called into the military service of the United States, shall not exceed the ratio of one officer to 200 enlisted men for all militia and volunteer forces called into the military service of the United States; Provided further, That the number of volunteer staff officers appointed in any grade in the various staff corps and departments shall not exceed in any staff corps or department the proportionate strength of regular officers of the corresponding grade as established by law for the corresponding staff corps or department of the Regular Army; Provided further, That the President may appoint, by and with the advice and consent of the Senate, volunteer chaplains at the rate of one for each regiment of Volunteer Infantry, Cavalry, and Field Artillery, and one for every 12 companies of Volunteer Coast Artillery raised, with rank corresponding to that established by law for chaplains in the Regular Army. Regular Army.

Mr. KAHN. Mr. Chairman, I desire to call to the attention of the chairman of the committee that on page 5, line 17, the "Organized Militia" are spelled with capitals and assume, to conform with the practice in the early part of the bill, he would want to have that changed to small letters.

Mr. Chairman, I offer that amendment,

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 5, line 17, strike out the capitals in "Organized Militia" and insert lower case type.

The question was taken, and the amendment was agreed to. The Clerk read as follows:

The Clerk read as follows:

SEC. 8. That the temporary vacancies created in any grade not above that of colonel among the commissioned personnel of any arm, staff corps, or department of the Regular Army, through appointments of officers thereof to higher volunteer rank, shall be filled by temporary promotions, according to seniority in rank from officers holding commissions in the next lower grade in said arm, staff corps, or department; and all temporary vacancies created in any grade by temporary promotions shall in like manner be filled from, and thus create temporary vacancies in, the next lower grade; and the vacancies that remain thereafter in said arm, staff corps, or department, that can not be filled by temporary promotions, as prescribed in this section, may be filled by the temporary appointment of officers of such number and grade or grades as shall maintain said arm, corps, or department at the full commissioned strength authorized by law: Provided, That officers temporarily promoted or appointed under the terms of this section shall be so promoted or appointed by the President, by and with the advice and consent of the Senate, for terms that shall not extend beyond the termination of the war or, if war does not occur, the passing of the imminence thereof, as defined by the President's proclamation, and upon the expiration of said terms said officers shall be discharged from the positions held by them under their temporary promotions or appointments: Provided further, That officers temporarily promoted under the provisions of this section shall not vacate their permanent commissions, nor shall they be prejudiced in their lineal or relative standing in the Regular Army under permanent commissions, by reason of their services under temporary commissions authorized by this section.

The committee amendments were read, as follows:

The committee amendments were read, as follows:

Page 7, line 20, strike out the word "from" and insert in lieu thereof the word "of."

Page 8, line 10, strike out the word "does" and insert in lieu thereof the word "shall."

Page 8, line 11, after the word "occur," insert the word "beyond."

The question was taken, and the amendments were agreed to.

The Clerk read as follows:

The Clerk read as follows:

Sec. 10. That in time of war all organizations of the land forces shall be recruited and maintained as near their prescribed strength as practicable. For this purpose the necessary rendezvous and depots shall be established by the Secretary of War for the enlistment and training of all recruits, and in order that officers may be available for recruiting duty the President is authorized, by and with the advice and consent of the Senate, to appoint officers of Volunteers of the proper arm of the service, additional to those elsewhere herein authorized, in numbers not to exceed at the rate of 1 major, 4 captains, 5 first lieutenants, and 5 second lieutenants for each organized regiment of Cavalry, Field Artillery, or Infantry, each 3 battalions of Engineers, or each 12 companies of Coast Artillery; that for purposes of instruction and discipline the troops at recruit depots herein authorized may be organized into companies and battalions, at the discretion of the Secretary of War, with noncommissioned officers and privates of such grades and numbers as may be prescribed by the President. The recruit rendezvous and recruit depots herein prescribed shall be under the direct control of the Secretary of War, and shall render their reports and

returns to The Adjutant General of the Army: Provided, That to maintain the organized land militia organizations in the military service of the United States at their maximum strength the recruiting rendezvous and depots in any State or Territory may, at the request of the governor thereof, enlist and train recruits for the organized land militia organizations in the service of the United States from said State or Territory.

The committee amendments were read, as follows:

Page 9, line 10, after the word "war," insert the words "or while war is imminent."

Page 9, line 11, after the word "forces," insert the words "in the military service of the United States."

The question was taken, and the amendments were agreed to. The Clerk read as follows:

The Clerk read as follows:

SEC. 11. That in the organization of a recruiting system, after Congress shall have authorized the raising of volunteer forces, the President is authorized to employ retired officers, noncommissioned officers, and privates of the Regular Army, either with their rank on the retired list or, in the case of enlisted men, with increased noncommissioned rank; or he may, by and with the advice and consent of the Senate, appoint and employ retired officers below the grade of colonel, with increased volunteer commissioned rank not to exceed one grade above that held by them upon the retired list, or retired enlisted men with volunteer commissioned rank not above the grade of first lieutenant: Provided, That retired officers and enlisted men while thus employed shall not be eligible for transfer to the field units, but shall receive the full pay and allowances of the respective grades in which they are serving, whether volunteer or regular, in lieu of their retired pay and allowances: Provided further, That upon the termination of the duty or, in case of those given volunteer rank, upon muster out as volunteers the officers and men shall revert to their retired status.

The committee amendments were read, as follows:

The committee amendments were read, as follows:

Page 10, line 24, after the word "exceed," insert the words "in the case of any officer."

Page 10, line 25, after the word "by," strike out the word "them" and insert the word "him."

Page 11, line 9, after the word "volunteers," strike out the word "the" and insert the words "said retired."

Page 11, line 10, after the word "and," insert the word "enlisted."

The question was taken, and the amendments were agreed to. The Clerk read as follows:

SEC. 12. That, except as tollows:

SEC. 12. That, except as otherwise specifically prescribed by law, all officers provided for in this act shall be subject to such assignments of duty and such transfers as the President may direct: Provided, That medical officers of Volunteers when detailed as consulting surgeons shall not exercise command over the hospitals to which they may be assigned for duty, except that by virtue of their commissions they may command all enlisted men: Provided further, That medical inspectors shall be detailed for duty with each army, army corps, and division, and for the base and lines of communications, and that no officer shall be detailed for duty as a medical inspector except he be experienced in military sanitation.

The committee amendment was read, as follows:

Page 11, line 20, at the beginning of the line, insert the words "field army, or."

The question was taken, and the amendment was agreed to. The Clerk read as follows:

Sec. 14. That the commander of a division or higher military unit is authorized to appoint, from time to time, military boards of not less than three nor more than five officers of the volunteer forces to examine into the capacity, qualifications, conduct, and efficiency of any commissioned officer of said forces within his command: Provided, That each member of any such board shall be superior in rank to the officer whose qualifications are to be inquired into: Provided further, That if the report of any such board is adverse to the continuance of any officer, and if the report be approved by the President, such officer shall be discharged from service in the volunteer forces, at the discretion of the President, with one month's pay and allowances.

Mr. HAY. Mr. Chairman, there is a committee amendment to strike out the section.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 12, strike out all of section 14.

The question was taken, and the amendment was agreed to. The Clerk read as follows:

SEC. 15. That all laws and parts of laws in conflict with the provisions of this act be, and the same are hereby, repealed.

The committee amendment was read as follows:

Strike out all of section 15 from lines 16 to 18, inclusive, and insert in lieu thereof the following:
"Sec. 14. That all laws and parts of laws in conflict with the provisions of this act be, and the same are hereby, repealed."

Mr. MANN. Mr. Chairman, may I ask the gentleman, are there any laws on this subject now?

Mr. HAY. Oh, yes. Mr. MANN. Which would be repealed? Mr. HAY. Yes; the law of 1898 and four or five other laws passed since then to amend the law.

The question was taken, and the amendment was agreed to. Mr. HAY. Mr. Chairman, I move that the committee do now rise and report the bill to the House with the recommendation that the amendments be agreed to and that the bill as amended

do pass. The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. Houston, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 7138, and had directed him to report the bill with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The SPEAKER. Is a separate vote demanded on any amendment? If not, the amendments will be put in gross.

The question was taken, and the amendments were agreed to. The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. Har, a motion to reconsider the vote by which the bill was passed was laid on the table.

#### LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. Linthicum, for three days, on account of serious illness in his family.

To Mr. Merritt, indefinitely, on account of illness.

To Mr. Jones, indefinitely, on account of serious illness.

WITHDRAWAL OF PAPERS-FREDERICK BITTMANN.

Mr. O'Brien, by unanimous consent, was granted leave to withdraw from the files of the House, without leaving copies, papers in the case of H. R. 21476, Sixty-second Congress, a bill for the relief of Frederick Bittmann, no adverse report having been made thereon.

#### ADJOURNMENT.

Mr. HAY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 3 o'clock and 38 minutes p. m.) the House adjourned until Thursday, December 4, 1913, at 12 o'clock m.

#### EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Postmaster General, transmitting the annual report of the board of trustees of the postal savings system for the fiscal year ended June 30, 1913 (H. Doc. No. 359); to the Committee on the Post Office and Post Roads and ordered to be printed.

2. A letter from the Secretary of the Smithsonian Institution, transmitting a statement showing in detail what officers and employees of the branches of the Government service under the direction of the Smithsonian Institution have traveled on official business from Washington to points outside of the District of Columbia for the fiscal year ended June 30, 1913 (H. Doc. No. 366); to the Committee on the Library and ordered to be printed.

3. A letter from the Clerk of the House, transmitting his annual report for the fiscal year ended June 30, 1913 (H. Doc. No. 357); to the Committee on Accounts and ordered to be printed.

4. A letter from the Librarian of Congress, transmitting his annual report and the annual report of the superintendent of the Library Building and grounds for the fiscal year ended June 30, 1913 (H. Doc. No. 399); to the Committee on the Library and ordered to be printed.

5. A letter from the Librarian of Congress, transmitting statement of travel expenses incurred during the fiscal year 1912-13 (H. Doc. No. 367); to the Committee on the Library and ordered

to be printed.

6. A letter from the Secretary of the Treasury, transmitting his annual report on the state of the finances for the fiscal year ended June 30, 1913 (H. Doc. No. 358); to the Committee on Ways and Means and ordered to be printed.

7. A letter from the Clerk of the House of Representatives, submitting a list of reports to be made to Congress by public officers during the Sixty-third Congress (H. Doc. No. 356); to

Committee on Accounts and ordered to be printed.

8. A letter from the Secretary of the Treasury, transmitting statements from the several offices and bureaus of the Treasury Department showing in detail what officials and employees traveled on official business for the department to points outside of the District of Columbia for the fiscal year ended June 30, 1913 (H. Doc. No. 365); to the Committee on Expenditures in the Treasury Department and ordered to be printed.

9. A letter from the Postmaster General, transmitting statements showing in detail what officers and employees other than special agents (and others who are required to constantly travel on official business) traveled from Washington to points outside of the District of Columbia during the fiscal year ended June 30, 1913 (H. Doc. No. 368); to Committee on Ex-penditures in the Post Office Department and ordered to be printed.

10. A letter from the Secretary of War, transmitting a letter from the Chief of Ordnance, United States Army, submitting

statements of the cost of all type and experimental manufacture of guns and other articles and the average cost of the several classes of guns and other articles manufactured by the Government at the several arsenals during the fiscal year ended June 30, 1913 (H. Doc. No. 360); to the Committee on Military Affairs and ordered to be printed.

11. A letter from the chairman of the Interstate Commerce Commission, transmitting a statement of expenses incurred by officials and employees of the commission on account of travel when absent from Washington, D. C., on official business during the fiscal year ended June 30, 1913 (H. Doc. No. 369); to the Committee on Interstate and Foreign Commerce and ordered to be printed.

12. A letter from the Secretary of the Smithsonian Institution, transmitting a detailed statement of the expenditures for the fiscal year ended June 30, 1913, under appropriation for "International exchanges," "American ethnology," the "Astrophysical Observatory," the "International Catalogue of Scientific Literature," the "National Museum," the "National Zoological Park," etc. (H. Doc. No. 355); to the Committee on the Library and order to be printed.

13. A letter from the president of the Board of Commissioners of the District of Columbia, transmitting the annual report of the commissioners for the fiscal year ended June 30, 1913 (H. Doc. No. 403); to the Committee on the District of Columbia and ordered to be printed.

14. A letter from the Secretary of the Interior, transmitting a report of the receipts from the rentals, extension of the Capitol Grounds, for the period beginning December 1, 1912, and ending August 1, 1913 (S. Doc. No. 251); to the Committee on Public Buildings and Grounds and ordered to be printed.

15. A letter from the Secretary of the Interior, submitting a report of the disbursements for the fiscal year ended June 30, 1913, made in the States and Territories under provisions of the act approved August 30, 1890, providing for the endowment and support of colleges for the benefit of agriculture and the mechanic arts (H. Doc. No. 361); to the Committee on Agriculture and ordered to be printed.

16. A letter from the Secretary of the Interior transmitting a report of the Maritime Canal Co. of Nicaragua, in accordance with section 6 of the act of Congress approved February 20, 1889 (H. Doc. No. 362); to the Committee on Interstate and Foreign Commerce and ordered to be printed.

17. A letter from the secretary of the Interstate Commerce Commission, transmitting a detailed statement of the expenses incurred by officers and employees, in connection with meetings or conventions, under written authority and direction of the secretary of the commission, for the fiscal year ended June 30, 1913 (H. Doc. No. 363); to the Committee on Interstate and Foreign Commerce and ordered to be printed.

18. A letter from the Secretary of War, transmitting a report of the travel expenses incurred by officers or employees of the War Department during the fiscal year ended June 30, 1913 (H. Doc. No. 364); to the Committee on Expenditures in the War Department and ordered to be printed.

#### REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. GREGG, from the Committee on War Claims, to which was referred the bill (H. R. 8846) making appropriations of certain claims in accordance with findings of the Court of Claims, reported under the provisions of the acts approved March 3, 1883, and March 3, 1887, and commonly known as the Bowman and the Tucker Acts, and under the provisions of section 151 of the act approved March 3, 1911, commonly known as the Judicial Code, reported the same with amendment, accompanied by a report (No. 97), which said bill and report were referred to the Private Calendar.

# PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. THACHER: Petition of Leach Clark, of Bridgewater. Mass., favoring payment of pensions monthly instead of quarterly; to the Committee on Pensions.

# SENATE.

# THURSDAY, December 4, 1913.

The Senate met at 10 o'clock a. m. Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D. The Journal of yesterday's proceedings was read and approved. Mr. SMOOT. Mr. President, I suggest the absence of a

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Goff	Nerris	Smith, Ariz.
Bacon	Gronna	O'Gorman	Smith, Ga.
Borah	Hollis	Overman	Smith, Md.
Brady	Hughes	Owen	Smith, S. C.
Brandegee	James	Page	Smoot
Bristow	Johnson	Perkins	Sterling
Bryan	Kenyon	Pittman	Stone
Burleigh	Kern	Pomerene	= Sutherland
Burton	Lane	Reed	Thomas
Chilton	Lewis	Robinson	Thompson
Clapp	Lippitt	Root	Thornton
Clark, Wyo.	McCumber	Shafroth	Townsend
Colt	McLean	Sheppard	Vardaman
Cummins	Martin, Va.	Sherman	Walsh
Dillingham	Martine, N. J.	Shields	Williams
Fletcher	Myers	Shively	Works
Gallinger	Nelson	Simmons	

Mr. SHEPPARD. I wish to announce the necessary absence of my colleague [Mr. Culberson] and to state that he is paired with the Senator from Delaware [Mr. DU PONT]. This announcement may stand for the day.

Mr. THORNTON. I desire to announce that my colleague [Mr. Ransdell] is necessarily absent on public business. I ask

that this announcement stand for the day.

The VICE PRESIDENT. Sixty-seven Senators have answered to the roll call. There is a quorum present.

TRAVEL OF EMPLOYEES IN WAR DEPARTMENT (H. DOC. NO. 364).

The VICE PRESIDENT. The Chair lays before the Senate a communication from the Secretary of War, transmitting, pursuant to law, a statement of the travel of officers and employees of the War Department from Washington to points outside the District of Columbia.

If there be no objection, the Chair proposes to refer all such communications to the Committee on Printing for the determination of the question whether they shall be printed or not. The communication will be so referred.

ANNUAL REPORT OF THE SECRETARY OF TREASURY (H. DOC. NO. 358).

The VICE PRESIDENT. The Chair lays before the Senate the annual report of the Secretary of the Treasury on the state of the finances for the fiscal year ended June 30, 1913. The report will lie on the table, as it has already been printed.

SUPPORT OF AGRICULTURAL COLLEGES (H. DOC. NO. 361).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of the Interior, transmitting, pursuant to law, a report of disbursements for the fiscal year ended June 30, 1913, made in the States and Territories, from the proceeds of public lands for the support of colleges of agriculture and the

mechanic arts, which, with the accompanying paper, was referred to the Committee on Printing.

ANNUAL REPORT OF THE SECRETARY OF AGRICULTURE (H. DOC. NO. 385).

The VICE PRESIDENT laid before the Senate a communication from the Secretary of Agriculture, transmitting, pursuant to law, a detailed statement of the expenditures of the Department of Agriculture for the fiscal year ended June 30, 1913, which, with the accompanying paper, was referred to the Committee on Printing.

ANNUAL REPORT OF COMMISSIONERS OF DISTRICT OF COLUMBIA (H. DOC. NO. 403).

The VICE PRESIDENT laid before the Senate the annual report of the Commissioners of the District of Columbia for the fiscal year ended June 30, 1913, which was referred to the Committee on Printing.

FRENCH SPOLIATION CLAIMS (H. DOC. NO. 379).

The VICE PRESIDENT laid before the Senate a communication from the assistant clerk of the Court of Claims, transmitting a list of French spoliation cases filed under the act of January 20, 1885, which cases were dismissed by the court for nonprosecution, which, with the accompanying paper, was referred to the Committee on Printing.

ANNUAL REPORT OF THE LIBRARIAN OF CONGRESS (H. DOC. NO. 399).

The VICE PRESIDENT laid before the Senate the annual report of the Librarian of Congress and of the superintendent of the Library Building and Grounds, which was ordered to lie on the table.

TRAVEL OF EMPLOYEES OF LIBRARY OF CONGRESS (H. DOC. NO. 367).

The VICE PRESIDENT laid before the Senate a communication from the Librarian of Congress, transmitting, pursuant to law, a statement showing in detail what officers or employees of the Library of Congress have traveled on official business from Washington to points outside of the District of Columbia during the fiscal year 1913, etc., which, with the accompany paper, was ordered to lie on the table.

#### MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed a bill (H. R. 7138) to provide for raising the volunteer forces of the United States in time of actual or threatened war, in which it requested the concurrence of the Senate.

## ENROLLED BILL SIGNED.

The message also announced that the Speaker of the House had signed the enrolled bill (S. 2318) authorizing the appointment of envoys extraordinary and ministers plenipotentiary to each Paraguay and Uruguay, and it was thereupon signed by the Vice President.

#### SAN FRANCISCO WATER SUPPLY.

Mr. PERKINS. I have received a large number of petitions in relation to the Hetch Hetchy bill, praying for the passage of the bill, and they have been referred to the Committee on Public Lands. I received the following telegram this morning, which I ask to have read at the desk.

There being no objection, the telegram was read, as follows: Senator George C. Perkins, Washington, D. C.: SAN FRANCISCO, CAL., December 2, 1913.

Washington, D. C.:

San Francisco Council, No. 615, Knights of Columbus, comprising 1,500 members, in regular meeting assembled unanimously indorse bill providing for a Hetch Hetchy water supply for San Francisco. We need pure mountain water for our great and growing metropolis. Our members have summered in the Yosemite and know that the passage of the bill will not depreciate the beauty of the valley, but the plans proposed will enhance its natural grandeur. The primary object that we as San Franciscans have is to obtain sufficient pure drinking water for our citizens. The commercial objections put forward are but a subterfuge raised by misguided nature lovers.

San Francisco Council, Knights of Columbus.

By Warren Shannon, Grand Knight.

Mr. PERKINS. Mr. President, I desire to state that members of this council have visited the Yosemite annually for several years and have encamped in the park. I have personally met them on two occasions, and I know that the majority of them are more familiar with the natural beauties and scenery of the Yosemite Valley and of the Hetch Hetchy than any other organi-

ration of which I have any knowledge.

The VICE PRESIDENT. The telegram will lie on the table.

Mr. WORKS. Mr. President, in view of the fact that this grant is asked in the interest of Oakland and other cities around the bay, and it has been claimed here that the city of Oakland is favoring the grant, I submit three telegrams from that city, which I ask to have read.

There being no objection, the telegrams were read and ordered lie on the table, as follows:

OAKLAND, CAL., December 3, 1913.

Senator John D. Works, Washington, D. C.:

Civic center of Oakland held an open water convention at Oakland Hotel, lasting three days, for purpose of discussing Hetch Hetchy and other water propositions. San Francisco men and women took part in debate, ending to-day. Convention, which was largely attended by representative citizens, refused to indorse Hetch Hetchy scheme and the proposition was overwhelmingly snowed under, so far as Oakland and east bay cities are concerned. The result of convention practically means that the eastern side of bay refuses to cooperate in Hetch Hetchy scheme. Debate demonstrated fact that Oakland and eastern bay cities and San Francisco have sources of water supply sufficient to draw from that will last them for many years.

John P. Irish.

JOHN P. IRISH.

OAKLAND, CAL., December 3, 1913.

Senator Works, Senate Chamber, Washington, D. C.:

Water problem for bay cities has been discussed for three days by not less than 30 speakers representing all phases of the problem. San Francisco was given the fullest and freest opportunity to present the merits of the Hetch Hetchey scheme. It is the almost unanimous opinion that the San Francisco speakers convinced the audience that the whole scheme is intensely partisan and promoted for partisan purposes, conclusively shown, and no attempt made to deny it; that the local supply on both sides of the bay can be readily developed to supply all requirements for at least 30 years at one-tenth of the cost of Hetch Hetchy, Irrigation interests in San Joaquin Valley convinced the entire audience of the vast harm resulting from diversion of Tuolumne River from agricultural uses. You will confer a lasting benefit on all California by opposing with all your might this iniquitous bill.

W. F. Kelly,

W. F. KELLY, Bondholder People's Water Co.

OAKLAND, CAL., December 3, 1913.

Hon. John D. Works, Senate Chamber, Washington, D. C.:

to death

Senate Chamber, Washington, D. C.:

Three full days' discussion of Hetch Hetchy question before Woman's Convention, Oakland, has demonstrated that available local sources of supply are ample for years to come; that Hetch Hetchy grant would prevent development of San Joaquin Valley, upon which the growth and future prosperity of bay cities greatly depend; and that future requirement of San Francisco can be met by acquisition of other sources the use of which will not retard the development of any part of the State. Believe that you have in your opposition to Raker bill the hearty support of everyone who attended the convention except San Francisco representatives.

EDWARD W. ENGS, Attorney at Law.

EDWARD W. ENGS, Attorney at Law.

Mr. THOMAS. I should like to have the Secretary restate the signature to the second telegram which was read.

The VICE PRESIDENT. It will be stated.

The Secretary. The second telegram is signed "W. F. Kelly, bondholder People Water Co."

Mr. WORKS. I have here also a letter upon the same subject from Clay P. Gooding, of Oakland, Cal., that I ask to have printed in the RECORD, omitting certain private matter of no public interest, and also three other telegrams that I ask to have printed in the RECORD.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

Los Angeles, Cal., November 28, 1913.

Hon. John D. Works, United States Senate, Washington, D. C.

Hon. John D. Works.

United States Senate, Washington, D. C.

My Drar Judge: My respects and regards to you. As you are the only Senator with whom I am acquainted, I write you with regard to a question in which I have taken a keen interest for five years. My knowledge of the Hetch Hetchy problem is far greater than that of the average San Francisco citizen, hence I know its broad scope too well to enter upon a general dissertation. I will touch upon but one feature, and but one side of that. I am one of the nature lovers and desire to contribute my mite to the good cause by giving you one idea or standard by which to weigh evidence that will come before you on only one question.

The nature lovers have always said that they would withdraw all opposition to San Francisco's claims "if it could be shown that the city could not reasonably obtain another satisfactory water supply."

I am in no wise lacking in loyalty to my city or State, but I believe it is not to San Francisco's best interest from any standpoint to get the Hetch Hetchy. With that belief, I think there are just two conditions to be considered. San Francisco is looking forward 50 to 100 years in relation to her water supply: First. What will be the condition and use made of the Yosemite National Park in 50 to 100 years if the city does get the Hetch Hetchy?

The one object of this letter is to convey an answer to the first, that you may judge as to the second. If my answer to the first, that you may judge as to the second. If my answer to the first, that you may judge as to the second. If my answer to the first seems tedious, I ask you to bear with me, as I believe it is vitally important to a correct determination of the Hetch Hetchy?

The one object of this letter is to convey an answer to the first, that you may judge as to the second. If my answer to the first, that you may judge as to the second. If my answer lose first seems tedious, I ask you to bear with me, as I believe it is vitally important to a correct determination of the Hetch Hetchy?

The Tuolumne Meadows was pronounced several years before this controversy arose, by John Muir, to be the finest high-mountain meadow in the Sierra. Keith, the artist, and Prof. Joseph Le Conte, both now dead, held similar views, for I was in the Yosemite with all three and in the Tuolumne Meadows with the two former.

In the Tuolumne Meadows the tourist will find one first-class hotel, one lesser hotel, and several public camps. From these he will take side trips to lesser camps, which will be within easy travel range of the average tourist and established at places of rare beauty, such as Lake Tlago, Lysle Canyon, etc. Saddle horses will take others to less-frequented camps a little farther away and at more beauty, such as Lake Tlago, Lysle Canyon, etc. Saddle horses will take others to less-frequented camps a little farther away and at more beauty spots. For the more hardy but unequipped traveler there will be pack outfits and guides to take them on camping trips to more distant grandeurs, and for the still hardier who have their own outfits there will always remain within the park limits, more distant, a wild and magnificent country full of superb scenery, such as Mount Conness, Return Creek, Matterhorn Canyon and Peak, Lakes Rogers, Smedburg, Benson, etc.. Regulation Peak, and others. From the Meadows the hardy will climb Mounts Lysle, Dana, Gibbs, etc.

While standing on the peaks of several of our mountains, including Mount Lysle, I have been told by foreigners who have climbed the Alps that they found nothing there to surpass the views before us.

From the Meadows the traveler will pass down through the Grand Canyon of the Tuolumne, with its lofty walls rising in places higher than those of the Grand Canyon of Arizona; through Muir Gorge, Pate Valley, and on the way the hardy will stop to climb Rancherero Peak, from which one of the finest views of the Sierra is had. The trip down the Grand Canyon will be about 20 miles, and through a most rugged and precipitous gorge. A road or trail here will cost a lo

down the Grand Canyon will be about 20 miles, and through a most rugged and precipitous gorge. A road or trail here will cost a lot of money, but here is the place to spend it. The relative position of the Yosemite Valley, Tholumne Meadows, and the Hetch Hetch form a triangle.

Long before fils controversy was started Mr. Keith, the artist, pronounced the bed of the Hetch Hetchy more beautiful than that of the Yosemite. John Mult says it contains many more species and more magnificent species of trees than the Yosemite, more beautiful meadows, and a greater variety of wild flowers. The mosquitoes can be eradicated, and according to my conversation with Mr. Lippincott, and a greater variety of wild flowers. The mosquitoes can be eradicated, and according to my conversation with Mr. Lippincott, and the conversation with the meaning that covers the lower part of the Hetch Hetchy in the spring.

The fourist will find here two first-class mountain hotels and camps, as in the Yosemite. The hardy will take superb camping trips to Lakes Vernon, Tilden, and surrounding country. The less hardy will go to Tiltil Valley and near points.

This completes the "grand tour of the park." I have spent 30 days each of five summers in the High Sierra, and saw my first rain on the fourth trip. It lasted from 3 o'clock in the afternoon until 9 o'clock that night. On the fifth trip I saw one rainy day and night. The possibilities the superb sights to be seen, the variety of travel, the possibilities in the superb sights to be seen, the variety of travel, the possibilities the superb sights to be seen, the variety of travel, the possibilities and the property of the park. I have always said that in 50 to 100 years there will be 50,000 to 75,000 who will make the grand tour each year. And the winter sports, as in Switzerland, will call out no small number.

Mr. Freeman (city's brief, p. 152) anticipates only "a dozen solitude lovers" a year will visit the Tuolumne watershed. If the Government anticipates that, would there will be 20,000

CLAY P. GOODING, 3535 Peralta Street, Oakland, Cal.

P. S.—It is the climate of California that renders possible what will be the most unique feature of the park; that is, the camping trips, particularly in the upper portion and radiating from many points along the "grand tour."

Senator John D. Works,

Senate Chamber, Washington, D. C.:

At a meeting of the Board of Trade and the Commercial Club of the city of Whittier resolutions were adopted opposing the Raker bill and asking you to work and vote against same. On report of competent engineers it has been shown that there are other sources from which San Francisco may obtain abundant supply of water without damage to territory set apart as national park. Your efforts opposing this attempt to break up our national reserves will be appreciated.

R. B. Kennedy,

George L. Hazzard,

Committee.

Modesto, Cal., December 2, 1913.

Senator Works, Washington, D. C .:

Senator Works, Washington, D. C.:

We water users of Fairview district unanimously indorse views expressed in telegrams from mass meeting at Ceres, December 1. We water users of Fairview district appeal to you to defeat Raker bill, which would pauperize our valley and make a desert of our homes now depending upon all the water of the Tuolumne.

C. H. Moody, Chairman.
C. R. Motimer, Secretary.

MODESTO, CAL., December 2, 1913.

The United States Senate, Care of Hon. John D. Works, Washington, D. C.:

More than 92 per cent of the water users of Modesto-Turlock districts are opposed to the Raker bill. Any information to the contrary is absolutely false. If San Francisco has ever had water famine it was due to her neglect to develop her present sources of supply. The facts are she has water for 50 years. If she wants additional water, send her where she can get more water, better water, for \$20,000,000 to \$30,000,000 less and will not interfere with irrigation. How in God's name can you vote to take from us our limited amount of water and bring ruin and destruction to 300,000 acres of the finest lands in California, owned by thousands of the best home builders in the world that have their all invested in these little homes? Can it be possible that you will impose upon us, tillers of the soil, such an unjust burden in order to give to San Francisco a power proposition worth, estimated by their own engineers, \$45,000,000? We pray you to deliver us from this great enemy.

Levi Winklebleck,

LEVI WINKLEBLECK,
President Modesto Water Users' Association.

Mr. TOWNSEND. Mr. President, I have received numerous telegrams and letters in the form of resolutions both for and against this proposition, but generally against it. I have not presented them to the Senate because I am convinced that these matters, unless printed in the RECORD, are read by nobody, and they are intended largely, I understand, for my own benefit. For that reason I have not presented them to the Senate.

#### PETITIONS AND MEMORIALS.

The VICE PRESIDENT presented petitions of Local Council No. 615, Knights of Columbus, of San Francisco; of the Scandinavian Civic League, of San Francisco; and of the Municipal Ownership League, of Alameda, all in the State of California, praying for the passage of the so-called Hetch Hetchy bill, which were ordered to lie on the table.

Mr. NELSON presented a petition of the Minnesota Historical Society, praying that an appropriation be made for the erection of a monument to the memory of William S. Cox, United States Navy, which was referred to the Committee on the Library.

Mr. THOMPSON presented petitions of sundry citizens of Topeka, Waldo, and Osawatomie, all in the State of Kansas, praying for the early passage of the so-called Glass-Owen currency bill, which were ordered to lie on the table.

Mr. FLETCHER. I present resolutions adopted by the Central Trades and Labor Council of Jacksonville, Fla., favoring the passage of the Hetch Hetchy bill. I suggest that the resolutions need not be read, but I desire to present them in the

resolutions need not be read, but I desire to present them in the

nature of a petition.

The VICE PRESIDENT. The resolutions will lie on the table.

Mr. BRANDEGEE. I present a memorial of the States of Connecticut and Massachusetts, requesting approval by the Congress of the boundaries established by the agreement between these States. I ask that the memorial be printed in the RECORD and referred to the Committee on the Judiciary.

There being no objection, the memorial was referred to the Committee on the Judiciary and ordered to be printed in the RECORD, as follows:

To the Senate and House of Representatives of the United States in Congress assembled:

To the Senate and House of Representatives of the United States in Congress assembled:

The memorial of the States of Massachusetts and Connecticut represents that they have agreed upon a boundary line between said States, subject to its ratification by the Congress, which boundary line is shown on duplicate maps, one copy of which has been deposited with the secretary of the State of Massachusetts, and another copy thereof in the library of the State of Connecticut, and that an act has been passed by each State to express and confirm said agreement, and that a copy of the act passed by the State of Massachusetts has been sent to and received by the State of Connecticut, and a copy of the said act of the State of Connecticut has been sent to and received by the State of Connecticut has been sent to and received by the State of Massachusetts.

Said act of Massachusetts is entitled "An act to establish the boundary line between the Commonwealth of Massachusetts and the State of Connecticut," and was approved March 19, 1908; and said act of Connecticut is entitled "An act establishing the boundary line between Connecticut and Massachusetts," and was approved June 6, 1913, and is printed in the special laws and resolutions of the General Assembly of the State of Connecticut at its January session, 1913, on page 1003. Each of said acts contains a full description of said boundary line.

Your memorialists therefore hereby request the approval by the Congress of the United States of the boundaries established as heretofore stated.

In witness whereof, on this 22d day of November, 1913, the undersigned subscribe hereto as governors of said States, respectively.

Eugenne N. Foss,

Governor of Massachusetts.

SIMEON E. BALDWIN,

Governor of Connecticut.

Transmitted to the Vice President of the United States, President of the Senate of the United States.

Transmitted to the Vice President of the United States, President of the Senate of the United States.

## AMENDMENT OF THE RULES.

Mr. WILLIAMS, from the Committee on Rules, to which was referred Senate resolution 84, providing that any Senator upon his own request may be recorded and counted as present in order to constitute a quorum, submitted by himself on May 15, 1913, reported it with an amendment and submitted a report (No. 134) thereon.

## ADDRESS BY F. S. WASHBURN (S. DOC. NO. 257).

Mr. FLETCHER. On November 20 the Senator from Tennessee [Mr. Lea] asked unanimous consent to have printed as a Senate document an address delivered by Mr. F. S. Washburn, of Nashville, Tenn., before the National Conservation Congress, November 18, 1913, and it was referred to the Committee on Printing for action. I am authorized by the Committee on Printing to report favorably the paper submitted by the Senator from Tennessee, and I move that an order be entered that it be printed as a public document.

The VICE PRESIDENT. Without objection, it is so ordered.

#### BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. NELSON:

A bill (S. 3546) to extend the time for constructing a dam by Rainy River Improvement Co. across the outlet of Namakan Lake at Kettle Falls, in St. Louis County, Minn.; to the Committee on Commerce.

By Mr. SHEPPARD (for Mr. Culberson): A bill (S. 3547) for the relief of Oscar C. Guessaz; to the Committee on Claims.

By Mr. STERLING (for Mr. CRAWFORD):

A bill (S. 3548) granting an increase of pension to Samuel E. Haight (with accompanying papers); to the Committee on Pensions.

By Mr. OWEN:

A bill (S. 3549) authorizing the President to nominate and, by and with the advice and consent of the Senate, appoint Elsworth Wilson, a first lieutenant in the Medical Reserve Corps of the United States Army, a first lieutenant in the Medical Corps on the retired list, and increasing the retired list by one for the purposes of this act; to the Committee on Military Affairs.

By Mr. BRANDEGEE:

A bill (S. 3550) ratifying the establishment of the boundary line between the States of Connecticut and Massachusetts; to the Committee on the Judiciary.

## IMPROVEMENTS IN THE HARBOR OF LIVERPOOL.

Mr. LANE. Mr. President, I have a report here which I have secured from the State Department. It relates to the improvements in the harbor of Liverpool, showing the amount of expenditures that have been made there for dredging and for dock purposes. It would be useful if printed as a public document without any of the illustrations which accompany it. request that that may be done.

Mr. SMOOT. I did not hear the request of the Senator.

Mr. LANE. I request to have published quite a lot of sta-tistics relating to the improvement of the Mersey River and Liverpool Harbor for the information of the people of the Pacific coast who are engaged in similar work.

Mr. SMOOT. There are certain illustrations? Mr. LANE. There are illustrations, but I do not ask to have them printed.

Mr. NELSON. Will the Senator from Oregon yield to me for a moment?

The VICE PRESIDENT. Does the Senator from Oregon yield to the Senator from Minnesota?

Mr. LANE. I do.

Mr. NELSON. I suggest that inasmuch as the paper desired printed by the Senator from Oregon relates to the improvement of the Columbia River it ought to be referred to the Committee on Commerce, which has jurisdiction of the river and harbor bill. The committee can then order it printed, if it feels so disposed. In my opinion that would be the best method of procedure.

Mr. LANE. I would have no objection to that except for the fact that I am being requested to make large numbers of copies

of this report.

Mr. SMOOT. The method of disposing of this matter as suggested by the Senator from Minnesota [Mr. Nelson] will, I think, meet that condition.

Mr. LANE. That is satisfactory to me if the committee will be prompt in their action.

The VICE PRESIDENT. The Chair would suggest to the Senator from Minnesota that, if entirely agreeable to the Sen-

ator, he would prefer to refer this document for printing to the Committee on Printing.

Mr. NELSON. Mr. President, I repeat, it relates to the im-

provement of the Columbia River, and it ought to be referred to the Committee on Commerce. If that committee deem it of sufficient importance, they can have it printed for their use. The Committee on Commerce has jurisdiction over all matters relating to rivers and harbors, and there is where this matter properly belongs.

The VICE PRESIDENT. The paper will be referred, then, to

the Committee on Commerce.

#### HOUSE BILL REFERRED.

H. R. 7138. An act to provide for the raising of the volunteer forces of the United States in time of actual or threatened war was read twice by its title and referred to the Committee on Military Affairs.

#### HOUR OF DAILY MEETING.

The VICE PRESIDENT. The Chair lays before the Senate a resolution coming over from a previous day, which will be

The Secretary read Senate resolution 225, submitted by Mr. KERN on the 1st instant, as follows:

Resolved, That the hour of daily meeting of the Senate be 10 o'clock a. m., and that the Senate shall on each day at 6 o'clock p. m. take a recess until 8 o'clock p. m. and adjourn at 11 o'clock p. m., until otherwise ordered.

Mr. CUMMINS. Mr. President, I make no complaint against the resolution proposed by the Senator from Indiana [Mr. Kern]. It is a logical outcome of the system adopted by the Democratic majority for legislation. It would be still more logical if it provided for a continuous session of the Senate during the 24 hours of the day. I say this seriously, because, if I understand the situation correctly, there is to be no real debate upon the banking and currency bill. That debate has already taken place, the bill has been considered elsewhere; it has been passed elsewhere. Neither am I criticizing the provisions of the bill. I am not ready to say that, as between the bill reported by the distinguished Senator from Oklahoma [Mr. OWEN] and the existing law, I would not vote for the change which has been proposed. My protest is against the caucus system, and I intend to record it now, as I have recorded it

The real legislation of this body is now taking place in a Democratic caucus. I think a debate upon this measure is a pure farce, and I hesitate myself to participate in it. I do like to give it, before the country, the color of actual deliberation, when we all know that the period of deliberation With the exception, as we are informed by the newspapers, of two Senators upon the other side, there is not an open mind in the Democratic majority; there is not a single Senator there who would vote to amend this bill in any respect upon the floor of the Senate without referring the amendment to the caucus of the party.

I have the highest regard for the men who make up the Democratic majority, but I believe in my heart that the system which these men have adopted is wrong; I believe it menace to the institutions of our country; I believe it is opposed to representative government. I can hardly imagine how any member of the majority who favors the extension of popular government, through the medium of primaries or through procedure intended to take the real sentiment of the rank and file of the people, should yet favor legislation by caucus. Until the system is changed debate upon any bill that has been decreed by the caucus is a sham, and I do not object, when once we pass the point of the caucus, to the closing of debate in any way that can be adopted under the rules of the Senate.

My friend from New York [Mr. Root] spoke the other day with regard to the rights of the minority. I will not venture to differ from him with respect to the high necessity of preserving the opportunity of the minority in debate, but the actual invasion of the rights of the minority does not occur through the adoption of this resolution. The actual overthrow of the rights of the minority has already taken place; it occurred when the Democratic caucus considered this bill and came into the Chamber under some kind of obligation to support its provisions. It seems to me dangerously near a conspiracy against the rights of all the people.

Suppose that in a great corporation in which the stockholding interest is widely diffused some great proposal was about to be laid before the directors of that corporation to be adopted or rejected for the welfare of those who might be interested in it, and suppose that it were proper to submit information and to have discussion upon the proposal, and then that a majority of the directors of the corporation should come together in secret conclave and agree with respect to the course to be pursued, agree with regard to the adoption or rejection of the proposal, and agree that the entire majority should be bound by a majority of the majority, in my opinion that kind of procedure in business would be a conspiracy against the rights of the stockholders of the corporation; and, although it is rather a sordid comparison, I see no difference between that procedure and the procedure adopted by our friends upon the other side.

If we are to have debate, it can only be of value if the minds of the Senators who are present are open to conviction; it can only be valuable if all the Senators feel free-absolutely -not only to receive argument and reach a conclusion, but

to follow the conclusion that the mind may reach.

I can not think that over a long period of time the American people will tolerate legislation by caucus. I have no doubt my friends on the other side have considered this bill; I know they have; I know they have debated it; and, if I may credit the public press, I know they have amended it. I have no doubt that debate was carried on intelligently, that it was carried on with learning: I have no doubt the amendments which were adopted were adopted conscientiously in the caucus. I do not know, of course, by what steps this conclusion was reached; but whenever the Democratic caucus took such action, expressly or impliedly, as closed the minds of the Democratic Members against the arguments that are to be produced in debate, that moment the period of debate passed. I agree, therefore, with the Senator from Indiana [Mr. Kern], that inasmuch as there is no room for debate, inasmuch as the minds of Senators are not open to conviction and their conduct can not be changed by debate, the sooner we reach a vote upon the bill-that formal vote which the Constitution of the country seems to require in order that the decree of the caucus shall become the law of the land-the better it will be for the people of the

Mr. LEWIS. Mr. President, I rise to observe that I have been from time to time exceedingly attracted by the frequent references of the distinguished Senator from Iowa [Mr. CUMMINS], as he has inveighed against two imagined evils which he fancies are afflicting this country, particularly under the present administration. At one time I hear the distinguished Senator, for whom I have great respect and whose ability is a subject always of admiration, denouncing, as he does this morning, against the vice of the Democratic Party holding what is called a caucus. At another it is to condemn the President as an intruder and

It may be conceded, Mr. President, that for the purpose of a general government it were better if all persons who are elected as representatives could assemble in some one assemblage in harmony; yet in view of the fact that there are always divergent views, and that these representatives are sent here for public representation of those views, it is very natural that one side should conflict and contest with the other. In order that one of these sides shall get an opportunity to formulate a plan of action, it brings itself together in some form of an arrangement or organization. In the business corporations referred to by the distinguished Senator it would probably be a directors' meeting, or, possibly, in a majority of cases, a stockholders' meeting; or in the church of which the distinguished Senator is an honorable member, possibly there would be those who are called either deacons or vestrymen, who would doubtlessly adjudge the course, settle upon it, and the congregation would be guided by it.

These things are parts of organization. But I wish to ask, when did my distinguished friend become so virile an advocate of this open-air government, and when did he become so ardently the apostle of condemnation of this thing called a

caucus arrangement?

Incidentally, with this accursing the caucus, I have heard my distinguished friend also condemn the President because he has sought to indicate to his party the duty which it owed under its platform. He denounces the President as dictator. I wonder if my memory serves me well, when I ask my learned friend from Iowa to recall for himself that he was governor-and an excellent governor-of the State of Iowa from something like the year 1902 to 1906, and possibly in 1905 he was an advocate of two very excellent measures. One was for a 2-cent passenger railroad fare in Iowa and one was for the general abolishment of that evil confessed by all to be pernicious, sinister, and destructive of independence of legislators—the railroad pass.

Does not my friend, the distinguished Senator, recall that his own party, in different sessions, held a caucus of the Legislature of Iowa and gave him the support that he justly had a right to demand, and through that agency of caucus gave him the support for the measure upon which he made his issue before the people. That it was such that gave him the support that subsequently carried his bills through the legislature?

Did not the Democratic Party, the minority of the Iowa Legislature, I ask the distinguished Senator, meet also in caucus to carry out the plan of the Democrats and give to the Republican governor its approval? And did my eminent friend while governor, seeking to carry out the will of the people and execute the design which it was his object to accomplish, raise his voice in protest against either his own side or that of the Democracy when they caucused, one at his behest and the other with his consent, in order to accomplish the object, worthy as it was, that he advocated; one which the people of his State at the ballot box had ordered-

Mr. CUMMINS. Mr. President——
The VICE PRESIDENT. Does the Senator from Illinois yield to the Senator from Iowa?

Mr. LEWIS. Certainly; I yield. Mr. CUMMINS. The Senator from Illinois is wholly mistaken, according to my recollection. I began my fight against legislation by caucus in 1888, when I was a member of the Iowa Legislature. The Republican Party in that year sought to hold a caucus upon a very important measure then pending before the assembly. I refused to enter the caucus, and gave the very reasons for that refusal that I have now attempted to give to the Senate of the United States.

The Senator from Illinois is mistaken, again, in that I happened to be governor of Iowa, not from 1902 to 1906, but from 1902 to December, 1908. The bill to which he referred was not passed in 1905. However, that is immaterial; but, according to my recollection, there was no caucus upon the bill at all.

I should like to have the Senator from Illinois produce some proof of the holding of a caucus. If it was held, it was not held at my request; and I do not remember that there was a caucus held. However, I recognize the frailty of human memory,

and I only give the Senate my recollection about it.

Mr. LEWIS. Mr. President, I have with gladness allowed the able Senator to interpolate his defense within my impeachment, that they might go along with regularity, and that he might have such reply made within my speech, though he does this in response to his asking if he might interrogate me.

I will now refresh the Senator upon his own political history. He is correct when he reminds me that at a time when he was in the legislature there was a caucus against which he rightfully protested. He was in a minority, because he was fighting for the people; and certain gentlemen who were counsel for certain corporate interests, whose names I have no desire now to mention, had been so successful in lobbying through the Iowa Legislature from time to time that they had been able to bring about a caucus, ostensibly under the name of the Republicans, that had for its object the defeating of the will of Iowa, as the Senator rightfully comprehended it at that time. The Senator as governor protested, as he rightfully did, against entering into a caucus that had for its object at that time clearly the defeat of these measures. The protest was against the caucus not because it was a caucus, but because it was not his caucus, and because it was not a caucus in behalf of his measures, and because it was not a caucus that carried out the will of the people as he comprehended it.

I now revive the Senator's mind that it is true he was governor for a longer period than I related; but what I was bringing to his attention in the sessions to which I have alluded was his unsuccessful, nevertheless commendable, fight for the particular bills to which I allude. Then, in the latter session of his later term, when he was successful, I recall the Senator's attention to the fact that there again not only was there a caucus on the part of his own party, resulting in the election of a speaker who was friendly to his measures, when previously there had been considerable opposition, and the railroads had assembled at Des Moines, through their different agents, and had sought to defeat the projects. But the Democracy likewise caucused and offered their candidate for leader or minority candidate for speaker, and in this caucus gave to the distinguished governor, now the Senator, support for the measures for which he was fighting. I now invite his memory to recall if he protested then against the minority, which were the Democrats, caucusing then, when they were for the measures which he advocated and gave him support; whether then such caucus did not meet his approval, in so far that he made not a step nor uttered a word against it? No; because his object was for his just measure, thoroughly commendable if obtained through a caucus.

I go one step further, and ask my honorable friend, when he seeks to condemn the President of the United States— as he frequently does, sometimes designating him as being only upon the plane of Huerta, the tyrant of Mexico, and sometimes the despot intimidator of the Senate, and sometimes the invader of the Constitution, and at other times the destroyer of the fundamental liberties of free government—now, I ask, Mr. President, what has this Chief Executive, President Wilson, done? It appears that as President he has indicated to the House and to the Senate his desire that the legislative body shall carry out the will of the people as the people have expressed it at the ballot box and as the party has declared it in its platform. He has done this often and constantly-uncompromisingly and What else would be expected of the President? persistently. He was under the obligation to execute his oath and his pledge; he was under the obligation to inform Congress of its honor; he was under the duty of enforcing upon us our obligation to the people made at the ballot box.

Does the distinguished Senator forget that there was no man in the Middle West who endeared himself to the general public, as I recall the political history of that country-where I likewise played somewhat of an active, if not influential, part—more than the distinguished Senator in his struggles to force the representatives of the Republican Party in Iowa to carry out

the direction of the people?

In the latter term of the distinguished Senator, when governor, may I not now invite to his attention that not only did he address his message on the duty to the Legislature of Iowa, but, offering a precedent to the distinguished President of the United States, he personally read it before the legislature, imposing upon them their honorable obligation of carrying out the will of the people as expressed at the ballot box in Iowa. He invited to their attention that any attempt to yield to the sinister influence of lobby to defeat the will of the people or to frustrate the governor would be a violation of their solemn oaths before

Heaven and of their duty to the constituency of Iowa.

Did not the governor of Iowa, now the Senator, go further and summon these legislators to his chamber, calling them by their names, man for man, sovereign representatives of sovereign counties, so far as such could be, in the sovereign State of Iowa, and by name tell each man that he dared not lend himself to a measure that was frustrating the will of his people, dishonoring his conscience, violating his oath, debasing Iowa, and seeking to defeat the expression of the ballot box without counting on the governor as his critic and opponent? For that was he not commended by his people; was he a tyrant, or would he see himself a dictator, a despot? Sir, the Senator executed an honorable task, a righteous duty, and faithfully discharged his own honorable oath. For that he was justly praised. And now, sir, may not the conscientious President of the United States, beholding this distinguished precedent, exclaim in the language of the great Roman:

Behold, ye conscript fathers, there is the path ye trod. What other course could I take so nobly?

[Laughter.]

Yet my distinguished friend every morning, when some illtemper possesses him, or something has gone awry, produced possibly through reading disagreeable correspondence, finds a relief-something of an escape valve-in raising his voice against this awful man in the White House, and this dreaded scourgethe caucus. It must be refreshing to the Senate to note, however, that the Senator is in the line of long tho' unavailing precedents when he cries out against a President. I noticed in his speech the other morning, or my mind revived the thought, how very

eminent were his ancient predecessors.

Why, Mr. President, in 1802, in the body of the Senate, there arose a distinguished Senator and made these precise charges as now made by the Senator, almost word for word, against Thomas Jefferson, because he likewise sought to force the legislative body to execute the will of the people, and sent a message to that effect. He, too, inveighed against the representatives violating their oath, deserting the people, and by surrender or opposition de-feating the popular will. Henry Clay, almost an equally distin-guished man as the eminent Senator from Iowa [laughter], did not hesitate, of course, to speak of Andrew Jackson, the President of the United States, as the sinister shadow upon the Republic, destined by his exercise of influence to destroy the whole Republic. This because he sought to have Representatives true to their oaths, faithful to their promise, and responsive to the will of the people.

Yet we turn for a minute in reflection. The Republic has moved on, and these two eminent gentlemen have passed into These who condemned the President because he sought to have the representatives execute the will of the people are renowned, but not for their course in obstructing the democracy of their President, but for reversing their course and pursuing the will of the people by supporting the head of their Government. Those eminent Senators are embalmed in such little temporary glory as this ephemeral thing called fame permits. Yet the Government has moved to higher ideals, and the great voice throughout America to-day will be found indorsing

that manner of President or that manner of governor such as was the distinguished Senator when he was governor of Iowa, they who hold a hard hand strongly and firmly over the men who either negligently forget their duty owed as representatives or who purposely seek to violate that obligation.

I have not seen this Government inherit any of the ills which the distinguished Senator seems to think are about to come upon it, and which Senators a hundred years past prophesied under similar conditions. To the contrary, I have seen the distinguished Senator from Iowa, like a John the Baptist, go out to the people, crying from the hilltops to the valleys, arraying thousands around him in a spirit of admiration, because of the very policies advocated by him which in a Democratic President

provokes his condemnation.

Mr. President, I think the time has come when eminent men, such as the distinguished Senator from Iowa, ought to reflect that outside of this Chamber there is a great multitude of intelligence, and that the day has gone by when the littleness of partisanship on the one hand, and the narrow prejudices of geography on the other, can seriously seduce the popular mind to error. It will measure a man, not for that he is called a Republican nor because he is designated a Democrat, but it will measure him by what he does. You will be tested again by the doctrine of the Holy Law that by the works and not alone the faith professed will you be judged. "Not every man who crieth 'Lord, Lord,' will enter the kingdom of Heaven, but they that doeth the will." The distinguished Senator from Iowa will likewise find that sacred law prevailing in the precincts where hereafter he will either invade or be invited, and that he will be judged by what he does in behalf of the common interest of the common country, and not by what he cries out against a party official.

Mr. President, it will not avail in this country much longer for eminent gentlemen to profess a platform and principles Democratic or Republican, and by them array the great common mass on their side and weld them in confidant regard, and obtain office year after year and term after term, then immediately condemn the very same principles when it serves some little partisan object on the one hand or creates petty opportunity to

serve personal vanity on the other.

The great public of America will turn and demand of the man in public life that he be a man within and without. there be some display of sincerity of conduct all the way through, marked by some little rule of consistency. When the distinguished Senator thinks he may violate that law, he avoids beholding the spheres and the aspects all around him. He refuses to hearken to what is the real sentiment of the times. I prefer to invite him to contemplate his own splendid course of the past and to reflect that the great West and the spirit of democracy has been guided largely by the things he professed and the principles he advocated, against the very cabal in Iowa which had done so much to destroy free government and popular will by the very methods he lately adopts. By the very measures he professed to obtain office and which he as an official in Iowa put into force, I appeal to him to uphold, willingly and gladly, with his ability the distinguished gentleman who occupies the White House, who is now giving to the land splendid evidence of devotion to public welfare. I beseech the Senator to no longer stand as a stop guard to stay the wave of progress at this time in this country. He helped call it up. Let him launch his craft upon it, and let him move with it in harmony, and let there be a more splendid statesmanship and idealism in his senatorial career than that other—that would stamp his yesterdays with hypocrisy or his to-days with doubt of patriotism.

Mr. CUMMINS. Mr. President, the Senator from Illinois is not well informed with regard to the history of Iowa.

Mr. LEWIS. I could not hear the Senator. I apologize. Mr. CUMMINS. I repeat, the Senator, with all his plenitude of learning, is not well informed with regard to the history of Iowa, although it is a sister State with his own. The measure concerning which I spoke a moment ago and whereon I refused to enter a caucus had no reference whatever to railways. It was neither promoted nor objected to by railways or railway attorneys. It happened to be a measure relating to the liquor traffic in my State.

However, those little misstatements made by the Senator from

Illinois, of course, have no effect upon his ultimate conclusion. I rise to say only one thing. It is true the time has come when the promise of a party must be executed if the party is to retain the confidence of the people. That ought to become the most sacred motto of every man in public life.

The only question upon which I differ with the Senator from Illinois is this: I think that a promise in the Democratic platform that can only be executed through legislation ought to be performed by the Senate, ought to be performed by the House; it ought not to be performed by the President of the United The Senator from Illinois seems to think that when the Democratic Party pledges itself to the people that certain laws shall be passed it is for the President to pass those laws or say what laws are in conformity with the pledge of the platform. I should like to lift up a little the dignity of the Congress of the United States, as I sought to do in urging that when you who compose the party promise the people of the United States that a thing shall be done it is for you to see that it is done, and it is for you to determine how it shall be done. If this be not true, then I have misconceived the institutions of my country

Mr. NORRIS obtained the floor,

Mr. LEWIS and Mr. OWEN addressed the Chair, The VICE PRESIDENT. Does the Senator from Does the Senator from Nebraska

yield to the Senator from Illinois?

Mr. NORRIS. I will yield to the Senator from Illinois or I will yield to the Senator from Oklahoma if they desire to speak I will yield the floor and speak after they have finished.

Mr. OWEN. I will yield to the Senator from Illinois. Mr. LEWIS. Mr. President, I have but one observation, which I am sure will not exceed a moment, as the Senator from Oklahoma, I think, desires to address himself to the materiality of the bill. It is this: It may be, as the able Senator from Iowa said, that in the early part of his experience as governor that one instance where he refused to enter the caucus was a matter of the liquor traffic. Of that I am not able to dispute, but I also call his attention to the other I have referred to, which he does not dispute. The Senator urges that the Congress shall be brought to a high level, and what says the able Senator as his test? He says that when we, the Democrats, put into the platform a policy it is for us to carry it out right-eously. I say he is correct. Yet when we meet in an ordinary conference, which he designates a caucus, for the purpose of carrying that out he condemns us and holds us up to the country as an example of the destruction of free institutions. thing to be derided by his eloquence and condemned by the intelligence of America.

Says he now that it is for us to carry our policy out, and not the President. That is true; but I call upon the able Senator to note that in every instance where the President has sought to cooperate and where we have sought to execute we have met that sentiment of opposition and obstruction of the distinguished Senator. Instead of disclosing that he really believes it to be the right of the country that its representatives should carry out the pledged policies, he busies himself, with his splendid ability, to defeat them. If he believes what he says as his political creed, I am unable to understand the consistency or justice of his course and must commend it to his own conscience to find a defense for such an attitude. I can not

Mr. CUMMINS. How have I obstructed the policy established by the Democratic caucus? I have already said that I think in harmony with the system that has been adopted we ought to

have a vote without any debate.

Mr. LEWIS. I answer the Senator. The Senator represents a great sovereign State. He has a potent voice in this body. Yet, when the Democracy moved to carry out the popular will on the tariff bill, then, again, on the currency bill, and execute what he says was the obligation of our party to carry out, then comes the voice of this distinguished Senator, with all its influence, inviting opposition from the public on the ground that something wrong is being done in the Senate, something destructive inaugurated by the Democrats; and here and with his influence and voice, potent as it is, he protests with con-stant resistance the popular will and a necessary measure, and this is his obstruction—sinister and indefensible. That is my

reply to the Senator.

Mr. OWEN. Mr. President—

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Oklahoma?

Mr. NORRIS. Does the Senator from Oklahoma desire to take the floor in his own right?

Mr. OWEN. Yes.

Mr. NORRIS. If the Senator prefers, I am perfectly willing to let him precede me.

Mr. OWEN. If it be agreeable to the Senator from Nebraska, should like to answer the Senator from Iowa.

I will yield to the Senator. Mr. NORRIS.

Mr. OWEN. Mr. President, the primary criticism of the Senator from Iowa [Mr. CUMMINS], to which I wish to make a very brief response, was against what he called caucus action on the pending banking and currency bill. I do not at this time

charged with the responsibility of government by the American people have a right to accomplish that task. I insist, however, that that party shall be permitted to perform that duty in a direct, simple, and efficient way, and if it prove to be necessary to have a caucus and a binding caucus in order to carry out and make effective the pledges made by that party to the people of the United States and to overcome the obstructions and difficulties placed in their path by the minority, it is fully justified as a matter of common sense. The criticism of the Senator from Iowa has no justification, however, as to caucus action on this bill. This measure has been before the country in substance for five years. The principles of the bill are not new. The principle of concentrating the reserves of the Nation, of making them mobile and responsive to our commercial necessities, the necessity for an open market for commercial bills, the need for elastic currency in this country, has been well understood by every student of finance. When the Senate, with laggard motion and ineffective action, in 1908 passed the Vreeland-Aldrich bill; when the party of the Senator from Iowa and his party associates were in charge of the Senate, and when they had the opportunity of giving this country relief, did not avail themselves of the opportunity they had, but, on the contrary, gave us the ineffective, poor expedient, the mere temporary expedient of the so-called Vreeland-Aldrich bill, they at least did so much as to respond in a small degree to the expectation of the country by authorizing a National Monetary Commission to study this matter and inform the Senate and the country—

Mr. BORAH. Mr. President—
The VICE PRESIDENT. Does the Senator from Oklahoma ield to the Senator from Idaho?

Mr. OWEN. I yield to the Senator.
Mr. BORAH. The Senator from Oklahoma voted for the
Vreeland-Aldrich bill and made a day's speech in support of it? Mr. OWEN. The Senator from Oklahoma protested against the Vreeland-Aldrich bill. The Senator from Oklahoma voted against the Vreeland-Aldrich bill. The Senator from Oklahoma pointed out the defects of the primary draft of the Aldrich bill that did not pass the Senate; he voted for it, after it had been amended to comply in part with his demands, because it was the best he could get under the circumstances. He voted for it because it was better than nothing, and he said so on the floor.

Mr. BORAH. I understand the Senator voted for the bill. Mr. OWEN. The Senator has already answered that ques-

tion.

Mr. BORAH. I did not understand the Senator's answer. I understood him to say in the first instance that he voted against it and afterwards that he voted for it.

Mr. OWEN. I did not say that. Mr. BORAH. Then I misunderstood the Senator. I ask him now if it is not true that the Senator voted for the Vreeland-Aldrich bill?

Mr. OWEN. He did not. He voted against it. Mr. BORAH. What bill was it the Senator voted for?

Mr. OWEN. The Senator voted for the first draft that passed the Senate on the ground that it was better than nothing. Does that answer the Senator's question?

Mr. BORAH. It answers as to the vote, but I am not so

certain as to the ground.

Mr. OWEN. The Senator can consult the Record and advise himself further, because the Senator from Oklahoma expressed his opinion on the floor of the Senate.

Mr. LIPPITT. Mr. President-

The VICE PRESIDENT. Does the Senator from Oklahoma

yield to the Senator from Rhode Island?

Mr. OWEN. I should like to be allowed to continue my argument and not have it chopped to pieces by interruptions on the other side until I get through. Then I will answer any question whatever.

Mr. LIPPITT. I am sorry-

Mr. OWEN. It is the general habit in the Senate when any Senator is making an argument that has any coherence in it to have one of the Senators rise in his place and cross-question and divert him in various and different ways, so that it is almost impossible to make a coherent argument. It is a bad practice in the Senate and I express my positive disapproval of it. I do not indulge it.

This banking question and its need of amendment has been discussed over and over again. It has been discussed in the public press, it has been discussed in innumerable public meetings, and, finally, after the National Monetary Commission had printed 33 volumes for the enlightenment of the country, and incidentally for the unlimited waste of time and opportunity to desire to go into any extensive discussion of the general merits of the policy of having party caucus action, except to say in brief that I agree with the Senator from Iowa that the party

the open market for commercial bills, for elastic currency, but containing also the one vice intolerable in America, that it put in private hands the control of the credit system of the United States. It would thus have emphasized and made still worse the tremendous concentration of property rights in the United States in a few hands, so well demonstrated by the Pujo committee in its great report, showing that \$22,000,000,000 of property were in the hands of a little over 100 men. This country is not going to stand it. It is not going to submit to it, and even the Republican Party in all its pride of power did not dare to urge the Aldrich bill. It abandoned it except in form.

Then a long investigation was made by the Pujo committee only last year, thousands of pages of evidence gathered, and a wonderful report prepared and presented to the country, which every man in this body has read or ought to have read.

Then another branch of the Banking and Currency Committee of the House, under Mr. Glass as chairman, heard the views of banker after banker and business man after business man, making a record of 750 pages of printed matter, bearing upon this question.

The Senate committee, beginning on the 2d day of September, heard the evidence and the opinions of bankers and business men and men of all classes until they had a record of over 3,200 pages. Then the members of the committee, in good temper, in good humor, the Republicans and the Democrats together, discussed this matter, and, finding themselves with some irreconcilable differences, finally presented two measures to this body. It was then, and only then, that the members of the Democratic conference saw fit to consider the work done by the Democratic members of that committee. In conference were suggested various amendments which were worthy, and which were adopted. In the conference were considered the views and representations made by the Republican members of the committee, and a number of suggestions made in the so-called Hitchcock bill were adopted, because they were worthy of acceptance.

Now the Senator from Iowa rises in his place and denounces our prudent and sensible action as an amazing thing. He states that he believes we ought to have the right to carry out the wishes of the country, and yet when we exercised every precaution to do that duty wisely and well and have faithfully considered the views of the Republicans we find ourselves obstructed on the other side by call after call for a quorum. Just let me read a little record which I have been making here for the information of the country to show that the Senator's colleagues have been obstructing us at every step, not permitting us to have long hours on the ground that it was exhausting to individual Members of the Senate—who do not attend—and the Senator from Kansas [Mr. Bristow] denounces it as legislative ruffianism.

Mr. Gallinger made the point of no quorum at 5.15 p. m. on Monday. Mr. Penrose had a roll call taken on a motion for a recess, which resulted in 53 yeas and 5 nays, at 5.35 p. m. Mr. SMOOT made the point of no quorum at 8 o'clock and 1 minute p. m. on Monday. Mr. Sutherland made the point of no quorum on Tuesday at 1.55 p. m. There were 58 present on the roll call, although doubtless there were not 58 present at the time the call was made. Mr. SUTHERLAND made the point of no quorum at 2.45 p. m., and 59 were present on the roll call. Mr. Sutherland then promptly disappeared and was not present at the next roll call. Mr. Smoot made the point of no quorum at 4 p. m. and 54 were present at the roll of the point of no quorum at 4 p. m. and 54 were present at the p. m. and 54 were p. m. and 5 quorum at 4 p. m., and 54 were present on the roll call. Mr. SMOOT made the point of no quorum at 5.12 p. m., and 52 were present on the roll call. Mr. Gallinger made the point of no quorum at S o'clock p. m., and 56 were present on the roll call.

Mr. GALLINGER. Will the Senator from Oklahoma permit

me to say that at the time I made the point of no quorum there were just 8 Senators in their seats?

Mr. OWEN. Doubtless; but the Senator did not state the number of Republicans who were in their seats

Mr. GALLINGER. It does not make any difference on that point at all.

Mr. OWEN. I do not think it does.

Mr. GALLINGER. The Senator from Oklahoma has already

Mr. OWEN. The Senator from Oklahoma will continue to put in the RECORD the attitude of Senators on the other side.

Mr. GALLINGER. The Senator has put into the RECORD that when I made the point of no quorum there were 65 Senators present. They may have been in the cloakroom or on the street or somewhere else, but they were not at that time present in the Senate Chamber, as the Senator would have the country believe.

Mr. OWEN. They were in the cloakrooms, relieving themselves of the weariness of prolonged and tedious debate that ought not to have taken any such length of time. It does not

require any Senator 10 hours to tell what he knows about Hetch Hetchy

Mr. GALLINGER. Does the Senator think that either the advocates or the opponents of the Hetch Hetchy bill are filibustering? Does he not recognize it as a legitimate discussion? I have not participated in it, and I probably shall not do so; but the discussion seems to be proper and legitimate.

Mr. OWEN. I have expressed the opinion that it does not take 10 hours for a Senator to tell what he knows about Hetch

Hetchy, and nobody believes that it does Mr. GALLINGER. It might not take the Senator from Oklahoma that long, because he presumes to know pretty much

everything on every subject.

Mr. OWEN. The Senator from Oklahoma is indulging in no presumption now. He is merely stating his knowledge about these calls for a quorum; and he has some knowledge about

Mr. GALLINGER. But the Senator does not state the facts correctly

Mr. WEEKS. Mr. President—
The VICE PRESIDENT. Does the Senator from Oklahoma yield to the Senator from Massachusetts?

Mr. OWEN. I yield to the Senator from Massachusetts. Mr. WEEKS. I should like to clear the Record as to the statement just made about the number present when the Senator from New Hampshire [Mr. GALLINGER] made the point of no quorum. The call of the roll after some time did develop that there were 54 Senators present; but when the Senator from New Hampshire made the point of no quorum I happened to be one of the Republicans on the floor. There were then 4 Democrats and 8 Republicans on the floor, making 12 Senators in sight. Of course, by taking time enough a quorum can be developed, but there was not a quorum in this Capitol when the point of no quorum was made.

Mr. SUTHERLAND. Mr. President-

The VICE PRESIDENT. Does the Senator from Oklahoma yield to the Senator from Utah?

Mr. OWEN. I yield to the Senator from Utah. Mr. SUTHERLAND. Before the Senator from Oklahoma resumes, if he will permit me, I would like to interpose long enough to say that at the time I called for a quorum upon the first occasion there were five Democratic Senators in their seats, with a very much larger number of Republicans in their seats. but there was not a quorum present. A quorum, however, did develop.

Mr. OWEN. They were near enough at hand to transact the business of the Senate, I will say to the Senator, if Senators on the other side would permit them to transact that business.

Mr. SUTHERLAND. Mr. President, no Senator is near

enough to transact business in this Chamber unless he is here; no Senator can transact the business of the Senate in the cloakrooms of the Senate.

Mr. OWEN. He is near enough to vote if permitted to do so. If the Senator will permit me, I will now continue my statement.

Mr. SUTHERLAND. Will the Senator permit me to finish what I was going to say?

Mr. OWEN. Certainly.

Mr. SUTHERLAND. It will only take a moment. The sec-

ond time that I demanded the presence of a quorum, which was nearly an hour later, I took the liberty of stating to the Senate what was the truth, that there were but two Democratic Senators upon the floor and one in the chair. Those two Democratic Senators were the Senator from Colorado [Mr. Thomas] and the Senator from North Carolina [Mr. Overman], who, owing to the lonesome condition upon the other side of the Chamber, had taken refuge upon this more populated side, though I did not at first observe him. After a while a quorum was developed; but I say to the Senator that even while the roll was being called, after the call of the roll had been completed, and at the time the announcement was made by the Presiding Officer-at no single moment was there ever a quorum present in this Chamber. Democratic Senators filed out of the cloakroom and from other parts of the Capitol, where they had been resting themselves, and filed into the Chamber for the roll call, and then immediately fled from the Chamber. So there never was a moment when there was a quorum present in this Chamber.

Mr. CLARK of Wyoming. Mr. President, will the Senator from Oklahoma permit me to interrupt him for just a moment? Mr. OWEN. In just a moment I will yield to the Senator. I will reply first to the Senator from Utah [Mr. SUTHERLAND], to say that the Democratic Members of this body are near enough to vote if they will be permitted to vote by Senators on the other side, and that the Senator himself, after twice calling for

a quorum, then fled from the tedium of the time-wasting talk

and was not present when a quorum was called immediately

Mr. Townsend made the point of no quorum at 8.25 p. m., and 48 Senators answer to the roll call. He also announced that he would call for a quorum whenever a quorum seemed to be absent. Then Mr. Townsend again called for a quorum at 8.50 p. m., and 56 Senators responded to the call of the roll. Senator Bristow made the point of no quorum at 10.24 on Wednesday morning, and 50 Senators answered "present." Senator Weeks suggested no quorum at 12.50 p. m., and there were 62 Senators who answered "present." Senator Root, although not making a point of no quorum, suggested the absence of Senators, and a call was ordered at 1.07 p. m., when 54 Senators answered to their names.

Mr. ROOT. Mr. President-

The VICE PRESIDENT. Does the Senator from Oklahoma yield to the Senator from New York?

Mr. OWEN. I do.

Mr. ROOT. May I ask the Senator from Oklahoma to revise his statement slightly?

Mr. OWEN. I shall be glad to do so if it is inaccurate. Mr. ROOT. What I did was to state, in order that it might go upon record, the precise number of Senators present on each side of the Chamber. I did not suggest the absence of a quorum. Mr. OWEN. Did the Senator from New York have any ob-

ject in doing that?

Mr. ROOT. I do not know but that the Chair ruled cor-

Mr. OWEN. The Chair did quite right, I think; and the Senator from New York, having performed that important pub-

lic service, immediately left for lunch.

Mr. ROOT. Mr. President, the Senator from New York immediately left, and he holds himself at liberty to leave, because he considers that the holding of the Senate in session from 10 o'clock in the morning until 11 o'clock at night in order that speeches may be made to empty seats is farcical and absurd and is not the performance—the just performance—of public duty. It will inevitably result from such a course of procedure that we shall have empty seats.

Mr. OWEN. I think the Senator from New York was entirely justified in feeling at liberty to go to lunch even if there was something on hand of more or less importance; but when there is nothing of any importance going on, except just simply the beating of the air with empty words, I think the Senator is the more justified in retiring to the cleakroom. Nothing but a sensible rule of cloture will abate this farcical, absurd, and pre-

posterous performance.

Mr. CLARK of Wyoming. Mr. President-

Mr. SMOOT. Mr. President, I should like to say to the Senator from Oklahoma-

The VICE PRESIDENT. Does the Senator from Oklahoma yield to the Senator from Wyoming?

Mr. OWEN. I yield to the Senator from Wyoming. Mr. CLARK of Wyoming. Mr. President, I want to trespass on the time of the Senator for just one moment while I beg to dissent from his implied statement that the Hetch Hetchy is a rather unimportant matter.

Mr. OWEN. I do not think so. It is the waste of words I

Mr. CLARK of Wyoming. To many of us it is a matter of supreme importance; to many of us, with the exception, per-haps, of the tariff bill and of the currency bill now pending, it is the most important measure-

Mr. OWEN. It is not the subject; it is the time-wasting talk

that I was commenting on.

Mr. CLARK of Wyoming. It is the most important measure in its results that has been before the Senate for many a day. While I have not, to my recollection, called attention to the fact of the absence of Senators and insisted upon a quorum, I have felt all the time that such a call was justified, because of the importance of the subject and because of the most excellent, exhaustive, and convincing speech which the Senator from Okla-homa speaks of as "empty words" or as "beating the air." I can not allow a statement of that character to pass and leave the impression that I for one consider the Hetch Hetchy proposition an unimportant matter.

Mr. OWEN. I think the Hetch Hetchy measure is a very important matter; but I think a week's talk about it is ridicu-

lous when every man has made up his mind.

Mr. CLARK of Wyoming. I desire to call the attention of the Senate further to the fact that this week has been devoted by the consent of the Senator and by the unanimous consent of the Senate to the discussion and decision of this very important matter of the Hetch Hetchy and not to the consideration or decision of the currency bill, and that therefore Senators who

are interested in this very important subject are not obstructing or seeking to obstruct, nor can they be considered as obstruct ing, the course of the currency bill by taking the time of the Senate which has been unanimously granted for the considera-

tion of the Hetch Hetchy matter.

Mr. OWEN. I was referring to the calls for a quorum, and I call attention to the fact that Mr. Gallinger at 1.55 p. m. on Wednesday called for a quorum, and 56 Senators answered to the roll call. Mr. Brandeger made the point of no quorum, and it developed for the first time that there was no quorum, it being immediately after dinner and some Senators not having finished dinner. There were only 40 Senators who answered the roll call until about 30 minutes—

Mr. SMOOT. Forty-five minutes.

Mr. OWEN. Which I think is a matter greatly to be regretted. Mr. Smoot made the point of no quorum at 10.15 this morning, and I want to say, in passing, that in commenting upon the absence of the Senator from Utah [Mr. Smoot] the other evening I did not do so with any unkind intent or to indicate that he was not faithful in his attendance upon the sessions of I do not believe there is a man in this body who the Senate. is more faithful in his attendance than is the Senator from Utah, and I do not believe there is a more industrious man in this body than he. I am glad to pay that measure of respect to him, because I think he is entirely deserving of it.

Mr. THOMAS. Mr. President-

The VICE PRESIDENT. Does the Senator from Oklahoma yield to the Senator from Colorado?

Mr. OWEN. I yield to the Senator.

Mr. THOMAS. Mr. President, I merely wish to emphasize my appreciation of the last statement of the Senator from Oklahoma [Mr. Owen]. I differ radically on almost every public proposition with the Senator from Utah [Mr. Smoot], but his powers of application and industry, his close attention to public business has commanded my admiration ever since I have been a Member of this body. He is a bitter partisan, but he fights fairly and in the open. He fought the tariff bill from its beginning to its ending. It encountered his unrelenting opposition, and yet he wanted to see that bill as to its details as perfect as possible, notwithstanding that fact, since he could not prevent its enactment. I want here and now to acknowledge my sense of obligation to the Senator, because during the consideration of that bill he gave me many extremely valuable suggestions and much desirable information concerning many of the items of the bill and relating as well to its general framework, many of which I was glad to avail myself of and which were incorporated in the bill. I think the Senator from Utah is entitled to this statement and to its appearance in the RECORD, to the end that he at least may be free from the charge or imputation of needlessly filibustering against important legislation. Certain it is that no one is more attentive to his public duties than the senior Senator from Utah.

Mr. NORRIS. Mr. President, I inquire if the Senator from Oklahoma has concluded?

Mr. OWEN. I have.

Mr. NORRIS. Mr. President, it is not my intention at this time to discuss, at least at any length, the question of caucus control raised by the Senator from Iowa [Mr. Cummins]. I wish to discuss briefly another phase of the question that is immediately before the Senate, but I can not permit the occasion to pass without saying that I concur most fully and enthusiastically with everything the Senator from Iowa has said upon the question of caucus control.

In that connection I want to call attention to one or two things that were mentioned by the Senator from Illinois [Mr. LEWIS]. He said, in commending the Senator from Iowa, that those in the majority of the Senate should do the best they could to carry out their platform pledges; and the Senator from Illinois reached the conclusion that that necessarily brought about caucus control by the majority side, and he cited the action that has been taken by the Democrats in caucusing or in holding a conference on the currency measure. The Senator from Iowa, in his opposition to the caucus, would not object to the Democrats holding a conference, or to the Republicans and Democrats together holding a conference, to bring about the best means to carry out any principle of government; but let us illustrate it here and see the difference—and I think there is a difference. For instance, in the currency measure there is a contest between friends of the measure-and I am using it only as an illustration-as to whether there shall be 12 regional banks or a less number of regional banks. I think it is conceded by every man that honest Senators, honest individuals may honestly disagree as to the number of regional banks the new system should have. The theory of the Senator from Iowa and those who believe with him that the caucus should not con-

trol the votes of Senators in such matters would leave every Member of this body free when the matter comes officially before the Senate to follow his conscientious judgment after the discussion had taken place and the evidence had all been offered as to how many regional banks he wanted to vote for; but caucus control would mean that, even on that detail, a Senator should vote the decree of the caucus rather than follow his own judgment after he had listened to the evidence; and he would have to reach that conclusion before the argument was made and before there had been any official consideration of the measure. I think that illustrates the difference of opinion that exists between those who favor the caucus and those who are opposed to it.

The Senator from Illinois [Mr. Lewis] very well and beautifully said, speaking of the work of the Senator from Iowa [Mr. CUMMINS] when he was governor of Iowa, that he was a pioneer

in antipass legislation.

Suppose that we had no antipass law on the Federal statutes, and that became a question for national legislation. Here, then, is a pioneer, a man who the Senator from Illinois admits is an authority on the subject, one of the men who began the fight, and he, under the present caucus methods of the Democrats of the Senate, would be excluded from participating in any deliberation that could have any effect on the framing of any law on that subject. Under this caucus method this man, whom the Senator from Illinois admits is the best qualified to frame such a measure, would not be allowed to have anything to do with the framing of the bill. His counsel would be denied. He would be excluded from all deliberations that could have any effect. The country would not get the benefit of his advice, ability, or knowledge. When the caucus had decided all the details of the bill, perhaps in secret, and had reported it to the Senate, then it is true he could talk and talk and offer to amend, but the caucus decree would compel the majority to oppose every amendment he would offer, even though they were all convinced his proposition would improve the bill.

Mr. REED. Mr. President—
The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Missouri?

Mr. NORRIS. I yield to the Senator.
Mr. REED. The Senator from Iowa would not at all be excluded; we would welcome him at any time into a Democratic conference, listen to him with pleasure, allow him to vote, and would be glad if he would see enough of the true light so that he would permanently join us.

Mr. NORRIS. I expected that kind of a suggestion; it is

not the first time that it has been made.

Mr. REED. And, Mr. President, we likewise extend the invi-

tation to the Senator from Nebraska.

Mr. NORRIS. I have had that invitation extended many times. Senators think it is a joke, but, as a matter of fact, it is a serious proposition. The Senator from Iowa [Mr. Cum-MINS] and the Senator from Idaho [Mr. Borah], and all other Senators for that matter, have, for reasons sufficient unto themselves, aligned themselves with a certain party. There may be propositions submitted by the other side or by an Executive representing the other party, in which they most heartily concur; they ought to be, and they should be, representing, as each of them does, a constituency just as intelligent and just as patriotic as that represented by any other Senator, allowed to participate officially in such deliberations as under the Constitution can come before this body.

Mr. REED. Mr. President-

The VICE PRESIDENT. Does the Senator from Nebraska

yield to the Senator from Missouri?

Mr. NORRIS. I will not yield at the present time. The reason I will not yield is because I do not wish to delay this particular question. It has been up for three days, and I am anxious to have it disposed of to-day.

Mr. KERN. May I ask the Senator if he does not know that by continuing this discussion on the subject of the caucus, which may be discussed hereafter on the bill itself, the inevitable

result will be the defeat of the resolution?

Mr. NORRIS. No. By the way, we have been meeting just the same every day at the hour the resolution provides for. I wish to submit to the Senator from Indiana that I have yielded patiently, I think, when I had a technical right to the floor, to Senators on the other side, who have consumed almost all of

The President of the United States delivered a message to the Congress the other day, and I wish to say now that with every single fundamental proposition that he laid down in that message I am in most hearty accord. I am just as anxious as any Senator on the other side, and more anxious than a good many of them, to carry out and bring about the enactment of every one of the propositions the President has laid down. There are a good many other Senators over here, I think, who feel the same way; all of them, at least, with respect to some of the propositions the President has laid down. Some of the Senators over here are pioneers on some of the propositions the President has laid down, and have given study and work for years to some of the propositions; but a caucus by the majority will exclude every one of them from any participation anywhere

that will be either beneficial or effective.

In other words, if Democratic Members caucus on any one of these propositions, and then are convinced later on in this official Chamber that some amendment offered by some of us would be effective, and would carry out in a better spirit the theory of the proposed law, they are precluded by the decree of the secret caucus from supporting it, because it is offered by some man who is not a member of their party and because it has not been passed on by the caucus. If this method is to be followed, then the best friends of these measures will not be allowed to help draft them. I want to help the President get these propositions mentioned in his message enacted into law, but if secret caucus methods are to be followed I will be excluded. I am as sincere as the President, and I ought to be allowed to make arguments and offer amendments before and to Senators who have not been controlled by secret caucus methods and bound in advance to vote against all amendments, even though they are convinced such amendments would improve the bill.

Mr. President, as I said at the beginning, I did not intend to discuss this proposition. I have discussed it a great deal more than I intended to. I wish now to come to another feature.

I am going to vote for the resolution offered by the Senator from Indiana [Mr. Kern]; and while I am not at all satisfied with it, I desire to call the attention of the Senate, and I hope of the country, to the fact that the necessity of taking that kind of action illustrates what I think is almost as important as the legislation itself; and that is, that this body ought to have some reasonable, fair, honorable, honest way of applying a cloture rule. I have taken the floor principally to call attention to that particular fact.

This resolution, like other resolutions that have been proposed in the past by Republicans when they were in the majority, and at other times by Democrats when they were in control, is really a means of reaching a cloture. If we are going to reach a cloture indirectly, why not let us reach it in a reasonable way by a direct course? It seems to me, as I said the other day to the Senator from Mississippi [Mr. Williams], that this is going to war according to the barbarism that existed in the past, when in this enlightened century we ought to have arbitration.

Years ago, if there was a dispute between two men as to

title, they settled it by wager of battle. The strong overcame the weak, and might, they supposed, made right. Here we have a proposition intended, at least by some who favor it, to

be a process by which men will be worn out.

Years ago the judge, when he instructed the jury and sent them to their room, told the bailiff that they should have neither things to eat nor things to drink until they had agreed. Why, they will agree; they must agree at some time; humanity must in the end succumb to torture; but is that a verdict for which a civilized, intelligent man or community would have

Now, we propose to put into operation about the only method the Senate has of avoiding being held up by one man, no matter who he may be. I am not complaining of the man who would hold up the Senate as long as the rule is there. not criticizing any man who takes advantage of it. I think he is justified in doing it, perhaps, often. We have a rule here, not written, but a silent rule, just as effective as though it were written, that there shall be no cloture. Then we say that the Senate shall meet and be in session under such terms and through such hours that the very physical condition of Members must fail if it is kept up for any length of time, and when they fail and become weakened some agreement will be reached. It is a barbarous method not founded on reason or intelligence, and the Senate should, by reasonable cloture rule, put an end to it.

I simply wanted to call the attention of the Senate to the fact that instead of using that ancient and barbaric method we should put upon the rules of the Senate some method by which we could reach the end of debate under reason and without resorting to means that are both ancient and uncivilized. When we do that I think it ought to be done—perhaps it will be necessary for it to be done—in a nonpartisan way. There are men on the other side who think such a rule ought to be adopted. There are those on this side and there are those on both sides who oppose it. I am not questioning their motives, but it seems to me this incident to-day ought to illustrate that something of that kind ought to be done.

Mr. GALLINGER. Mr. President, the extraordinary position In which the Senator from Oklahoma [Mr. OWEN] has put himself this morning, endeavoring apparently to bring discredit upon certain Senators on this side of the Chamber who have

called for a quorum, requires from me a single word.

Two days ago the Senator from Oklahoma called attention on the floor of the Senate to the fact that I had made the point of

no quorum, and the Senator added:

There were 56 Senators present.

Mr. President, when I made the point of no quorum I counted the Senators present, and there were just eight Senators in the Chamber at that time. The Senator from California was making a very earnest and important speech on a very important subject. It is unfair for any Senator to send out to the country a statement of that kind, that I made the point of no quorum when there were 56 Senators present. After a considerable time 56 Senators were brought into the Chamber, or brought themselves into the Chamber, and answered to their names.

The Senator from Oklahoma, in calling attention to-day to those of us who have made the point of no quorum from time to time, forgot to note the fact that on yesterday the Senator from Nevada [Mr. PITTMAN], a Senator on the Democratic side of the Chamber, raised the point of no quorum. I presume the Senator from Nevada ascertained the fact, as I have from time to time, that the attendance was very light, and that it was unfair to subject Senators to the task of making speeches to

empty benches.

Mr. THOMAS.

Mr. THOMAS. Mr. President—
The VICE PRESIDENT. Does the Senator from New Hampshire yield to the Senator from Colorado?

Mr. GALLINGER. Yes.

Mr. THOMAS. I think I should say, in justice to the Senator from Nevada, that he made the suggestion of the absence of a quorum at my request.

Mr. GALLINGER. That may be. At any rate, it came from

the Democratic side.

Last evening. Mr. President, we came here at 8 o'clock. was not agreeable to me to come, because I think I am entitled to some respite from the performance of my duties here. When we entered the Chamber, or a few minutes after entering the Chamber, the Senator from Connecticut [Mr. Brandegee] said:

Noticing that there are only about six or eight Senators on the floor, I would suggest the absence of a quorum.

What was the result? The roll was called, and it took 45 minutes to develop a quorum of the Senate. If Senators on this side of the Chamber had not been here, a quorum would not have been secured by the time the hour of 11 o'clock arrived.

If it be contended that we ought to transact the business of the Senate, sitting here 11 hours a day, in the absence of a quorum, many times only 5 or 6 or 8 or 10 Senators being present, I confess that I do not quite understand the proper procedure in the consideration of important questions that come before this body.

Mr. OWEN. Mr. President—

The VICE PRESIDENT. Does the Senator from New Hamp-

shire yield to the Senator from Oklahoma?

Mr. GALLINGER. I yield to the Senator from Oklahoma. Mr. OWEN. I would suggest that a very convenient way of accomplishing the result of having Senators present and avoiding these empty benches would be to have a reasonable cloture rule and not drive Senators out of the Chamber by prolonged and uninteresting debate.

Mr. GALLINGER. Mr. President, I remember a prolonged and uninteresting speech that the Senator from Oklahoma made not long ago, occupying six or eight hours and, by filibustering,

defeating the will of the Senate.

Mr. OWEN. It was perfectly justified, Mr. President, by such rules as we have. Any man has a perfect right to get up and use all the time he pleases and talk to the Senate until he drives every man out of it, which ordinarily is the result.

Mr. GALLINGER. Yes; but on that occasion why did not the Senator allow the regular business of the Senate to proceed, instead of "beating the air" for six or eight hours in idle

Mr. OWEN. The Senator beat the air to very fine effect on that occasion, and compelled the Senate to grant to the people of New Mexico the right to amend their own constitution. That is what it resulted in.

Mr. GALLINGER. Very well. If that be so, may there not be other occasions when equally beneficent results may be reached under the existing rules of the Senate?

Mr. SUTHERLAND. Mr. President, I intend to vote against this resolution, and because I intend to do so, I wish for a mo-

ment or two to give my reasons.

The resolution proposes that the Senate shall meet at 10 o'clock in the morning, and, with a recess of two hours, shall continue in session every day until 11 o'clock at night. That means that no other work can possibly be done except to attend the sessions of the Senate.

For more than three months the Senate and the other House of Congress have been held in session without the slightest excuse whatever. Not only have they been held in merely nominal session during that period of three months, but during that time no work at all of any character or description of any sort of importance has been transacted. It has not been permitted to be done.

I do not know who is responsible for that-whether it be some coterie that is managing the Democratic side of the Chamber or whether it be some source higher up. It is sufficient to say that for three months we have been kept here in Washington, nominally in session, nominally transacting the business of the country, but actually unable to do anything. Not only has no business been transacted upon the floor of the Senate, although the calendar is filled with bills of importance that ought to be disposed of, but even the committees of the Senate have been permitted to do nothing.

I happen to be a member of the Judiciary Committee of the Senate. During all this time, although members of that committee have been pressing for the consideration of important measures, it has been utterly impossible to secure at the hands of the committee the consideration of any measure whatsoever. Over and over again the Republican members of the committee have requested that certain bills should be taken up, and they have always been met with the proposition that we ought not to transact any business during the session except to dispose of the tariff bill; and after the currency matter had been injected into the situation, that we should do nothing else except attend to the currency bill. The humiliating spectacle was presented to the people of this country of 96 men ostensibly being held here in Washington to transact the public business and actually simply sitting about and waiting for the action of 12 men who happened to constitute the membership of the Committee on Banking and Currency.

After having wasted all that time, which kept many of us from taking needed rest, from taking some sort of a vacation after the strenuous work of the summer-and working in Washington during the heated period is strenuous, as everybody knows—having kept us from that, having worn many of us down, it is now proposed, as I view it, without any excuse or justification whatever, to compel sessions to be held here for these unreasonable hours in order to crowd through in a few days a piece of legislation which the committee has been dealing with and the whole Senate has been waiting for it to deal with

during a period of some three months.

wish to say to the Democratic side of this Chamber-and I think my observation of some nine years in this body warrants me in making the statement-that in the end they will gain nothing by passing the resolution. They will find, as I predict now, that before many days are over they will be unable to maintain a quorum here for night sessions. Men can not stand that work day after day. Not only will all other business of the Senate and of Congress be halted in the meantime, because no committee meetings can be held, no ordinary departmental business can be transacted by Senators, and their correspondence can not be properly attended to, but the hours are such that it will transpire in a very little while that Members upon your side of the Chamber will cease to attend the night sessions, and you will have to give the thing up. You will make better headway, in my judgment, and at any rate you will preserve the health of Members of this body if you will adopt more reasonable hours. If you will meet here, say, at 11 o'clock in the morning and run until 6 o'clock at night, you will find in the end that you would dispose of this legislation quite as quickly as you will under this sort of a forced order.

Mr. President, I am against any attempt of this kind. I am against it because I believe the proposition itself is unwise and because I object to the spirit in which the proposition itself is made. It has been stated upon the floor of the Senate by the Senator from Mississippi that the purpose of the order is to wear out the minority side of this Chamber; in other words, to force from them action, not after a debate but after they are tired out from these long and unreasonable hours of meeting.

Mr. President-

The VICE PRESIDENT (at 12 o'clock meridian). The morning hour having expired, the Chair lays before the Senate the unfinished business, which is House bill 7837. It will be read

The Secretary. A bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

VICE PRESIDENT. The unfinished business will be laid aside temporarily and retain its place upon the calendar, and the Chair now lays before the Senate House bill 7207.

The Secretary. A bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes

Mr. KERN. I ask that the resolution which has been pend-

ing may go over until to-morrow without prejudice.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the resolution will go over.

Mr. CLARK of Wyoming. Mr. President— Mr. GRONNA. I ask unanimous consent that the resolution may be passed to-day.

Mr. CLARK of Wyoming. The Senator can not do that.

I desire to make a parliamentary statement or inquiry in regard to another resolution, which was introduced day before yesterday. Of course there has been no opportunity to con-It was a resolution of inquiry introduced by myself. I find by a reference to the calendar that the resolution has gone to the calendar. I think it should retain its place on the table, so that it may be considered before going to the calendar in an ensuing morning hour. I ask that that order may be made.

The VICE PRESIDENT. That order will be made. It must

have gone inadvertently to the calendar.

Mr. REED. Mr. President, we have witnessed a singular manifestation of the methods which may be employed not to make haste. The entire forenoon has been spent in discussing mere motion to fix the hours of meeting. Those who have thus taken the time of the Senate have constantly insisted they desired to make speed, yet they have consumed several hours in absolutely useless debate. We have heard complaint after complaint because the Democrats have seen fit to hold a conference on this bill. The morning has been consumed in wailings. observed to-day, as I have in the past, that denunciation of caucus action is invariably confined to those gentlemen who at the particular moment find that caucus action has interfered with their desires.

We have been told all morning that the attempt of the Democrats to pass a resolution demanding that the Senate shall hold its sessions from 10 o'clock in the forenoon to 11 o'clock at night is a wicked scheme to reduce the contest over this bill to one of mere physical endurance. It has occurred to me that those who have prolonged the debate upon the resolution have done much to tax all of our powers of endurance and patience.

Mr. President, every man in this Chamber knows that the method complained of has been adopted in nearly every great battle which has been fought out on the floor of the Senate. Time and again the majority has held the Senate in session without intermission until the Members were willing to quit talking and go to voting. I have but little patience with Senators who claim to be desirous of saving time and who then proceed to consume time in debating a simple proposition fixing the hours of meeting. I have as little patience with the pretense that the numerous roll calls which have been demanded have been for the real purpose of securing the attendance of Senators.

It frequently transpires that there are upon the floor only a limited number of Senators, and yet the business goes on. It is only when some one desires to obstruct business that the systematic plan of repeated roll calls is adopted. The plain truth is that there is now a mild sort of filibuster going on upon the other side of this Chamber. No matter how Senators may disclaim that purpose, no matter what explanations they may offer, the Members of the Senate know that a filibuster is in progress, and the country knows it.

I desire to say further that I think a great mistake was made when we granted unanimous consent to vote upon the Hetch Hetchy bill on December 8. It seems to me utterly ridiculous for the Senate of the United States to spend a week or 10 days

debating a bill of that kind.

Mr. CLARK of Wyoming. Mr. President— Mr. REED. In a moment I will yield. Some means ought to have been provided for the ascertainment of the facts in this

particular matter, and the facts having been once ascertained, a statement and argument of an hour and a half upon either side would have elucidated every disputed point.

The present situation well illustrates some peculiar things that occur in the Senate. I have heard trifling questions debated here with all the solemnity in the world for a week or ten days and the most important of matters rushed through in a

few hours. I yield now to the Senator from Wyoming.

Mr. CLARK of Wyoming. I simply wanted to ask the Senator a question. The Senator on December 2 gave notice, which is on the outside of the calendar, that at this time he would address the Senate upon the currency bill. I wish to ask him if it is in pursuance of that notice that his remarks are now being made. Is it his intention to address the Senate on the currency bill at this time?

Mr. REED. I intend to address the Senate on the currency bill at this time. I am making some remarks that have application to Hetch Hetchy, and I shall probably keep as close

to that topic as those who have preceded me.

Mr. CLARK of Wyoming. Of course, I do not want to in-terfere with the remarks or the right to the floor of the Senator upon the Hetch Hetchy proposition. I only ask the Senator if he considers it to be exactly fair to those who believe the Hetch Hetchy proposition is an important one, it having been made the special order by the unanimous consent of the Senate, to take up the time upon matters which are not now before the It seems to me-

Mr. REED. Mr. President, I will answer the Senator frankly. Mr. CLARK of Wyoming. Of course, I do not wish to in-

terfere

If the remarks I am about to make will deprive Senators on the other side of their opportunity to debate this question, I will gladly postpone the making of those remarks. But in view of the fact that we have wasted the whole forenoon in discussing matters that have no more to do with Hetch Hetchy than the history of the fall of Sodom and Gomorrah has to do with the Constitution of the United States, I felt perfectly warranted in talking upon the currency question. However, if the Senator who has the floor or other Senators will say to me that they desire this time for the discussion of the Hetch Hetchy bill, I will cheerfully step aside.

Mr. CLARK of Wyoming. Of course, personally I do not

want to interfere with the Senator's occupancy of the floor and I would not do so, but I call his attention to the fact that but 10 minutes of the time devoted to Hetch Hetchy has thus far been consumed, that having been consumed largely by the Senator himself; and I further desire to say to the Senator that while the present speaker is not desirous of going on at this time I understand that other Members of the Senate have matters which they wish to present to the Senate on the Hetch

Hetchy proposition proper.

Mr. WORKS, Mr. President—
The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from California?

Mr. REED. Certainly.

Mr. WORKS. Mr. President, I have consumed a good deal of the time of the Senate in discussing the Hetch Hetchy bill. agree thoroughly with the Senator from Missouri that that should not have been necessary. If a proper investigation had been made of the conditions in the proper way, and the Senate informed by that means, the extended remarks that I made to the Senate would have been entirely unnecessary. But it was because of the fact that the truth had not been developed with respect to this proposition by that means that I felt myself compelled to consume the time of the Senate in an attempt to bring before it certain data and facts upon which the Senate could act intelligently, because of the fact that it had not been procured in some other way.

I have no apology to make to the Senate for the time I consumed in that endeavor, but I do agree with the Senator that it should not have been done in that way. Being foreclosed by the unanimous-consent agreement, that is the only way in which the Senate has had an opportunity to procure the information it ought to have on the subject in order to act intel-

Mr. PITTMAN. Mr. President—
The VICE PRESIDENT. Does the Senator from Missouri
yield to the Senator from Nevada?
Mr. REED. I yield to the Senator.
Mr. PITTMAN. I take issue with the Senator from California with regard to the facts before the Senate in this matter. It has been examined for a number of years. There are a number of reports. I also want to call attention to the fact that a large portion of the Senator's speech consisted in reading official reports by an official board created for the purpose of investigating this subject. I think probably that he would have been saved a great deal of time if he had not devoted a large portion of his speech to reading records that had been prepared under governmental direction.

Mr. BORAH. Mr. President-

Mr. REED. In one moment, please, I will yield to the Senator from Idaho. Mr. President, nothing that I have said should be taken as a criticism of the Senator from California [Mr. Works]. That was furthest from my thought. I was discussing a wholly different proposition. I have no criticism of the Senator from California for taking the time he did. think that he delivered a very illuminating address, and in-stead of being criticized he is deserving of the thanks of the Senate.

I yield to the Senator from Idaho.

Mr. BORAH. Mr. President, I am very much interested in the Hetch Hetchy bill, and I think it a very important measure; but the Senator from Missouri gave notice upon two different occasions that he would address the Senate upon the currency question, and he is now seeking to address the Senate under his second notice. While I think the Hetch Hetchy bill undoubtedly will receive and ought to receive much more consideration, as one party greatly interested in it I do not see any reason why the Senator from Missouri should not occupy a reasonable portion of time in discussing the currency question. I think we will have a great deal of discussion hereafter upon the Hetch Hetchy bill, but I think we have plenty of time

Mr. REED. Mr. President, I am quite willing, if Senators desire to go on with the Hetch Hetchy bill and discuss it, to yield the floor. I gave notice that I would speak on the currency bill because I had no thought that all the time would be desired by those who have the Hetch Hetchy bill at heart. I have been informed since I took the floor that the Senator from Idaho had expected to speak this morning on the Hetch Hetchy bill. If that is the case, I will gladly yield the floor to him.

Mr. BORAH. No, Mr. President; I do not want the Senator from Missouri to yield to me, because that was not the expectation. I had given no notice, and I will find sufficient time, I have no doubt, to present all the views I have at hand on this subject. So far as I am concerned, I do not desire the Senator to yield.

# BANKING AND CURRENCY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. REED. Mr. President, I invite the attention of the Senate to the pending banking and currency bill. I hope to be

brief. Permit a preliminary statement.

Some criticism has been indulged because of an alleged delay on the part of the committee in reporting this bill. It has been charged that some members of the committee were engaged in an effort to defeat the wishes and wreck the policies of the President. Just how impressions of that kind are born it is difficult to say. I do not intend at this time to do more than to refer to them in the briefest possible manner.

No honest man who knows the facts will charge that a

single member of the committee, either Republican or Democrat, has sought to amend this bill or postpone action upon it out of a desire to oppose the policies of the President. Any assertion

to that effect is groundless and infamously false.

I affirm that the President of the United States has never declared that the House bill ought to be passed without amendment. Neither has he undertaken to coax or coerce Congress into the enactment of that particular bill. The President has, within his constitutional right and in performance of his constitutional duty, recommended the enactment of banking and currency legislation. Within the same limitations he has made suggestions from time to time. But I utterly deny and repudiate the statement or innuendo that he framed a bill or approved a particular bill and insisted that the legislative branch of the Government should abdicate its duties and accept that bill without amendment or change. Those who so assert would place the President in a position he does not desire to

I am safe in asserting that the President has not only recognized the right of Congress to amend the bill, but those closest

to him have urged more than one change.

In order that I may not be misunderstood, let me, in substance, repeat: The President has advocated a reform of our banking and currency system within certain broad general lines, but he has left to Congress the task of working out the law.

The bill before us was not given to us hand made; it is the

result of development, as I shall show.

Mr. President, the forerunner of this bill was introduced into the House of Representatives by Mr. Glass on the 26th day of June, 1913. That bill was practically abandoned. A very similar bill was introduced by Mr. Glass on August 29, 1913. The latter bill went to the committee and was reported back; was repeatedly amended in the House and finally reached this body on the 18th day of September, 1913. On that day it went to the Committee on Banking and Currency.

Up to this point there had been no hearings on the bill. It is true, as has been asserted, that numerous hearings have been had in the past upon questions of banking and currency. But they did not relate to this bill, for the bill had not yet been born. They were in a large measure impertinent to this bill because the bill embraces ideas radically different from those entertained at the time the hearings were had. For that matter, hearings upon banking and currency questions have been going on for hundreds of years. A mass of knowledge has been accumulated. Students for centuries have employed their minds with these great questions. This storehouse of knowledge, of course, existed and was open to all, but it could not apply to the bill now under consideration, except in the most general way.

When the Senate committee was required to consider this particular bill, it was not justified in contenting itself with reading testimony devoted to other bills and other measures. The problem was not merely one of understanding the broad principles of banking and currency. The task which confronted us was to write a bill which would meet the requirements of

our present business and fiscal conditions.

Let it be remembered that our banking and currency systems are radically different from those of any other country on earth. The scheme outlined in the proposed bill has no counterpart anywhere in the world. The task, therefore, which we were called upon to perform was to develop a plan which could be fitted onto the existing banking and currency systems. It was, of course, necessary to understand all their intricacies and to become familiar with the laws under which the national and State banks and trust companies exist. We were then required to prepare a bill which would remedy existing evils without at the same time giving to the business interests of the country a wrench so violent as to involve us in a catastrophe.

I frankly acknowledge our indebtedness to the past. I candidly concede the value of other investigations, but the point I make is that we were called upon to ascertain exactly how the proposed bill would affect our present business conditions, not how some other bill introduced in the past and now abandoned

might have worked.

As I discuss this question, I hope I may say nothing which will be taken as a criticism of the House of Representatives. In my judgment, the authors of this bill did well. veloped a general plan in which there was much of merit. When that plan was submitted to the Senate, it became our

duty to analyze, scrutinize, and, if possible, improve it.

If, then, the Senate saw fit to give this bill careful attention, it did not violate legislative courtesies. In so scrutinizing and amending the bill the Senate simply performed its plain duty. Why did the Constitution provide for two branches of the Legislature? Manifestly, that two separate bodies, looking at questions from independent standpoints, might coordinate their judgments and criticisms upon a measure before it should become a law. To this the Constitution added a third safeguard by reposing in the Executive the right of approval or disapproval.

AMENDMENTS MADE APPROVED BY CAUCUS AND PRESIDENT.

Mr. President, the justification for the hearings needs but passing notice. It has already been debated. mitted by every member of the committee; it will be denied by no Member of the Senate; it will no longer be disputed by any sensible man who is familiar with the facts. Let me, however, call attention to a few facts:

Mr. Glass introduced his first bill on the 26th day of June. He introduced his second bill on the 29th day of August.

The second bill changed the first bill in 164 particulars. Before the second bill reached the Senate it had been amended 57 times.

As the result of the hearings, the deliberations of the committee, and the consideration of the Democratic conference, 340 additional amendments have been made.

So that it appears that since this bill found its way into

Congress it has been amended 561 times.

In the last print of the bill, which included the parts stricken out as well as the parts remaining, there is a total of 2,000 lines. In this print there appear 683 lines of the last House bill unaltered, 562 lines of the House bill have been marked out, and 755 lines of new matter added. The bill containing all of these changes has been approved by the Democratic caucus, and

doubtless will be signed by the President when it passes.

In the great majority of these changes all of the members of the committee, regardless of politics, have concurred.

The facts just recited clearly indicate that the hearings had profound effect, and, it must be presumed, were of great utility, because they produced the numerous amendments referred to.

I remark in passing that the amendments offered to the bill are in no sense a reflection upon the House of Representatives.

The general framework of the bill as we received it has been

in many important respects maintained. We have sought only to remedy defects, and to make additions to the structure as planned-and wisely planned-in the House of Representatives.

I think it but fairness to add that the great majority of the changes which I have included in the foregoing enumeration relate more to phraseology than to substance, but as I proceed with my remarks I shall clearly demonstrate that many of the changes made were not only of the essentials, but abso-Intely vital.

I desire to compliment the Republican members of the committee. It is true we arrived at a point in our deliberations when the committee divided into sections. Nevertheless, I am compelled to say that I never sat with men who appeared to be more earnest or more thoroughly imbued with a desire to write a sound measure. The members of the committee, regardless of politics, were, in my opinion, controlled by no other motives than love of country and a sincere devotion to the public welfare.

Mr. President, I desire to emphasize what I have already in substance said. I utterly deny that the President of the United States has in any particular gone a single hair's breadth beyond the limits of his prerogative. He has requested Congress to act upon this great measure; he has urged all reasonable speed; he has unquestionably ventured to suggest that the bill ought to be framed along certain lines; but in doing that he has kept consistently within his rights.

But, sir, the President needs neither defense nor encomium from me. He enjoys the confidence of the people of the United States to a remarkable degree. He has already won the profound respect of the nations of the world. I voice the universal sentiment when I assert that in force of intellect, exaltation of sentiment, breadth of learning, and disinterested patriotism Woodrow Wilson is the peer of any man who has yet occupied the executive chair. Such is the verdict of mankind,

## A COMPLICATED TASK.

Mr. President, I want very briefly to lay before the Senate the task the committee has had before it and which it has undertaken to the best of its ability to perform.

We have 7.488 national banks and approximately 13,000 State banks and trust companies. The national banks, as all know, exist under Federal statute, which embraces a complete banking plan wisely devised and for a long time followed. But State banks and trust companies exist under the separate laws of 48 different Commonwealths. Those laws differing, the character, therefore, of the institutions in each State vary as the laws vary.

One question we must answer is, How may a plan be devised which will enable all banks, existing as they do under different systems of law and possessing widely divergent powers, to become members of one system and yet retain the rights conferred by the laws under which they were created? No lawyer has ever confronted a proposition of that kind without at once realizing its gravity.

A further complication arises from the fact that the national banks are subdivided into three classes. There are 52 central reserve banks located in New York City, Chicago, and St. Louis; 315 reserve city banks located in 47 reserve cities and 6,806 so-called country banks.

The banks referred to also have different reserve requirements; country banks must have total reserves of 15 per cent, of which 6 per cent must be retained in the banks' own vaults, while 9 per cent may be deposited in the banks of reserve or central reserve cities. Reserve city banks must have 25 per cent, of which 121 may be deposited with the banks of central reserve cities.

Reserve city banks must have 25 per cent, all of which must be kept in their own vaults. It will thus be seen that we now have a system which permits what is commonly known as "pyramiding of reserves."

When, however, we turn to the State banks and trust companies, a still more complicated situation is presented. These institutions maintain reserves which vary with the laws of the States. In some instances no reserves whatever are rethe States. quired. Besides, the State institutions count as reserves national-bank notes, which are not permitted to be so counted by the national banks themselves.

Bear in mind also that the State banks and trust companies of one State can engage in certain lines of business not permitted to State banks in another State. At the same time. speaking of these organizations in the aggregate, they are permitted to do classes of business which are prohibited to the national banks. Therefore, I repeat, the difficulties confronting us have been great.

Mr. President, whatever Senators may have thought, it is undoubtedly true, that the country has understood that country banks had actually at hand at all times \$15, and the reserves and central reserve city banks \$25, out of every \$100 of deposits, sacredly set aside and constantly available to meet the demands of depositors.

But in the practical working of the system this is what transpires: The 9 per cent of the country banks' reserve which is deposited in the reserve cities immediately becomes a part of the general deposit of the reserve city banks and is loaned out or used as are ordinary deposits. In like manner the reserves of the reserve city banks, being redeposited in central reserve city banks, become a part of their general deposits and are loaned and used for commerce and business. The result is that the really available reserves of country banks do not probably exceed 15 per cent, while those of reserve city banks in like manner have dwindled to about 9 per cent, and the 25 per cent for central reserve city banks has probably not exceeded 15 to 18 per cent.

There is another feature to which I invite attention. is that these reserves, wherever held, have not been set aside and withdrawn from trade. On the contrary, they have largely constituted the working balances of the banks. The result of my investigations leads me to the conclusion that to all intents and purposes there have been no reserves kept by the banks other or different than they would have been obliged to keep if there had been no law upon the subject.

The fact I have pointed out is of great importance, because if the reserves now kept by banks are not in fact set aside and withdrawn from business, but, on the contrary, are being constantly used in business, then the withdrawal of these reserves from the banks where they are now actively employed and the placing of the reserves in Federal banks, where they must be maintained as actual reserves, involves the withdrawal of that amount of money from active business.

It is a wholly different proposition to transfer into the reserve of the banks about to be established from four to six hundred millions of dollars that are actively employed in the banking and commerce of the country than it would be to transfer the same amount if it were already retired from business and locked up as actual reserves.

One of the great difficulties confronting the committee was to work out this transfer without injury to the business of the country. If we have solved that single problem, then all the time taken by the committee is fully justified, because not to have solved it would have been to produce a constriction of cur-rency and credits calamitous in the extreme. I believe our committee has worked out the problem.

I present a table prepared by an expert of the Treasury Department, which I ask to print as a part of my remarks without reading it in full.

TABLE SHOWING CONDITION OF NATIONAL BANKS AND RESERVES ON HAND AND AMOUNT OF RESERVES TO BE HELD UNDER THE PROVISIONS OF THE FOLLOWING BILLS.

AND AMOUNT OF RESERVES TO BE HELD UNDER THE PROVISIONS OF THE FOLLOWING BILLS.

Glass bill, introduced June 26, 1913, referred to as H. R. 6454; House bill as it reached the Senate, September 18, 1913, referred to as H. R. 7837; House bill as amended by the Democratic members of the Senate Banking and Currency Committee and the Democratic conference, being referred to in table as "Senate bill."

The following table is intended to show the amount of free moneys the banks now have on hand and the amounts of free moneys they would have on hand under the various bills referred to below. By "free moneys" is meant those resources of the bank which it is at ilberty to loan or otherwise use in its general business.

In order to ascertain this we deduct from the present net deposits, first, the amount of reserves required to be kept; second, the amount of the banks will be required to take from their assets and contribute to the capital stock of the Federal reserve banks; third, the amount of reserves of other banks which the banks of central reserve and reserve eites now hold, and which will in all probability be withdrawn from them when the reserve-bank system is established.

It should be remembered that the banks are divided into three groups—central reserve city banks, reserve city banks, and country banks. The central reserve city banks hold a portion of the reserves of the country banks and the reserves of the country banks; the reserve city banks hold a portion of the reserve city banks at \$1,508,000,000, lon order to ascertain the amount of free net deposits they now have, we deduct their present actual reserves of \$392,000,000, leaving a balance of \$1,176,000,000, which constitutes the present free net deposits.

Applying the foregoing figures to House bill 6454, we find under that bill that we must deduct from the present net deposits, first, the \$243,000,000 of reserves of other banks no

banks, because this sum will, in all probability, be withdrawn, thus giving us net deposits of \$1,325,000,000; second, the 20 per cent reserves required by the bill, \$265,000,000, and the 10 per cent to be contributed to the capital stock of the Federal reserve banks, \$18,000,000, so that the free net deposits under House bill 6454 would be \$1,042,000,000 instead of \$1,176,000,000, showing a shrinkage in free net deposits of \$134,000,000.

The same method of calculation is carried through the other bills, the result being that in the national banks alone there is shown to be a shrinkage in free net deposits or loanable funds under the various bills as follows:

H. R. 6454---H. R. 7837---\$384,000,000 217,000,000 117,000,000 Senate bill"

"Senate bill"

The table also shows the shrinkage or contraction which will result if all banks come into the system.

The central reserve city banks now have \$1,568,000,000 of net deposits, of which \$243,000,000 are reserve funds of other national banks. Assuming that these reserve funds be withdrawn when the banks owning them become member banks, the net deposits of the central reserve city banks will then be \$1,325,000,000.

The reserve city banks now have net deposits amounting to \$1,946,000,000, of which \$325,000,000 are reserve funds of other national banks. Assuming that these reserves be withdrawn when the banks owning them become member banks, the new net deposits of the reserve city banks will be \$1,621,000,000.

The country banks have now net deposits of \$3,611,000,000, none of which is made up of the reserve of other national banks.

The final reserves required by the several currency bills are as follows: H. R. 6454—central reserve city banks, 20 per cent; country banks, 15 per cent. H. R. 7837 (as passed by the House)—central reserve city banks, 18 per cent; reserve city banks, 18 per cent; country banks, 12 per cent. H. R. 7837 (Senate bill)—central reserve city banks, 18 per cent; cuntry banks, 12 per cent.

In addition to the above, the investment in capital stock of the Federal reserve banks is treated as reserve. In H. R. 6454 and H. R. 7837 as passed by the House this amounts to 10 per cent of the capital and in Senate bill to 3 per cent of the capital and surplus. (In all the bills this amount can be doubled, if necessary.)

By applying these percentages to the new net deposits of the banks the reserves will be as shown in the table. The present reserves as there shown are actual reserves as given by the Comptroller of the Currency.

Currency.

The figures for national banks are based on the reports of June 4,

The figures for State banks and trust companies are based on the last available report, June 14, 1912.

#### Constriction of moneys.

Total national banks, State banks, and trust companies	1,944,000,000	2, 298, 000, 000	1,936,000,000	1,792,000,000	

	Free net deposits.					
	Present.	H. R. 6454.	H. R. 7837.	Senate.		
Central reserve cities. Reserve cities Country banks	\$1,176,000,000 1,460,000,000 3,069,000,000	1,271,000,000	1,303,000,000	1,364,000,000		
Total national banks State banks Trust companies	5,705,000,000 2,618,000,000 3,348,000,000	2,385,000,000	2, 471, 000, 000	2, 498, 000, 000		
Total national banks, State banks, and trust compa- nies	11,671,000,000	10,749,000,000	11,111,000,000	11, 255, 000, 000		

Applying these figures to the three bills, there will be constrictions of free deposits (in other words, a reduction in available funds), as shown in the following table:

CONSTRICTIONS IN FREE DEPOSITS.

Total of national and State banks and loan and trust companies.

	H. R. 6454.	H. R. 7837.	Senate.
Central reserve city banks	\$134,000,000	\$108,000,000	\$100,000,000
	189,000,000	157,000,000	96,000,000
	61,000,000	148,000,000	179,000,000
Total national banks	384,000,000	217, 000, 000	117,000,000
	233,000,000	147, 000, 000	120,000,000
	305,000,000	196, 000, 000	179,000,000
Total National and State banks and trust companies	922, 000, 000	560, 000, 000	416, 000, 000

<sup>1</sup> Indicates expansion instead of constriction.

NOTE.—The Senate bill provides that the reserve within the Federal reserve banks may consist one-half of eligible paper. This would probably free at least \$448,000,000 and would result in no constriction.

CONSTRICTION OF MONEYS AND CREDITS.

An examination of the foregoing table discloses that if all the national banks and State banks and trust companies came into the system there would be, under the various bills, an inevitable reduction in the moneys the banks are free to use, as follows: Glass bill of June 26, constriction of credits \$922, 000, 000
House bill 7837, constriction of credits 560, 000, 000
House bill 7837, as amended by the Senate, constriction
of credits 416, 000, 000

Applying the present bill to the national banks alone, it will be observed that although there is a constriction in the moneys the national banks are free to use, taken as a whole, of \$117,-000,000, there will be a surplus of \$79,000,000 in the country banks. The reason for these results is too complicated to stop now to discuss. The important fact is that the pending bill has greatly reduced the volume of constriction. It is sufficient to say that the result was worked out through changing the reserve requirements of the bill.

Notwithstanding the reduction referred to, a calamitous result would have been certain had we not gone further. Accordingly we proposed a plan which it is believed will avoid any contraction whatever. This is, accomplished by two amend-

First, we empowered the Federal board to authorize member banks to use as part of their reserves Federal reserve notes. This grant of power ought to be exercised with the extremest care and should never be employed except to meet a temporary emergency. It was believed to be absolutely necessary that the power be lodged with the Federal board in order to prevent contraction. Once the system is well under way the permission should be withdrawn.

Second, we amended the bill so that banks could meet the primary reserve requirements of the bill by turning over to the Federal reserve banks one-half of the reserves required in securities of the kind the banks are permitted to rediscount. This amendment will save the banks from the necessity of curtailing their loans, gathering the cash into their own vaults, taking it to the Federal reserve banks, and then rediscounting

If the banks avail themselves of the two privileges referred to there need be no contraction. The business of the country can go on without interruption. Instead of contraction, we shall probably have actually released about thirty-two millions of money which now is not available for business.

I have just detailed what I regard as one of the most important accomplishments of the committee. I believe the plan as worked out will be found to be wise. And I repeat, if the committee has done nothing else, the time and labor expended

by it is more than justified.

The facts to which I have referred were first suggested to the committee in the hearings, and were afterwards carefully verified. Let those who have been caviling and criticizing ask themselves this question: What would they have said of the committee had it permitted this bill to be rushed through Congress without investigation and without consideration, and then had discovered that the business of the country was paralyzed by the sudden withdrawal from the channels of commerce and trade of between four hundred and six hundred millions of dollars? Let these hypercritical gentlemen also ponder the fact that every dollar of money carries from \$8 to \$12 of credit, and let them consider the stupendous contraction which would have resulted had the committee subordinated discretion to

Mr. President, the tables I have presented are based upon the reports of all banks.

In demonstration of the fact that there is no grave error in the basis or conclusions in the foregoing tables, I will state that I had the same expert to select at random two typical banks, and from the detailed reports of these banks filed with the Comptroller of Currency, to calculate the decrease in the loan-able funds and the decrease in the profits of the banks. I present herewith his conclusions, in the form of a table:

Comparison of a typical central reserve city bank, a typical reserve city bank, and a typical country bank as to earning capacity under the present law and under the provisions of H. R. 6454, H. R. 7837 as it passed the House, and H. R. 7837 as amended to Dec. 1, 1913.

One-half of reserve with Federal reserve bank in form of eligible paper.

Note.—No allowance is made for any possible profits above dividends accruing to member banks from the Federal reserve banks under H. R. 6454 or H. R. 7837 as it passed the House. The Senate bill gives all profits above a 6 per cent dividend to the Government.

PUBLIC CONTROL-DANGER OF CREATING MONEY TRUST.

Now, Mr. President, passing from this phase of the bill, I invite attention to one other question of the greatest impor-tance, namely: The public control of the banking system we were about to create.

We have heard much in recent times of a Money Trust. In support of the charge that we already have what amounts to a financial trust, the chairman of the committee this morning declared that at this time a little more than 100 men con-

trol over \$22,000,000,000 in the United States. It is currently believed-perhaps the belief is exaggerated beyond the real facts-that there are certain great financial powers capable even now of largely dominating or influencing all of the important financial transactions of this country. This may be an extreme view. At the same time it is my judgment that there is too much of truth back of the opinion.

In creating any system of banks, manifestly the first duty of a legislator is to preserve the integrity and the independence of the individual bank. It is by maintaining the independence of the individual banks we can preserve that free competition which is the only real safeguard to the business of the country. So long as there is a free and open market for credits every citizen of the Republic can enjoy a fair chance of success. When we imperil or destroy that chance we have become the enemies of humanity and we commit a crime for which there should never be forgiveness. For these reasons, I have insisted, and shall continue to insist, that we shall make sure that nothing proposed in this bill shall make for the creation of a bank-

ing or money monopoly.

I pause at this point to remark that I do not believe the assertion so often made that "Ours is the poorest banking system in the world." On the contrary, I assert that we have the best banking system in existence. The cry that ours is the poorest banking system in existence. The cry that ours is the poorest banking system was raised for a purpose. It was uttered by those who hoped to set up in this country a great central bank. They intended to control the bank for the advantage of the great financial interests, already too powerful. The first step in this plan was to discredit our present banking system. The second step was to bring forward the central bank as a remedy, the expectation being that in their disgust with a system pictured as a complete failure, the people would accept the central bank as the only alternative.

I have said that ours is the best banking system in the world. But I would not be understood as saying that it is without defects of a very serious character. I do not claim that the system does not have weaknesses where other systems may have strength. I do not claim that other systems, in many respects, may not be superior to ours. What I do assert is that our system has one great virtue which makes it superior to any other. I claim that this virtue more than offsets the elements of greater strength and stability possessed by certain other banking systems.

Mr. President, it is a good thing for a country to have a fortress, if it be there for the protection of the people of the country; but it is a bad thing if the fortress is in the hands of those who oppress the people.

So it is wise to have a banking system that is strong; but it ought always to be a banking system created for the benefit of trade, commerce, and industry. Such a system promotes the happiness and welfare of the people. A country would better have no banking system than to have one able to destroy com-

merce or enforce an unjust tribute.

di trans

When I turn to observe the banking systems of other nations, I find that while they possess elements of strength which our system lacks, they have disadvantages which far overmatch those benefits. Canada has a branch banking system. There are a few large banks in the great cities, with numerous branches extending throughout that vast domain. The branches are merely the skimmers which gather the cream of the commerce and industry of their local communities, sending it to the financial centers. There is totally lacking that local interest and spirit which has made our banks such large contributors to the welfare of the country.

Why, sir, the bankers of this country are more than mere money changers, interest takers, or financial overlords, who gather where they do not sow. On the contrary, they are part of the business lives of their respective localities, prospering as their localities prosper, and in turn contributing to their prosperity. Witness our country banker: Nearly always he is a man who is local to the community. The stockholders in the bank live in the neighborhood. They have a pride in the town or village. They are frequently engaged in commerce and agriculture in that section. Such a bank is merely the financial nucleus of the vicinage. It gathers the idle money of the region and sets it to work at home. It promotes local business, encourages thrift, inspires enterprise, and contributes to the prosperity of the place. The community in turn makes for the prosperity of the bank.

The unification of local pride, local interest, and self-interest is the dominant principle of our banking system. The result is that our banks do not drain a town of its money; they keep the money in the town. They do not prosper off the community; they thrive with the community. They are parts of its commercial life, its energy, its development, its prosperity. That

correct to

one fact lifts our banking system above that of any other country. I would not sacrifice the single advantage referred to even to gain the strength of European banks. I would rather have an occasional panic and an independent banking system than a branch system with no panics. I prefer hard times part of the time to hard times all of the time.

COMPETITION BETWEEN BANKS PRESERVED.

Even more important than the question of local interest which I have just discussed is the fact that in this country each bank is independent from and in active rivalry with every other bank. That rivalry and independence makes for the development of the country. It insures an open market for credits. toward the reduction of interest charges. It is the life of enterprise; the soul of progress.

If all the banks were under one management or subordinated to one control the evils of monopoly would at once attach. Just in proportion as we approach a common control, we make possible the destruction of legitimate business. The independence of banks lies at the basis of commercial freedom. Under existing conditions a man refused credit by one bank may go to its rivals with the certainty that he will obtain such ac-commodations as he is justly entitled to receive.

It is my judgment that the two features of our banking system to which I have just referred render it superior to that of any other country on earth, even though the others may be financial Gibraltars, and even though our system occasionally is

involved in difficulties.

The pending bill undertakes to strengthen the points of weakness and at the same time maintain the independence and the democracy of our banks. It must be manifest, therefore, that the first problem we have to solve is to concentrate the reserves and the energies of these banks and at the same time to preserve the independence of each bank from every other bank. As we draw the banks together and coordinate them into one system, we must be careful-painstakingly and prayerfully careful-lest we create a financial trust in the United States.

This problem engaged the serious attention of the committee, If it be true, as some believe, that clready, with our independent banks, there can be exerted by great financial overlords an influence upon the system as it now exists, it must be plain that when we draw all of these banks together by a common interest, when we bring them into 8 to 10 institutions, when we give them a common-stock ownership in these institutions, when we confer upon the banks the right to elect the majority of the board of directors of the institutions to be created, we are in danger of making it easy for the sinister influences that are so much feared to gain control of the system. Patently, it must be easier to control a system of 7,413 banks after they have been united than it is when they exist as absolutely independent institutions.

Therefore the question to which we gave profound consideration was how we could place in control of the regional banks practical bankers and at the same time avoid the danger of

creating a banking trust.

There were members on the committee who believed that the majority of the board of directors of the regional banks should be selected by the Government, thus insuring a governmental control at that point. There were others who insisted that while there should be a full measure of Government control it should be exercised by the Federal reserve board. Those who entertained the latter opinion argued that as the banks furnish the capital and furnish the reserves, and as banking skill, forethought, and foresight are necessary, the majority of the board of directors of the regional banks should be allotted to the banks.

CONTENDED FOR ABSOLUTE PUBLIC CONTROL.

I want to say for myself now that I contended long and earnestly in the committee for a majority control by the Government of the regional banks. I would rather have no system of regional banks than to assist in creating one which would develop into a financial Frankenstein. I want no part in the

building of a monetary monopoly.

But, Mr. President, it was argued that because the regional banks do an actual banking business, because they must daily discount paper, guard their reserves, and perform other func-tions requiring technical skill, the majority of the board should be selected by the member banks. After full consideration and debate it was determined by a majority of the branch of the committee to which I belong that this point should be granted. I was led reluctantly to concur in this conclusion, and only upon condition that certain amendments should be made which it is believed will remove all possible danger.

I invite your attention to those amendments. The bill as it

came from the House provided simply in general terms that class B directors shall consist of three members who shall be

"representative of the general public interests." We amended this language so that it provides that class B directors shall be in fact representative of the business and agricultural classes. We made it read:

Class B shall consist of three members who at the time of their election shall be actively engaged in their district, respectively, in commerce, in agriculture, and in some other industrial pursuit.

Mr. BORAH. Mr. President-

The PRESIDING OFFICER. Does the Senator from Mis-

souri yield to the Senator from Idaho?

Mr. REED. When I have finished this one sentence I will gladly yield. The difference between the two propositions is this: Under the general language employed in the House bill it might be said that a man was representative of the public interests who might at the same time come nearer being interested in the banks than in any other calling in life. To say the least the language was very indefinite.

The bill as now framed requires a Class B director to be, when selected, actively engaged in either commerce or agriculture or some other pursuit. They must be men, therefore, who are interested in the specified pursuits, and who, in voting as members of the directorates, will necessarily vote in the light and be influenced by the environment of their business and

occupation.

By another amendment we prohibited them from being either officers, directors, or stockholders of any bank.

The board as now to be constituted, therefore, may fairly be said to be representative, three of them to be bankers selected by bankers, three of them to be men actively engaged in commerce or agriculture, but selected by the bankers, and three of them selected by the Federal Government itself through its reserve

I yield to the Senator from Idahe.

Mr. BORAH. Mr. President, the Senator from Missouri has practically answered the question which I am going to ask, and that is whether there has been any change made as to the manner of selecting class B.

Mr. REED. There is none. Mr. ROOT. Mr. President-

The PRESIDING OFFICER. Does the Senator from Missouri yield to the Senator from New York?

Mr. REED. Certainly.

Mr. ROOT. May I ask the Senator whether it should not read, "or in some other pursuit." It seems to me that it would require them to be engaged in all as it is now. I think it must be an inadvertence.

Mr. REED. No; on looking at the language I observed that the word "and" was used intentionally. It, however, may not be the most fortunate expression, but I will say to the Senator from New York that what was intended was that one of these men should be actively interested in agriculture, one of them actively interested in commerce, and the third actively interested in some other pursuit. I think the language, perhaps, is not as apt as it might be, but that was the thought.

Mr. President, we did not stop at that point. I myself had the honor of offering an amendment prescribing or defining

the duties of these directors. It is as follows:

The board of directors shall perform the duties usually appertaining to the office of directors of banking associations and all such duties as are prescribed by law.

Said board shall administer the affairs of said bank fairly and impartially and without discrimination in favor of or against any member bank or banks, and shall, subject to the provisions of law and the orders of the Federal Reserve Board, extend to each member bank such discounts, advancements, and accommodations as may be safely and reasonably made with due regard for the claims and demands of other member banks.

Mr. President, the importance of that amendment lies in the fact that for the first time it wrote into the bill language which commanded the directors of the regional banks to treat all member banks alike. It prohibits favoritism; it forbids discrimination; it gives to member banks the right to demand impartial treatment. The member bank is not left to solicit favors; it may insist upon rights.

Mr. President, the provisions I have just discussed might be ineffectual if it were not for the fact that at the same time we enlarged the powers of the Federal reserve board so that it can compel regional banks to obey this mandate of the law. We conferred this power by providing in section 11, paragraph J, as follows: The Federal reserve board shall have power

To exercise general supervision over said Federal reserve banks.

When, therefore, we imposed the duty upon the directors of the regional banks to treat all member banks fairly and impartially and without discrimination, and gave the Federal reserve board, which is appointed by the President of the United States, authority to exercise general supervision over the Federal reserve bank, we gave the Federal reserve board power and

authority to compel the Federal reserve banks to be impartial in their dealings with member banks. The same authority empowers the Federal reserve board to protect the public against wrongs sought to be perpetrated by the reserve banks. The power conferred is sufficient to accomplish these ends, and if it be wisely exercised there is but slight danger of discrimination in favor of some bank and against others; or in favor of one section of the country and against another; or, I will add, the adoption of a policy by regional banks which will be oppressive to the public.

POWERS OF RESERVE BOARD INCREASED.

The Federal reserve board, appointed by the President, is, by the two amendments I have set out, given absolute command of the system. It can make the regional directors perform their

full duty with fairness and impartiality to all.

We followed these amendments with others of equal importance. We gave the reserve board the unrestricted right to remove any of the directors of a regional bank. Here is the language: "The Federal Reserve Board shall have power to suspend or remove any officer or director of any Federal reserve bank, the cause of such removal to be forthwith communicated in writing by the Federal Reserve Board to the removed officer or director and to said bank." The House bill The House bill only gave a restricted right of removal,

Mr. BORAH. Mr. President— Mr. REED. I will yield in one moment. The lawyers of the Senate will observe that that power of removal is absolute. There is no trial demanded. It vests in the Federal Reserve Board the right to remove. The solitary requirement is that after removal has taken place, or coincident with it, the reason shall be put upon the public records in order that the board may be judged by its acts.

The PRESIDING OFFICER. Does the Senator from Mis-

souri yield to the Senator from Idaho?

Mr. REED. I yield to the Senator. Mr. BORAH. As I understand the change which was made as to the power of removal, it rests now solely and exclusively within the discretion of the Federal Board.

Mr. REED. Yes, sir.

Mr. BORAH. There is no one to review it and no reasons need be assigned for the removal, but after the removal the

reasons shall be communicated to the bank.

Mr. REED. That is the fact. It was intended to vest the power of removal absolutely-to give the Federal Board the right to remove, without question, any director, and the board is not compelled to specify any particulars and have trials and hearings; its mandate of removal is final.

The safeguard against an abuse of that power (and it is a very great power) is found in the fact that this board will be composed of men of the highest character. It will be the su-preme court of finance. The board will be appointed by the President himself, and must be confirmed by the Senate. It is required to state its reasons for the removal. If it states trifling reasons that do not justify its action, it will place itself in a sad position before the bar of public opinion. We need not therefore fear an abuse of its powers.

But another reason why the power will never be misused is that the board can not appoint the successor of the director removed. There is no incentive to remove a man except for real cause, because the power that removes can not, in pursuit of any scheme it may have, put some favorite man in the place of the man removed. The power may be thought to be somewhat arbitrary, but I believe that it is necessary to vest this power in the Federal Government if we give to the banks the

majority of the directorate of the regional banks.

Putting together, then, these several provisions to which I have adverted, I believe we can say to the country with a clear conscience that while we have drawn these banks together into this great system, while we have given them a common stock ownership, while we have placed the control of the regional banks in the hands of the bankers, we have at the same time so safeguarded every avenue and so locked every door that the people may be content. In the last analysis the Federal reserve board, appointed by the President and representing the entire country, has complete and absolute power, and will control the entire system and prevent discriminations, combinations, or other wrongs.

I call attention further to the increased power of the Federal reserve board, which is the one arm of this system that certainly represents at all times the public interest.

The board has power to supervise and regulate the issue and

retirement of Federal reserve notes.

It is given authority, for cause, to take possession of any Federal reserve bank, and to administer the same during the period of its suspension.

It is granted the right to authorize member banks to use as reserve Federal reserve notes or bank notes based on United States bonds to the extent that such board may find necessary.

It may permit national banks applying therefor, when not in contravention of State law, the right to act as trustee, executor, administrator, or registrar of stocks and bonds under such rules

and regulations as it may prescribe.

Other powers not herein specified have been added to those which were given to the Federal reserve board by the House bill, so that to-day I believe we can confidently state to the country that this system can be inaugurated, and that at every step it is safeguarded by a control which springs from the people themselves, and is worked out through the instrumentality of the appointees of the President who constitute the Federal reserve board.

Mr. BORAH. Mr. President—
The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Idaho?

Mr. REED. I do.

Mr. BORAH. I do not want to interrupt the continuity of the Senator's argument; but I take it perhaps an interruption does not disturb the Senator at all, as he is making, I notice, an argument without manuscript. As I understand the bill that the Senator is now supporting-I have not had time to read it since the print came in to-day, so this is the first time I have seen it—the power which has been vested in the Federal board is sufficient to practically give the Federal board supreme control over the entire system which is to be organized as a result of this bill; that by reason of being compelled to discount the paper of one bank and another, by reason of the power to remove three of the members of the Federal reserve board, it practically gives them absolute power over the system.

Mr. REED. I think that can be fairly said, but for reasons other than those included in the Senator's remark. At the same time, the bill leaves the practical banking in the hands of men

selected by the bankers themselves.

Mr. BORAH. It centralizes the power of ultimate action with

this Federal reserve board.

Mr. REED. Undoubtedly. The power had to be centered somewhere. It either had to be left in the banks or it had to be put in the Government. Now, to state it fairly, I think this plan combines the advantages of both systems, by which I mean it combines the advantages of governmental control with some of the advantages of private business management,

I may stop a moment to illustrate that. We begin with the member bank. It is not obliged to loan a penny of its money unless the directors of that bank want the money loaned. It makes its own loans. It transacts its own business exactly as it does now. It is not obliged to go to the regional bank for anything. It never goes there unless it wants to go. When the member bank comes to the regional bank, therefore, to rediscount its paper it comes because the bankers who have been managing that bank want to come to secure an accommodation.

These bankers, then, come to a regional bank that is officered by men who have been selected by the banks themselves, and it can secure no accommodation at that point unless it brings paper which, after being inspected by the officers of that bank, entitles it to an advancement. Thus for the second time we apply the bankers' knowledge, the bankers' skill, and the bank-

ers' discretion to the transaction.

At this point, for the first time, the Government, through its representatives, completely controls the transaction. Through the Federal board it has the right to say to the bankers who control the Federal reserve bank, "You shall be fair; you shall be just; you shall not discriminate; you shall not strike down the one man and build up the other." But that is a power which But that is a power which every fair man must say ought to be reposed in the Government.

Again, the Government can say whether it will issue money to the Federal reserve bank, but the money is never issued until the banker, with his knowledge, with his acumen, with his experience, believes the business of the country to be such

as to warrant its issuance.

Thus we have given to this bill the strength which comes from the banker's knowledge and the banker's control of banking, and at the same time I confidently believe we have retained in the hands of the people through their governmental agency a power to so control the system as to make it the servant-not the master-of the country.

Mr. President, there was another power given to the Federal reserve board which I omitted to make mention of. It is found

on page 44 and reads:

The Federal reserve board may authorize the reserve bank of the district to discount the direct obligations of member banks, secured by the pledge and deposit of satisfactory securities; but in no case shall the amount so loaned by a Federal reserve bank exceed three-fourths of the actual value of the securities so pledged,

The rediscount by any Federal reserve bank of any bills receivable and of domestic and foreign bills of exchange and acceptances shall be subject to such restrictions, limitations, and regulations as may be imposed by the Federal reserve board.

Thus we have given to the Federal reserve board another important function; and while it was in some measure covered by the bill of the House of Representatives, it was not as effectively covered, we think, as it is by the provisions of the present bill.

Mr. President, I have discussed these two important phases of the bill. I shall print, with the permission of the Senate, a table showing the most important changes which have been wrought in the bill, and which may be of use to Senators as a matter of reference. I do not claim that it is complete, but I think it will furnish an index at least to the changes.

The VICE PRESIDENT. Is there objection to the request? The Chair hears none.

The table referred to is as follows:

[In view of the fact that the Banking and Currency Committee of the Senate has been criticized because it granted hearings and took time to analyze and consider the pending bill, I present the following table. I hope it will be found of convenience to those who have occasion to trace the evolution of the bill. Late in its deliberations, the committee divided. That branch consisting of Senators Owen, O'Gorman, Reed, Hollis, Pomerene, and Shafroth, Democrats, reported the bill substantially as summarized in column 4. Their report, with slight changes, was unanimously approved by the Democratic conference of the Senate. The other branch of the committee, consisting of Senators Hitchcock, Democrat; Nelson, Weeks, McLean, Bristow, and Crawford, Republicans, filed a separate report, which concurs in the majority of the amendments made by the Owen branch of the committee, and, in addition, made many other changes.

A numerical summary of the changes between the Glass bill, as introduced in the House by Mr. Glass, and the Owen bill, is as follows: Between first Glass bill and second Glass bill, 164 changes. Between second Glass bill and House bill as it reached the Senate, 57 changes. Between the House bill introduced by Mr. Glass's second bill by the House of Representatives are indicated by the contrast between columns 1 and 2. The changes made in Mr. Glass's second bill by the House of Representatives are indicated in the contrast between columns 2 and 3. The changes made in the House bill after it reached the Senate, and which were ratified by the Democratic conference of the Senate, are indicated by the contrast between columns 3 and 4. The table presented only indicates the more important changes. All the amendments above indicated have been approved by the Democratic conference of the Senate, Other changes are likely to result from the debate in the Senate.]

### NATIONAL-BANK CIRCULATION—REPUNDING OF BONDS—continued.

House bill 6454, introduced June 26, 1913, known as first Glass bill.	House bill 7837, introduced Aug. 29, 1913, known as second Glass bill.	House bill 7837, as amended in committee and House of Representatives; passed Sept. 18, 1913, by the House and reported on same day to Senate.	Substitute for House bill 7837, reported by Owen branch of Senate Banking and Currency Committee and approved by Democratic conference of Senate; printed Dec. 1, 1913. All page num- bers refer to print of Dec. 1, 1913.		
All national-bank circulation to be retired by following plan—Continued.  2 per cent bonds bearing circulation privilege exchangeable for 3 per cent bonds without circulation privilege; national-bank circulation to be correspondingly decreased.  At end of 20 years all 2 per cent bonds exchanged for 3 per cent bonds without circulating privilege.  At end of 20 years all national-bank circulation not then retired to be called in.  Note.—Briefly, the plan contemplated a speedy retirement of all national-bank circulation and the returning of 2 per cent bonds by an issue of 3 per cent bonds.  Pages 28-29	Gives banks privilege of exchanging each year 5 per cent (\$36,000,000) of 2 per cent bonds having ofrculation privilege for 3 per cent bonds without circulation privilege, national-bank circulation to be correspondingly decreased.  Psyment at par of all outstanding 2 per cent bonds after period of 20 years.  All national-bank circulation not previously retired to be called in at end of 20 years.  Pages 33-34		Reserve bank authorized to buy outstanding 2 per cent bonds against which circulation has not been issued and to exchange them for 1-year gold notes bearing 3 per cent.		
			Note.—This plan, in contrast with the other plans, proposes absolutely to preserve the present volume of bank currency, whereas the earlier plans proposed its retirement. The plan permits the issuance of 3 per cent gold notes only to an amount of approximately \$237,000,000, whereas the other plan would have permitted the issuance of 3 per cent bonds to the amount of \$727,078,847.		
	PARRING OF	EXCHANGES.	A Company No. 1881 - 19 Up.		
Required reserve bank to receive for deposit and without charge for exchange or collected for deposit and checks drawn by or against any of its depositors (p. 27).  Note.—All the work was to be done without any charge whatever.	Same as column 1, but provision is made that nothing therein contained shall be construed to prohibit member banks from making reasonable charges to cover actual expenses (p. 32).	Same as in column 2 (p. 33).	The provision regarding charges is changed so that the charges may be made reasonable, thus making it possible for a bank to make a reasonable profit. Federal reserve board is given power, by rule to fix the charges made by member banks against their customers whose checks are cleared.		
CONTROL OF FEDERAL RESERVE SYSTEM.  Federal reserve board and directors regional bank.					
Federal reserve board:  Terms of appointive members, 6 years. (Willis Testimony Hearings, p. 3117, print of bill N. Y. Times, June 19, 1913, p. 4, sec. 11.) His bill as introduced into the House was: Reserve board, 7 members, consisting of Secretary of Treasury, Secretary of Agriculture, and Comptroller of Cur- reney, and 4 members appointed by President, one of whom to be person experienced in banking. Term of appointive members, 6 years. Secretary of Treasury to be ex officio chairman of reserve board.  One of appointive members of board to be designated governor, and one vice governor, of bank.  Governor to be subject to supervision of Secretary of Treasury. No member of Federal reserve board to continue to hold office or act as direc- tor of any reserve bank.  Note.—Mr. Glass's original proposition was a Federal reserve board of 9; 3 cabinet officers, 3 appointees of the President, and 3 members selected by Federal reserve banks.  Pages 15, 16, 17	Same as column 1 except not more than one of appointive members shall be selected from any one Federal district.  Also required to devote entire time to business. Allowed in addition to salary actual travelling expenses. Not more than two of same political party. One of appointive members to be designated by President as manager and one as vice manager, the manager to be the active executive officer of his Federal reserve board.  Manager subject to supervision of Secretary of Treasury. No member of Federal reserve board to be an officer, director, or stockholder in any bank.  Board empowered to require Federal reserve banks to discount paper of other Federal reserve banks, charging an interest rate not less than 1 nor greater than 3 per cont above the higher rates prevailing in the district. Power given to suspend all reserve requirements imposing a graduated tax upon all invasions of the reserve notes. Power to suspend, subject to approval of President, officials of reserve banks on written charges, with opportunity of hearing, for incompetency, dereliction, fraud, or deceti.  Power to appoint receiver for Federal bank.  Federal advisory council created without pay.  Federal advisory council created without pay.  Federal advisory council created without pay.  Federal advisory council created without pay.	Substantially same as column 2. Pages 17-23.	Reserve board consisting of Secretary of Treasury and 6 members appointed by President. Terms of appointive members 6 years. Not more than one from any reserve district.  Required to devote entire time to business. Allowed, in addition to salary, actual traveling expenses. Omitted. Two of appointive members to be designated by President governor and one vice governor, to be active executive officer.  Governor under supervision of reserve board. Same as column two.  Board to require rediscounts at rates of interest to be fixed each week by Federal reserve board.  Board empowered to suspend reserve requirements, both general and with reference to Federal reserve notes.  To suspend or remove any officer of a Federal reserve bank in its discretion, being merely required to state its reasons.  Power to take possession of Federal reserve bank and administer same during period of suspension. To require bonds of Federal reserve agents and to make all rules and regulations necessary. To authorize member banks to use as reserves beform notes and bonk notes when necessary. To permit national banks to act as trustee, executor, administrator, or register of stocks and bonds. To exercise general supervision over all Federal reserve banks.  Federal advisory council created, compensation to be fixed by board of directors, Federal reserve banks.		

CONTROL OF FEDERAL BESERVE SYSTEM—continued.

Substitute for House bill 7837, reported by Owen branch of Senate Banking and Currency Committee and approved by Democratic conference of Senate; printed Dec. 1, 1913. All page num-bers refer to print of Dec. 1, 1913. House bill 7837, as amended in commit-tee and House of Representatives; passed Sept. 18, 1915, by the House and reported on same day to Senate. House bill 6454, introduced June 26, 1913, known as first Glass bill. House bill 7837, introduced Aug. 29, 1913, known as second Glass bill. Directors of regional banks: rectors of regional banks:

Nine directors.

Class A: 3 members chosen by and representative of member banks.

Class B: 3 members elected by banks to be representative of general public interests of the reserve district; not to be officers or directors of any bank, and not to accept office during term of service.

Substantially as in column 1. Substantially same as column 1. Same as column 1. Class B: Same as column 1, and must be actively engaged in commerce, in agri-culture, and in some other pursuit. Substantially same as column 1. of service,
Class C: 3 members designated by
Federal reserve board, one to be
Federal reserve agent. Pages 6-9. Same as column 1, and Federal reserve agent to be person of tested banking experience. Pages 5-10 Pages 5-9 Same as column 1. No member of class B or C shall be an officer, director, or employee of any bank.

Class C: Members of class C must have been for 2 years residents of district.

Class C: Two members to be persons of tested banking experience.

Board of directors required to extend to all member banks accommodations impartially and without discrimination.

Pages 16-21

ADVANTAGES TO BANKS AND PUBLIC.

Mr. REED. Mr. President, complaint has been made by certain bankers against the proposed legislation. I am glad to say that the majority of the bankers of the country have viewed the bill from a fair standpoint. They have sought to aid in its preparation and have met it in a friendly spirit. It is, however, a regrettable fact that in certain quarters there has been manifested not only a disposition to be hypercritical but obstinate. These gentlemen constantly prate about "the banks furnishing all of the capital," and vociferously assert that "the Government is about to do something of an oppressive nature." They fill the air with wailings over imaginary confiscations and forced contributions.

I want, for a few minutes, to have a plain talk with the bank-

ers of the country.

I do not belong to that class of men who hate a man because he has made some money. So far as I am concerned, I have always had a kindly spirit for the banker. He loans me money, and so long as he continues to do that I shall continue to hold him in very high esteem. [Laughter.] Mr. President, let us look at the banking situation as it is,

Let me call the attention of the banker to his duties, his obligations, his liabilities. When a banker takes over his counter the money of the citizen, he enters into a legal obligation to return that money upon the instant it is demanded. It is his duty, not only under the law, but in all good morals, to keep himself at every moment of the day ready to respond to the demand of the depositor. If the banker were always to keep his reserves high enough, he could meet that demand. If he were reserves high enough, he could heet that demand. If he were content with smaller profits, he need never be in a position to become the victim of a panic. It is because he wants to make money rapidly that the system has grown up of loaning the de-positors' money down to the danger line. It is only when he has loaned the money down to that line he finds himself in danger. Time and again a sudden tremor has run through the financial channels; time and again the banks have been obliged to close their doors, simply and only because they had not kept themselves in a position to respond to their legal liabilities. You say, "If the banks were to so withhold their reserves, they would cut down their profits." I grant it. You say, "If they were to so withhold their reserves, credits would be con-stricted." I grant it. The fact remains, nevertheless, that the principal cause of financial disturbances is to be found in the fact that bank reserves have been kept too low.

Mr. President, no longer ago than in 1907 substantially all of

the national banks of this country repudiated for the time being their obligations. If the law had been enforced in all of its rigidity, most of them would have been placed in the hands of receivers and the entire financial structure would have been wrecked; but the law was not enforced. Manifestly, there was no moral obligation resting on anybody to enforce the law, because to have enforced it would have been to have wrought ruin and disaster. We would have destroyed the bankers, who, after all, were not greatly to blame, but we would also have

almost destroyed the country.

The inherent weakness of the banking system consists in the fact that no banker wants to keep enough money in his coffers so that he can meet every extraordinary demand.

Now comes the Government and proposes a plan to relieve the banks. In every letter, syllable, line, and paragraph this law is devised for the benefit of the banks of the country. The banks ought to receive it in the friendliest spirit of cooperation. They should not regard it as an adversary measure about to be forced upon them by a superior power, but as a beneficence intended in amity. This is of course a great benefit resulting to the public from the system, but the banks receive the benefits first.

Let us see what this bill does for the banks:

First. The reserves of country banks are reduced from 15 to 12 per cent, the reserve banks from 25 to 15 per cent, and the reserves of central reserve banks from 25 to 18 per cent.

Five-twelfths of the reserves of country banks, six-fifteenths of the reserves of reserve banks, and six-eighteenths of the reserves of central reserve banks are required to be deposited with the Federal reserve banks.

The Federal reserve banks thus become the common reservoir for a part of the reserves of all banks.

In turn the member banks are permitted to withdraw and use 65 per ceat of these reserves by simply depositing in lieu thereof commercial paper of the character defined in the bill. Thus the banks are enabled immediately to use in their ordinary business substantially two-thirds of the reserves thus deposited.

Moreover, this system of impounding reserves has the additional advantage of placing the surplus moneys of each bank where they can be used by every bank. This right, being reciprocal, will, of course, in the long run benefit all banks

Second. The reserves thus placed constitute a great element of safety, because they must always be kept on hand, unless their use is demanded by the legitimate commerce of the coun-They will not be congested in certain great centers, there be loaned out to support the gambling operations of the stock market as is now unfortunately the case.

Has any banker the right to complain of this as ungenerous treatment?

Third. We have provided in this bill for the benefit of the banks that through the Federal reserve banks they may deliver to the Federal reserve agent their 90-day commercial paper and receive in exchange for it currency of the United States Government,

To illustrate: Under the terms of this bill the member banks may rediscount their commercial paper with the Federal reserve bank. That bank in one day may take this commercial paperthese mere promissory notes-to the amount of millions of dollars to a Federal reserve agent, and thereupon the reserve agent may turn over to the reserve bank an equal amount of currency bearing the imprint of the Government upon it, and back of which stands the faith and credit of all the people of the United States.

The bill places no limit on the amount of money that may be thus issued, except the desire of the bank to obtain it and the discretion vested in the reserve board to regulate the amount issued, and the ability of the reserve bank to maintain a 33 per cent gold reserve.

The regional bank having obtained currency in this way can in turn pay it to member banks for other commercial bills

presented by them.

Surely the banks may not claim that this is harsh treatment. We do that for the banks which we have never done for any other class of people. I am content that it should be done at this time, because I want to see our banking system strengthened, and our commercial and financial systems buttressed. But I say that the banker who does not appreciate these great benefits is incapable of recognizing blessings that come in the open and undisguised.

Truth to tell, there is, in my judgment, no justification for granting these special privileges to the banks, except that it seems to be necessary at this juncture to strengthen our fiscal system, and because the benefits will undoubtedly in the end inure to the common advantage of the people through the greater security of our financial system, the reduction in the interest charges, and the steadying effect upon the prices.

Indeed, I am afraid we have been too generous in extending the circulation privilege. We may invite inflation. I shall probably discuss this feature at a later date.

Fourth. It is proposed to deposit in the regional banks the

moneys of the Federal Government.

GOVERNMENT DEPOSITS.

At this point I call attention to a distinction between this bill and the House bill. The House bill made it obligatory upon the Secretary of the Treasury to deposit all the general funds of the Government with these banks. Our committee did not deem that wise. While in ordinary times the policy of so depositing public moneys will undoubtedly be pursued, we did not regard it as prudent to impose upon the Secretary of the Treasury the legal command to deposit, under any and all circumstances, with the regional banks all of the public funds. We regarded such a provision as one fraught with danger. We therefore reposed in the Secretary of the Treasury a discretion to withhold such deposits if, in his judgment, that course was prudent. The House bill commanded the Secretary of the Treasury of the Treasury to distribute the money equitably among all the districts. If this provision had stood every dollar of the people's money collected at the Federal Treasury would have been turned into these banks and distributed among them, I presume, according to capital. The money would have been thus placed in the banks even though the exigencies of the situation might have warned against it.

We have also changed the provision, just referred to, reposing in the Secretary a discretion as to the distribution of the

moneys.

But, sir, the general intent of this bill is that we shall as a general rule take all of the money collected in taxes from the people of the United States, put it into the coffers of these Federal reserve banks, and allow the banks in turn to borrow it without requiring from the Federal reserve bank in which the money is deposited the payment of a single dollar of interest. I ask the bankers of the United States, When in the history of this round earth a government has ever treated the banking portion of its population with greater generosity?

BILL TOO GENEROUS TO BANKS-FUTURE AMENDMENT NECESSARY.

I say to you now that while I am under the present circumstances content that the provisions of this bill shall be enacted into law I hope and confidently expect that the time will come when there will be further restrictions and safeguards added to the measure. I am astonished that any banker in the United States fails to appreciate the fact that in our efforts to strengthen the banking system, in our efforts to enable the bankers to escape from the dangers now besetting them, we have gone to the very edge of the precipice by proposing to take all of the Government's money and to place them the vaults of banks that are controlled by banks, with the full knowledge and intent that this money shall in turn be loaned to member banks. We have approached the limit of danger when we propose to issue to the banks currency backed by the faith and credit of the Government. If the bankers of the country do not recognize these advantages and the spirit in which they are proffered, then they are not the intelligent and patriotic men I have always believed them to be.

Mr. President, I can not close this branch of my remarks without saying that there is, of course, vested in the Federal reserve board an ample power of control. Why should it not be there vested? Will any sane man pretend that these great advantages should be given to the banks and the Government not retain the absolute power of control? What just man will contend that the power of control should not be vested in the people of the United States, when it is considered that the money of the people of the United States is to be turned over to the banks and the credit of the people of the United States

is to be pledged for further moneys to be issued and turned over to the banks? Have the banks any right of partnership in that control?

The banks have contended that they are entitled to be represented upon the Federal reserve board. I utterly deny it. They are on one side of the table; the Government of the United States, representing the people of the country, is upon the other. The bankers represent those who demand, who ask, rights from the Government. They come to the Federal reserve board making their demands and proffering their requests. No man should sit upon that board unless he represents the people of the United States—the people of the United States alone—for it is their money and their credit which is to be granted.

Mr. President, I might prolong these remarks for hours. I have seen fit to touch this bill at only a few important points.

I do not intend much longer to take your time.

I believe, sir, that the country is face to face with an emergency. I do not intend to say that a calamity is threatened, but a real emergency exists. The banks of the country are naturally husbanding their resources in order to be prepared to comply with whatever conditions the bill may prescribe. Until it is passed there will be a period of uncertainty, both as to its requirements and the time it shall become operative. The peril of uncertainty should be as short as possible.

The bill has been studied carefully by the committee. The two branches of the committee are in the main agreed. I wish we might have been completely in accord. The business of the country is halting, and it is because of this condition of

incertainty.

I regret that Senators the other day when I made a similar remark rose to charge present depression to the tariff legislation. Every man who will inquire of the banks of his own community will find they are husbanding their resources and that they are doing so because they want to be ready to meet this bill. The bill has been carefully considered in the committee. Its defects have been remedied, its dangers avoided; it is in a condition now where it is safe for the public and safe for the banks. I certainly hope for its speedy passage.

#### THE NEW ERA.

Mr. President, we are at the open door of a splendid era.

The day has passed when business can longer hope to support itself upon the crutches of statutory privilege or industry expect to thrive from the profits of taxation.

We have discovered that energy, to be effective, must be free; that enterprise may be retarded, but never prematurely accel-

erated, by governmental regulation.

The century just closed struck the shackles from the limbs and brain of man. We have recently released American industry from the legal chains which have restricted its progress and threatened its life. We are about to back our productive power by a fiscal system possessing at once the advantages of flexibility and stability.

I venture the prediction that when these laws shall have become established the enterprise and genius of the American people will gather wealth in every land and subjugate the com-

merce of the world.

Beyond these material advantages we all confidently anticipate a speedy establishment of national policies which will make for the elevation and happiness of all our people. May we not put behind us the animosities of politics and engage together in a splendid work for our country?

# SAN FRANCISCO WATER SUPPLY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes.

Mr. THOMPSON. Mr. President, in view of the fact that many club women of Kansas, as well as men connected with the various State educational institutions, have written me requesting that I vote against the Hetch Hetchy bill, I feel I should offer some explanation as to the reason for my vote, which will

have to be recorded contrary to these requests.

In most cases I find that the proposition when submitted to those who have written me has been very grossly misrepresented, just exactly as it was to me when I first heard of it. In the outset, from the wild stories I heard concerning it, I was naturally very much prejudiced against the bill. It seems to have been the tactics of some of the opponents of the bill to defeat the legislation proposed, regardless of the means employed or the consequences, if accomplished.

After hearing all of the evidence relative to the matter as presented to the Senate Committee on Public Lands, of which I am a member, and after studying the evidence presented to the House committee, I became firmly convinced that I was wrong in my first impressions, caused by what I learned to be a gross misrepresentation and exaggeration of the facts. I have learned from experience in court matters that when resort is made to misrepresentation, deception, or gross exaggeration there is usually but little merit in the question presented. This I find clearly exemplified by the opponents to the Hetch Hetchy proposition. In many instances I have answered letters urging me to vote against the bill, telling the writers the facts, as I understand them from the proof in the case, and they have quickly responded, acknowledging that my position was right in supporting the bill and that they were wrong in attempting to interfere with something they did not know anything about, except what was told them by those opposed to the bill.

The record shows that San Francisco and the surrounding cities on the bay and in the valley, including Oakland, Berkeley, San Jose, and other smaller cities, have for years suffered for the lack of an adequate supply of pure water-one of God's greatest gifts to man-for drinking purposes and domestic use, thereby endangering the lives and the health of the people and greatly retarding the progress of the community. more than 10 years these people have been struggling with the water problem. Over 40 per cent of the area within the boundaries of the city of San Francisco is now without an adequate supply of water, and the people living in these sections are constantly pleading with the city authorities for water service for their families. Many districts are actually hauling water to their homes in water wagons. The officials have been doing the best they could, and have not been idle in trying to meet the needs of the people for this great necessity of life.

Mr. President-Mr. SMOOT. The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Utah?

Mr. THOMPSON. I do.

Mr. SMOOT. I have heard heretofore the statement that has just been made by the Senator from Kansas. I want to ask him upon what information he bases his statement that many of the people of San Francisco are compelled to haul water in wagons, of course, intimating that there was not water enough

In the water system to furnish San Francisco with it?

Mr. THOMPSON. I think, if the Senator will refer to the record of the case, he will find that it discloses that state of

facts throughout.

Mr. THOMAS. Mr. President, if the Senator from Kansas will allow me, I think, if the Senator from Utah will read the hearings before the House committee-I can not give him now the names of the witnesses, but I think Mr. O'Shaughnessey was one-he will find that some parts of the city are entirely without a water supply from the pipes and mains, notwith-standing the fact that they have petitioned for an adequate supply a number of times; that in many of the houses water has to be stored in bathtubs over night for domestic uses, and that in other places water must be transported in the daytime, as suggested by the Senator from Kansas.

Mr. SMOOT. I simply want to say to the Senator from Kansas that my information as to the reason why some people in San Francisco do not receive water is because the water mains

are not taken to their premises.

Mr. THOMPSON. I remember particularly the statement of

the mayor of the city to the effect that I have given.

Mr. THOMAS. The Senator from Utah [Mr. Smoot] is right, but the reason the mains are not laid is because the company

has no water with which to supply the mains if they were laid.

Mr. SMOOT. Mr. President, if the Senator has any such information as that, it is information that has not come to me; it may be right or it may be wrong; but I am told by people who live in San Francisco that the only reason why the people carry water in water wagons is because of the fact that the mains have not been extended to their places, and that if the mains were extended to those outside districts there would now be a sufficient supply to furnish those people with water.

Mr. THOMAS. I think the Senator from Utah is correct, but that raises the question, Why are not the mains laid in the populous parts of the city? Why is it that this system is incomplete? Is not the very statement an indictment of the conditions that are prevalent in the great city of San Fran-

Mr. President, as I understand, that condition exists in districts where very few people reside, so that there are not enough water takers, I suppose, to justify the expense of extending the mains; but I want to say to the Senator that it will be only a little while until San Francisco can take over

the present water system, if she so desires, either by condemnation, which I understand will be resorted to, or by transfer under a mutual agreement between the city of San Francisco and the water company. When that time comes I am quite sure that the city will extend the mains, if there is justification for so doing.

Mr. THOMAS and Mr. GRONNA addressed the Chair. The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Colorado?

Mr. THOMPSON. I yield to the Senator from Colorado.

Mr. THOMAS. I want to state, for the benefit of the Senator from Utah, that I am informed by one of the Representatives from the city of San Francisco in Congress that there are in some parts of the city pipes and mains laid which are not supplied with water, and the reason given by the water company for the purpose, water for the purpose. pany for the lack of a supply of water is that they have not the

Mr. GRONNA. Mr. President—
The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from North Dakota?

Mr. THOMPSON. I yield for a question, but I do not like

to yield for a speech.

Mr. GRONNA. I was just going to say, in connection with the statement made by the Senator from Utah, that, as I understand, there is an understanding now between the city of San Francisco and the Spring Valley Water Co. to the effect that the Spring Valley waterworks will be taken over by the selection of three judges, who will appraise or fix the value of the property of the Spring Valley Water Co.
Mr. THOMAS. Mr. President, I think that is the fact; but

it is one of the necessities to which the city has been driven for the purpose of enabling it to get the supplies it desires and

Mr. THOMPSON. Mr. President, I will say that I think the record in this case, if fairly read, will bear out every statement I have made or will make. I have taken these statements from the evidence offered in the case, the same as I would in the trial of a lawsuit; and I have simply placed the conclusions I have deduced from the evidence in these few remarks, to which I

should like to have the attention of the Senate.

Much careful study has been given by the city, the State, and the national authorities, and by public and private engineers, to learn every possible source of supply. All of the investigations have clearly pointed to the Hetch Hetchy Valley, in the Sierra Nevada Mountains, as the only practicable, economical, and certain available supply. Secretary of the Interior Garfield, after the most careful and painstaking investigation, granted the city the right to impound in the Hetch Hetchy Valley its great water floods, now flowing through the valley and on to the ocean and absolutely wasted. Under this permit San Francisco in good faith has spent about \$2,000,000 in acquiring lands from private sources and other preliminary work. In 1910 the city voted overwhelmingly \$45,000,000 in bonds for the construction of this water system.

Mr. WORKS. Mr. President-

The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from California?

Mr. THOMPSON. I will yield for a question.

Mr. WORKS. Does the Senator know that the \$45,000,000 was voted for this system, or was it voted to buy the Spring Valley waterworks?

Mr. THOMPSON. My understanding is, from the records in the case found on page 19 of the report of the committee, that it was voted for this system, and, as I understand, by direction of

the Secretary of the Interior.

After all this expenditure and preparation, suddenly, in 1910, Secretary Ballinger ordered the city to show cause why the Garfield Hetch Hetchy permit should not be revoked. The city was required to make further detailed investigations and reports at enormous trouble and expense. Finally, to settle the whole matter, President Taft appointed a board of able, distinguished, and entirely disinterested engineers of the United States Army to make investigations and report. These engineers spent two years in independent investigations of San Francisco's great problem. All of the evidence was placed in the hands of the board. The Army engineers, who possessed the same instinct, similar training, and service as Col. Goethals and his assistant builders of the Panama Canal, after this long, careful investigation found for the city, declaring in favor of the Hetch Hetchy Valley as the only practicable source of water supply. This board made its report to the Secretary of the Interior, Walter A. Fisher, who retired from office in March, 1913. Secretary Fisher recommended the consideration of this matter by Congress, which it has undertaken by this bill, introduced by Representative RAKER, of California.

The Army board findings particularly applicable to this matter are found on page 23 of the committee report. I desire at this point to make them a part of my remarks without reading. They have been read already in this discussion.

The VICE PRESIDENT. Is there any objection? The Chair

hears none.

The matter referred to is as follows:

ARMY BOARD FINDINGS.

[Extracts from conclusions of Board of United States Army Engineers. (H. Doc. No. 54, 1st sess. 63d Cong.)]

The project proposed by the city of San Francisco, known as the Hetch Hetchy project, is about \$20,000,000 cheaper than any other feasible project for furnishing an adequate supply.

The Hetch Hetchy project has the additional advantage of permit-ting the development of a greater amount of water power than any

The board is of the opinion that the use of the Hetch Hetchy Valley as a reservoir site is necessary if the full flow of the upper Tuolumne is to be conserved.

The board further believes that there will be sufficient water, if adequately stored and economically used, to supply both the reasonable demand of the bay communities and the reasonable needs of the Turlock-Modesto irrigation districts for the remainder of this century.

The board believes that on account of the fertility of the lands under The board believes that on account of the lettility of the lands under irrigation and their aridness without water the necessity of preserving all available water in the Valley of California will sooner or later make the demand for the use of Hetch Hetchy as a reservoir practically irresistible. The board does not think that a delay of a few years in transforming the Hetch Hetchy Valley into a reservoir is of importance, and therefore does not think it necessary to require delaying construction of this reservoir until the Lake Eleanor and Cherry sources have been fully developed. fully developed.

The board believes that the regulations proposed by the city will be found sufficient to protect the waters from pollution, and that these regulations will tend toward the protection of campers and others using the park and will not be onerous upon them. It recommends, however, that the permit to the city require the city to take other means, such as filtration, to parify its water supply if these regulations are ever deemed insufficient.

The construction of reservoirs, especially the Hetch Hetchy, will destroy a few camping grounds in the park. The construction of the proposed trails will, however, render accessible other parts of the park not now readily reached, and the number of camping places within the park is large.

Construction of Tuolumne system as proposed by city of San Francisco, to be extended over about 50 years, \$77,000,000.

Against the above expenditures there will be developed 115,000 horsepower, having an estimated capitalized net value of \$45,000,000.

Mr. THOMPSON. The Public Lands Committee of the House of Representatives gave weeks to the Hetch Hetchy hearings. Every opponent was given a chance to state any possible objection. The committee reported unanimously for the passage of the bill. The House passed it almost unanimously. The Senate committee, of which I am a member, also thoroughly investigated the matter and unanimously approved the bill.

It seems that the opponents of the measure consist mainly of the Spring Valley Water Co. and those affiliated with them in commercial interests, some irrigationists whose rights are fully protected, and the few people who call themselves "nature lovers," most of whom do not understand the situation.

Hetch Hetchy is a region of barren granite, inaccessible except for a short time during the summer, and is of no possible use to humanity except through its production of water and power, but by this development it will become vastly useful to thousands of people now living around San Francisco Bay and the millions of future generations.

Mr. CLARK of Wyoming. Mr. President, will the Senator yield to me?

I yield to the Senator from Wyoming. Mr. THOMPSON.

Mr. CLARK of Wyoming. Just to correct what might be an erroneous impression. When the Senator speaks of the Senate committee unanimously approving this bill, of course he means the members of the committee who were present at the time it was acted upon?

Mr. THOMPSON. The Senator is correct. I refer to all that were there.

Mr. CLARK of Wyoming. As a matter of fact, there are members of the committee who, although not present at that time, did not then and do not now approve it.

Mr. THOMPSON. I am not advised as to that,

Mr. THOMAS. I wish to thank the Senator from Wyoming for introducing that fact into the RECORD. I meant to have made the statement last night.

Mr. THOMPSON. I referred, of course, only to all the members there, Republicans as well as Democrats, for we have no matter of politics in this bill.

Mr. CLARK of Wyoming. None at all.

Mr. THOMPSON. All members of the committee present voted unanimously to report the bill favorably.

Mr. BRANDEGEE. Mr. President-

The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Connecticut?

Mr. THOMPSON. I do.

Mr. BRANDEGEE. I will say to the Senator that I will refrain from interrupting him if he desires to proceed. There is one point at which he has just arrived about which I would like some information.

Mr. THOMPSON. I should like to proceed, and when I am through I shall be glad to answer any questions the Senator

may have in mind.

Mr. BRANDEGEE. That it satisfactory to me.

Mr. THOMPSON. It was represented to many of the people who now oppose the bill, and who asked me to oppose it, that the beautiful Yosemite Valley was in danger of being destroyed and that the Calaveras big trees would be injured by the con-struction of the reservoir. The truth is that the Yosemite Valley is not affected by this proposition at all, it being at least 30 miles distant, and there is only a very small portion of the Hetch Hetchy Valley affected, and none of it that will in any way mar the beauties or value of the national park. The Calaveras big tree grove is 50 miles distant from Hetch Hetchy and two intervening watersheds separate the valley from the grove. Hetch Hetchy Valley has an elevation of 4,200 feet and Yosemite Valley is approximately 1,000 feet higher. Hetch Hetchy Valley is separated from the Yosemite Valley by a range of mountains 8,500 feet high. So it is an absolute impossibility for any of the water from this valley to either enter the Yosemite Valley or to reach any of the beauties of that wonder-Furthermore, it has been demonstrated that the ful park. creation of a lake will greatly increase the beauties of this particular region instead of depreciating them.

In addition, the city, under the terms of this bill, is required to build roads through the valley, which will make it accessible to all the people of the country instead of to only a few who would assume the risk and hazard of going into the park afoot

or on mule back.

These people have been for more than a decade working on this proposition and have acquired from time to time from private sources most of the necessary land for this reservoir and own it absolutely in fee simple. There will be only about 1,330 acres of the valley, all told, out of 756,000 acres in the national park covered by the reservoir, and of this 1,330 acres San Francisco now owns more than one-half in fee simple, leaving only about a section of land belonging to the Government, which San Francisco will exchange about 2,500 acres of land elsewhere in the park, and the city agrees to construct roads at a cost of more than a half million dollars into this region, and will also pay to the Government within a short time \$30,000 per year for the right to construct this reservoir and use the water therefrom. The rights of all the people below the reservoir who use the water for irrigation purposes are fully protected by the express terms of the bill. There is not a single thing overlooked to protect all the interested parties, including the general public. I do not see the slightest grounds for any objection, except by those who call themselves "nature lovers," who contend that man, no matter how great the necessity, has no right to change in any way the scenery produced by nature. There are hundreds of places more beautiful than this particular spot—and many of them in this very valley, which will be undisturbed—and the plan devised at this particular place is to make it even more beautiful than it was before by the production of a beautiful lake and by making it accessible to all the people of the country by the construction of good roads to every point of interest and pleasure.

But people must have water even at the expense of a little so-called desecration of the beauties of nature. I remember as a boy in the early days in Indiana that my father and grandfather cut and burned magnificent walnut and hickory trees that were indeed beautiful to look at and always remained with me as a most pleasant memory; but there were mouths to feed, and the ground had to be cleared to raise wheat and corn in order to feed them. It is, of course, very nice and desirable to have beautiful flowers in a home, but it is far more important to have a plentiful supply of bread and butter. So it is with this water. The needs of thousands of people here now and thousands more in years to come require water, and Hetch Hetchy undoubtedly offers the largest and most available source of supply. But even if it did destroy the national park, or a considerable portion of it, and this water was necessary to supply the needs of the people of California residing in that vicinity, it would be best to destroy it, for human consumption is the highest use to which a supply of water could possibly be put. 'The conservation of human lives is indeed the highest type of conservation. Only a few years ago, largely from a scarcity of water, 43

San Francisco suffered one of the most terrible catastrophies ever visited upon a community, and the least that this Nation can now do for this unfortunate city is to heed the cry for water to quench the thirst of its people, whose throats are still parched from the effects of the awful conflagration which swept the city as the result of the terrible earthquake.

I am a believer in the conservation of natural resources, and this act seems to me as one of the greatest opportunities to demonstrate my belief in it. This project is regarded as one of the greatest efforts in legislation to conserve the natural resources. The rights granted here go to the people for their benefit, and not for the enrichment of any individual cr private

corporation.

If the bill were in the interest of any private person or corporation, it would not receive my support. As it is against private interests, that fact makes it more essential that it receive the support of all opposed to placing such valuable concessions under private control. It is sanctioned by the greatest conservationists in this country, including Gifford Pinchot, former Chief Forester; Secretary Bryan; Secretary Lane; Secretary Houston; F. H. Newell, chairman of the United States Reclamation Commission; Dr. George Otis Smith, Director of the United States Geological Survey; and many

I have heard no argument that would justify me in voting against this bill. In any event the necessities of the case and the advantages received by the Government so far outweigh the theories and notions which have been advanced in an endeavor to show how some possible injury might result to somebody, some time, that, desiring to serve the whole people of the Nation and to meet the requirements of the people of this particular section of the country to the best of my ability, I do

not hesitate to give the bill my most earnest support.

In conclusion, Mr. President, I desire to include as a part of my remarks, without reading, the resolutions adopted by the Kansas Society of California, and a memorial of the California Women's Clubs of San Francisco, favoring the passage of this

Kansas Society of California, San Francisco, November 21, 1913.

Whereas San Francisco for 12 years has been appealing to the Federal Government for such rights in the high Sierras as will enable it to provide the people of the bay counties with a pure and adequate supply of water; and
Whereas the Hetch Hetchy region offers the only source to which San Francisco can look for such an uncontaminated supply as will provide for not only the immediate but the future needs of its people; and

and

whereas San Francisco already owns outright more than half the land in the floor of the Hetch Hetchy Valley which will be flooded by the proposed reservoir, and has in good faith spent one and one-half million dollars in the development of its proposed municipal water

million dollars in the development of its proposed management system; and
Whereas all that San Francisco asks of the Federal Government is the
right to construct a dam and the grant of the uses as a reservoir of
part of the Hetch Hetchy Valley, which will in no wise be impaired
in its natural beauty by the creation of a lake; and
Whereas the natural beauties of the Hetch Hetchy region will be made
more easily accessible to thousands of nature lovers by the building of
roads and trails, which San Francisco will construct into this entire

roads and traits, which san Flancisco will constitute him the region; and hereas human consumption is the highest use to which the Hetch Hetchy water can be put, in that it will safeguard the health and supply of the present needs of a community of 800,000 people, and the future needs of many times that number: Therefore be it

Resolved by the Kansans in California, That we most earnestly go on record as approving of San Francisco's petition to Congress for the grant of certain rights in the Hetch Hetchy region; and be it further Resolved. That we declare our firm conviction that human needs are paramount to sentimental objections of so-called nature lovers, who profess to see in San Francisco's project a desecration of nature, although the work of San Francisco in the high Sierras will in reality bring this wonder region closer to the real lovers of nature and will in no wise impair the grandeur of the scenery there to be found; and be it further

further

Resolved, That we regret the campaign of misrepresentation that has been made in the effort to prevent San Francisco from obtaining that pure and adequate supply of water to which every community should be entitled; and be it further

Resolved, That we petition the Senate of the United States to grant to San Francisco the rights for which it has so long appealed, and which are embodied in the Raker bill, heretofore passed by the House of Representatives of the United States, and respectfully urge the Senators representing our home State to lend their efforts toward securing same.

Thus I Straum President

THOS. J. STRAUB, President. H. F. GOULD, Secretary.

CALIFORNIA CLUB, San Francisco, November 17, 1913.

Hon. WILLIAM H. THOMPSON.

DEAR SIR: At the present time no matter so deeply concerns the people of the city of San Francisco as the question of the Hetch Hetchy water supply now pending in Congress.

The most fundamental factor in the safety and well-being of the population of a municipality is obviously an abundant supply of pure water. The need which San Francisco has felt for several years in this respect is constantly growing more urgent with the increase and

spread of population, while people at a distance and unacquainted with actual conditions oppose the use of a supply which by the most eminent authorities has repeatedly been declared the most practicable source in the State of California.

The facts in the Hetch Hetchy matter have been clearly set out by our delegation sent from California, and as a San Francisco and a California club interested in the welfare of the whole State, we ask you to thoughtfully consider the points as presented and then believe that the transforming of this small, almost inaccessible valley into a mountain lake will in no wise decrease the natural wonders and beauty of our State.

mountain lake will in no wise decrease the natural wonders and beauty of our State.

No people are more interested or more zealous for the conservation and prosperity of California than the citizens of San Francisco, and being convinced that no real damage is to be done, and realizing only too well the vital and urgent need of abundant pure water for the 800,000 people living in San Francisco Bay district, we pray that the bill before Congress be granted.

Will you not, with a full understanding of the case, use your vote and influence in favor of this proposition to meet the vital need of a great municipality, soon to be the center of the occidental and oriental trade?

Very truly, yours,

Mrs. A. P. Black,
President of California Women's Club.
Mrs. H. C. Tiebitts,
Secretary.

Mr. THOMPSON. I have here an article appearing in a recent issue of Harper's Weekly, edited by Norman Hapgood, under the heading "The Hetch Hetchy controversy," which I desire to send to the desk and have read by the Secretary. It contains some evidence in support of the statement I made as to the inadequacy of the water supply of the city of San Francisco, and also as to some of the parties who are opposing the

The VICE PRESIDENT. Is there any objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

[From Harper's Weekly for Dec. 6, 1913.] THE HETCH HETCHY CONTROVERSY.

IFrom Harper's Weekly for Dec. 6, 1913.]

THE HETCH HETCHY CONTROVERSY.

How do you explain the fact that a fierce agitation all over the country is kept up against a measure which has had the support of Gifford Pinchot, James R. Garfield, James D. Phelan, William Kent, and a number of other conspicuous fighters for conservation in this country? Gifford Pinchot says:

"I am fully persuaded that there is no other comparable source of water supply available at anything like a reasonable cost to the cities around San Francisco Bay.

"Second. That the supply of surface water furnished by the Spring Valley Water Co. is adequate neither in quality nor in quantity.

"Third. That the injury to Hetch Hetchy by substituting a lake for the present swampy floor of the valley, all due allowances being made for whatever reduction in the height of the walls there may be, is altogether unimportant compared with the benefits to be derived from its use as a reservoir.

"Fourth. That the sanitary regulations included in the bill absolutely dispose of the plea, untenable at all times, that what San Francisco is asking for is control of half of the Yosemite Park instead of merely the Hetch Hetchy Reservoir.

"Fifth. That much of the opposition has its root in the unwillingness of water-power and transportation interests in and around San Francisco to see the city get possession of the large power it will develop if the grant goes through."

The forces in opposition are two—the water-power companies, who know exactly what they are doing, and the sentimental lovers of scenery, who do not know at all what they are doing. A very few of them, like John Muir, may know the facts and be out of perspective on the relative importance of things, but most of them are persons unaccustomed to studying exact conditions, who merely go up in the air when somebody tells them that some scenery is going to be hurt somewhere. If there is any injury to scenery at all in this case, it will be slight and the economic gain will be so great as to explain wh

Mr. BRANDEGEE. Mr. President, will it be convenient to the Senator now to let me ask him a question?

Mr. THOMPSON. Certainly.
Mr. BRANDEGEE. The Senator referred to the great and valuable power to be generated from the water after the dam is built in this location. The bill confers upon the city of San Francisco and the other corporate agencies that may be associated with it, with its consent, the right to use this power and to sell it.

If it is conceded that this is an exceedingly valuable power site and that the control of the development of the power situation is at present in the United States Government by reason of its ownership of the public lands at the point at which the dam is proposed to be built, I am not entirely clear-and 1 am asking simply for information-whether or not, in the opinion of the Senator, it is the duty of the United States, acting in this matter in a certain measure as trustee for the whole people, who own these public lands, to confer upon the city of San Francisco forever the great right and privilege which would result from the passage of this bill.

In other words, my idea-perhaps somewhat vague at present—is this: Is there any way in which this power site could be made available by the Government for the benefit of all the

people of the country or the benefit of others than those to whom San Francisco might make it available?

Mr. THOMPSON. I will say to the Senator that I know of no way, and I think this is the best available use we have at

hand at the present time. We are giving the power and the use of this park to the people for their disposition. They are

people of the United States.

Mr. BRANDEGEE. Of course I am aware of the various schools which differ about the question as to whether the Government has any right whatever to control any water power that may be developed, or to give it to anybody, or to sell it to anybody. It was not quite on that line, however, that the drift of my question lay.

Mr. THOMPSON. If the Senator will examine the case of

the Butte City Water Co. against Baker, reported in One hundred and ninety-sixth United States, I think he will satisfy himself as to the power of the Government in this matter, and that we are acting strictly within our power, as the Supreme Court de-

Mr. BRANDEGEE. Of course, if the Government is the proprietor of land I have no doubt whatever of the power of the Government to sell its land or to grant any less estate than a fee simple under whatever conditions it may attach, which are, in my opinion, the same as those which any other proprietor of land may attach, provided the Government owns the land in fee simple. That, however, was not the exact question about which I wanted information. It was whether it was wise at this time to confer upon a particular city the key of a situation which may not be entirely developed or entirely seen at present, and which controls such vast possibilities as the Senator has outlined, of which, I think, most of us are aware.

Mr. THOMPSON. There is one thing that is thoroughly settled, and that is that there are about a million people over there crying for water, and we have it within our power to aid them in securing this wonderful supply. It seems to me it is ridiculous for the Government to sit idly by and see a million people suffer for want of pure water, merely waiting to see whether at some future time, maybe in a thousand years, they can use it somewhere else, or perhaps pipe it to some city down east. I think it is proper to give it to the people whom we know need it now.

Mr. BRANDEGEE. Of course the consideration just stated

by the Senator appeals very forcibly to every man of decent impulses. Everybody will agree that the mere preservation of a beautiful, romantic, and picturesque spot on the surface of the globe purely for esthetic purposes, or to contemplate as you would a beautiful picture or any other beautiful sight, should not be allowed to prevail against the urgent needs of great masses of human beings for the necessities of life. I do not think anybody would maintain that, unless it should be some person who has become so artistic and esthetic that he has almost ceased to have any decent judgment in a practical way upon the ordinary affairs of life.

While I am deeply sensible of the necessity of preserving everything we may in this country, and in every country we control or in which we have any influence, in the way of great pictures and panoramas and wonders of nature, still that one consideration will not, I hope, make me a crank, a "nature faker," or even a nature lover in a legitimate sense to such an

extent that I can not do justice to human beings.

There is doubt in my mind, at least, about this question. have no set speech to make upon the matter, and I doubt if I shall say anything about it in the future. If I do, it will be a very brief statement. I think every Senator here wants to do right thing about this matter if he can. It is a complicated subject, and is embarrassed more or less by the different charges and claims that the two sides make against the advocates and accessories of each other-charges of lobbying. of misstatement, of greed, of wrong motives, and all such things, which are always present wherever there is a serious controversy in a

public body upon any subject.

I believe it was ex-President Roosevelt who said the other day—at least I saw him quoted in the papers as having said when somebody was criticizing some of his entourage in the political arena, that every reform movement had its penumbra of rascality. I have no doubt that wherever there is a popular movement for good many gentlemen whose past has served to intersperse their characters and reputations with dashes of heliotrope and other colors hasten into the aureole of the uplift movement," animated by mixed and to some extent commendable motives, to obtain for themselves a new certificate of character with which to pose as a power in their community, and incidentally to uplift themselves into an office of conspicuity and distinction. [Laughter.] Those things always are connected with every movement, but they do not necessarily confuse anybody about the facts of a situation.

What I should like to know, if any member of the committee or any Senator can tell me, is, What is to be done with this source of water and power if we do not treat it in some such manner as is proposed by the bill? Can it be made to subserve

a larger public use, and a more commendable one, and in a better way than is proposed by the bill?

The knights of the quill and people who pull the strings on some of them never will exert any influence on me in the consideration of a question of this kind by sending me postal cards or other means of communication in which they say, as the gist of their argument, "We demand that you stop the Hetch Hetchy grab," or this or that "steal," or the other "outrage." They simply beg the whole question in the judgment of a sensible man and bring themselves into contempt, I think-they do in my opinion, at any rate, whether they do in that of others or not-when the whole question is, Is it a steal or a grab?

That is what we want to find out. If it is, of course no Senator in this body would stand for it for a minute. If it is not, it is a mighty contemptible Senator, in my opinion, and a mighty contemptible man who will allow himself to be scared out of voting for what is right by a lot of people who do not know the facts, or who have been inspired by some other people of whose motives they were unaware, or because some newspaper says he is a "crook" or a "grafter" or associated with

some power company, or something of the kind.

Of course, each side in the present controversy claim that the other side are crooks and grafters and the agents of power interests of all kinds, and they are engaged in an unseemly bandying of epithets as between themselves. But there is some truth about this somewhere, and if the committees of Congress have been deceived about it, I hope some Senator has the information and will be able to lay it before us before we get through, so that any Senator who wants to do the right thing may do it.

I appreciate the importance of preserving beautiful natural features of a landscape as much as anybody else. I think, love them myself, and I have been chairman in the past of the Forest Reserve Committee that did something toward encouraging and preserving such places of national interest, and of

international interest, I may say.

But if one of those beautiful places can be so used as not to be abused, and if it still can be made a place of beauty, accessible and delightful, and if a great national park can be utilized and possibly ornamented by combining features of landscape and water, beautiful lakes interspersed with forest and wild scenery, would not be prevented from voting for a bill of this kind because the park might not be maintained in exactly its original natural condition. But I should like to have some Senator who is more familiar with the facts than I am give us some information upon that subject before we come to a vote. We have plenty of time for it under the unanimous-consent agreement, and I hope that feature will be fully developed before the debate

Mr. CLARK of Wyoming. Mr. President, it is not my purpose to discuss the matter at any length, but the statement that was made by the Senator who has just addressed the Senate so ably in support of the bill, following upon many other statements on the same subject matter as to the source of the opposition to the bill, I think deserves a comment just in this connection.

It has been suggested in many ways and has been openly stated in others that the main opposition to this bill comes from the Spring Valley Water Co. There are many Members of the Senate who are opposed to the bill. I am sure none of them are influenced by considerations regarding the Spring Valley Water Co. I am sure that none of them have been approached by the Spring Valley Water Co. I am sure—as sure as I can be from the information which I have-that the Spring Valley Water Co. has no interest whatever in the passage or the defeat of this The Spring Valley Water Co. is entirely indifferent as to whether this bill shall pass or whether some other bill shall pass.

I understand the situation to be that the Spring Valley Water Co. is entirely indifferent whether San Francisco shall have as the source of its water supply the Hetch Hetchy or any of the other sources of supply that have been mentioned. I understand that the Spring Valley Water Co. is about to go out of existence; that the Spring Valley Water Co. and the city of San Francisco, without respect to what may happen to this bill or any other bill, have virtually severed their connection; that the Spring Valley Water Co. and the city of San Francisco have agreed upon a transfer to city ownership of all the property and franchises which the Spring Valley Water Co. owns; that the Spring Valley Water Co. is no longer interested in any source of supply; and that whether San Francisco gets the Hetch Hetchy or gets other sources of supply makes no dif-ference whatever, as the water supply of San Francisco passes

into the hands of the municipality.

If that is not true, I want to be corrected. I understand it to be true that both parties, the city of San Francisco and the Spring Valley Water Co., have agreed to a sale of the Spring Valley Co. to San Francisco, the question of price only remaining to be settled; that the two parties have agreed upon the three judges to whom shall be submitted that question for settlement.

Now, that being the case, it seems to me that Senators who oppose this bill ought not to have the imputation set upon them that they are influenced in anyway by the Spring Valley Water Co. Inasmuch as the Spring Valley Water Co. is taking no interest whatever in this legislation, I do not think the officers of that company, whom I assume to be reputable men, should be charged with seeking to defeat a great public purpose, as has been so frequently charged and intimated.

Mr. President, there are other features entering into this bill. I suppose that no Senator here receives less than a dozen or fifteen or twenty—up to a hundred—letters a day in regard to this proposition. The Senator from Oklahoma [Mr. Owen] this morning thought it was a rather frivolous proposition for the Senate to consider. Other Senators have expressed the same view. Yet the mails of Senators are laden.

Mr. OWEN. Mr. President, the Senator, of course, does not

wish to misrepresent the Senator from Oklahoma. Mr. CLARK of Wyoming. Oh, no; not at all.

Mr. OWEN. He did not say that the Hetch Hetchy matter is unimportant. He did not say it; he did not suggest it. He only considered unimportant the enormous waste of words in

relation to Hetch Hetchy.

Mr. CLARK of Wyoming. Hetch Hetchy is a subject that demands some words. Whether they are wasted or not remains to be seen. I assume that no Senator upon the floor desires to waste words. I presume that no Senator upon the floor engages in the debate in regard to the Hetch Hetchy unless he is interested in the question and considers it a matter of public importance. I have received probably a hundred written let-I have received newspaper clippings, innumerable, marked editorials, wanting to know why it is that some of the Senators of the United States are opposed to giving an adequate water supply to the famishing people of San Francisco, intimating in every way that anyone who is opposed to this bill on the floor of the Senate or elsewhere is opposed to giving San Francisco all the water she needs to fulfill the requirements of that great and growing city. We have been told that we should not stand in the way of affording the very life to a great community for the purpose of preserving a natural beauty and

I think the real objection, the strongest objection at least, in this body comes upon grounds entirely outside of those that are suggested in these letters or editorials. I think the leading paper—that is, the paper that is taking the most conspicuous part, perhaps—in the advocacy of this bill is the San Francisco Examiner, a paper that is ably managed, a paper one whole edition of which was published in this city for the purpose of

furthering this bill.

The editorial in the Examiner says: "We want to ask Senators of the United States who are opposing this bill why it is that they are willing to grant to the city of Los Angeles, that they are willing to grant to the city of Portland, that they are willing to grant to the city of Seattle, but they are not willing to grant to the city of San Francisco?" What does that mean? What is the inference? The inference is that the Senators who are opposed to this bill are opposed to the granting to the city of San Francisco a thing which they granted to the city of Los Angeles

For one I am opposed to this bill, but I am in favor of granting to the city of San Francisco the exact thing that we granted to the city of Los Angeles; and before this discussion ends I shall introduce an amendment in hæc verba, except so far as the location is concerned, giving to the city of San Francisco the exact, identical rights and privileges that we granted to the city of Los Angeles and under which that great city has gone scores of miles into the mountains and at an expense of scores of millions of dollars has provided an adequate water supply for

that great and growing city.

The edition of the San Francisco Examiner of which I spoke, published in this city, gave interviews with very many Senators; it gave interviews with very many prominent people all over the United States; and the substance of a majority of those interviews was that they were in favor of this measure because it was necessary in order to give San Francisco the needed water supply. If there can be eliminated from the bill all features except those that guarantee to San Francisco the water supply which she needs and to which she is entitled, I believe it will have almost unanimous consent in the Senate for its passage.

I believe that San Francisco is wronged in this bill, but that is not a matter for me to discuss. She is willing, in order to

get her water supply, to pay to the Government of the United States an unconscionable price for what she is receiving. We have been told here in this debate that the land which is being granted to the city of San Francisco is worthless. We are told that when San Francisco paid \$142,000 for the land which she purchased in the Hetch Hetchy Valley it was an outrageous holdup; and yet the Congress of the United States is voting to demand from the city of San Francisco for this worthless land, but a few hundred acres in extent, more than a million dollars, for which the bonds of the city of San Francisco are to be sold.

I will go further than the proponents of this bill go. I would be willing to grant to San Francisco without price the worthless acres upon which she can store the water for her necessities. I believe that the Government of the United States, in this bill, is committing an outrage when it says that the city of San Francisco must bear an annual interest charge of \$30,000 for the land upon which this reservoir is to be constructed and a dam to be built. But that is neither here nor there. That is

a matter which San Francisco herself can settle.

If the bill can be modified so as to give San Francisco the right to construct the dam, the right to construct the necessary tunnels and aqueducts and whatever may be necessary to convey the waters over the public domain and stop there, as it stopped in the case of Los Angeles, where it stopped in the case of Portland, as I remember, and of the city of Seattle, I shall not object to the bill. I do not think anyone will. I do not think there is a person who does object to the bill who wants to deprive the city of San Francisco of whatever she needs in the

way of water supply.

Mr. President, I said that, if no one else did, I should introduce a proposed amendment or a substitute granting all these things to San Francisco. I do not know; others may have that same purpose in view. The Senator from North Dakota [Mr. McCumber] has prepared an amendment to the bill which accomplishes all the purposes which the proponents of the bill claim are desired, leaving out the objectionable features, which have nothing whatever to do with the water supply of the city of San Francisco. I shall be glad if that amendment may be adopted; and if it shall be adopted, I will very gladly vote for the bill. The amendment which has been offered by the Senator from North Dakota does not take one whit from all the rights which San Francisco herself is asking of the Congress of the United States. It gives her all she asks for. It gives her all she needs.

The senior Senator from California [Mr. Perkins] presented a petition here yesterday signed by 20,000 people. The amendment proposed by the Senator from North Dakota contains everything that those 20,000 people ask for, and if they shall receive the legislation according to the amendment proposed by the Senator from North Dakota they will have received everything that they have asked for or hoped for from this legislation. The difficulty is that this bill contains features that are objectionable to some Members of the Senate. They are features that relate not at all to the needs or wants or desires of San Francisco, but they are features which, in the opinion of some Senators at least, involve a great principle that ought not to be tried out and decided on a bill of this sort. I suppose the proponents of that principle go so far that they will not even be willing to accept an amendment that I shall hereafter offer.

To some of us at least, whether our view is well grounded or not, Mr. President, it appears that there is an effort in this bill to recognize the authority of the Government of the United States to control, supervise, and distribute the waters of a State. Some of us believe—I believe all of us believe—that the waters flowing within this stream are the absolute property of the State of California, and that over the waters flowing in this stream the Congress of the United States has no jurisdiction or constitutional right. We believe that any means, direct or indirect, that allow the gathering together and the distribution of the waters flowing in that stream is an invasion of the constitutional rights of the State of California, and that as it is an invasion of the constitutional rights of the State of California it is an invasion of the constitutional rights of every other State which owns waters within its borders.

There is no question of a navigable stream here. It is different from the Connecticut Dam Co.'s bill. It is different from the Coosa bill of last year or the year before. There is no question of the right of the general public of the United States in that water; there is no question of an interboundary stream; there is no question of a stream flowing from one State into another, but it is a pure, local stream over which California has the constitutional right of exclusive jurisdiction. Some of us do not believe that in any way, directly or indirectly, the Government of the United States should interfere with that exclusive jurisdiction.

But it is urged by many that that fear is entirely unfounded; that we do not read the bill aright; that there is nothing in the bill to warrant that suspicion; and, to make it perfectly plain, we are pointed to the eleventh section of the bill, which says:

SEC. 11. That this act is a grant upon certain express conditions specifically set forth herein, and nothing herein contained shall be construed as affecting or intending to affect or in any way to interfere with the laws of the State of California relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired thereunder.

Mr. President, we are told that, if there is an evil in the bill, will cure the evil; in other words, that, having made a condition in the bill, this provision will waive the condition. If there is an evil in the bill which this provision seeks to cure, why not reject the evil and not put it into the bill at all? the proponents of the bill if, even then, they will be willing to accept this further amendment which is printed after the word "thereunder," in line 15 on page 26, which I have just read, to insert the words:

Nor as giring or assuming to give or grant to the grantee herein any right to any quantity of water in excess of the amount by it heretofore or hereafter appropriated or owned under the laws of the State of California, nor to give to said grantee any right to impound or distribute any quantity of water in excess of such appropriation or ownership.

I apprehend that amendment will not be adopted; but it will be offered, and I hope it will be adopted.

Mr. WORKS. Mr. President—
The PRESIDING OFFICER (Mr. Kern in the chair). Does the Senator from Wyoming yield to the Senator from California?

Mr. CLARK of Wyoming. Yes. Mr. WORKS. I suggest to the Senator from Wyoming that perhaps an amendment of that kind would not be appropriate to the conditions that now exist in California, because under the laws of that State no specific amount of water could be appropriated. The amendment refers to the amount appropriated. The amount that the city might be allowed to take out of the stream would have to be determined by the water commission. Therefore an amendment of that kind would not be appropriate.

Mr. CLARK of Wyoming. The language is "appropriated or

Mr. WORKS. There can be no ownership of water.

Mr. CLARK of Wyoming. Well, the Senator from California understands the idea I have in mind.

Mr. WORKS. Yes; I understand the idea; but I was only suggesting that it might better be put in some different shape in order to meet existing conditions.

Mr. CLARK of Wyoming. I shall be very glad to comply with the suggestion of the Senator, because all I want to do is to conform to the laws of California in the use of this water.

Mr. WORKS. Mr. President, what should be done with respect to this matter, if the grant is to be made, is simply to make the grant and let the law of California do the balance.

Mr. CLARK of Wyoming. That is just exactly what the amendment which I suggested a while ago as being the law in relation to Los Angeles does. Los Angeles was simply granted the right of way for the reservoir and the canals, everything else being left as it should be left, under the operation of the laws of the State of California.

Mr. President, I have simply said this much in order to put at rest any idea that all those who are opposing this particular bill are opposed to a water supply for the city of San Francisco. I think all of us are at one that we want San Francisco to have the proper and necessary water supply. So far as I am concerned individually, I am perfectly content that it shall come from the Hetch Hetchy Valley. Others, of course, have different views. The Senator from California [Mr. Works] himself, realizing the necessity of the San Joaquin Valley to use all the water within that watershed, would have the water supply come from some other source. Personally I am not interested in that so much, because that is a matter local to the people of the State of California; I am not particularly hesitant about using the Hetch Hetchy; but I am hesitant about assuming to grant a power which I believe we have no constitutional right to grant; and I am also hesitant about the Congress of the United States assuming to impound, collect, and distribute water under any guise, whether in the guise of a condition to a grant or any other guise, and to assume authority which the State of California alone has over the waters lying wholly within the State.

Mr. WORKS. Mr. President, I suggest to the Senator from Wyoming that no Member of this body should be called upon to commit himself upon the question as to whether this water should come out of the Hetch Hetchy or should come from some other place. The Government can grant this right of way, but even after that the authorities of California might determine

that San Francisco should get her water somewhere else. That is a matter that ought to be left to the authorities of California under the laws of that State, and we should not meddle with it in any way whatever.

Mr. CLARK of Wyoming. Mr. President, I think the Senator from California is entirely right. I think all the Government ought to do is exactly what it did in the case of the Los Angeles water supply—grant the right upon the public domain, upon the lands of the Government of the United States, to place the reservoir and place the dams and the necessary right of way for ditches or canals or tunnels or whatever they may be.

Mr. POINDEXTER. Mr. President, I do not intend at this time to enter into a discussion of this bill; I hope later on, before a vote is taken, to have an opportunity of stating my views as to the merits and demerits of the bill. At this time I rise for the purpose of introducing into the RECORD, in order that they may be available before the debate is closed, certain papers and documents which have a very material bearing upon the decision of this question. As preliminary to that I want to again mention—it has been mentioned a number of times by Senators here-what seems to be a rather insidious and mysterious plan of conveying a false impression-I will use that language—in regard to the situation and the needs of the city of San Francisco for this bill or for what will come to it through this bill if it shall be passed.

I heard in the speech of the Senator from Kansas [Mr. THOMPSON] a few moments ago a repetition-no doubt in good faith on his part-of that same statement; and that is that the people of the city of San Francisco are in a state of dire need for water and that that need will be relieved by the passage of this bill; whereas the fact is-and it will be admitted by any fair-minded man who represents the city of San Francisco and is informed about the proposition-that the passage of this bill will not affect in anyway whatever any man, woman, or child in the city of San Francisco, so far as their need for water

is concerned, probably not during their lifetime.

Mr. THOMAS. Mr. President-

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Colorado?

Mr. POINDEXTER. I yield to the Senator from Colorado. Mr. THOMAS. Does the Senator from Washington mean by that statement that the city of San Francisco has a supply of water at present sufficient for the needs of the present generation?

Mr. POINDEXTER. I mean to say that the city of San Francisco has at the present time under way plans and projects for securing water, altogether independent of the so-called Hetch Hetchy, which will in all probability be sufficient for the needs

of the present generation.

Mr. THOMAS. Does the Senator refer to the contemplated condemnation of the Spring Valley Co.?

Mr. POINDEXTER. I do. Mr. THOMAS. Well, Mr. President, it is in the record, and also is the statement of the Representatives in Congress from California that the present supply is woefully inadequate. The record shows that, as a part of that general project of a water supply for the future, San Francisco has been provident enough to agree to take over this concern and make it a part of its general scheme of water supply. I think the Senator's information must be derived from other sources than those in the record as the basis of the statement he has just made.

Mr. WORKS. Mr. President—
The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from California?

Mr. POINDEXTER. I yield to the Senator from California.
Mr. WORKS. The report of the Army board, so often referred to, shows that from the Spring Valley system over 200,000,000 gallons a day can be produced. My recollection is that Mr. Freeman, the engineer of the city, fixed the amount considerably lower than that—I think at 180,000,000 gallons per day-four or five times as much as the city is now using or needs.

Mr. THOMAS. Mr. President—
The VICE PRESIDENT. Does the Senator from Washington yield further to the Senator from Colorado?

Mr. POINDEXTER. I yield to the Senator for a brief statement.

Mr. THOMAS. I shall not interrupt the Senator again. It is true, as stated by the Senator from California [Mr. WORKS], that the Army board of engineers reported that this quantity of water was available, and that Mr. Freeman has said a less quantity is available; but it is equally true that Mr. Freeman declared before the Senate committee—and I think the statement is somewhere else in the record—that this water can be obtained only at the expense of the agriculturists who are now

dependent upon it, and that to take it means to deprive them of a supply of water that is absolutely essential for their needs.

I submit that, inasmuch as the interests of the agriculturists have been made a prominent feature of this discussion, the rights and the welfare of those who are dependent upon the source of supply of the Spring Valley Co. are, or ought to be, quite as sacred in this Chamber as those in the Valley of the San

Mr. POINDEXTER. Mr. President, I was very much impressed by the slight but very material change in the form of the immediate proposition we are discussing which is contained in the reply of the Senator from Colorado. I said that plans which the city of San Francisco had under way would produce a sufficient supply of water to meet the needs of the present generation. The Senator changes that very slightly in form by stating his proposition that the present supply of the city of

San Francisco is insufficient. That is quite different.

Mr. THOMAS. Mr. President, of course, if I misunderstood

the Senator's statement-

Mr. POINDEXTER. I agree there is not any difference in opinion between the Senator from Colorado and myself as to the present situation in the city of San Francisco. I admit that

Mr. THOMAS. I misunderstood the Senator, or I would not have interrupted him at all.

Mr. POINDEXTER. I admit that there is an insufficient supply there at the present time; but the city of San Francisco, whatever the effect may be upon the irrigationists whom the Senator from Colorado has in mind, has already begun proceedings-I get that information from a consultation with the city attorney of San Francisco, who is present here now and who is interested in the passage of this bill—to take over the Spring Valley Water Co.'s property and to carry on the enlargements of that property which are now under way, including the building of a dam, called the Calaveras Dam, which will within two years afford to the city of San Francisco double the amount of

water which it now has.

Mr. McCUMBER. Mr. President—

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from North Dakota?

Mr. POINDEXTER. I do.

Mr. McCuMBER. The Senator has given voice to an expression that has been used here several times, namely, that San Francisco has projects under way that will give her a supply for the present generation, but the presumption to be drawn from that statement is that the city of San Francisco ought not at this time to look beyond the needs of the present generation. With the known supply of water in the State of California, the known places from which it can be obtained for the use of the city of San Francisco, ought not that city to anticipate not only the immediate needs of the present generation but the needs for at least a century ahead, as to where the water will be obtainable when her population may be double or quadruple what it is to-day? I wish also to inquire why is it improper at this time to settle the question of where she will get the water to be used for her people 100 years from to-day? I could see some force in the argument, if the Senator will allow me, if the water supply of the State were inexhaustible, but there are only certain sections where water may be obtained; and it seems to me that it is a part of the duty of the present generation at least to look that far ahead, especially in a matter relating to the water supply for the future of the city.

Mr. POINDEXTER. I agree with the Senator from North Dakota; but that is putting the case upon a different basis from what it would be on if the city of San Francisco were suffering from an immediate lack of water, which would be relieved by the passage of this bill. For one thing, it removes the necessity for speedy action, which has been so much urged in the consid-eration of this bill and which was particularly urged during the extra session. It would give an opportunity for the city of San Francisco at least to consider other sources of supply and compare them with this source of supply in a way which, in my

judgment, it has not done heretofore.

There have been some comparisons, of course, but they have been comparisons somewhat like those which were made by the Army board, which went out for the purpose of examining primarily the Hetch Hetchy plan and made, as the Senator from California has stated, an automobile trip over the territory concerned in that project, and did not make a visit—even an automobile visit—to the McCloud River project. They did not visit that at all, as they set out in their report.

I do not know why San Francisco at this particular time should come to Congress and ask for a grant of national property, which grant is objected to by so many of our citizens, because it will need some water from that project 50 or 60 years

from now. We do not know what conditions may develop between now and the time when San Francisco may actually need more water than will be developed by the Spring Valley project, carried out as it is now being carried out. That is the difference between the two propositions. I only meant to put the case on its actual basis, upon the facts which actually exist and which should be considered when an attempt is being made to have it considered as an emergency matter for the relief of present necessities.

Mr. SMOOT. Mr. President-

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Utah?

Mr. POINDEXTER. I yield to the Senator from Utah,

Mr. SMOOT. I find in the report of the board of Army engineers that in summing up the examinations made by the board, they make this statement:

All present near-by sources of water supply for the bay communities are now drawn on nearly to their economical limit with the exception of the Alameda system of the Spring Valley Water Co. and the coast streams; and the total estimate of the economical development possible, including the amount now used, is:

(In million gallons daily.)

Spring Valley Water Co. resources	131
San Mateo CountySanta Clara County	20 55
Parts of Alameda and Contra Costa Counties	27

With an allowance of 100 gallons per day for each man, woman, and child that will provide for a population of 2,330,000 people. At the present time San Francisco is consuming

42,000,000 gallons of water per day. So, that while the Senator states that twice the amount of water San Francisco is using to-day can be developed, according to the Army board, there can be developed nearly eight times the amount that is being consumed to-day

Mr. POINDEXTER. The Senator is perfectly right in his statement, except that he misunderstood my statement. My statement was that the plans which the city had under way would double the amount. I was not speaking of the ultimate possibilities of the Spring Valley Water Co. system. No doubt they would be able to develop as much water as the Senator from Utah states.

I had in mind the particular feature of the Spring Valley water system, which is mentioned here in the report of John E. Behan, the secretary and assistant manager of the Spring Valley Water Co. If that statement is incorrect, the gentlemen here who represent San Francisco will have an opportunity to correct It.

Mr. Behan says:

The Calaveras Dam, now in course of construction, when built to its ull height of 220 feet in December, 1916, will supplement the Spring Valley's resources to the extent of 60,000,000 gallons daily—

Even that, as the Senator says, is more than double the present amount-

and by the month of December, 1914, when the dam is partially completed, sufficient water will be impounded to supplement the company's resources to 20,000,000 gallons daily.

That will be the situation, according to the estimates, in the month of December, 1914, from work which is now under way, and which the city has begun proceedings to take over, according to the statement of its attorney, made to me here on day before

yesterday.

The attempt to create the impression in Congress and in the country that a present dire need of water in San Francisco is concerned in this bill, or that its relief will be brought about by this bill, is evidenced by an article which I have in my hand, which has been printed in New York papers and in a leading daily newspaper of this city, written by a very distinguished newspaper correspondent. I wish to read just a paragraph of it to illustrate the sort of campaign that has been carried on. I am not charging any improper influences. It may be due to a misunderstanding or a lack of information. Nevertheless, it creates altogether a wrong impression. The article says:

The people of this region, and more especially the middle and poorer classes, are positively suffering for water to drink and in which to cook and to bathe. Sanitation, health, and life depend upon it.

Referring to this bill and creating the impression that the poorer classes of people in San Francisco will get relief from the passage of this bill, whereas in all probability they will not be concerned at any time during their lives in the passage of this bill.

The writer of the article goes on to say further along the same line:

We are rapidly approaching the time when San Francisco is to be the host of the Republic to the nations of the earth at the great Panama Exposition. Our repute for progress, enterprise, and salubrity

as a nation depends upon the water which San Francisco gives our national and international guests to drink. The issue is overwhelming in its importance.

I would not mention this if it were not such a prominent article, printed in such conspicuous newspapers, and containing such specific representations as to the effect of this bill. The Panama Exposition will be over and in part forgotten, in the rapidly moving affairs of this country, years before a drop of water will come into the city of San Francisco from the Tuolumne River even if this bill should be passed to-day.

Mr. BORAH. Mr. President— The PRESIDING OFFICER (Mr. CHILTON in the chair). Does the Senator from Washington yield to the Senator from

Mr. POINDEXTER. I yield to the Senator from Idaho. Mr. BORAH. What is the anticipated date of the San Francisco exposition?

Mr. POINDEXTER. Nineteen hundred and fifteen.

Mr. BORAH. Section 2 of the bill under consideration says: That within three years after the passage of this act said grantee shall file with the registers of the United States land offices, in the districts where said rights of way or lands are located, a map or maps showing the boundaries, locations, and extent of said proposed rights of way and lands required for the purposes stated in section 1 of this set.

So about the time or a little later than the time when the people of the earth gather at San Francisco to celebrate the opening of the Panama Canal they will have filed a map showing the line of the right of way. No doubt it will be a great disappointment to those who go there in anticipation of having water to drink, but during the next three years what will become of the poor children, the unwashed and the unsanitated, who are now suffering, when it is not proposed even to take the initiatory step for three years?

Mr. NORRIS. Mr. President—
The PRESIDING OFFICER. Does the Senator from Wash-

ington yield to the Senator from Nebraska?

Mr. POINDEXTER. I yield to the Senator from Nebraska. Mr. NORRIS. I hope neither the Senator from Washington nor the Senator from Idaho will charge that any Member is making the claim here that the Senator says is made through that article. There are a great many claims that are without merit made by enthusiastic and honest people on both sides of this question. I believe there is a shortage of water even now; but I do not claim, and no one here has claimed, that the passage of this bill is necessary for the purpose of taking care of the people who will go to that great exposition.

Mr. POINDEXTER. I am very glad to hear the Senator

say so.

Mr. NORRIS. No one has claimed that here. I could fill the RECORD with statements on the other side of this proposition that would be just as unreasonable as that if I cared to do so, but it seems to me the Senator ought not at least to create the impression that anybody is making here the argument that he says is made in favor of this bill.

Mr. POINDEXTER. I am very glad it has had the effect of causing the Senator from Nebraska publicly to give the benefit

of his high character and influence to that disclaimer.

Mr. NORRIS. Why, no one has claimed it. A disclaimer is unnecessary, at least here. You could go out in the newspapers, if you are going to try the case upon that kind of evidence, and get on both sides of this question so much evidence that we would die of old age before we could even read it; and on neither side of the question could it have any legitimate effect or consideration.

Mr. BORAH. Mr. President-

Mr. POINDEXTER. If the Senator will pardon me just a moment. I came in just a moment ago, at the conclusion of the speech of the Senator from Kansas [Mr. Thompson], when he was being interrogated by the Senator from Connecticut [Mr. Brandegee], and I heard the Senator from Kansas give, as one reason why the Nation should be willing to give up this great park, or a portion of it, the suffering of the women and children of the city of San Francisco for lack of water.

Mr. NORRIS. I will say to the Senator that unless something is done for San Francisco, unless some additional supply is provided from some source, and the city continues to grow, that picture is not overdrawn. I think that is true. I believe all Senators on both sides of the question will admit it; at any rate, those who opposed this bill in the committee. The very father of the greatest opposition admitted over and over again that San Francisco must have additional water if it is to grow

and develop.

The point I wish to make is that I have heard no one claim here, and I am ready to concede that the claim can not be made, that the passage of this bill is necessary in order to get water for San Francisco for the exposition. Everybody who has

studied the proposition concedes that if we pass the bill it will be an impossibility for this great system to be developed in time for the water to reach San Francisco during the exposition.

I heard the Senator from Montana [Mr. Myers], when he opened the debate, speak of the exposition in an incidental way, and he made a very interesting statement in regard to it, but he particularly disclaimed, in answer to an interrogatory, any idea that the passage of this bill would supply water at that

Mr. POINDEXTER. Then what is the purpose of referring

to it? What is the object of bringing it into the case?

Mr. NORRIS. The Senator has brought it in. I wondered myself why he should do so.

Mr. POINDEXTER. The Senator stated that the Senator from Montana brought it in.

Mr. NORRIS. But he particularly made a statement that would have made it unnecessary to offer the argument here as the Senator is now proceeding to do.

Mr. BORAH. Mr. President—
The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Idaho?

Mr. POINDEXTER. I yield to the Senator. Mr. BORAH. I may have misunderstood the Senator from Montana, but I understood him to refer to the present conditions of women and children in that city for want of water. I have not read his speech, but I sat here and listened to it.

Mr. NORRIS. Even that would not be a claim that the passage of this bill would get the water there by the time of the exposition. Perhaps he did make some sort of statement of that kind. I think it can be demonstrated that they ought to have more water now, and ought to have better water than they are getting; but this bill will not get it there that quickly, even if we pass it to-day.

Mr. BORAH. Every report I have read as to the quality of the present water supply of San Francisco testifies to its superior quality. The reports coming from Army engineers and all other experts say that it is superior. That is one of the reasons the exposition was sent there. It was because of the great capacity of San Francisco to take care of visitors, and to give the people who visited there not only good water but everything else

Mr. NORRIS. Everything else that was good to drink.

[Laughter.]

Mr. POINDEXTER. Mr. President, as to the character of the water which will be developed by the Calaveras Dam of the water which will be developed by the Calaveras Pail of the Spring Valley Water Co., I have here a report upon the water furnished to the city of San Francisco by the Spring Valley Water Co., made by H. M. Chittenden, brigadier general, United States Army, retired, and member of the American Society of Civil Engineers. Because it is so applicable not only to this phase of the question but to other phases I will read a portion of his report. He says:

of his report. He says:

Because of the general roughness of the country, and particularly of the ground on which the city of San Francisco is located, the cost of delivering water under proper pressure to all portions is necessarily much greater than where the water can be pumped from an inexhaustible near-by source under practically uniform heads for the whole city, as in Chicago and Buffalo. The serious feature of this Sierra proposition is the large addition which it will make to a cost of service already unavoidably high.

The Spring Valley development involves no such increase. It can be taken up gradually in strict conformity to growing needs. But the initial cost of the Sierra project will be so great that the interest alone will suffice for the permanent development of the Spring Valley system.

Then there is quite a significant footnote referring to the remarks made by Mr. Freeman, the distinguished engineer who was employed by the city of San Francisco to examine the Hetch Hetchy project.

Mr. Freeman seems to have had this thought in mind on page 69 of his report, where he says: "It is plain that there would be a saving in cost from developing these reservoirs (the Calaveras, San Antonio, and Del Valle), the dams of which are relatively inexpensive, and which would put off for a few years the paying of interest on the large sum of money involved in building the Hetch Hetchy dam and the aqueduct easterly from Valle." And again, speaking of the Antonio and Del Valle Reservoirs, he says that their construction would permit the Sierra project to be "deferred four or five years and an amount would be saved in interest that would build the dams two or three times over."

Then he goes on to give a summary of his conclusions on the entire question. He says:

There is no substantial reason to believe that the consumption of water in San Francisco County will exceed 92,000,000 gallons daily by 1950, or 235,000,000 gallons daily for the five bay counties, apart from the supply from private wells.

I should like that fact to be borne in mind in connection with the fact that this bill is based upon the proposition that they will need 400,000,000 gallons a day. Gen. Chittenden says that in 1950 they will not need over 92,000,000 gallons a day.

The three main divisions of the Spring Valley system—the peninsula, as Alameda, and the coast streams—by careful development into a

single unified system are capable of a dependable supply of over 200,000,000 gallons daily.

By resort to the company's other sources and to the San Joaquin River the supply may be indefinitely increased.

So far as quantity is concerned there is no present necessity for a resort to the Sierra, and will not be for an indefinite period to come.

If there were no Sierra, San Francisco could still face the problem of a future water supply with perfect equanimity.

The next paragraph has particular reference to what the Senator from Idaho has just said.

As to quality, the Sierra supply is softer but hygienically no purer, and is less palatable as drinking water than the Spring Valley supply. The extra cost of the Hetch Hetchy system will virtually be the price paid for a gain in the quality of softness.

Whatever source is ultimately adopted, the great reservoir group proposed by the Spring Valley Water Co, should be made the mainstay of the system as a certain insurance against disaster.

The question discussed in the foregoing report is not that of the sufficiency or desirability of the Hetch Hetchy supply in itself but that of the present necessity of such an outside supply for the people of San Francisco and vicinity. The result of the investigation has been to show that such a necessity does not now and possibly may never exist; that the supply would be in the nature of a luxury rather than a necessity and a very costly luxury at that.

Mr. President, I send to the desk and ask to have the Secretary read a telegram which I have received to-day.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The Secretary read as follows:

Modesto, Cal., December 3, 1913.

Hon. Miles Poindexter, United States Senate, Washington, D. C.:

We, the water users of the Modesto-Turlock district, deny the quotation of to-day's San Francisco papers that Senator Works is in traitor rôle. This is very painful to us water users, because he is honestly representing his constituents in refusing to take our water from us and give it to San Francisco, when there is no cause under heaven for so doing, and in addition give her a power proposition worth many million dollars as free gift. Can anyone conceive it right to destroy our homes—give our water to one who does not need it? God forbid that such a disgraceful thing should happen us.

Levi Winklebleck.

LEVI WINKLEBLECK, President Water Users.

Mr. WALSH. Mr. President-The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Montana?

Mr. POINDEXTER. I yield.

Mr. WALSH. Before the Senator passes from that, I should like to inquire of him to what end or purpose this telegram is read here? Does the Senator agree that these rights are given to San Francisco for nothing? We listened a little while ago to the statement of the Senator from Wyoming, who regarded San Francisco as unduly burdened by the exactions that were made of it in consequence of this grant. Then, with respect to the other matter, are we to understand that the Senator is desirous of impressing the Senate with the idea that if this bill goes through the homes of these people will be destroyed or that any of the rights they enjoy to the waters of these streams will be in any way imperiled or taken away from them?

Mr. POINDEXTER. Most assuredly not to the complete extent stated by the Senator from Montana, but most grave injury will be done them, and hundreds of thousand of acres of land will be deprived altogether of water for irrigation.

Mr. WALSH. That is not my question. My question is, does the Senator believe that there are provisions in this bill which will destroy their homes; which means, as I take it, that it will take away from them the rights to the water which they now enjoy and by means of which they thus make their homes? Does he desire the Senate to so understand? If so, I should be very glad to be enlightened as to what the provisions are which operate that way.

Mr. POINDEXTER. The Senator is very familiar with the bill. It is not my purpose at this time especially to go into a discussion of that phase of it. The bill allows 2,350 secondfeet of water to the water holders of the Modesto and Turlock irrigation districts. According to experience, and the best evidence is the actual experience of farmers, the minimum amount that they will need there for proper irrigation is 3,670 secondfeet of water, which is 1,320 second-feet more than the amount that will be allowed them under this bill.

Mr. NORRIS. Will the Senator state how much these homes have been getting in the past and how much they are getting now? Is it not true that at the present time these very homes that it is claimed are going to be destroyed are not now using and never have used as much water as this bill provides they shall have?

Mr. POINDEXTER. They have been using very nearly as much water as the bill provides they shall have.

Mr. NORRIS. Very nearly.
Mr. POINDEXTER. I will obtain the exact figures and furnish them to the Senator.

Mr. NORRIS. Then how would it destroy the homes if we refuse to give them additional water, when heretofore, for the building up of those homes, they have never seen fit to use it when they had a right to it?

Mr. POINDEXTER. They have been making a vigorous and persistent effort to get more water. They have built a reservoir. They have expended some \$4,000,000 for the purpose of developing an irrigation district. They have never been able to obtain water enough to fill the reservoir. The complete development of the waters of the Tuolumne River for purposes of irrigation has not been taken enough. I do not contend that it is a completed project. I am speaking of the future uses and the conservation of that water, and by conservation I mean the best use that can be made of the water of the Tuolumne River.

Mr. NORRIS. I agree with the Senator; that is a good defense, but this telegram says that these homes are going to be destroyed. These homes have been built up under the use of water that as far as quantity is concerned is not going to be diminished, but it will be slightly, at least, increased by this bill.

Mr. POINDEXTER. Many of them have not a sufficient amount of water, and they are making an effort to get a sufficient amount of water. I suppose one thing this man has in mind is the development of lands which are not now being irrigated but which may be, and which would be irrigated if the waters of this stream were left free for that use.

Mr. WALSH. I should like to follow the inquiry just a little further, if the Senator will care to yield.

Mr. POINDEXTER. I yield to the Senator from Montana.

Mr. WALSH. I want the Senator to assume that these people are of right entitled to the excess; that is to say, to something over 3,000 second-feet instead of the 2,300 second-feet mentioned in the bill. What is there in the bill that in any manner prejudices them in the assertion of the right that they are entitled to 3,500 second-feet?

Mr. POINDEXTER. There is everything in the bill that undertakes to parcel out this water and allow them a certain amount and allow the city of San Francisco the balance. I know the Senator contends that there is no grant of water, yet throughout the bill there are regulations as to how much the irrigationists shall have and how much the city shall have, and, to say the very least, these farmers will be up against the contention of the guaranties of the United States Government in attempting to get more than is provided for them under this bill.

Mr. WALSH. This matter can easily be left by endeavoring to follow step by step the procedure that would ensue. We will assume that they are entitled to 3,500 second-feet—that they demand that amount—and the city of San Francisco refuses to give them more than 2,300 second-feet. They are obliged, therefore, to go into court to institute a suit or to initiate proceedings before the water commission of the State of California. In those proceedings they assert that they have acquired the right to 3,500 second-feet of water by virtue of the laws of the State of California. I want to know from the Senator if this act will in any way affect or imperil a favorable adjudication in that

Mr. POINDEXTER. Undoubtedly it would. Undoubtedly any court would give consideration to the asserted power of the Congress of the United States to apportion this water, which it undertakes, at least, to exercise in this act of Congress, if it shall become an act of Congress. Courts are not in the habit of so lightly ignoring an act of Congress as the Senator seems

to think would be the case.

Mr. WALSH. I want to follow the Senator another step.

Mr. POINDEXTER. I yield to the Senator.

Mr. WALSH. If they do, as a matter of fact, own 3,500 second-feet of water and are entitled to take that much out of this river, that is just as much property as if they owned 3,500 acres of land or 3,500 head of cattle. I should like to ask the Senator how any legislation that we may pass will operate to deprive them of that right, in view of the constitutional provision that no legislation shall so operate as to deprive a person

of his property without due process of law.

Mr. POINDEXTER. I should like to answer briefly the
Senator from Montana. I would say to him, it would operate by virtue of whatever authority has been claimed to exist in the United States to regulate the use and the disposition of waters impounded upon lands which are granted by it for the purpose of reservoirs or by dams which are built on lands which the United States owns, asserting the authority to attach

conditions to its grant.

I will say, furthermore, to the Senator from Montana that his comparison of the right to the water in the Tuolumne River with the title to a piece of land is not an apt one, because the Senator, with all his familiarity with the uncertainties of water rights, especially in the arid States of the West, knows that they have been the subject of more litigation, of more doubt, of more conflict in and out of the court than any other property right that concerns our western people, whereas

the title to land by comparison is fixed and certain.

Mr. BORAH. Mr. President—

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Idaho? Mr. POINDEXTER. I yield.

Mr. BORAH. Assuming that the Senator from Montana is correct as to the fact that any attempt here to distribute these waters would be void and unconstitutional, and assuming that these provisions here which seek to do that would be held by the court to be unconstitutional, nevertheless those farmers would undoubtedly have to meet this condition, when their lawsuit should come on for a hearing, that they had appeared at Washington through their representatives or agents and agreed to a distribution of this water, and that the Congress of the United States acting upon that agreement had passed this law, which became thereby a binding contract between these farmers and San Francisco, and the farmers would be said to be estopped because their agents and representatives had appeared here and waived and consented to a reduction of the amount of water to which they were really entitled.

If the farmers are entitled to 1,350 more feet than are actu-

ally provided for here, yet there can be no question but that they could waive and dispose of it by contract between themselves and some other individual, and they would be up against the question of estoppel, with the testimony upon the part of San Francisco that she had proceeded to expend her money and make her investment upon the basis of this contract to which they had consented, and the farmers would have to meet the doctrine of estoppel with the fact that thousands of dollars had been expended and spent upon the strength of the contract,

Mr. WALSH. Mr. President-

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Montana?

Mr. POINDEXTER. I yield.

Mr. WALSH. Of course, the Senator now advances a legal proposition that, I apprehend, very likely upon reflection he would not like to father.

Mr. BORAH. Perhaps not, after I have heard from the Sen-

ator from Montana.

Mr. WALSH. I am sure the Senator will agree with me that, inasmuch as San Francisco is the beneficiary of this legislation, it as a matter of course can not accept this grant without compliance with its conditions; but I apprehend the Senator will agree that no court will listen to evidence, extraneous evidence, aliunde, for the purpose of showing that anybody assented to the obligation or to the terms of this legislation.

Mr. BORAH. While I have a very profound regard for the legal knowledge of the Senator from Montana, neither one of those propositions, in my judgment, can be sustained. are at absolute variance with the doctrine of estoppel. They are at variance with the legal principle which would undoubtedly be advanced to sustain the position of San Francisco after she had expended thousands and thousands of dollars upon the strength of the decision of these parties. The Senator says that San Francisco could not be heard to advance the doctrine, because she has accepted this in her grant. Does not the Senator from Montana understand that no one is ever estopped by reason of a void and unconstitutional provision in a statute? If there is a provision in a grant that is contrary to law, it estops not the grantee, for his title becoming vested he may enjoy it without performing the terms of the illegal condition.

Mr. POINDEXTER. Mr. President, I think the difference of opinion between the Senator from Montana and the Senator from Idaho, both of them being eminent and distinguished lawyers, illustrates very well the situation in which these farmers will be in regard to their rights if they are turned over to the mercies of litigation, as is proposed by the Senator from Montana. They have not lawyers retained by the year. Senator seems to think it is a very light matter that if the Congress of the United States undertakes to take water for San Francisco which it does not need, away from the farmers in the San Joaquin Valley which they do need, and they are wronged, they can go into litigation in the courts and fight it out, probably during the balance of their lives.

Mr. NORRIS. Mr. President-

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Nebraska? Mr. POINDEXTER. I yield.

Mr. NORRIS. I commend the Senator on the proposition that we ought to avoid litigation for these people, if we can. I think we all know that that is an expensive proposition, and we ought to keep them out of it if we possibly can. It is

commendable in anyone who attempts to do that, I think. But I want to inquire of the Senator why it should mean litigation if we would exclude this, and that it would mean litigation if we include it in the bill. I want to submit this proposition to

Mr. POINDEXTER. Include what?

Mr. NORRIS. The particular provision by which San Francisco agrees to recognize the right of these irrigation districts, to supply them with 2,350 second-feet.

Mr. POINDEXTER. The Senator does not understand me as

objecting to that? My objection is that it does not grant them

more than that.

I am going to include that in the proposition that I want to submit to the Senator. The Senator thinks that does not include enough. I think he will admit, however, that that is more than what they are asking now, and a little more than they ever have had. If they are entitled to more, and San Francisco thinks they are entitled to less, the advantage of the irrigationists in putting that proposition into the bill is that San Francisco having accepted the grant has to acknowledge their priority of right to so many feet, even though under the laws of California they are not entitled to that much.

That is the reason, as I understand it, why this provision was put in at the request of the very men who are now objecting If they are entitled to more under the law they are en-

titled to get it under section 7.

It seems to me if you will construe those two propositions together you will see that it is to the advantage of the irriga-San Francisco acknowledges their right to so much, even though it may be illegal. She must acknowledge under section 11 everything that is legal. So it would not bring these people into litigation nearly as quick as though it was all left because then San Francisco might object to these people getting as much as is named in the bill and litigation would

Mr. POINDEXTER. Mr. President, I do not think the Senator from Nebraska really would have very much hope that the farmers in these two irrigation districts would have a very favorable outlook for securing any more water than is allowed under the bill if the city of San Francisco acting under it expends a hundred and thirty odd million dollars for the purpose of using it for domestic purposes in the city of San Francisco.

Mr. NORRIS. I think the bill specifically in section 11 gives them everything that they have a legal right to under the laws

Mr. POINDEXTER. The question goes far beyond what they have a legal right to under the laws of California at the present time or what filings have been made or what filings have not been made. It is a much broader question. The question is as

to the best use that can be made of this water. I did not intend to discuss this phase of the question at this

time, but the bald fact is, as it seems to me after some careful examination of all the available evidence, that there are 411,000 acres of dry land in the San Joaquin Valley, which can not get water from any other source except the Tuolumne River, and if that water is taken away from them by the city of San Francisco that land will remain forever undeveloped. It is not a question of what the situation is at the present time. proposition is that the Congress of the United States ought to cooperate with the owners of that land in the interest of public policy, if that is a fact, to preserve this water and to secure, if necessary, not legislation which will put obstacles in the way of the proper use of it for irrigation, but which will facilitate the proper use of it and to cooperate, if necessary, with the State of California for that purpose.

There is more in this case than the mere narrow technical legal rights of these parties at the present time. It is very difficult to determine what those rights are. The statement, I understood—I may have been mistaken—was made by the Senator from Colorado [Mr. Thomas] yesterday that this bill allowed these irrigationists as much water as they had filed on. I am informed that they have filed between the two districts on more than 9,000 second-feet of water; and they claim that they have been diligent in following up the necessary requirements under the water statutes of California for perfecting that right.

Mr. THOMAS. Mr. President—
The PRESIDING OFFICER. Does the Senator from Wash-

ington yield to the Senator from Colorado?

Mr. POINDEXTER. I yield.

Mr. THOMAS. Inasmuch as the Senator from Washington has referred to something that I said yesterday, will he permit me to interrupt him for a moment?

Mr. POINDEXTER. I have yielded.

THOMAS. It was practically conceded by all parties at the hearings before the two committees that the maximum amount of legal appropriations—not filings, but legal appropriations—of San Francisco amounted in the aggregate to 2,350 second-feet for these districts plus 60 feet for the La Grange Water Power Co., making a total of 2,410 feet.

Mr. POINDEXTER. Does the Senator mean by "legal appropriation of water," water that has actually been used?
Mr. THOMAS. No; I do not mean that. I ought to mean that, because that is the test of the legal ownership of water in arid States.

Mr. POINDEXTER. I do not think it is important, but-Mr. THOMAS. If the Senator will pardon me, it was conceded, however, finally that that was the maximum amount. Mr. Needham, formerly a Representative from California, declared before the committee that the districts which he represented insisted on the recognition of that right as a superior one to that of San Francisco, and that it should be put in the bill for the purpose of avoiding litigation in the State courts and putting an end to the controversy that they had waged with San Francisco for 10 years. They have only actually used about 2,000 feet of this water, subjecting 119,000 acres to actual cultivation.

Mr. POINDEXTER. Now-

Mr. THOMAS. Just a moment. Due allowance, however,

was made for sufficient to supply 300,000 acres.

The Senator speaks about the cooperation of the Government, and its duty to do so, for the development of this remaining land. Let me say to the Senator the evident truth is that under this land is a subsurface flow of water, from 7 to 10 feet beneath the surface, needing only the application of cheap electric power to make it serviceable to the uses of man by applying it to that land; and the provisions of this bill require the city of San Francisco to develop that power and to let the owners of this land have it at cost, thus giving them the cheapest, the best, and the only source of supply which can be made available for that land.

Now, if the Senator from Washington desires to ask a ques-

tion. I shall be glad to answer it.

Mr. POINDEXTER. I will put it in the form of a question. The Senator says that they are now using the water. That was the question asked by the Senator from Nebraska [Mr. Norris] a moment ago as to how much water they were now using. have since been informed that the figures are the same as those which the Senator from Colorado now states-about 2,000 second-feet-and that with that they are irrigating 119,000 acres of land.

Mr. THOMAS. That is correct.

Mr. POINDEXTER. If it requires 2,000 second-feet to irrigate 119,000 acres of land, does the Senator from Colorado think that they can irrigate 250,000 acres of land with 2,350

Mr. THOMAS. I do not; but the bill makes provision, as soon as the people of these districts shall construct the necessary reservoirs, for an additional 4,000 second-feet during the flood season of every year.

Mr. POINDEXTER. Yes, Mr. President; but that involves-Mr. THOMAS. And that is what they asked for. They got

everything that they asked for and demanded.

Mr. POINDEXTER. It provides for surplus water; but there is no surplus water, and there will be no surplus water sufficient to meet the demand for the 4,000 second-feet.

Mr. THOMAS. Then, Mr. President, they have lost nothing, because everything is clear gain that they get by way of surplus

Mr. POINDEXTER. They have lost the entire volume of water of the Tuolumne River, which goes to the city of San Francisco.

Mr. THOMAS. How is that possible, Mr. President, when that volume of water has run to the sea, unserviceable to man, for 50 years, during all of which time these gentlemen should have made their appropriations effective?

Mr. POINDEXTER. Let me apply that proposition to the Senator from Colorado. During all of these years that this water has run unused to the sea San Francisco did not appropriate it or use it. What right has she now to come and take

It is applicable to one as well as to the other. Mr. THOMAS. Because she has been the first to file upon it, subject to these senior rights, in order to devote it to beneficial purposes, and those who had the right previous to that time and failed to exercise it ought not now to complain and insist

that this water is necessary for the development of that land.

Mr. POINDEXTER. The Senator says that San Francisco was the first to file upon it, subject to senior rights. That is quite a condition which the Senator states.

Mr. THOMAS. I did not eatch that remark.

Mr. POINDEXTER. I understood the Senator from Colorado to say that San Francisco was the first to file upon the water, subject to these senior rights.

Mr. THOMAS. Yes.

Mr. POINDEXTER. Of course, the senior rights come first by the filing upon it, as a matter of fact.

Mr. THOMAS. The senior rights are all provided for and allowed in this measure.

Mr. POINDEXTER. They filed upon over 9,000 second-feet. Mr. THOMAS. Oh, yes; San Francisco is the owner by purchase and by location of 1,100,000 miners' inches.

Mr. POINDEXTER. They are all subordinate to the senior

rights which the filing on those 9,500 second-feet give.

Mr. THOMAS. They are not senior rights unless they have been devoted to beneficial use. No man can file upon water and let it stand upon his filing unless he developes it.

Mr. POINDEXTER. How has San Francisco done so? Mr. THOMAS. She has not done so, but she has been en-

deavoring to use it.

Mr. POINDEXTER. How has she been endeavoring to use it, when the board of supervisors of San Francisco in 1906, not informally, but by formal order, abandoned the whole Hetch Hetchy project?

Mr. THOMAS. But in 1906 the Ruef machine, in the interest of a band of gentlemen possessing themselves of a lot of socalled water rights, entered into a conspiracy with that infamous government to saddle their claims upon the city for \$10,000,000, one-third of which was to go to the city council and to Abe Ruef. Does the Senator think that is an abandonment for which the city of San Francisco should be held responsible?

Mr. POINDEXTER. It is a new rule of law that the courts should inquire into the character of city officials, and if it is proven that one of them was sent to the penitentiary, their

formal, regular acts are not valid.

Mr. THOMAS. That is true; but fortunately for San Francisco, Mr. Reuf and his cohorts did not complete their conspiracy against the interest and welfare of the city that they governed.

Mr. POINDEXTER. But they completed it enough to show

their intention.

Mr. THOMAS. Indeed, they did; but, thank God, one of them is in the penitentiary, where the others ought to be, including the gentlemen who promoted the scheme.

Mr. POINDEXTER. I agree with the Senator in that ex-

pression

Mr. THOMAS. I know the Senator does.

Mr. POINDEXTER. And in his feelings on that subject;
but, at the same time, all that is a little far removed from the Hetch Hetchy bill. Mr. THOMAS.

Well, I do not think it is.

Mr. McCUMBER. Mr. President-

The PRESIDING OFFICER. Does the Senator from Wash-

ington yield to the Senator from North Dakota?

Mr. POINDEXTER. I will yield in just a second. say that whether they accomplish their plan of abandoning Hetch Hetchy or not, they went far enough to prevent any of their rights from maturing under the filings which they had previously made.

Mr. THOMAS. Surely the Senator would not contend that San Francisco should be made the unwilling victim of this unfortunate conspiracy to rob her treasury of \$10,000,000?

Mr. POINDEXTER. If I had the power to prevent it, I would not consent to it, but San Francisco

Mr. THOMAS. No; the Senator's judgment does not approve of it. I know him too well to believe that for a moment,

Mr. POINDEXTER. But San Francisco, I think, in the present water famine, if there is a water famine there, is the victim of some inefficiency in its city government, and perhaps a portion of the criminality, of which the Senator has spoken, in a previous city government may be responsible for the present lack of proper water facilities in the city of San Francisco by the failure to use many available sources of supply.

Mr. McCUMBER and Mr. NORRIS addressed the Chair.

The PRESIDING OFFICER. To whom does the Senator from Washington yield?

Mr. POINDEXTER. I yield to the Senator from North Da-

Mr. McCUMBER. The Senator from Washington, the Senator from Montana, and the Senator from Idaho a short time ago had reached a very interesting legal proposition and left it undecided. With such eminent lawyers disagreeing as to what the law is in this particular case, and as many of us feel that our vote will depend somewhat upon the proper construction of the law, I am inclined to ask for a little more light. Therefore, I

direct my remarks to the Senator who has the floor, but the Senator from Idaho [Mr. Borah] can answer them, as they will be more particularly directed to the legal proposition advanced by him. He spoke of the law of estoppal. What I want to ascertain from the Senator who made the legal statement, which seemed to be concurred in by the Senator from Washington, is whether or not he would carry his rule to the extent of saying that a number of representatives of water users in the State of California could come here and agree to any character of legislation which would estop the State of California, operating through its water commission, from directing what should be the distribution of its own water supply in accordance with its own laws? Would not the law of California govern, and could there be such a thing as the estoppal of a State from enforcing its own policies with relation to its own waters, notwithstanding any kind of private agreement or any law that might be enacted by the Federal Government touching and covering a property right over which the Government has no jurisdiction, against the rights of the State of California?

Mr. BORAH. Certainly not. Two individuals, or a number of individuals, could not transfer any attribute of sovereignty from one government to another. But here is a different proposition. Here is an individual who claims to have an ownership in private property; that is to say, he reduces to his use and to his control under the laws of the State of California so much water. If he were dealing with his neighbor, he could enter into a contract with the neighbor that he would waive one-half of the water which he had and transfer it to his

Mr. McCUMBER. But the State comes in and says he shall not transfer that water, notwithstanding he has made such an

Mr. BORAH. But the laws of California do not say anything

Mr. McCUMBER. They certainly can say it.

Mr. BORAH. They can, but they do not. Mr. McCUMBER. And they can enforce it.

Mr. BORAH. The laws of California can not say as to water which has become my private property that I shall not dispose of it to my neighbor when the Government had ceased to own it prior to the time that disposal was made of it. So long as the title remains in the State of California and is undisposed of no one can enter into any agreement with another which will prevent California from designating the manner in which it shall be appropriated; but after it has become private property and the title and use have passed to the ownership of an individual he may dispose of his interest or his equity to any other individual.

Mr. McCUMBER. Yes, the individual can; but suppose that the Water Commission of the State of California said that a certain portion of the flow of this water should go to some other locality notwithstanding this contract; the Senator does not claim that the State of California could not enforce such

an edict?

Mr. BORAH. I claim that if a farmer goes out upon a piece of land and appropriates and diverts and applies to a beneficial use a thousand inches of water, we will say, the State of California can not say to that farmer, "You must let 500 inches of that water go to another individual over here."

Mr. McCUMBER. If the farmer does not need it all himself?

That is a different proposition entirely. Mr. BORAH.

Mr. McCUMBER. There is the whole question.

Mr. BORAH. If the farmer does not need it, then he never gets title to it, because he can only secure title by virtue of applying it to a beneficial use. So long as it is applied to a beneficial use, it is his, but he may waive that use of water; he may deprive himself of that property right; he may reduce his acreage under cultivation from 160 acres to 80 acres and transfer the water to other individuals.

Mr. SMOOT. Mr. President-

The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Utah?

Mr. POINDEXTER. I yield for a question.

Mr. SMOOT. I want to ask the Senator from Colorado a question, if the Senator from Washington will yield.

Mr. POINDEXTER. If it does not take too long, I will

Mr. SMOOT. It will not take many minutes.

Mr. POINDEXTER. Very well.

Mr. SMOOT. Mr. President, last night the Senator from Colorado in his most interesting remarks referred to the underground waters of the San Joaquin Valley. He stated that those waters could be pumped at very little cost and that the valley could be settled under that system of irrigation.

Mr. THOMAS. At very little relative cost.

Mr. SMOOT. After I went home last evening, I took about an hour to look through all the hearings in this whole case, but I could not find where pumping the underground waters was referred to in a single instance. If the Senator knows where that reference is, I should like to have him advise me, and if not, I should like to have him state upon what authority he makes that statement. To-day I have asked a number of California people in relation to it, and they have told me that it is the first time they have ever heard an intimation of that

Mr. THOMAS. My impression is that it can be found in the testimony of Mr. O'Shaughnessy, but I may be mistaken as to that. It is, however, stated in the hearings of the House. My direct source of information is Engineer O'Shaughnessy himself. The same statement has been made to me by Mr. sang, who is the president, I think, of the San Francisco board of public utilities, and I think also by Mayor Phelan. I know that this statement has been made to me with an assurance that betokened personal knowledge, and my recollection is fairly good that there is a reference to it somewhere in the hearings of the House committee.

Mr. POINDEXTER. Mr. President-

I should like to ask the Senator from Colorado one other question, and that is this: Does he know of a single case of pumping water in the San Joaquin Valley for irrigation purposes?

Mr. THOMAS. Yes. My memory is deficient as to names, but my recollection is that in the testimony of Col. Biddlealthough I may be mistaken as to that-he stances of pumping plants in different portions of the San Joaquin Valley.

Mr. POINDEXTER. Mr. President-

Mr. THOMAS. It has been some time, I will say to the Senator from Utah, since I read completely and exhaustively I will say to the Senator, however, if the Senator from Washington will pardon me, that I will endeavor to obtain for him as soon as possible information as to the specific instances where such pumping was carried on.

Mr. POINDEXTER. Mr. President, I think I will have to decline to yield further on that phase of the case.

I want to say, in regard to the question of subterranean supplies of water, that everyone who has lived in an irrigation district knows that where irrigation is carried on over a large area there is developed a large amount of underground water; and it is in the irrigated districts of the San Joaquin Valley, where irrigation has been carried on for a number of years, that the underground water has risen nearer to the surface.

Mr. President, there are 411,000 acres of land involved in this proposition. Our contention is that if this water is taken for San Francisco 300,000 acres of that land, approximately, will not be irrigated at all. There will not be any subterra nean supply of water on that portion of the land. There will be still less subterranean supply of water for the reason that the waters which flow in the Tuolumne River which are not now used for irrigation, but which make up the underground supply that comes from the same source, will be carried away to the city of San Francisco, and the underground supply will diminish and disappear and will not exist at all upon the new lands. You can not take the water to San Francisco and still have it for irrigation either in the rivers or underground. I think nobody will dispute that proposition.

I want to add just one word to make clear the amount of land that will be deprived of water for irrigation by this bill. The Senator from Colorado [Mr. THOMAS] has just said that are 119,000 acres of land irrigated in the Turlock and Modesto irrigation districts. In those districts altogether there are 250,000 acres of land, so that the difference between 119,000 and 250,000 will be without water even within those districts. But outside of those districts there is an additional amount of land which is susceptible of irrigation, if water can be obtained

for it, which makes the aggregate 411,000 acres.

Mr. THOMPSON. Mr. President—
The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Kansas?

Mr. POINDEXTER. I yield to the Senator.

Mr. THOMPSON. I rise only to correct the figures, which I think the Senator has transposed. The number of acres under irrigation is 191,000 instead of 119,000.

Mr. POINDEXTER. I beg to differ with the Senator from Kansas. However, even if the Senator from Kansas were correct, it would be merely a difference in degree and would still leave without water hundreds of thousands of acres of land admittedly capable of irrigation.

Mr. PITTMAN. Mr. President—
The PRESIDING OFFICER. Does the Senator from Washington yield to the Senator from Nevada?

Mr. POINDEXTER. I yield to the Senator from Nevada. Mr. PITTMAN. I should like to ask, just for information, whether the Senator knows what portion of this land is not fit

for cultivation?

Mr. POINDEXTER. I know that practically all of it is fit for cultivation. Of course, like every large area, there are probably isolated pieces that are not fit for cultivation, but I have here reports of a more or less official character indicating that there are over a million acres of land in the San Joaquin Valley that are fit for cultivation. Of course it is not claimed that water can be obtained for anything like that amount, but it is claimed that 411,000 acres of fertile land, some of which is asserted to be the most fertile land in California, can be furnished with water.

Mr. PITTMAN. Does the Senator know whether or not any

of this land is tributary to other watercourses?

Mr. POINDEXTER. Some of it is tributary to the Merced River, but there is an insufficient amount of water in the Merced to irrigate it. It is admitted in the report of the Army engineers, which has been talked about so much by the advocates of this bill, that every drop of water in the San Joaquin Valley will be required for irrigation if the lands which can be irrigated are put under cultivation.

Mr. PITTMAN. Does the Senator know whether or not the impounding of these other watercourses is possible; and if so, whether the water thus obtained would then irrigate this land?

Mr. POINDEXTER. I know that it would not irrigate it; that the impounding of all the watercourses tributary to the San Joaquin Valley would be necessary for the irrigation of its land, and would be insufficient for its irrigation.

Mr. PITTMAN. Does the Senator know whether or not the impounding of these watercourses would be sufficient to irri-

gate the land that is now occupied?

Mr. POINDEXTER. I suppose it would irrigate something over 200,000 acres within the Turlock and Modesto irrigation The Senator's question presupposes the impounding and use for irrigation of the water which it is proposed by this bill to carry to San Francisco. That is a very vital issue, involved in the entire case.

Mr. CUMMINS. Mr. President-

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Iowa?

Mr. POINDEXTER. I do.

Mr. CUMMINS. I have not made up my mind as to the vote I shall cast upon this bill. My conclusion will be determined by certain legal propositions that I have propounded to everyone, with the possible exception of one Senator, who has so far addressed himself to the bill. I now wish to ask a question or two of the Senator from Washington, because the information I seek must necessarily come from those who are more familiar than I am with the law prevailing in the arid country.

It is admitted that in 1889 these two districts filed upon 9,500 second-feet of water. I have asked, I think, every Senator who has spoken upon the subject whether the owners of land in these districts are still entitled to enlarge their development so as to utilize this amount of water; for if they are, their rights relate to the time of filing the notice. No one has answered that question except to say that certain representatives appearing before the House committee admitted that 2,350 econd-feet of water was all the water to which they are entitled. These same people, or representatives of these same people, now deny the assertion.

I wish to have somebody enlighten the Senate upon that proposition. Did the filing in 1889 confer upon these two districts the right to take 9,500 second-feet of water, and have the districts lost any part of that right by failure in the meantime

to construct their works so that they can utilize the water?

That is the first question upon which I should like to hear something from the Senator from Washington. Let me give him

another, now.

Mr. POINDEXTER. That is a difficult question. I wish the Senator would let me say what I have to say about that one before asking another one.

Mr. CUMMINS. Very well; I shall be very glad to hear the

answer.

Mr. POINDEXTER. I think it will be conceded by every lawyer that the question of whether or not these people had a right to all the water they had filed upon would depend upon whether they had proceeded with diligence and good faith, with reasonable dispatch, actually to appropriate the water. So it would come down to a question of fact, to a most minute examination of what they have done, and what their needs were;

and it would be complicated also by the question of what conflicting rights there were. There has been no mention made here of any conflicting rights except those of the city of San Francisco, which, in my opinion, are subject to a greater uncertainty than the rights of the irrigationists. It is claimed that they have been diligent in perfecting their filings. I do not think they have been.

Mr. CUMMINS. Then, Mr. President, it depends upon evi-

dence that we have not before us at this time, and we are not

capable of determining that question.

Mr. POINDEXTER. I agree with the Senator in that. I think it would be impossible for the Senate to do it. It would require most careful investigation of the facts, under rules of evidence, by a court, unless the facts could be agreed upon between the parties.

Mr. CUMMINS. One more question with regard to their

Mr. BORAH. Mr. President, will the Senator yield to me for

Mr. POINDEXTER. I yield.

Mr. BORAH. The question asked by the Senator from Iowa relates entirely to a judicial proposition, to be determined by a Therefore it illustrates the impropriety of attempting to settle it here before a body which is not a judicial body. It could be determined only by the introduction of evidence pro and con as to what they had done, whether that was ordinary diligence, and also, as the Senator from Washington says, whether the competitor or antagonist had filed a proper notice and had complied with the law. It is entirely a matter for a judicial tribunal. We can not determine it here, because we have not the evidence, and we never could resolve ourselves

into such a tribunal as would be competent to pass upon it.

Mr. POINDEXTER. Consequently, I should like to add to what has been so well said by the Senator from Idaho, we ought not to undertake in this bill to grant this water to the city of

Mr. CUMMINS. That would seem to be an inevitable conclu-

One further question about the rights of these water users: Suppose the water as it flowed naturally would not give during every day in the year the amount of water to which these districts were entitled by virtue of their filings. Would the districts have a right to build a dam in the river at some point nearer its source, in order to impound the water, and thereby enable the users to take every day in the year the full amount to which they are entitled?

Mr. POINDEXTER. I should say they undoubtedly would have that right, so far as the water was concerned, if they had the necessary franchises to enable them to construct the dam.

Mr. CUMMINS. I am assuming that they have received from the landowners at that point permission to build the structure.

Mr. POINDEXTER. I wish to say, in regard to all these questions, that I am speaking of them only upon the underlying principles of the general law relating to water in the dry States. I do not pretend to be familiar with the present state of the decisions of the courts or the statutes of California upon this question.

Mr. CUMMINS. So much for that phase of it. Now I turn

to the other phase.

It appears that in 1901 San Francisco, through her mayor, Mr. Phelan, filed a notice for the diversion of water in the Hetch Hetchy Valley, there being at that time no statute which enabled a municipality to appropriate water from the stream. San Francisco did nothing at all in the way of taking that water from the stream. I suggested that yesterday to the Senator from Colorado [Mr. Thomas], and his reply was to read a statute passed by the State of California relieving anyone who had attempted to appropriate water at a point within the domain of the United States from the operation of the statute of limitations until the person so filing the notice had received a license or permit from the landowner—that is, from the United States to build the structure.

I find, however, that the statute to which the Senator from Colorado referred was not passed until 1903, a little more than two years after Mr. Phelan—who, of course, derived only the rights of an individual—had filed his notice, and two years had gone by without anything whatever having been done in the way of diverting the water from the river in the Hetch Hetchy

Valley.

Under those circumstances did the passage of the statute to which the Senator from Colorado referred revive or preserve the rights, whatever they were, which Mr. Phelan had secured by filing the notice in 1901?

Mr. POINDEXTER. Of course, I can only give my views in answer to the Senator's question; but it would seem to me to

be perfectly clear that a curative statute of that kind might be effective as between the State and Mr. Phelan if no other interests were involved, but it could have no effect whatever as

to the intervening rights of other parties.

I can not conceive how a legislature of California, under the provisions which undoubtedly exist in its constitution against taking property without due process of law, could deprive the irrigationists in the Tuolumne Valley of rights which they had acquired under their filings by reviving an invalid and lapsed filing of some one else.

Mr. CUMMINS. The statute as read by the Senator from Colorado, however, seemed to be wholly prospective and not curative, and I wondered whether the Senator from Washington

had investigated that question.

Mr. POINDEXTER. I have not investigated that statute, but it is perfectly obvious, I think, that it is of no effect whatever as to these landowners, whether it was prospective or intended

to be curative.

Mr. President, I want to read, in connection with the colloquy which I just had with the Senator from Colorado, a brief extract from the hearings before the Committee on Public Lands in the House of Representatives on this bill. It is found on pages 254 and 255 of the hearings, and relates to the character of the land and the amount of it which is susceptible of irriga-

or the land and the amount of it which is susceptible of irrigation:

Mr. Thomson. If this water is used for San Francisco from Hetch Hetchy, will those 200,000 acres of land in the San Joaquin Valley that you have referred to be without irrigation?

Mr. Dennett. Ultimately it will. Of course, I assume that if this water is used for San Francisco that for a time some part will be retained for use in the valley, but ultimately this land will be absolutely without water.

I would like to state that the annual rainfall in this region where they use this water is only about 9 inches. This year it was only about 5 inches. Nine inches of water, as you gentlemen are aware, in a dry climate like that of California can only be of use in the raising of wheat or similar grains. This land has been cropped for years to wheat until its productivity has been almost destroyed for grain. It must be irrigated or it becomes practically worthless.

Mr. Thomson. Is Hetch Hetchy the only source?

Mr. Dennett. Hetchy is the only possible source of supply for this land lying along the Tuolumne River. I think I have heretofore given, at an earlier stage, the reference to this report showing the acreage dependent on the Tuolumne River, and the flow-off from the Tuolumne River. I stated that there were 250,000 acres approximately in the irrigation district; there are 200,000 acres outside of the irrigation district, according to this report, which are dependent on the river. In addition to that there is an area of about 22,000 acres in the foothills which can be irrigated at considerable expense. We believe if this foothill land is citrous land it will pay for irrigation at this expense. That is a development which has not yet been thoroughly determined.

Turning from that phase of the question to pursue the object

I had in view when I rose—

Mr. SMOOT. In this connection, may I call the Senator's attention to a part of the House hearings that also answers the question that was propounded by the Senator from Nevada?

Mr. POINDEXTER. I yield for that purpose.
Mr. SMOOT. I find in the hearings that the chairman addressed Mr. O'Shaughnessy in this way:

The CHAIRMAN. I want to jump from that back to the Tuolumne River and the Hetch Hetchy Dam site. Have you ever made a careful estimate, or has anyone else, so that you are able to give it to us, of the exact area in the San Joaquin that could be irrigated; that is, feasible of irrigation?

Mr. O'SHAUGHNESSY. I believe about 6,000,000 acres.

The CHAIRMAN. You think 6,000,000 acres could ultimately be irrigated in the San Joaquin Valley?

Mr. O'SHAUGHNESSY. I believe so.

Mr. POINDEXTER. Mr. President, as to whether or not there is enough water for San Francisco and enough water for the irrigationists, of course, would depend upon the acre-feet, or whatever standard of measurement was adopted, required for irrigation. Many of these reports are based on the assumption that 2.5 acre-feet of water are all that are required.

In this connection I wish to call attention to an investigation that was conducted on the experiment farm of the State of California, as to the amount of water required for irrigation and the effect upon the size of the crop of a greater or less amount of water, particularly with relation to alfalfa, which is one of the great money crops of that region.

ALFALFA THRIVES WITH PLENTY OF IRRIGATION—DAVIS FARM EXPERI-MENTS PROVE THAT MOISTURE MUST BE SUPPLIED.

[Special to the Evening Post.]

DAVIS, January 29

Davis, January 29.

That irrigated alfalfa on well-drained land in the Sacramento Valley should at no period of its growth be deprived of needed moisture if the largest yield is to be obtained, and that a profitable increase in yield will follow an increase in the amount of water applied up to a depth of at least 2.5 acre-feet per year are interesting results of experiments conducted at Davis during the past two years by the irrigation investigations of the United States Department of Agriculture.

Several years ago the university farm at Davis set aside 25 acres of land for irrigation investigations under the direction of the Department of Agriculture and at the joint expense of the Department of Agriculture, the State engineering department, and the university farm. So far the experiments have been largely devoted to the duty of water on alfalfa. Thirty plats of one-half to one acre in size have been seeded to

this crop, and depths of water have been applied varying from 1 acrefoot to 5 acre-feet per season. Water has been applied in some cases before cuttings, in some cases after cuttings, and in some cases both before and after. The relative effects of the time of irrigating have not yet been worked up, but the different yields for the different amounts of water applied are available.

During the season of 1910 the yield from nonirrigated land was 3.85 tons per acre, and the yields under irrigation were 4.79, 6, 7.60, and 8.45 tons, with total applications of water of 1, 2, 3, and 4 acre-feet per acre, respectively.

During 1911 the increases in yield were similar to those of 1910, but the total yields were all larger, due to 1911 being the year both of more rainfall and of better growing conditions. Where no water was applied the yield in 1911 was 6.02 tons per acre. An application of 1 acre-foot of water for the season increased the yield to 7.52 tons per acre. With 2 acre-feet the yield was 8.38 tons, with 3 acre-feet it was 9.33 tons, and with 4 acre-feet it was 9.64 tons per acre.

Both in 1910 and 1911 six cuttings were taken off.

And the same general results were demonstrated by the ex-

And the same general results were demonstrated by the experiments in the following year, 1911. So the yield of agriculture in this valley is demonstrated to depend in value and in its quantity upon not simply a bare sufficiency of water but an ample supply of water.

Mr. CLARK of Wyoming. Will the Senator from Washing-

ton yield to me

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Wyoming?

Mr. POINDEXTER. I do.

Mr. CLARK of Wyoming. If the Senator will yield to me, it is not for argument, but my attention was called by the Senator from California to-day to a weakness in the amendment which I had proposed yesterday, and I desire to correct that weak-ness so as to conform with the laws of California. I ask leave to introduce the amendment now, so that it may be printed and lie on the table.

The VICE PRESIDENT. The amendment will be printed

and lie on the table.

Mr. POINDEXTER. I will revert later on to some other important phases of this bill, particularly as to the need of San Francisco for the supply of water. At this time I want to call attention to a statement made by the Senator from Nevada [Mr. Pittman] a few days ago which has done some injustice to some people in the State of California. He introduced a resolution and stated that it was a resolution of the California Federation of Women's Clubs, which resolution advocated the passage of this bill. I did not examine the resolution at the passage of this bill. I did not examine the resolution of the time, but it turns out that it was not a resolution of the Federation of Women's Clubs of California, but of one chapter of that confederation, I think the Oakland district. I have in my hand a letter from Mrs. Foster Elliot, State chairman of the forestry department of the California Federation of Women's Clubs, in which she refers to that incident and asks that it be corrected. She says:

CALIFORNIA FEDERATION OF WOMEN'S CLUBS, November 15, 1913.

Hon. Miles Poindexter, United States Senate, Washington, D. C.

Hon. Miles Poindexter.

United States Senate, Washington, D. C.

My Dear Senator Poindexter: In the Congressional Record of November 6 there is printed a statement by Senator Pittman to the effect that the California Federation of Women's Clubs, in session at Santa Rosa on Thursday, October 30, passed a resolution "approving the San Francisco petition to Congress for the grant of certain rights in the Hetch Hetchy region, etc." The resolution was printed in full. Such a resolution was passed, but not by the California Federation of Women's Clubs. It was a resolution of only one of the six districts comprising the State federation and was the district, the membership of which is mostly in San Francisco.

Representing as I do the California Federation of Women's Clubs as chairman of its committee on conservation, I feel that I must advise you of the facts in the case and express the hope that this communication may be printed in the Congressional Record as was the resolution which was reported, incorrectly, to be the expression of the entire State Federation of Women's Clubs. I have no doubt that Senator Pittman was unaware of the fact that the resolution which he presented came from but a small section of the California federation.

Because of the marked diversity of opinion in California on the subject of San Francisco and its desire to secure the Hetch Hetchy, it has been the steadfast policy of the California Federation of Women's Clubs, whose home is in the city of San Francisco, I am urged to make it clear that such has been the policy of the federation, and to state further that at the last meeting of the federation, in conformity to this policy, a resolution relating to the Hetchy Hetchy matter was by unanimous consent tabled and not considered.

The publication in the Congressional Record of the resolution passed by that one district of the California federation puts the entire State federation in a wrong light, and for that reason I should be very glad if this correction might be given the same prominen

Mrs. FOSTER ELLIOT, State Chairman Forestry.

There are other documents here, some of which I will not burden the RECORD with, with the exception of one other letter which I will ask the Secretary to read.

The VICE PRESIDENT. The Secretary will read, without

objection, as requested.

The Secretary read as follows:

CALIFORNIA FEDERATION OF WOMEN'S CLUBS, November 24, 1913.

Hon. Miles Poindexter,

Senate Chamber, Washington, D. C.

My Dear Sir.: It has just been called to my attention that Senator Pittman has had incorporated into the Congressional Record a statement that the California State Federation of Women's Clubs passed a resolution in favor of the Raker bill. As a matter of fact, the California Federation passed at Montercy, in 1999 or 1910, a resolution opposing the use of Hetch Hetchy as a water supply for San Francisco, and this action has never been set aside. At its last convention, in Santa Rosa, San Francisco district passed a resolution in favor of the Raker bill.

At its last convention, in San Diego, the southern district passed a resolution opposing the Raker bill.

Yours, truly.

R. V. Coley,

President Alameda District.

R. V. Colby, President Alameda District.

Mr. POINDEXTER. Referring to the matter referred to in the letter, I read an extract from the San Diego Union of November 22 referring to a meeting of the Southern District Federation of Women's Clubs in California, in which it is stated that-

One of the features of the convention was the almost unanimous sentiment against the proposed use of the Hetch Hetchy Valley by San Francisco for water purposes. When the resolution condemning this plan was presented and passed at the last session of the convention hundreds of delegates jumped to their feet, waving handkerchiefs and clapping long and loudly.

Then follows the resolution in opposition to the bill, which I

will not put into the RECORD.

Mr. President, I think it is not improper to put in the RECORD for consideration in weighing this bill a letter from William Frederic Badé, professor of semitic literature in the University of California, which is situated in the suburbs practically of San Francisco, in which the writer says:

DEPARTMENT OF SEMITIC LITERATURE,
PACIFIC THEOLOGICAL SEMINARY,
Berkeley, Cal., November 26, 1913.

Hon. MILES POINDEXTER, Senate Chamber, Washington, D. C.

My Dear Mr. Poindexfræ: I inclose some clippings from yesterday's and to-day's San Francisco Examiner. It will indicate how the absurd Hetch Hetchy petition which it is proposed to present to the Senate has been drummed up. The Examiner, as well as other papers, has never told its readers the truth about the situation, and great numbers of the citizens of San Francisco have been led to believe that it is a case of Hetch Hetchy or die.

Sincerely, yours,

WILLIAM FREDERIC BADÉ.

From the same gentleman I have received, inclosed in a letter, a copy of a letter which he had addressed on this subject to the chairman of the Committee on Public Lands of the House of Representatives, and I will ask that the Secretary

The VICE PRESIDENT. Is there any objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

BERKELEY, July 3, 1913.

The Hon. Scott Ferris,
Chairman Committee on Public Lands,
House of Representatives, Washington, D. C.

The Hon. Scott Ferris,

Chairman Committee on Public Lands,

House of Representatives, Washington, D. C.

My Dear Sir: I appreciate the trouble you have taken to write me regarding your views upon the urgency of the Hetch Hetchy project. I still must maintain and express my conviction that no such urgency for immediate action exists. I know conditions intimately here and I have been present at all the hearings in Washington up to date. You will find in the stenographic report of the hearings held last November that Mr. Freeman testified, under close questioning from the Secretary of the Interior, that the local sources of the Spring Valley system are capable of a development of at least 150,000,000 galons daily. Not a third of this amount is being used at the present time. The committee, I am sure, will wish to distinguish between a real shortage of water, which would require the immediate development of a Sierra source and the mere unwillingness on the part of the city to acquire and develop the local sources or to guarantee a certain amount for their development. It seems to me that a feud between the local water company and the city is an extremely poor reason for invading a national park, especially when a number of other sources are in any case open to the city if they wish to pay a little more.

As for Mr. Pinchot and his views, I wish to say that I know him personally and have the highest regard for his work as a conservationst, but in this case I think your committee ought to discount his views for the significant reason that it was he who first suggested the invasion of Yosemite National Park, before any real investigation as to the necessity of such a course had been undertaken. In proof of this I inclose copies of two letters which were written by him in 1906. They tell their own story. The New York Independent of August 18, 1910, published them in an editorial and made this comment: "This is not merely approving, but suggesting and abetting a scheme which the public sentiment of the country has cond

hand it over, without the excuse of a real necessity, to the nearest hungry municipality that asks for it, is nothing less than conservation buried and staked to the ground. Such guardianship of our national resources would make every national park the back-vard annex of a neighboring city. We hope Mr. Pinchot sees by this time that he made a serious mistake. The sooner he repudiates his support of the Hetch Hetchy water project the better for the cause of conservation which he represents.

Hetch Hetchy water project the better for the cause of conservation which he represents.

I would respectfully call your attention also to the fact that the city's representatives, as shown conclusively by last year's hearings, deliberately and consistently underestimated the cost of the Hetch Hetchy system and belittled and overestimated the cost of rival systems. New evidence has just come to light that important facts were suppressed by the city officials. On behalf of this organization I wish to respectfully urge again the postponement of full hearings for all parties until next December. The city officials must have been quite aware that it is physically impossible for a number of us to go to Washington at this time of the year.

Very sincerey, yours,

Vice President Society for

Vice President Society for the Preservation of National Parks.

Mr. POINDEXTER. Mr. President, I should like to read a letter from the director of laboratories of the city of San Francisco as to the quality of its present water supply, ad-dressed to Mr. E. T. Parsons, of that city, and dated November 18, 1913. He says:

CITY AND COUNTY OF SAN FRANCISCO, DEPARTMENT OF PUBLIC HEALTH, CENTRAL OFFICE, November 18, 1915.

Mr. E. T. Parsons, 454 Second Street, City.

DEAR SIR: In response to your inquiry concerning the quality and safety of the San Francisco water supply I would say that this laboratory examines the water from all the reservoirs, both chemically and bacteriologically, at frequent intervals and that it is always free from contamination of any sort.

The idea entertained by a few, that the water was unsafe, had its origin in the fact that part of the supply during a portion of the summer contained some minute water plants.

We had less typhoid than usual this season, and no cases were traced to the water.

In conclusion I would say that few cities in the United States have as safe a supply.

as safe a supply. Respectfully,

WILFRED H. KELLOGG, Director of Laboratories.

Mr. BRANDEGEE. Mr. President-

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Connecticut?

Mr. POINDEXTER. I yield.

Mr. BRANDEGEE. I want to call the attention of the Senator from Washington to the communication which was read Mr. Badé, vice president of the Park Preservation Society?

Mr. POINDEXTER. I think he is an officer of that society, and he is a member of the faculty of the University of Cali-

Mr. BRANDEGEE. In view of what the Senator from Colorado stated last night about the proportions of the Hetch Hetchy Valley and the part to be devoted to this project if this bill should pass, how does the Senator from Washington account for the statement made in the letter which has been read that half of the Yosemite National Park is to be destroyed by this improvement? This gentleman lives right there in California. Can it be that even he does not know better about the project as to which he is attempting to instruct the Senate?

Mr. POINDEXTER. On the contrary, Mr. President, there are maps, of which I have some, though not immediately at hand, which most clearly corroborate his statement, in which the portion of the watershed of the Yosemite National Park which drains into the Hetch Hetchy Valley and into this reservoir is shown to be very much larger than all the remainder of the Yosemite National Park. He bases his statement upon the proposition that it would be necessary to exercise supervision over the drainage area which drains into the Hetch Hetchy Reservoir. I do not think he has reference to the part of it which is actually covered by water.

Mr. BRANDEGEE. The fact that some supervision was exercised over the drainage area which furnishes water for the reservoir that may be created would not, of course, destroy the park. If inspectors should prevent people from committing nuisances upon the watershed, it would not detract from the attractiveness of the park, it seems to me, but would make it more attractive.

Mr. POINDEXTER. As to the proceedings which the city of San Francisco has started to acquire a water supply independent of the Hetch Hetchy, I read an extract from the San Francisco Call of November 25, 1913, which is as follows:

WATER-SUIT ORDINANCE PASSED—SUPERVISORS CLEAR WAY FOR CONDEMNATION ACTION ON SPRING VALLEY.

An ordinance was passed by the board of supervisors to-day authorizing City Attorney Long to file suit for the condemnation of the Spring Valley water properties. This action was taken on receipt of a report from City Engineer O'Shaughnessy listing the properties actually necessary for the city's water supply.

Thomas E. Haven, special prosecutor, announced to-day that he would file a suit December 8 og 9, expecting that the report of J. H. Dock-

weller, expert engineer, on the physical holdings of the company will be ready at that time.

The names of the three judges who will hear the case will not be announced until the suit is filed. It is probable that the case will not begin until early in January.

I ask leave to present to the Senate, without reading and without printing, a large number of petitions numerously signed by members of the faculty of the various educational institutions. The first one I see is one which is signed by a number of the professors of Harvard University. The second one is one which is signed by the president and a large number of the faculty of the Washington and Lee University, of which, I think, in fact I know, there are several of the alumni on the Democratic side of this Chamber. The Senator from Oklahoma [Mr. Owen], the Senator from Florida [Mr. Bryan], and the Senator from Oregon [Mr. Chamberlain] will, no doubt, be glad to learn that the kind of public opinion which they were familiar with at Washington and Lee University is opposed to the passage of this bill, as indicated by this remonstrance. I present these petitions to the Secretary for filing.

Mr. President, I ask leave to have printed as a part of my remarks, without reading, a most excellent statement of this entire case in the form of an editorial in the New York Evening Post of December 1, 1913.

The VICE PRESIDENT. Is there objection? The Chair hears none, and permission is granted.

The statement referred to is as follows:

hears none, and permission is granted.

The statement referred to is as follows:

A CALM VIEW OF HETCH HETCH.

The first important matter to come before the Senate in the regular session beginning to-day is the bill technically known as that for the control of the control and its feders be removed from the use and enjoyment of the general public. There may be room for dispute whether the waterworks at Hetch Hetch would be roomed from the use and enjoyment of the senier partition of the reservoir and its federus be removed from the use and enjoyment of the senier partition of the reservoir and its federus become of the senier bardies of the valley, but that in the end the effect would be on the seenic beautiles of the valley, but that in the end the effect would be on the seenic beautiles of the valley but that in the end the effect would be on the seenic beautiles of the valley but the valley of the va

unanimous consent, to have a final vote on it next Saturday. But a motion could be offered, and we think should be, to refer the matter back for fuller investigation. That would be, in parliamentary effect, a "final vote," and it would have the good result of seeing to it that the Senate was put in possession of all the facts before proceeding to what it might find to be a needless despoilation of the Yosemite National Park.

Mr. POINDEXTER. I also present a remonstrance from the California Badger Club, of Los Angeles, signed by its officers, which I ask to have read, as it is very brief.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

CALIFORNIA BADGER CLUB, Los Angeles, November 23, 1913.

Senator MILES POINDEXTER.

DEAR SIR: The California Badger Club ask you to vote against the Raker bill, thereby preserving the Hetch Hetchy Valley for a national Hoping you will do all you can against the Raker bill.

Mrs. Frank Waters, President.

Mrs. Clarence H. Peare,

Corresponding Secretary.

Mr. POINDEXTER. Mr. President, I ask to have printed in the RECORD a statement of the institutions which have sent the various remonstrances I have presented, together with their localities, not printing all the names, but indicating by whom they have been signed.

The VICE PRESIDENT. Is there objection? The Chair

hears none, and it is so ordered. The matter referred to is as follows:

Memorials of the president and faculty of Harvard University, Cambridge, Mass., and of Radcliffe College, Cambridge, Mass.; of the president and 11 members of the faculty of Washington and Lee University, Lexington, Va.; of the superintendent of schools and 17 other citizens of Winchester, Mass.; of the superintendent of schools and assistant professors of schools at Crawfordsville, Ind.; of the faculty and officers of Whitman College, of Walla Walla, Wash.; of the faculty of Westminster College, New Wilmington, Pa.; of the superintendent and assistant teachers of the New Brunswick public schools, of New Brunswick, N. J.; of the president and assistant professors of Adelphia College, Brooklyn, N. Y.; of the superintendent of schools and assistant teachers of School No. 3, of Hackensack, N. J.; of the supervising principal and assistant teachers of the public schools of Swissvale, Pa.; of the superintendent of schools and assistant professors of the public schools of Mankato, Minn.; of the superintendent of schools and assistant professors, of Concord, N. H.; of the superintendent of schools and assistant teachers of the borough schools of Ambridge, Pa.; of the superintendent of schools and assistant teachers of the public schools of Ridgewood, N. J.; of the president and faculty of Beloit College, Beloit, Wis .: of the superintendent of schools and assistant teachers of the public schools, of Wheeling, W. Va.; of the president and faculty of Smith College, Northampton, Mass.; of the superintendent of schools and assistant teachers of the public schools of Mamaroneck, N. Y.; of the superintendent of schools and assistant professors of Solvay, N. Y.; of the chancellor and faculty of the University of Kansas, Lawrence, Kans.; of the superintendent of schools and assistant teachers of public schools of Elmira and Buffalo, N. Y.; of the superintendent and assistant teachers of the city schools of Tuskaloosa, Ala.; of the supervising principal of the public schools of Forest City, Pa.; of the superintendent of schools and assistant teachers of the public schools of Dunkirk, N. Y.; of the superintendent of schools of Pittsfield, Mass.; of the superintendent of schools of Gardner, Mass.; of the superintendent of schools of Burlington, Vt.; of the superintendent of schools and assistant professors of the high schools of Grand Rapids, Mich.; of sundry teachers in the public schools of Wellsley, Mass.; of the superintendent and assistant teachers of the high schools of Spring Valley, Ill.; and of the superintendent and assistant teachers

of the public schools of Everett, Wash. Mr. POINDEXTER. I present, without asking that it be either read or printed, a memorial remonstrating against the passage of this bill from the Friday Morning Club, of Los

The VICE PRESIDENT. The memorial will lie on the table, Mr. POINDEXTER. Mr. President, I read from the New York Tribune of November 23, as follows:

THE LOGIC OF HETCH HETCHY.

A fortnight hence the fate of the Hetch Hetchy Valley will be determined by the United States Senate. It will be decided whether the valley is to be preserved as one of the scenic wonders of the world or is to be sacrificed in order that San Francisco may get water and water power without paying the fair price which would be required elsewhere. If that were all that is to be decided, the transaction would be of great interest. But that is not all. There is an immeasurably broader and

deeper issue, which has been repeatedly proclaimed, and which Mr. Frederick Law Olmsted again sets forth with convincing authority in the Boston Transcript.

The United States deliberately undertook to preserve the Yosemite National Park for the enjoyment of future generations. To surrender the Hetch Hetchy for use as a reservoir would be to abandon that undertaking and to set the precedent of abandoning any national park which might be coveted for utilitarian purposes by sordid interests. It would be to endanger every national park, whether of scenic or historic value. That is the inexorable logic of the Hetch Hetchy case, and that is why the interests of the Nation demand that this sinister grab at the Nation's domain shall be defeated.

As indicating the state of public opinion upon this question, I will read another resolution adopted by an influential organization in the city of Boston. This is from the State Federation of Women's Clubs, and contains a very excellent statement of the issues involved in this bill:

#### THE HETCH HETCHY VALLEY.

Resolutions unanimously adopted by the Massachusetts State Federation of Women's Clubs.

Whereas the Hetch Hetchy Valley contains some of this country's most wonderful scenery and most stimulating resources for recreation; and

and
Whereas this valley belongs to all the people and is used and enjoyed
by the East as well as the West; and
Whereas it is not, as has been asserted, "an inaccessible region of
barren granite of no possible use to humanity, except through the
production of water and power," but it is, on the contrary, visited
each summer by large parties of women as well as men, who find
health and inspiration as campers upon its fertile floor of matchless
beauty; and

health and inspiration as campers upon its fertile floor of matchless beauty; and Whereas better transportation facilities, with hotels and permanent camps, which might readily be supplied by the Federal Government, would give to far larger numbers the benefit of this sublime recreation ground; and Whereas the use of the Hetch Hetchy Valley as a municipal water supply for San Francisco would destroy its use and enjoyment by the whole people as a park and recreation ground; and Whereas with growing population the areas for public playgrounds are diminishing while the need for them is increasing; and Whereas this proposed action by San Francisco would afford a precedent for handing over any or all ef our national parks and other public lands to private interests; and Whereas this action has been pronounced by eminent engineers as wholly unnecessary since San Francisco has other sources of abundant water supply, some even more available than Hetch Hetchy: Now, therefore, be it

be it

Resolved, That we, the Massachusetts State Federation of Women's Resolved, That we, the Massachusetts State Federation of Women's Clubs, assembled in the town hall of Whitman and representing 262 clubs, asrnestly oppose this needless and irrevocable sacrifice by the whole Nation of an invaluable possession, and we petition the President and urge the Senators to defeat any bill which has for its object any such invasion of Hetch Hetchy or the cession of any public land whatever to any private or corporate enterprise unless such enterprise be shown without question by competent and impartial judges to be absolutely necessary to the public welfare.

Mrs. George W. Perkins,

NOVEMBER 25, 1913.

I present, Mr. President, and ask that it be printed in the RECORD, without reading, a very excellent answer to a statement which has been given out and widely circulated by the mayor of San Francisco in the form of a letter dated November 4, 1913, the letter of the mayor being in favor of the passage of this bill. This memorandum, as it is called, is from the Society for the Preservation of National Parks, and is in answer to the various points which were made by the mayor of San Francisco in behalf of this bill.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

The matter referred to is as follows:

Memorandum in relation to certain statements by the mayor of San Francisco in a widely distributed letter, dated November 4, 1913. The mayor states that a large area of the city is without a domestic

The mayor states that a large area of the city is without a domestic water supply.

Whatever shortage now exists is largely due to a lack of service pipes. Additional water is to be provided by 1914 by the Calaveras dam, now building near the city. This will add 40,000,000 gallons daily to the present supply and will take care of their needs for many years to come. Hetch Hetchy can not relieve any present needs, as it will require from five to eight years to develop that source.

The mayor states that the Hetch Hetchy is a region of barren granite, inaccessible, and of no possible use to humanity except as a water and power supply.

As a matter of fact, the Hetch Hetchy Valley itself is a notably verdant basin in the midst of most impressive mountain landscape. It is the front door and vestibule to 500 square miles of the most glorious mountain scenery. It is the base from which the entire northern half of the Yosemite National Park will be visited, and this northern half of the Yosemite National Park will be visited, and this northern half lass by far the finest scenery of the park, aside from the Yosemite Valley proper, which is an infinitely small portion of the whole reservation. Yosemite Valley is even now resorted to in winter as well as in summer, and Hetch Hetchy will be in similar demand when opened up. Hetch Hetchy is to-day but two days' travel from San Francisco. Until some six years ago the Yosemite Valley was three days from the same point. Six miles of comparatively inexpensive wagon road would open the Hetch Hetchy even to the infirm.

The mayor states that Secretary Garfield issued his grant of the valley "after careful investigation."

Secretary Garfield stated in his grant, dated May, 1908:

"I do not need to pass upon the claim that this is the only practicable and reasonable source of water supply for the city. It is sufficient that "a "the officials of the city insist that such is the case."

Moreover, Mr. Garfield did not give the city a grant of the valley unconditionally. He stipulated that they should first develop the Lake Eleanor supply, and should only resort to Hetch Hetchy when the other had been developed to its utmost and found insufficient. The Lake Eleanor supply was pronounced by the Director of the Geological Survey, after examination by two Rechandlon Service engineers, to be "amply sufficient to meet the present and prospective needs of the The Market of the Committee of the Hetch of the Interior, 1910, p. 9.)

The major states that San Francisco in good faith spent millions in acquiring lands.

Mr. Long, the city autorney, testified before the Public Lands Committee of the House June 25, 1913, that the city bought 720 acres in the Hetch Hetchy Valley, paying \$81,306,18; for 640 acres scattered elsewhere in the region it paid \$92,457,02; and for land and water rights on the Lake Eleanor section about \$1,000,000 more. He admitted that none of this land was condemned by eminent domain. To have condemned would have meant delay, and the city was in a hurry to establish a vested right at whatever cost. The land bought by the city meeting the committee of the Hetch Hetch of the Het

As to its inaccessibility answer has already been made (p. 1 bereof). Strictly speaking there is a mass of high country which runs up to 8,500 and even to 9,200 feet lying between the valleys, but be it noted that these elevations are above sea and not above the valleys. The valleys themselves are up 3,600 and 4,000 feet, and are countersunk basins in the midst of the mountain mass. The fact is, this mass of high country seems more like a plateau to one traveling across it, and the summits are so little elevated above the general level that there is no appearance of a great range. A further fact is that the old Tloga wagon road runs right across this high country from east to west between the valleys, while the valleys themselves are connected by north and south wagon roads and trails. From Yosemite Valley one can go by wagon 22 miles, and thence by an easy trail of 6 miles into Hetch Hetchy, or by trail all the way, and cut the distance down to 25 miles. Laddes have walked this trail in a single day without undue fatigue.

miles. Ladies have walked this trail in a single day without undue fatigue.

The mayor states that the creation of a lake in the valley would increase its beauty.

For answer to this reference is again made to the discussion of the effect of the project on the landscape by Mr. Olmsted. Commenting directly upon the value of this "lake" Mr. Olmsted said:

"To substitute an expanse of water for the sylvan landscape of the valley floor would wipe out of existence that apparently minor element of the Yosemite scenery which makes its charm unique in all the world. It would change it into a sort of imitation of the scenery to be found in certain seacoast flords, not without great impressiveness but a radically different and a far less rare and precious thing than is the existing scenery. That is the crux of the whole matter as far as concerns the value of the park."

Mr. Olmsted also points out that the "lake" would not always be a sightly object, due to the heavy drain placed upon it throughout the summer, exposing at the worst about 3 square miles of muddy bottom to only 1 square mile of water.

The mayor states that the city will build roads to and about the valley.

The city's advisory engineer did recommend originally that a scenic road should be built by the city entirely around the basin. A later and more careful computation of the cost led him to modify this materially, and the Raker bill provides (sec. 9, par. p) that the city "shall construct on the north side of the reservoir site a scenic road or trail." Anyone familiar with the topographical features of that north wall will readily conclude that the city will elect to build a "trail" and not a road there, since the right of election is left to it. As for the road into the valley, about 6 miles, that can not in any sense be regarded as a concession to the public, since it would be an essential feature to the construction and maintenance of the works.

The mayor refers to the city's representative, Mr. Dunnigan, at Washington. He is the clerk of the board o

has been quartered in Washington for many weeks while engaged in an active campaign of lobbying for the bill in Congress and of coaching the newspaper correspondents in the city's interests.

Mr. POINDEXTER. I ask, also, that there may be printed as a part of my remarks, without reading, a copy of a resolution adopted at the annual meeting of the San Joaquin Valley Problem Association, representing the eight counties of San

Joaquin Valley, at Merced, Cal., November 17, 1913.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

Resolution 2, adopted at the annual meeting of the San Joaquin Valley Water-Problem Association, representing the eight counties of the San Joaquin Valley, at Merced, Cal., November 17, 1913.

San Joaquin Valley, at Merced, Cal., November 17, 1913.

Whereas the control of floods and the irrigation of arid lands in the San Joaquin and Sacramento Valleys constitute in reality but two phases of one problem; and
Whereas in the San Joaquin Valley there is a deficiency in the water supply, and even with the complete conservation of all the waters of the valley there will be an insufficient supply of water with which to irrigate efficiently all the irrigable lands in said valley; and Whereas in the Sacramento Valley there is an excess of water and, with its proper conservation, all of the land in the valley can be irrigated, the navigability of the Sacramento River remain unimpaired, and a supply of water be left for diversion to other localities; and Whereas the city of San Francisco is attempting to divert water from the San Joaquin Valley and take it to San Francisco for municipal purposes; and
Whereas we believe that every unit in the development of water control in the Sacramento and San Joaquin Valleys should be constructed as a part of a comprehensive whole designed ultimately to accomplish the full development of both valleys and the conservation to the utmost of their resources:

\*Resolved\*\*, That we deprecate this attempt of San Francisco to violate

the utmost of their resources:

Resolved, That we deprecate this attempt of San Francisco to violate what we believe to be one of the fundamental principles of the conservation of the resources of the interior valleys of California because it is entirely unnecessary, and because great injury will result to water users if water is so diverted from the San Joaquin Valley, and, further, because the Sacramento Valley offers an ample source of water supply for San Francisco's need without injury to anyone.

Resolved further, That we hereby declare it to be the sentiment of this association that no water should be diverted from the San Joaquin Valley for any purpose, but that all its waters should be retained in the valley for the irrigation of the arid lands therein, and that in every attempt at water control the two valleys should be considered as a whole, so that the development of one may be supplemental to the development of the other.

We therefore instruct our secretary to forward a copy of these resolutions to each Member of Congress.

Mr. POINDEXTER. Mr. President, the only other proposi-

Mr. POINDEXTER. Mr. President, the only other proposi-tion which I desire to speak of—and I will not go into that at this time—is to call attention to the indisputable evidence that there are a large number of alternative sources of supply of water which San Francisco can secure and develop at less expense and in a shorter time than it can secure and develop the Hetch Hetchy project. Among those, I call attention particularly to the enlargement and development to its full capacity of the Spring Valley water system, all of which is pointed out in the report of the board of Army engineers, who were, to say the least, not unsympathetic with the desire of the city of San Francisco, expressed so earnestly and so persistently, to acquire the Tuolumne source of supply. Among these alternative sources of supply is the McCloud. I undertook to call the attention of the Senate to the figures given by the Army engineers in their report, which indicate, in the face apparently of the general conclusions announced by the board, that the McCloud project is a cheaper one than the Hetch Hetchy; that the water is unexcelled in quality and far greater in volume than that in the Tuolumne River.

There can be 200,000,000 gallons per day of supply developed in the Eel River. No question has ever been made that the water in that river is of good quality, nor is the fact questioned that the engineering problems can easily be overcome, and that the cost will be approximately but one-half of the expenditure involved in developing an equal amount of water in the Tuolumne or the Hetch Hetchy project. The Army engineers did not consider the Eel River project, because they had set before them provision for a system which would supply 400,000,000 gallons a day at some indefinite time in the future, and they set out in their report that they accepted that from the city of San Francisco, but that they regarded it as largely exaggerated. It must be borne in mind that the present supply of the city

is only 42,000,000 gallons per day.

It should be further borne in mind that among the urgent advocates of the passage of this bill are those who regard the development of water power as its principal feature and virtue. I should like to call attention to the fact that that is a separate proposition from supplying the city of San Francisco with water. Power can be developed, and no doubt there are many agencies which would be glad to develop this power under a reasonable reserved power in the United States to regulate prices of the product at any time the United States should choose to grant the necessary franchises for that purpose.

There is not any occasion, if power is the prime consideration, to take the water that would go through the machinery of a

power plant through a system of iron pipes 45 miles across the San Joaquin Valley and deliver it to the city of San Francisco for domestic consumption, leaving behind the unsatisfied needs of 411,000 acres of dry land which can not be supplied from any other source.

The city of San Francisco already owns the two other tributaries of the Tuolumne River, Lake Eleanor and Cherry Creek; and it is shown by all the reports that, so far as power is concerned, over 100,000 horsepower can be developed from those two tributaries without touching in any way the Hetch Hetchy Valley or granting any of the franchises that are provided for in this bill. All around the city of San Francisco, or at least in different directions from it, in the Coast Range and in the Sierra Nevada, there are power possibilities which can be developed without taking any water from any irrigationists that need it.

Upon some of those phases of the question I shall ask permis-

sion to address the Senate later on.

Mr. NORRIS. I desire to give notice that on next Saturday morning, after the regular routine morning business, I shall address the Senate on this bill.

### BANKING AND CURRENCY.

Mr. NELSON. Mr. President, I desire to give notice that on Monday next, after the Senator from Virginia [Mr. Swanson] has spoken, I shall address the Senate on the pending currency

#### RECESS.

Mr. KERN. I move that the Senate take a recess until 8 o'clock this evening.

The motion was agreed to; and (at 5 o'clock and 45 minutes p. m.) the Senate took a recess until 8 o'clock.

#### EVENING SESSION.

The Senate reassembled at 8 o'clock p. m.

#### SAN FRANCISCO WATER SUPPLY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7207) granting to the city and county of San Francisco certain rights of way in, over, and through certain public lands, the Yosemite National Park, and Stanislaus National Forest, and certain lands in the Yosemite National Park, the Stanislaus National Forest, and the public lands in the State of California, and for other purposes

Mr. SMOOT. Mr. President, I believe that before the discussion of the pending measure is continued we ought at least to develop the presence of a quorum of the Senate, and I sug-

gest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators

THOMETER TO	cheir names.		
Ashurst Bacon Bryan Chilton Clark, Wyo. Clarke, Ark. Colt Olllingham Fletcher Sallinger Fronna	Hollis Hughes James Johnson Kern Lewis McLean Martin, Va. Martine, N. J. Nelson Overman	Owen Page Pittman Reed Robinson Saulsbury Shafroth Sheppard Sherman Shively Simmons	Smith, Ariz. Smith, Ga. Smith, Md. Smoot Swanson Thompson Thornton Townsend Vardaman Works

Mr. SMITH of Maryland. I desire to state that my colleague [Mr. Jackson] is absent on account of illness. Therefore I ask that he be excused on that account.

The VICE PRESIDENT. Without objection, the junior Senator from Maryland will be excused.

Mr. LEWIS. I beg to announce that the Senator from South Carolina [Mr. SMITH] was suddenly called away by serious illness in his family.

Mr. GALLINGER. The Senator from New York [Mr. Root] is unavoidably absent. He is paired with the Senator from South Carolina [Mr. SMITH].

The VICE PRESIDENT. Forty-four Senators have answered to the roll call. There is not a quorum present. The Secretary will call the names of the absentees.

The Secretary called the names of the absent Senators and Mr. Warren and Mr. Williams answered to their names when

The VICE PRESIDENT. Forty-six Senators have answered

to the roll call. There is not a quorum present.

Mr. KERN. I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The motion was agreed to.

The VICE PRESIDENT. The Sergeant at Arms will proceed to carry out the order of the Senate.
At 8 o'clock and 23 minutes p. m. Mr. CLAPP and Mr. SHIELDS

entered the Chamber and answered to their names.

After some little time, Mr. Kenyon, Mr. Stone, and Mr. O'GOB-MAN entered the Chamber and answered to their names.

The VICE PRESIDENT. Fifty-one Senators have answered to the roll call. A quorum of the Senate is present.

Mr. KERN. Mr. President, I move that further proceedings under the call of the Senate be dispensed with.

The motion was agreed to.

Mr. GRONNA obtained the floor.

Mr. WORKS. Mr. President—
The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from California?

Mr. GRONNA. Yes; I yield. Mr. WORKS. Mr. President, near the close of my remarks yesterday I made the statement that I was the only Member of the California delegation who was opposing the passage of the pending bill. Relating to that matter, I have here a letter from Mr. Church, who represents the district in California which contains the San Joaquin Valley. In justice to Mr. CHURCH I ask that the letter may be read.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

COMMITTEE ON REFORM IN THE CIVIL SERVICE,
HOUSE OF REPRESENTATIVES U. S.,
Washington, D. C., December 4, 1913.

Hon. John D. Works, United States Senate, Washington, D. C.

Hon. John D. Works,

United States Senate, Washington, D. C.

My Dear Senator: In order that there may be no uncertainty as to my attitude toward the Hetch Hetchy bill, I wish to state that I am unqualifiedly opposed to its passage.

I am opposed to the waters of the Hetch Hetchy Valley being taken away from the farmers on the plains below to the city and county of San Francisco, more than 150 miles away.

My reasons are that San Francisco can without doubt secure ample water from a number of other sources, but the farmer, as he watches his crops wither in the summer sun, must look to the waters of the Tuolumne River as his only hope and source of supply.

Deprived of sufficient water for his lands, the farmer's task becomes a hopeless one; his investment will be lost or greatly depreciated, and in common with his neighbors he will be involved in years of ruinous litigation with San Francisco.

The passage of this bill may make the hearts of some people in San Francisco glad at the cost of immeasurable loss and sacrifice to thousands of men, women, and children in my district.

When I was elected to Congress, and afterwards, my firm conviction was that San Francisco never should be granted any reservoir site on the Tuolumne River, but that all the waters of that watershed, including storage facilities, should be reserved for the exclusive use of the irrigable lands of the San Joaquin Valley.

Subsequently, when the Raker bill was pending before the Public Lands Committee of the House, several gentlemen came on to Washington representing the irrigationists of the Modesto and Turlock irrigation districts. These representatives went into conference with the people who represented the interest of San Francisco, and then reported to me that they had agreed upon a compromise, the conditions of which were embodied in the Raker bill. They requested me to withdraw my opposition to the measure and to give it my support. I reluctantly yielded to their request. I regarded it as a business and financial matter, peculiar to

I regret to say that the men who represented the irrigationists were deceived, and soon after their arrival home their acts were repudlated, not because they had done any intentional wrong but simply because they had acted unwisely and permitted themselves to consent to a compromise that was disastrous to the interests of their districts. The people of these districts, as well as the farmers outside the districts are practically a unit in their opposition to the passage of this bill, and I would be doing less than my duty if I did not exert every effort to defeat a measure that will injure thousands of my home people. Sincerely hoping that you will be successful in your opposition to this measure, and with assurances of very high regard, I am,

Very truly, yours,

Denver S. Church,

DENVER S. CHURCH, Member of Congress.

Mr. THOMAS. Mr. President-

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Colorado?

Mr. GRONNA. I yielded to the Senator from California. If the Senator from California has concluded, I will yield to the Senator from Colorado.

Mr. WORKS. I have the floor only through the courtesy of

the Senator from North Dakota.

I simply desire to say, Mr. President, that Mr. Church is a man of high character and conscientious in the performance of his duties. Like a good many other people, he was deceived by this supposed compromise, which was made against the judgment and the wishes of the people who are directly interested in this question, namely, the water users. There were other members of the California delegation who were induced to con-There were other sent to the passage of the bill by reason of the fact that Mr. Church, whose constituents were directly interested in it, had made this agreement and they refused to join in the effort to pass the bill until they had learned from Mr. Church that he was supporting it.

Mr. KERN. Mr. President, before the Senator takes his

seat

Mr. GRONNA. I now yield to the Senator from Colorado [Mr. Thomas], and I shall later yield to the Senator from Indiana [Mr. KERN].

Mr. THOMAS. I wish to say-

Mr. KERN. I merely wish to ask a question of the Senator from California.

Mr. WORKS. The Senator from Indiana desires to ask me a question, I understand, and I am quite willing to submit to any inquiry he desires to make.

Mr. KERN. I wish first to inquire as to the date of the letter which has been read?

The VICE PRESIDENT. It is dated December 4, 1913.

Mr. KERN. Mr. President, I wish to state to the Senator from California that my mind at this moment is open on this question, but I wish also to state that I regard the fact that this Member of the House of Representatives, who must have known of the imposition upon his people, if there was any by reason of this agreement, has acted very queerly, to say the least, in remaining silent during all these weeks until a few days before the vote is to be taken upon the bill, to make known to the public and to the Members of this body the fact of the outrage which, as he now claims, was perpetrated upon his constituents. I should like to know what is the theory of the Senator as to the state of mind of this gentleman during the intervening weeks since that compromise was made?

Mr. WORKS. I have had absolutely no conference with Mr. CHURCH about the matter, I will say to the Senator from Indiana, and therefore I do not know. I only know that Mr. CHURCH himself has always been opposed to this legislation. He gave way simply because he understood that the people directly interested had compromised. He found out afterwards, however, that they had not. Since that time he has been opposed to the legislation, but no action could be taken on his part because the matter had gone out of the House of Repre-

sentatives

Mr. THOMAS. Mr. President-

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Colorado?

Mr. GRONNA. I yield.

Mr. WORKS. If the Senator will allow me just a moment, Mr. President, I suppose Mr. Church may have been moved to this course by what was said by me in respect to that matter.
Mr. THOMAS. Mr. President, I do not want to say anything,

and shall not intentionally say anything, of a personal character concerning this episode; but it is due to the Senate to inform it that this gentleman has, up to the time of the writing of this letter at least, been a supporter of this bill. He voted for it in the House and he appeared before the Senate committee to make a statement in its behalf. He is the Representa-tive of the congressional district of California where the irrigation districts are situated, and it is a remarkable and, I hope, a unique thing in the legislation of the Congress of the United States that a Member of one House supporting and advocating a measure should, upon the threshold of action by the other House, write a long letter, to be read into its Record, urging and counseling the Members of that House to vote against the measure.

Mr. WORKS. Mr. President—
The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from California?

Mr. GRONNA. I yield. Mr. WORKS. Mr. President, instead of Mr. Church supporting the bill in the House, it will appear from the hearings before the committee that he was inquired of directly by the chairman of the committee, or some other member, whether he was supporting the bill, and he said no; he was not consenting to its passage, but he was not opposing it. He was just in that attitude where he was allowing the people who were here attempting to secure the passage of the bill by a compromise to take the course that they desired.

I know Mr. Church pretty well, and I know that he has acted in this matter in perfect good faith. It was rather a peculiar condition in which he was placed. He was opposed to the bill, and always has been conscientiously opposed to it, but he was moved by the compromise that was made, just as a

good many other people have been moved.

Mr. THOMAS. I think it is remarkable and unusual, Mr. President, that he should be so greatly moved as a Member of one House as to write a letter to be introduced and read to the Members of another House, urging them to vote against a measure which, whatever his convictions and duty, he certainly did not oppose there, and my information is that he voted for the bill.

Mr. WORKS. Mr. President, I am responsible for this letter being read in the Senate.

Mr. THOMAS. The Senator may be responsible for the letter being read in the Senate, but Mr. Church is responsible for writing the letter, which in all probability he knew was written to be read in the Senate.

Mr. WORKS. That may be: but there was no request on

the part of Mr. CHURCH that it be read.

Mr. THOMAS. Oh, no; Mr. President, a request was not The whole transaction must have been predetermined on the part of Mr. Church, or else the letter would not have been written and delivered for the purpose of being presented at the desk and called to the attention of the Senate.

Mr. WORKS. Whether it was or was not, it was perfectly justified under the circumstances. Mr. Church had been misled into taking an action that was against his own judgment, and he was doing what he could to correct the evil that resulted from that action.

I have no doubt that he has been threatened Mr. THOMAS. with defeat in his attempt at reelection if this bill is carried; and, for the purpose of saving his political future, he asks the Senate of the United States to vote against the bill which he supported in the House, of which he is a Member.

Mr. GRONNA. Mr. President, I proposed to read at the beginning of my remarks a statement made by Mr. Denver S. Church, Representative in Congress from California, but I recollect that the Senator from Nevada [Mr. PITTMAN] read his statement. I inquire of the Senator from Nevada if I am cor-

Mr. PITTMAN. I read a statement of Mr. Church, I think day before yesterday, and read it for the purpose of showing that he was supporting this bill, and at that same time he was sitting in this Chamber and heard me make that statement.

Mr. GRONNA. I will not burden the RECORD with his state-

Of course, the RECORD speaks for itself.

Mr. GALLINGER. Mr. President-

The VICE PRESIDENT. Does the Sendtor from North Dakota yield to the Senator from New Hampshire?

Mr. GRONNA. I yield.

Mr. GALLINGER. The fact that Mr. Church was in this Chamber and did not make any rejoinder does not count for anything, because he could not have made a rejoinder. He has, however, made the rejoinder in the letter which has just been

Mr. GRONNA. Well, Mr. President, in justice to Mr. Church, I want to read a portion of his statement:

Mr. Church. Originally I was very much opposed to this plan. I had heard of this Hetch Hetchy matter for years and years; I had heard that Mr. Needham was fighting for the rights of the irrigation districts and the people. When I came to Washington this spring the battle was on in reference to the Hetch Hetchy and, very fortunately, certain representatives from these districts came here.

Then he gives their names. He was under the impression that the provisions in the bill protected the water users of this irrigation district, and for that reason he stated that he had withdrawn his objection.

Mr. President, I have no other interest in this matter except what seems to me to be my duty to assist in a limited way the people of California, and to see that justice is done to all the people of that great State. I have the same interest in this bill which I believe every other Senator on this floor has; and I hope that anything that I may say will not lead to a mis-understanding; that it will not be interpreted that I attribute to any Senator or to anyone any sinister motives, whether they are for or against the bill.

The project which the city of San Francisco is so willing to undertake is one that for years has been discussed, in Congress and out of Congress. In the Sixtleth Congress some of the people of San Francisco-its attorneys, its engineers, its mayor, and other city officials-appeared before the House Committee on Public Lands, of which at the time I was a member. We had extended hearings on the resolution before Congress at that time, and I tried to reach an honest judgment according to the evidence before the committee. The conclusion I reached at that time was that San Francisco did not then have to go to the Hetch Hetchy Valley for a water supply.

I shall try to present testimony here that will bear me out in my statement that there are other available sources of supply. It is true that at that time a majority of the members of the Committee on Public Lands of the House made what was supposed to be a favorable report, but it was by a bare majority. I am going to take the time of the Senate this evening to read both the majority and the minority reports. The trial that was going on at that time was in a measure the same as the trials that have been going on since that time.

At that time the contest was fought between what is known as the Spring Valley Water Works and the city of San Fran-

Francisco, because I was not then willing, nor am I now willing, that any corporation shall take undue advantage of a great municipality; but after hearing all the evidence in the committee I came to the conclusion, as I have said, that there were other available sources of supply where San Francisco could get an abundance of water without doing injustice to any of the citizens of the great State of California.

The only question that I care to take into consideration is how to give San Francisco an abundant water supply. I am not so much concerned about what she now seems to desire to obtain, namely, a valuable power site. There can be no reason why I should oppose any proposition to give to the city of San Francisco a water supply. There can be no reason, I say, why I should oppose a proposition of that kind; but there are other matters and other people concerned in this measure.

I am going to take the time of the Senate this evening to introduce such evidence as I have. Among that evidence will be statements by attorneys representing the Spring Valley Water Works, statements made by citizens representing the city of San Francisco, a portion of the report of the Board of Army Engineers, and extracts from some of the hearings that have been held in the House and in the Senate.

The question was raised the other day, "Why are not the farmers who are protesting against this measure here?" do you find the farmers in legislative halls anywhere protesting? They are satisfied to trust their representatives and believe it is incumbent upon them to do justice to all concerned. have neither the inclination, the time, nor the money to be around legislative halls either to solicit support or to make protests.

Anybody who knows anything about the industry of farming knows that the farmer after his hard day's toil is not in a mood to appear before congressional committees and discuss these great questions. It is for the Members of Congress to settle this matter and to take into consideration not simply the interest of those who can afford to have skilled engineers and the ablest lawyers to represent them, but also those who can not afford such representation. I do not say that with any idea of protesting against anyone being represented here by a lawyer. I only wish the farmers of the country could unite and agree and adopt the method of being represented by able counsel; but it never has been done and it is not being done

We have heard a great deal about the "nature fakers." do not like to use that term. I respect and honor the man who unselfishly tries to protect the property of the people of the United States. I respect and honor the man who will sacrifice his time and his money for the protection of the scenic beauties and grandeur of nature. The men and the women who have protested against this measure have done so because they believe it is an infringement upon the rights of the citizens of the United States.

Mr. President, if the water supply of the city of San Francisco depended upon the Hetch Hetchy Valley I should not raise my voice in protest against the passage of this bill. do not believe there is a single nature lover in the United States who would protest against the passage of the bill if he believed it was absolutely necessary to have the Hetch Valley for a water supply and there was no other available source. Whether they are mistaken or not, I am going to give them the benefit of the doubt. I am going to give them the benefit of the belief that they are honest and sincere in their conviction that this place of beauty and grandeur should be preserved for the future and for future generations.

For myself, I do not underestimate the esthetic value of this park. I believe, sir, that it is a mistake to commercialize every bit of land and all of the landscapes of our country. I believe it is a mistake to destroy the handiwork of God's creation, for that can not be duplicated; but I am free to confess that if this were the only source of supply I should be ready to-night to vote for this bill, and give the people of San Francisco all the water there is in the Tuolumne River. I am going to show, however, that such is not the case,

In the first place, the Army engineers' report does not state that the Hetch Hetchy Valley is the only available source of supply. Col. Biddle, in his testimony before the House Committee on the Public Lands, does not state that Hetch Hetchy, or the Tuolumne River, is the only available source of supply. That great engineer who is now in the employ of San Francisco, Mr. Freeman, does not state in his report that Hetch Hetchy and the Tuolumne River are the only available sources of supply.

I may be mistaken, Mr. President, but from the reading of these reports and from the reading of the hearings before the House committee I am strengthened in the conclusion that I cisco. At the outset my sympathies were with the city of San reached during the Sixtieth Congress, that it is not necessary

to give to the city of San Francisco the Hetch Hetchy Valley for a water supply. While I am inclined to believe that this bill will be enacted into law, I also believe that the future will prove to us that it is a mistake.

In beautiful words eminent men of our country tell us about the importance of getting back to the farm, but can you wonder why the farmer and those who live in the rural districts are disappointed? Whenever legislation comes before Congress or before the State legislatures what do we find? We do not find the farmer present with his paid attorneys; we do not find that the farmer is present to make his demands; but he trusts in his representatives and I am sorry to say that he is very often

forgotten.

What right have the citizens of the city of San Francisco to demand property to which the farming communities of the State of California have a prior right? The waters of the State of California belong to the people of California. They do not belong to any particular class or to any particular industry. I think it would be much better for some of the citizens of the city of San Francisco if they would join the honest toilers who are living up in the San Joaquin Valley and give to them the waters in the Tuolumne River and help them build this dam for the benefit of those irrigation districts. If the dam is to be built, will any Senator here tell me why a municipality or a corporation of any kind has any more legal right to the building of a dam that will produce electrical energy than the farmers of the community? When a project of this kind is contemplated, as a rule this work goes on in this way: They organize, they incorporate, they issue bonds, and they sell them to those who care to buy such securities. They do not build it with their own money. Why not give to the irrigationists in this valley the benefit of this power if it is necessary to destroy the beautiful scenery in that park, which I do not believe it is?

But so far as an inchoate right is concerned, those settlers who have for years been struggling to produce crops in that arid region are entitled to the first consideration, and should get the benefits, if benefits are to come, from the building of

But you say that it is absolutely necessary that San Francisco shall have this water supply. The Army engineers' report shows that the rainfall in this valley is not to be compared with the rainfall in the Sacramento Valley. We have proofs before us, if we want to consider them, which show that by going to the McCloud River not only can the land in that district be irrigated from that river, but that San Francisco can get an abundant water supply.

But it is said that it is a question of price. You are not considering the proposition that the people of the San Joaquin Valley are driven away from their homes. You are not taking into consideration the fact that you are making it impossible for those people to make an honest living and remain on their

farms.

I do not believe there is a single Senator on this floor who will deny that there are at least 200,000 acres in the two irrigation districts, the Modesto and the Turlock districts, that will not get an abundant water supply if this water is diverted to the city of San Francisco. On the other hand, there is testimony before us in the hearings and in the Army engineers' report which proves conclusively to me that there is an abundant water supply from the McCloud River, and that there are 12 or 13 other sources, which, while they are not abundant supplies, can be combined, and that San Francisco and the bay cities can get all the water they need.

Mr. GALLINGER. Mr. President-

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from New Hampshire?

Mr. GRONNA. I yield.

Mr. GALLINGER. I had placed on my desk this morning a very interesting personal letter from Mr. Taggart Aston, a consulting civil engineer residing in the city of San Francisco, in which this matter is very lucidly and clearly discussed, and would ask permission to have it read at this time.

The VICE PRESIDENT. Without objection, the Secretary

will read as requested.

The Secretary read as follows:

SAN FRANCISCO, CAL., November 26, 1913.

Senator Gallinger, Washington, D. C .:

SIR: Three cold-blooded facts stand out prominently in the

DEAR SIR: Three cold-blooded lacts stand out present leafth the chird controvers:

1. The city of San Francisco is now completing arrangements to purchase the Spring Valley Co.'s water system.

2. Said system is fully capable of being developed to meet the city's full requirements for some 60 years to come more economically than any Sierra or other source, thus eliminating any necessity for considering Hetch Hetchy or other Sierra source in the present generation.

3. The quality of the Spring Valley water is superior for drinking purposes to that of the softer and less palatable Hetch Hetchy water (vide Brig. Gen. H. M. Chittenden's report of 1912, p. 22).

San Francisco has had alternations of criminal and semicriminal governing bodies—God help her unfortunate taxpayers when they elect their next "criminal" board of supervisors—with some \$80,000,000 of "Hetch Hetchy" money in the treasury.

I am, very truly, yours,

TAGGART ASTON.

Mr. GRONNA. Mr. President, as I said at the outset, I shall attribute no sinister motives to anyone, whether he is for or against this bill. I wish to read from the report made by Representative Smith, of California, in the House of Representatives February 8, 1909. I read the views of the minority, as follows: THE VIEWS OF THE MINORITY.

February 8, 1909. I read the views of the minority, as follows:

THE VIEWS OF THE MINORITY.

The Committee on the Public Lands has given very careful attention to the questions involved in the consideration of H. J. Res. 223, having had many hearings, which have been printed to the extent of nearly 500 pages. The consideration of the resolution necessitated the consideration of many matters which are not necessarily suggested by the title or text of the resolution.

The questions involved were first presented under H. J. Res. 184, by Mr. Kahn, the consideration of which was referred to a subcommittee, which reported as a substitute H. J. Res. 223. Very briefly stated, the facts and occurrences that lead up to the presentation of this resolution are as follows:

For a considerable number of years there has been a growing belief on the part of the people of San Francisco that ultimately the city would be obliged to seek sources of water supply in addition to those available through the Spring Valley Water Co., which now supplies the city with water, and there has been a general consensus of opinion that ultimately San Francisco and the other communities around San Francisco Bay would be obliged to secure such additional water supply from the Sierra Mountains. This belief and opinion has been strengthened and accentuated by reason of a condition of disagreement and friction which has existed between the Spring Valley Water Co. and the people and authorities of San Francisco for years past.

The question as to which of the possible Sierra sources of supply is most available and satisfactory has been discussed for a considerable length of time. Quite a number of sources have been investigated, and at one time or another more or less favorably considered. The present city government finally decided upon the use of Lake Eleanor and the Hetch Hetchy Valley, on the Tuolumne River, in the Yosemite National Park as the most satisfactory and economical point for the storage of water for a Sierra supply for the city, and af committee.

The legislation has been objected to for a number of reasons, some

inned a ree title to the lands which they purposed to submerge, and those immediately adjacent, and thus the matter came before the committee.

The legislation has been objected to for a number of reasons, some of which would not apply to the original resolution. First, there has been an exceedingly widespread, earnest, and vigorous protest voiced by scientists, naturalists, mountain climbers, travelers, and others, in person, by letters and telegrams, and in newspaper and magazine articles, against allowing the city of San Francisco to use the Hetch Hetchy Valley for reservoir purposes, on the ground that such use would deprive the public of the use of this beautiful valley for camping purposes, and would necessarily interfere with the use by the general public of the valley and drainage basin of the river above the reservoir.

It has been contended that there was no condition existing warranting the granting to the city of San Francisco the privilege asked for, with a view of making more secure its tenure under the permit issued by the Secretary of the Interior, because there are, it is claimed, many other sources from which the city could obtain an abundant and satisfactory water supply. At one time the irrigation districts on the lower Tuclumne objected to the granting of a permit by the Secretary of the Interior, because there are, it is claimed, many other sources from which the city could obtain an abundant and satisfactory water supply in the objection was overcome by certain conditions contained in the Secretary's permit.

I am of the opinion that the city has failed to establish its contention that the Hetch Hetchy is the only reasonably available source of water supply in the Sierras, and that, therefore, the interests of the people of all the country should be waived on behalf of San Francisco in its claim to exclusive use of this valley. But aside from this and all similar questions that have been raised the legislation is particularly objectionable on account of features that are entirely unnecess

There is another provision as fellows:

"5. The city and county of San Francisco will in no way interfere with the storage of flood waters in sites other than Hetch Hetchy and Lake Eleanor by the Modesto and Turlock irrigation districts or either of said districts for use in said districts, and will return to the Tuolumne River above the La Grange Dam, for the use of said irrigation districts, all surplus or waste flow of the river which may be used for power."

of said districts for use in said districts, and will return to the Tuclumne River above the La Grange Dam, for the use of said irrigation districts, all surplus or waste flow of the river which may be used for power."

There is also a provision compelling the city of San Francisco to sell to the Modesto and Turlock irrigation districts any excess of electric power which the city may generate by means of its dam, which shall not be used for actual municipal purposes by the city and county of San Francisco, at actual cost, to be fixed by the Secretary of the Interior, and also a provision that the city shall not interpose any power plant on the line of flow of the water which it impounds, except under conditions and limitations above set forth.

Whatever we may think as to the propriety of these conditions and stipulations as between the Secretary of the Interior and the city and county of San Francisco, it is very clear that the Congress of the United States has no authority and ought not to attempt to legislate in such matters. In fact, the language in the resolution which is objected to entirely changes its character from one simply proposing an exchange of lands between the city and county of San Francisco and the United States into legislation. settling water-right controversies in advance of their having arisen—fixing the limitations of certain water rights without adjudication, placing limitations upon the authority of the city to even use as it sees fit power which it creates, and compelling it to dispose of all but a limited amount of that power to others.

The resolution came to Congress ostensibly on behalf of and for the benefit of San Francisco. As it is reported it is practically legislation for the benefit of San Francisco. As it is reported it is practically legislation for the benefit of San Francisco. As it is reported to the provide of the city in the connection with this legislation: As to whether there are not a number of other reasonably available sources of Sierra supply for the city in co

The main report is signed by F. W. Mondell, Scott Ferris, W. B. Craig, John M. Reynolds, and D. W. Hamilton, two Republicans and three Democrats, and the last two paragraphs

are signed by A. J. Volstead and A. J. Gronna.

Mr. President, it will be seen from this report that at least a large number of the House committee at that time believed that it was not necessary, that it was not important that Hetch Hetchy should be given to the city of San Francisco for a water supply; but there was then no discussion on the question of a power plant. If the people of San Francisco had it in their minds at that time that they desired Hetch Hetchy Valley for a power plant, it was not discussed and their wants were not then known nor made known to that committee.

Mr. KENYON. Mr. President—
The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Iowa?

Mr. GRONNA. I yield.
Mr. KENYON. I simply should like to ask the Senator if the form of the bill in the House of Representatives was substantially the same as the bill which is now before the Senate?

Mr. GRONNA. No; I understand it was not the same as the

pending bill. An easement was first granted to the city of San Francisco permitting her to flood this valley. It was a permit granted by the Secretary of the Interior to flood the valley. It seems, however, that they were not entirely satisfied to proceed unless they acquired full title or a fee title to all the lands in

Mr. KENYON. Did that bill pass the other House?

Mr. GRONNA. No; it did not, according to my recollection, pass the other House.

Mr. KENYON. Is the report from which the Senator has been reading a report with relation to that bill?

Mr. GRONNA. It is in relation to that bill, and is a minority report.

Mr. KENYON. Did the majority report favor the bill? Mr. GRONNA. The majority report is a lengthy report, and if.

Mr. KENYON. I simply wanted to note the progress of the bill through the House of Representatives; but the Senator states that it did not pass that House.

Mr. GRONNA. It is my recollection that it did not pass the

other House.

Mr. President, it is true, as the Senator from Colorado said, that San Francisco owns a portion of the land in what is known as the Hetch Hetchy Valley. Mr. Howland, a Member of the House from the State of Ohio, asked this question:

Is there any corresponding value of these different lands which you propose to exchange?

The proposition they made at that time was to exchange lands outside of the national park for lands within the national park. The question was asked:

Is there any difference in the market value, or is there any market value? Mr. Manson-

Mr. Manson was then the city engineer for the city of San Francisco

Mr. Manson. There was no difference when purchased. We paid \$150,000 for the entire tract, and there was no difference made, and none is made in the prices between those in the floor of the Hetch Hetchy Valley and those in the Tiltill Valley, those in the Canyon Ranch, those in the Hog Ranch, and those in the Middle Fork Homestead. A lump sum was paid for them, and the same price was paid for this little area shaded in red [indicating on the map], as you will see from the legend on the map, or it was agreed to be paid, and part is paid already; so that those lands were acquired under the terms—those terms were perfected under the terms of the grant by the Secretary of the Interior at the same price, and for the specific purpose, none other, of making this exchange. It would be absolutely useless to the city, of course.

Mr. President, it is evident that San Francisco, or some of the people of San Francisco, had in mind at that time that they would like to acquire this water power. It is obvious that it was not only for the purpose of securing a water supply, but for the purpose of securing water power.

Mr. Garfield, who appeared before the committee at that time,

gave this testimony:

The CHAIRMAN. Mr. Secretary, the committee would like to be informed, in a general way, the connection of your department with this granting of this revocable right of way, and as to what developed during the hearings had before you as to the necessities of the city of San Francisco in this matter, and also as to the effect of this water storage upon the park and the forest reserve, as to how it will affect the interests of the general public, as we must necessarily consider the interests of the general public in this matter, as well as those of the city of San Francisco.

Mr. President, I believe that the question as put by Mr. Mondell, of Wyoming, then chairman of the committee, indicated that the committee had in mind to do justice to all the

people interested in this matter, and nothing else.

Mr. KENYON. Mr. President, I do not want to interrupt the argument of the Senator, but I know he has given the matter a great deal of thought-

Mr. GRONNA. I am glad to be interrupted.
Mr. KENYON. Various statements have been made as to the amount of acreage in the arid region that might be affected by taking this water in the San Joaquin Valley. Senator know how many acres might by this bill be deprived of irrigation or irrigation rights?

Mr. GRONNA. There are over 450,000 acres of irrigable

Mr. KENYON. My impression was that there were more than that.

Mr. GRONNA. I mean in these two districts. There are more than 200,000 acres which will not get any water if this bill goes through and this water is given to the city of San

Mr. SMOOT. Mr. President—
The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Utah?

Mr. GRONNA. I yield. Mr. SMOOT. If the Senator will not object, I think at this point it would be a good thing to put in the testimony of Mr. O'Shaughnessy

Mr. GRONNA. I do not object.

Mr. SMOOT. As to how many acres of irrigable land there are in the San Joaquin Valley.

Mr. GRONNA. Oh, well, Mr. President, in the San Joaquin Valley there are over 6,000,000 acres.

Mr. KENYON. That is what I thought. I ask the Senator from Utah to what testimony he refers? Is it testimony before the committee?

Mr. GRONNA. I would be glad to have that testimony read.
Mr. SMOOT. It is testimony before the Committee on Public
Lands of the House of Representatives. I will read it. The
chairman of the Committee on Public Lands of the House of Representatives asked Mr. O'Shaughnessy this question:

I want to jump from that back to the Tuolumne River-

Mr. CLAPP. Mr. President, will the Senator pardon me?

Mr. SMOOT. Certainly.

Mr. CLAPP. I think it would appear in more concise order to take Mr. O'Shaughnessy's testimony, which shows the amount that is now used, the amount that is now filed for, and then the total amount that could be used if the water were supplied, instead of taking his latter testimony first.

Mr. SMOOT. If the Senator from North Dakota will not object, I will find that in just a moment and read that first.

Mr. GRONNA. I yield to the Senator. Mr. SMOOT. This is the testimony of Mr. O'Shaughnessy on the point suggested by the Senator from Minnesota [Mr. CLAPP]: The CHAIRMAN, I would like for the record to show right here just how much land is actually under irrigation in the Turlock and Modesto districts now.

Mr. O'SHAUGHNESSY. One hundred and nineteen thousand seven hun-

dred acres.

The Chairman. What is the greatest amount that the Turlock-Modesto irrigation people can secure under the law and their prescribed

Modesto Frights?

Mr. O'Shaughnessy. The entire area in the district is 257,000 acres.

The Chairman. And you have agreed to furnish water for 300,000 acres?

Mr. O'Shaughnessy. We have agreed to permit them to distribute their water over a wider territory than that embraced in their two districts by which this additional land of their choice may be brought in.

In other words, it is not a question of appropriation under the laws of California, but they have been allowed an additional amount of water above what they had filed on and appropriated.

Now, I turn to the testimony of Mr. O'Shaughnessy as to the amount of irrigable lands in the San Joaquin Valley. The chairman asked him this question:

The CHAIRMAN. I want to jump from that back to the Tuclumne River and the Hetch Hetchy Dam site. Have you ever made a careful estimate, or has anyone else, so that you are able to give it to us, of the exact area in the San Joaquin that could be irrigated; that is, feasible of irrigation?

Mr. O'SHAUGHNESSY. I believe about 6,000,000 acres.

The CHAIRMAN. You think 6,000,000 acres could ultimately be irrigated in the San Joaquin Valley?

Mr. O'SHAUGHNESSY. I believe so.

Mr. GRONNA. Mr. President, I was about to read the testimony of Secretary Garfield before the Committee on the Public Lands of the House of Representatives during the Sixtieth Congress:

Secretary Garfield. The application, as it was presented to me, came up on the motion for a reopening of the case, which had theretofore been closed by the action of my predecessor in declining to grant the request of the city to permit the use of the floor of this valley for storage purposes. I first made careful investigation of the law and the decision of the Attorney General, and found that under that decision it was clear that the Secretary of the Interior had power, under the act of Congress, to grant this application, if he should deem it for the public interest to do so. I thereafter advised the city of San Francisco that effect, and while in San Francisco a year ago last summer I had a public hearing there.

Mind you, the hearing was held in San Francisco; it was not held in the San Joaquin Valley—

and went over very carefully the various facts relating to the condition of the application, and there appeared various parties in interest, including not only the city representatives, but as well the representatives of certain irrigation districts—the Turlock and Modesto districts—which lie below the headwaters of the Hetch Hetchy, and thereafter giving opportunity to all interested parties to file in detail their briefs and exchange briefs.

These gentlemen came to Washington, and we went over in detail the conditions that the conditions that the conditions that the second transfer is the conditions that the conditions that the second transfer is the conditions that the conditions the

opportunity to all interested parties to file in detail their briefs and exchange briefs.

These gentlemen came to Washington, and we went over in detail again the conditions that existed in that district. Those conditions, in brief, were these: The Modesto and Turlock irrigation districts below had acquired and were using valuable water rights for the development of their irrigation projects. There were certain private holdings in the floor of the Hetch Hetchy Valley and in the surrounding park and forest reserve area. The city had acquired, by option, holdings in the floor of the valley to the extent as stated by its representative here, and had also acquired a number of holdings outside, as indicated by the representative. The points that I gave especial consideration to in determining what action the Government ought to take were these: The city of San Francisco had been making every effort to obtain for its citizens and the citizens in the immediate surrounding vicinity there the best, purest, and largest water supply. I took the view that, so far as the Federal Government was authorized, it should be of help to the citizens of any of these cities, not only San Francisco, but elsewhere, to enable them to obtain that kind of a water supply, believing that the domestic use was the highest use to which water could be put.

Mr. President, in that I heartily concur—

Mr. President, in that I heartily concur-

Mr. President, in that I heartily concur—

There were in connection with this question a number of matters of difficulty; private interests—that is, conflicts between the existing water company in San Francisco and companies or individuals who were seeking to have the city acquire their water rights instead of undertaking to develop the Hetch Hetchy, as was requested by the city. I declined to enter into a discussion of the relative merits or demerits of any of these various plans, because they involved most intricate engineering questions in almost every instance, as well as questions of cost, both of which questions I felt were matters for the city to determine and not for the Federal Government to determine.

The matter before me was simply whether or not the Federal Government ought to give the citizens of San Francisco an opportunity to use this valley and the adjacent valley—the Lake Eleanor site—for purposes of obtaining a domestic water supply, if those citizens deemed that this was the most available and the purest—

Here is a decision made again on ex parte statements—

Here is a decision made again on ex parte statementsand the question of cost was a matter for them to determine, not for the Government. I likewise considered most carefully, as the Govern-

ment should, the question of the rights of the irrigating district below. They were not only valuable rights, but were likewise rights that had been very highly developed by the citizens in those localities, and, as I stated to the representatives of the city, I should take no action that did not absolutely protect the people who had developed the irrigation projects below there in their rights to use or impound the water upon which they had filed.

It shows that they had not been derelict in their duties; they had not shirked their responsibilities, but they had done everything the law required them to do in order to get this

I think it does not require a lawyer to understand that the citizens of these two irrigation districts were not protected to the extent of permitting them to impound the waters of the Sierra Nevada Mountains. Secretary Garfield, no doubt, was honest in his conclusions, but he was mistaken in thinking that those irrigation districts would or could possibly be protected in impounding the waters that are absolutely necessary in order to get a sufficient water supply for the millions of acres in the valley. It is a valley that can be made very productive. It is a valley which for years has been farmed and cultivated by honest toilers, who to-day are about to be forced out of the valley because of the lack of moisture in the soil. If they are to stay on their farms, they must have the waters that can be supplied by the Tuolumne River and the waters adjacent to the Tuolumne River and the Hetch Hetchy Valley.

As to the private property owned in the park and on the floor of the park, those were matters that I stated to them would have to be settled by submission of those matters probably to Congress, because I had no authority under the general acts to patent to the city of San Francisco the remaining unappropriated lands on the bed of the valley, nor could I without an act of Congress accept other property in exchange for those, and therefore the proposition was made that the city, having acquired these private rights, would offer in exchange, acre for acre, as nearly as could be exchanged on the smallest equal subdivision, land which it owned outside for the unappropriated land which remained on the floor of the valley.

\*\*Myr Precident think of the generacity of the citizen of San

Mr. President, think of the generosity of the citizens of San Francisco in trading, acre for acre, for the wonderful scenery in the Hetch Hetchy Valley, for a portion of the so-called Hog

There was serious opposition on the part of a number of citizens, not only of California but throughout the country, to any action by me that would, as they stated, abandon the Hetch Hetchy as a valley and destroy, as they felt, one of the great and wonderful natural beauties of that section of the country. I fully appreciated that feeling on the part of those gentlemen, and fully appreciated that feeling on the part of those gentlemen, and fully appreciated the obligation that Congress had placed upon me to preserve these tracts for the purpose, not only of the Nation's playgrounds, but for the purpose of preserving the great curlosities and great beauty of that region. On the other hand, in weighing the two sides of the question, I felt that there could be no doubt but that it should be resolved in favor of the citizens of San Francisco, because this use of the valley would not destroy it as one of the most beautiful spots in the West.

If anyone will take a map and look at that valley, containing some 800 acres in all, with mountains of granite towering thousands of feet above it, and say that a great lake would not destroy, its beauty, I believe his testimony would not stand before a disinterested jury.

It would simply change the floor of the valley from a meadow to a beautiful lake, and it could be so constructed as not to interfere with the access of people to that portion of the park. It would mean, of course, that there would not be that same freedom in camping that there otherwise would be.

I therefore made the agreement which appears in the final decision which I made in this matter, which has been presented to you here this morning. That agreement was made after the most careful conference with the representatives of the irrigation districts, and a final and unanimous agreement by all that we had protected fully the rights of these various interested parties.

I believe the Secretary honestly believed he had done that; otherwise he would not have granted this permit.

He then gives the provisions of the permit, which I shall not take the time of the Senate to read.

Here is part of the testimony of Mr. Manson, the civil engi-

neer:

Mr. Smith. What I want to find out is, are there any appropriations of water claimed by any individuals or corporations in this watershed, or along the same stream, that would be in any way affected by the accomplishment of this legislation?

Secretary Garfield. None that have been brought to my attention. I have no remembrance of any suggestion of any location, or attempted location, for that purpose. Can you tell me about that, Mr. Manson?

Mr. Manson. I know of no appropriation. But there is one point I would like to make clear, Mr. Secretary and Mr. Chairman: That is, that that was imposed by virtue of the fact that there might be a possibility that after this water got in control of the city ditches and canals and conduits, it might be reverted and not returned, if used for power, to the channel and go down to the irrigation districts which depended upon it and needed it, and in order to guard against the possibility of at any time in the remote future the city granting to anybody, or taking the authority itself, of diverting this water as it flowed outside of the limits of parks, and so on, for other uses, and not returning it to the channel of the Tuolumne River for use by the irrigators, that provision was inserted in very rigid form. What I wanted to find out was—I am not here to represent any power company—but I wanted to know whether there have been any filings of water rights on the streams affected by this grant.

Secretary Garfield. None that I know of.

Mr. SMITH. You would know if any had been?
Mr. Manson. No, sir; I have not searched the records of Tuolumne County to find that out.

Mr. SMITH. I assume that you know what substantial water rights exist on those streams before you go in there and spend some millions

of money?

Mr. Manson, No, sir. We would store water and use it. If we interfere with any private rights or corporate rights, those would have to be established and determined by the courts of the State of California.

That is how the farmers would be protected. They would have to establish their rights in the courts of the State of California.

Mr. President, I am not at all surprised that this bill is to pass, because the farmers who are living in those irrigation districts, and who are most vitally interested, have not appeared. On the other hand, the city of San Francisco has had an array of the best talent in California from the time this resolution was first introduced in Congress. I find no fault with that; but the farmers should have the same opportunity to be heard, and they should have their claims presented in the able manner that the city of San Francisco has had her claims and her wants presented to Congress.

For the city of San Francisco briefs have been gotten up by For the city of San Francisco briefs have been gotten up by the able city attorney, Percy V. Long, and his able assistant, Robert M. Searles, assisted by the city attorney of Oakland; the city attorney of Berkeley; the city attorney of Piedmont; the city attorney of Alameda; the city attorney of San Mateo; Albert Mansfield, city attorney of Redwood City; John F. Davis, city attorney of Burlingame; Norman E. Malcolm, city attorney of Palo Alto; Frank Mitchell, jr., city attorney of Hayward; and J. N. Frank, city attorney of San Leandro.

Mr. President is it any wonder that a bill has been drafted.

Mr. President, is it any wonder that a bill has been drafted that is absolutely satisfactory to the citizens of San Francisco, to the municipality of San Francisco, and to the bay cities? These men have not appeared here as attorneys for the farmers in the irrigation districts. We can not expect them to guard the interests of men whom they do not represent.

I said at the outset that I had made up my mind that the Tuolumne River and the Hetch Hetchy Valley are not absolutely necessary in order to give San Francisco an abundant water supply.

Mr. President, the conclusion which I reached, after hearing the testimony presented before the Committee on Public Lands of the House during the Sixtleth Congress, of which I was then a member, has been strengthened after reading the report of the advisory board of Army engineers and the hearings before the Committees on Public Lands of the House and the Senate held since that time. It confirms me in my belief that it would be a mistake and a discrimination against the farmers living in those irrigation districts, that it would saddle an unnecessary burden upon the citizens of San Francisco, and that it is not at all necessary to acquire the right to take and destroy the beautiful Hetch Hetchy Valley in order to get an abundant water supply for the citizens of the city of San Francisco.

Let us look at the report of the board of Army engineers. read from a report on the Hetch Hetchy Valley made by the advisory board of Army engineers to the Secretary of the Interior under date of February 19, 1913, known as Senate Docu-

We first come to the possible source of additional supply on page 83:

## POSSIBLE SOURCES OF ADDITIONAL SUPPLY.

POSSIBLE SOURCES OF ADDITIONAL SUPPLY.

The sources of additional supply which have been given more or less consideration, assigning to them the same numbers by which they are designated in the communications from the city engineer of San Francisco, dated June 18 and August 5, 1910, are as follows:

2. Fel River.

3. Putah Creek.

4. Clear Lake and Cache Creek,
5. Sacramento River,
6. Feather River,
7. Yuba River.
8. American River,
11. Stanislaus River,
12. Tuolumne River,
12. Tuolumne River,
13. San Joaquin River,
16 frese, Nos. 3, 4, and 9 were, by action of the board, eliminated from the list so far as further investigation by the city engineer is concerned, for reasons stated by him as follows:

3. Putah Creek: Inadequacy and lack of available storage.

4. Clear Lake and Cache Creek: Interference with existing irrigation work and developments and (stated by the city engineer, with references) impurity and pollution of the water.

9. Lake Tahoe: Remoteness and difficulty of conduit and because its full possibilities are under development by the United States in the Truckee-Carson irrigation project."

These three possible sources have, however, been studied by me and are taken up in their proper order below.

As to the other sources enumerated, the data furnished by the city engineer have been those mentioned in a general way on pages 56 and 57, and more in detail under heads of separate sources investigated.

The investigations made by me as to the well-regulated supply of water that each of these sources may be developed to yield will now be taken up in the same order as given above. These will be followed by estimates of cost for those supplies which alone, or in conjunction with others from adjacent watersheds, may be developed to a capacity of 400,000,000 gallons daily.

2. Eel River: Eel River is a coast range stream rising in the northerly part of Lake County, flowing generally north and emptying into the Pacific Ocean about 15 miles south of Humboldt Bay. It is in a region of high precipitation. At a point near Potter Valley the South Fork of Eel River is separated from the South Fork of Russian River by a narrow ridge through which a tunnel has been bored. Below this the Snow Mountain Water & Power Co. has a power plant, under a head of 450 feet, with a capacity of 350 cubic feet per second. The Russian River, into which this water is discharged, flows to the south, toward San Francisco, a distance of over 60 miles.

Above the Snow Mountain Water & Power Co.'s point of diversion on South Fork of Eel River there is a drainage area of 326.5 square miles. Of this, 268 square miles are tributary to an excellent reservoir site at Gravelly Valley, which, with a dam 140 feet high, will store 180.000 acre-feet. A detailed report on the available water supply of the Snow Mountain Water & Power Co. by Messrs. W. R. and N. A. Eckart, consulting and resident engincer, respectively, has been presented to your board.

Later on there is a report on the McCloud River.

Later on there is a report on the McCloud River.

A mass diagram showing run-off from watershed above the company's power plant accompanied my preliminary report of April 8, 1911. Actual measurements of discharge cover a period of 5 years. In deducing the run-off from precipitation records for 33 of the 38 years covered by the diagram, Mr. N. A. Eckart used what he calls a "minimum curve," which not only gives results more conservative than the usual "mean curve," but gives a value for the run-off, month by month, instead of annual totals only. The diagram shows that, with the storage capacity given above, this watershed would have yielded a supply of 180,000,000 gallons daily through the most critical seasons occurring within the period of observations, viz, 1877 to date. Mr. Eckart estimates that by taking advantage of large storage capacity at the San Francisco end of the conduit, or on the peninsula, and by giving the conduit a capacity a little in excess of 200,000,000 gallons daily, the mean supply may be increased to that figure through the most critical periods. A conduit to carry this water from Potter Valley to San Francisco across the Golden Gate would be about 125 miles long. If, instead of crossing the Golden Gate, its route were via San Pablo Bay and Oakland and thence across San Francisco Bay, it would be 10 miles longer. Even this greater length of conduit is less than that for any of the Sierra sources. This scheme has also the advantage that the pipe line could be laid much nearer the hydraulie grade line, and thus the weight of steel pipe would be less than for the Sierra schemes, or renforced concrete pipe could be used over portions of the distance.

The talirace of the Potter Valley power plant is at about elevation 1,000 feet, giving sufficient head for delivery of water to Crystal Springs Reservoir by gravity.

The crossing of the Golden Gate, where the water is 360 feet deep for the shorter line, or the double crossing of the bay, for the line via Oakland introduces features which, in p

It shows that in this project no thorough investigation was

made.

3. Putah Creek: Putah Creek drains the easterly slope of the Coast Range, south of Clear Lake, and discharges its waters into the Tule lands of Yolo Basin. The watershed above Winters has an area of 805 square miles. As shown by mass diagram (fig. 14), a storage capacity of 150,000 acre-feet would have been necessary to equalize a flow of 200 million gallons daily through the season of 1907-8, and doubtless 100 per cent greater than that for the driest seasons.

Surveys have been made of two sites for reservoirs, having an aggregate capacity of nearly 150,000 acre-feet. The drainage area above them is but little more than one-half of that above Winters.

4. Clear Lake and Cache Creek: Clear Lake is in Lake County. It has an area of about 65 square miles and an elevation of 1,325 feet at mean level. The tributary drainage area is alout 500 square miles. Some of the peaks on this watershed reach an altitude of 6,000 feet. Figure 14 shows mass diagrams, both of the run-off from the Clear Lake drainage area and for the whole of Cache Creek at Yolo (tributary area, 1,230 square miles) for the periods through which the records have been kept by the United States Geological Survey. There is also shown a mass curve of yearly run-off (1873-1900) from Clear Lake, platted from quantities computed by Russell L. Dunn, consulting engineer, from lake levels, as given in a report made by him to Mr. Dalzell Brown.

Mr. President, I am reading this unfavorable report and I am

Mr. President, I am reading this unfavorable report and I am mr. Fresident, I am reading this uniavorable report and I am going to read some of the reports that are not unfavorable, but even in the projects that the Army board reported against we find that there is a large supply of water, and while the board has made a study of these, and has made undoubtedly an honest report, they do not say that it is absolutely impossible for the city of San Francisco to get her water supply even from the residents which they have reported against

projects which they have reported against.

Mr. GALLINGER. Mr. President—

The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from New Hampshire?

Mr. GRONNA. I yield.

Mr. GALLINGER. Mr. President, at this juncture I want to call the attention of the Senate to a very important matter.

Some months ago, when we were spending three or four hours in this Chamber each day, the junior Senator from Missouri [Mr. REED] called attention to the fact that the air in the Chamber was so poisonous that something ought to be done to remedy the evil. That Senator introduced a resolution for the appointment of a committee to consider the matter, which was unanimously agreed to, and as I chanced at that time to be acting as President pro tempore I appointed a committee, with the junior Senator from Missouri as chairman.

I do not know whether that committee has done anything to remedy the evil then complained of, but I do know, Mr. President, that if the air in the Chamber at that time was detrimental to the health of Senators who sat here 3 or 4 hours, it must be exceedingly detrimental to those of us who are compelled by the majority to sit here 11 hours each day.

The Senator from North Dakota [Mr. GRONNA] is suffering from illness. He has talked nearly two hours. He has been in the Chamber 10 hours and 15 minutes to-day, and I submit that it is not the proper thing to detain the Senate any longer to-night.

I therefore make the point of no quorum.

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

Overman Owen Page Pittman Ashurst Bacon Hollis Hughes Smith, Md. Smoot Sterling Bryan Chilton James Johnson Stone Clapp Clark, Wyo. Fletcher Kenyon Kern Lewis Martin, Va. Martine, N. J. Nelson Reed Saulsbury Sheppard Shields Swanson Thompson Thornton Townsend Gallinger Shively Gronna Simmons Williams

The VICE PRESIDENT. Forty Senators have answered to the roll call. There is not a quorum present. The Secretary will call the names of the absentees.

The Secretary called the names of absent Senators, and Mr. SHAFROTH answered to his name.

The VICE PRESIDENT. Forty-one Senators have answered to the roll call. There is not a quorum present.

Mr. KERN. I move that the Sergeant at Arms be directed to request the attendance of absent Senators.

The VICE PRESIDENT. The question is on the motion of the Senator from Indiana.

The motion was agreed to.

The VICE PRESIDENT. The Sergeant at Arms will carry out the instructions of the Senate.

At 10 o'clock and 25 minutes p. m. Mr. Thomas entered the Chamber and answered to his name.

Mr. KERN (at 10 o'clock and 30 minutes p. m.). I move that the Sergeant at Arms be directed to compel the attendance of absent Senators

The VICE PRESIDENT. The question is on the motion of the Senator from Indiana.

The motion was agreed to.

The VICE PRESIDENT. The Sergeant at Arms will carry out the instructions of the Senate.

Mr. OVERMAN. Mr. President, I ask to have read the names of those whose attendance the Sergeant at Arms has been ordered to compel.

Mr. GALLINGER. Mr. President, no business can be done in the absence of a quorum.

Mr. OVERMAN. I can have their names read.

Mr. GALLINGER. That is business.

Mr. CLARK of Wyoming. All the Senate can do is to adjourn. Mr. OVERMAN. We can ascertain the names.

The VICE PRESIDENT. The Secretary will furnish the Senator from North Carolina with the names he desires.

Mr. OVERMAN. I want the names in the RECORD.
At 11 o'clock and 3 minutes p. m. Mr. ROBINSON entered the Chamber and answered to his name.

At 11 o'clock and 10 minutes p. m. Mr. O'GORMAN entered the Chamber and answered to his name.

At 11 o'clock and 13 minutes p. m. Mr. Lane, Mr. Newlands, Mr. Chamberlain, Mr. Brady, Mr. Walsh, Mr. Poindexter, and Mr. Ransdell entered the Chamber and answered to their

The VICE PRESIDENT. Fifty-one Senators have answered to the roll call. There is a quorum present.

Mr. GRONNA rose.

Mr. President-

Mr. STONE. Mr. President—
The VICE PRESIDENT. Does the Senator from North Dakota yield to the Senator from Missouri?

Mr. GRONNA. I yield. Mr. STONE. The order of the Senate was to compel the attendance of absent Senators, not to compel enough to make a quorum. The order of the Senate has not been discharged, and I, for one, think the order ought to be enforced and absent Senators ought to be compelled to attend here to-night, if it takes us all night to get them.

Mr. SMOOT. Does the Senator mean that Senators outside

of the city should be compelled to attend?

Mr. STONE. All who can be reached should be brought here to-night. The Senate can exercise its power at any time to discharge the order. Until the order made by the Senate directing the Sergeant at Arms to compel the attendance of absent Senators is discharged by the action of the Senate, no business is in order. That is the express direction of the rules of the Senate.

Mr. CLARK of Wyoming. It certainly can not be urged that

a quorum of the Senate can not transact business. A quorum of the Senate having appeared under the order given to the Sergeant at Arms, I move that as to the Senators who have made

their appearance the order be vacated.

The VICE PRESIDENT. The question is on the motion of

the Senator from Wyoming.

The motion was agreed to.

Mr. LEWIS. I ask the Senator from North Dakota if he will yield to me for a moment to make a request for exemption.

Mr. GRONNA. Certainly.
Mr. LEWIS. I ask unanimous consent that in the general order to bring in absent Senators the Senator from South Carolina [Mr. SMITH] be exempted, in view of the fact that he was called suddenly to the bedside of a relative who is undergoing an operation in a neighboring hospital.

The VICE PRESIDENT. Is there any objection? There being none, the junior Senator from South Carolina is exempted

from the order.

Mr. KERN. I move that the Senate adjourn until 10 o'clock to-morrow morning.

The motion was agreed to; and (at 11 o'clock and 18 minutes p. m.) the Senate adjourned until to-morrow, Friday, December 5, 1913, at 10 o'clock a. m.

## HOUSE OF REPRESENTATIVES.

THURSDAY, December 4, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the fol-

lowing prayer:

Infinite, eternal, our God and our Father, Thou hast made us; Thou knowest us altogether, our weakness and our strength. Thou alone canst judge us. Thy mercy be upon us. Hearten us, we beseech Thee, for the tasks which loom large before us, and make dominant the godlike in us, that we may solve them in accordance with our highest conceptions of right and truth and justice, and hold our course to Thee

Thou Grace Divine, eneircling all, A shoreless, soundless sea, Wherein at last our souls must fall, O love of God most free.

Amen.

The Journal of the proceedings of yesterday was read and approved.

ENROLLED BILL SIGNED.

The SPEAKER announced his signature to enrolled bill of the following title:

S. 2318. An act authorizing the appointment of envoys extraordinary and ministers plenipotentiary to each Paraguay and Uruguay.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Crockett, one of its clerks, announced that the Senate had passed bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 281. An act providing for an increase of salary of the United States attorney for the district of Connecticut.

The message also announced that the President of the United States had approved and signed bills of the following titles:

On November 27, 1913:

S. 2779. An act to authorize the conveyance of the steel bridge over the Snake River, between Lewiston, Idaho, and Clarkston, Wash., to the States of Idaho and Washington, or local subdivision thereof.

On December 1, 1913:

S. 3397. An act to amend section 2324 of the Revised Statutes of the United States, relating to mining claims.

# SENATE BILL REFERRED.

Under clause 2 of Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S.281. An act providing for an increase of salary of the United States attorney for the district of Connecticut; to the Committee on the Judiciary.

#### COMMITTEE RESIGNATION.

The SPEAKER laid before the House the following communication:
House of Representatives of the United States,
Committee on Rules,
Washington, D. C., December 3, 1913.

Hon. Champ Clark, Speaker of the House of Representatives, Washington, D. C.

DEAR MR. SPEAKER: I herewith tender my resignation as a member the Committee on Rules and trust that it will be immediately

accepted.
Respectfully, yours, The SPEAKER. If there be no objection, the resignation

will be accepted. There was no objection.

DECISION IN THE GRACE COX INHERITANCE CASE.

Mr. STEPHENS of Texas. Mr. Speaker, I desire to ask unanimous consent to have printed as a House document the decision of the Commissioner of Indian Affairs, affirmed by the First Assistant Secretary of the Interior, in the Grace Cox inheritance case, construing the act of June 25, 1910, relating to Indian heirships.

The SPEAKER. The gentleman from Texas [Mr. STEPHENS] asks to have printed as a public document the decision which Is there objection?

Mr. BORLAND. Mr. Speaker, reserving the right to object, would like to ask the gentleman if he has consulted the Com-

mittee on Printing?

Mr. STEPHENS of Texas. I have not, because I did not think it was necessary under the rules to do so. Very often decisions of this importance have been printed as public documents without reference to the committee. I will state that it is a matter of great importance, as a legal question, to this section of the country, and there is no other means of getting it into the hands of the people interested, principally the members

of the bar.

Mr. BORLAND. Mr. Speaker, it seems to me that the matter should be submitted to the Committee on Printing, so that they may know how much of this printing is going to be done.

The SPEAKER. Is there objection? Mr. BORLAND. I object.

Mr. LLOYD rose.

The SPEAKER. The gentleman from Missouri [Mr. Bor-LAND] objects, and the other gentleman from Missouri [Mr. LLOYD] is recognized.

# ASSIGNMENT OF SESSION CLERKS TO COMMITTEES.

Mr. LLOYD. Mr. Speaker, I ask unanimous consent to present for immediate consideration the following resolution from the Committee on Accounts.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House resolution 327 (H. Rept. 98)

House resolution 327 (H. Rept. 98).

Resolved, That clerks to committees of the House during the session, provided for by the legislative, executive, and judicial appropriation act for the fiscal year ending June 30, 1914, be, and they are hereby, assigned for the present session of Congress to the following committees on Education.

Committee on Education.

Committee on Reloways and Canals.

Committee on Reform in the Civil Service.

Committee on Alcoholic Liquor Traffic.

Committee on Invalid Pensions (assistant clerk).

Committee on the Judiciary (additional assistant clerk).

Committee on Disposition of Useless Executive Papers.

The SPEAKER. Is there objection?

The SPEAKER. Is there objection?

Mr. MANN. Mr. Speaker, reserving the right to object, it is a privileged resolution, anyhow, is it not?

Mr. LLOYD. No; I do not think so. Mr. MANN. It has always been treated so.

Mr. LLOYD. It may have been before, but not in this in-

Mr. MANN. These are the usual assignments?

Mr. LLOYD. Yes; except this: We have assigned heretofore a clerk to the Committee on Election of President and Vice President. That committee has an annual clerk. We now assign, instead of that, an additional assistant clerk to the Committee on the Judiciary, which will have a vast amount of extraordinary work at the coming session. I think that committee will need additional help.

Mr. MANN. That is, the Committee on the Judiciary gets one of the session clerks provided for in the legislative bill?

Mr. LLOYD. Yes, sir.
The SPEAKER. Is there objection?
There was no objection.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

SESSION CLERKS TO EXPENDITURE COMMITTEES.

Mr. LLOYD. Mr. Speaker, I present the following privileged

resolution from the Committee on Accounts.

The SPEAKER. The gentleman from Missouri [Mr. Laoyd] presents a privileged resolution, which the Clerk will report.

The Clerk read as follows:

House resolution 260 (H. Rept. 100).

Resolved, That the Committee on Expenditures in the Department of Justice, the Committee on Expenditures in the Department of Commerce, the Committee on Expenditures in the Department of the Interior, the Committee on Expenditures in the Department of tabor, the Committee on Expenditures in the Popartment of Labor, the Committee on Expenditures in the Post Office Department, the Committee on Expenditures in the State Department, the Committee on Expenditures in the State Department, the Committee on Expenditures in the War Department, and the Committee on Expenditures on Public Buildings be allowed each a clerk at the rate of \$125 per month during the second session of the Sixty-third Congress.

Mr. MANN. Mr. Speaker, will the gentleman yield? Mr. LLOYD. Yes. Mr. MANN. This provides for a session clerk for each of the expenditure committees?

Mr. LLOYD. Yes; and it is the same resolution we have had before, excepting that we here provide a clerk for the Committee on Expenditures in the Department of Labor.

Mr. MANN. How many times have these committees had these session clerks?

Mr. LLOYD. I do not know how long—for several years back; long enough so that it has become a universal custom.

Mr. BURKE of South Dakota. Mr. Speaker, will the gentleman yield for a question?

Mr. LLOYD. Yes. Mr. BURKE of South Dakota. I desire to ask the gentleman whether or not the Committee on Accounts considered the question of allowing annual clerks to these expenditure committees?

Mr. LLOYD. No, sir; we did not.
Mr. BURKE of South Dakota. If I recall correctly, when a Mr. BURKE of South Parota. If I telegrated similar resolution was considered in the last session of Congress, the matter was discussed, and I undertood that the Committee on Accounts had under consideration the question of ultimately giving annual clerks to all of these expenditure committees. Personally, I am one of those who believe that if a committee is entitled to a clerk at all it ought to have an annual clerk. It so happens that during the last year Congress has been in session all the time and these committees have, in effect, had annual clerks. I should like to inquire of the gentleman whether the Committee on Accounts intends at any time to consider the question of giving these committees annual clerks?

Mr. LLOYD. That matter is not being considered at the present time. Perhaps it will be considered later. The several expenditure committees are all anxious to have annual clerks, and the matter was discussed to some extent during the summer at various meetings of the Committee on Accounts.

Mr. BURKE of South Dakota. Does not the gentleman think, in the interest of the public service and in the interest of effi-

ciency, they ought to have annual clerks?

Mr. LLOYD. I think every committee that does any considerable amount of work ought to have an annual cierk.

Mr. BURKE of South Dakota. I agree with the gentleman, and I hope the time will come when these committees will be given annual clerks.

Mr. LOBECK. The fact is that during the special session just closed these committees did not have annual clerks.

Mr. LLOYD. That is the fact.

The SPEAKER. The question is on agreeing to the resolu-

The resolution was agreed to.

### MESSENGERS IN HOUSE POST OFFICE.

Mr. LLOYD. Mr. Speaker, I present the following privileged resolution from the Committee on Accounts.

The SPEAKER. The gentleman from Missouri presents a

resolution, which the Clerk will report.

The Clerk read as follows:

House resolution 319 (H. Rept. 99).

Resolved, That the Postmaster of the House be, and he is hereby, authorized to appoint four messengers, who shall be paid out of the contingent fund of the House at the rate of \$100 per month from and

after the 1st day of December, 1913, during the second session of the Sixty-third Congress.

Mr. MANN. Mr. Speaker, will the gentleman yield? Mr. LLOYD. I yield to the gentleman from Illinois.

Mr. MANN. Are these new employees or just old employees who are continued, who have been in service during the special

Mr. LLOYD. It provides for the continuance of old em-

Mr. MANN. Why do you cut out the first day of the session and not allow them to be paid for that day?

Mr. LLOYD. They will be paid for that day.
Mr. MANN. That is not what the resolution says. The resolution says:

From and after the 1st day of December.

I take it that would exclude pay for the 1st day of December. Mr. LLOYD. It might exclude that day's pay. I do not now. If there is any question about it, I will ask to change it.

Mr. MANN. I think you had better change it. There is no question about it. The old employment does not last over the 1st of December, and this says "from and after."

Mr. GARNER. Would "on and after" be satisfactory?

Mr. LLOYD. I move to amend the resolution by striking out the word "from" and inserting the word "on." The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

Amend, line 4, by striking out the word "from" and inserting in lieu thereof the word "on."

The amendment was agreed to.

The resolution as amended was agreed to.

CHOCTAW AND CHICKASAW COAL AND ASPHALT LANDS.

Mr. CARTER. Mr. Speaker, I ask unanimous consent for the present consideration of House joint resolution 155, extending time for completion of classification and appraisement of surface of segregated coal and asphalt lands of the Choctaw and Chickasaw Nations and of the improvements thereon, and making appropriations therefor.

The SPEAKER. The gentleman from Oklahoma asks unanimous consent for the present consideration of a joint resolution,

which will be reported by the Clerk.

The Clerk read as follows:

The Clerk read as follows:

Whereas by the act of Congress approved February 19, 1912 (37 Stat. L., p. 67), entitled "An act to provide for the sale of the surface of the segregated coal and asphalt lands of the Choctaw and Chickasaw Nations, and for other purposes," it was provided that before the surface of said lands should be offered for sale the same should be classified and appraised; and Whereas it was provided by said act of Congress, as amended by section 18 of the act of Congress approved August 24, 1912 (37 Stat. L., pp. 518-531), and by section 18 of the act of Congress approved June 30, 1913 (Public, No. 4), that the classification and appraisement of said surface should be completed not later than December 1, 1913; and
Whereas the appraisers appointed by the President under the provisions of said act of Congress approved February 19, 1912, entered on duty August 14, 1913, and have classified, appraised, and scheduled 3,500 tracts, containing approximately 388,000 acres and the improvements thereon, and there remains unclassified and unappraised the surface of approximately 44,000 acres of said segregated coal and asphalt lands: Therefore be it

Resolved, etc., That the act of Congress approved February 19, 1912

lands: Therefore be it

Resolved, etc., That the act of Congress approved February 19, 1912
(37 Stat. L., p. 67), being "An act to provide for the sale of the surface of the segregated coal and asphalt lands of the Choctaw and Chickasaw Nations, and for other purposes," be, and the same is hereby, amended to provide that the classification and appraisement of the surface of said segregated lands as required by said act and the classification and appraisement of the improvements thereon as required by section 18 of the act of Congress approved August 24, 1912 (37 Stat. L., pp. 518-531), shall be completed not later than 60 days from the date of approval of this resolution: Provided, That at the expiration of such time any classification, appraisement, or other work incident thereto remaining unfinished shall be completed by the Secretary of the Interior under rules and regulations to be prescribed by him, and the sum of \$5,000, to be paid out of the Choctaw and Chickasaw tribal funds, is hereby appropriated for such purpose.

The SPEAKER. Is there objection to the present consideration of the House joint resolution?

Mr. MANN. Reserving the right to object, will the gentleman from Oklahoma yield?

Mr. CARTER. I will.

Mr. MANN. The gentleman has stated to me, and the gentleman from Texas also, that this was a pressing matter; will

the gentleman explain to the House what the emergency is?

Mr. CARTER. I will try to do that as briefly as possible.

The act of February 19, 1912, provided for the sale of the surface of the segregated mineral land. A classification and appraisement to be completed within six months by the three appraisers was one of the requisites of the bill. For some reason these appraisers were not appointed until April 15, 1912, and for this reason on August 24 Congress thought it wise to extend the time of appraisement until December 1.

In the month of October, after their appointment, charges were preferred against the first board of appraisers. On November 14, 1912, they resigned and their work was shortly thereafter disapproved by the Secretary, thus making it necessary to go over the whole field again.

The second board of appraisers was appointed on November 25, 1912, and their terms expired on December 1, 1912, just five days thereafter; therefore no work of any consequence was

done by them. The Indian appropriation bill of June 13, 1913, carried another extension of time to December 1, 1913. Appraisers were not appointed under this act until July 25, 1913. This last board has completed the appraisement of 388,000 acres, leaving an approximate balance of 44,000 unclassified and unappraised.

Now, the purpose of this resolution is to continue that board for 60 days longer, which it is thought will be ample time for the completion of the work, and in case it is not any remnants remaining unfinished may be completed by the Secretary of the Interior.

The reason for bringing this joint resolution in without committee action is because the time for appraisement of these lands expired on December 1, and it is desired by the Secretary of the Interior and the Commissioner of Indian Affairs to push this appraisement to a conclusion at the earliest possible day. It will also be in the interest of economy to go right ahead with the force that is organized, rather than to have them disband, scatter, and have to reorganize, as may be the case if we had waited for committee action.

Mr. MANN. Were these prior extensions by an act of Con-

gress?

Mr. CARTER. One extension by an act of August 24, 1912, and another by act of June 13, 1913.

Mr. MANN. I notice that the resolution reads that the appraisement shall be completed within 60 days after the approval of this act.

Mr. CARTER. Yes. Mr. MANN. And any appraisement unfinished should be done at the discretion or under the authority of the Secretary of the Interior?

Mr. CARTER. Yes.

Mr. MANN. What will completed within 60 days? What will there remain to be finished if it is

Mr. CARTER. I think there will be practically nothing; that is, it will be completed within the 60 days, but in case there should be something left the Secretary of the Interior could complete it without additional expense to the tribes.

Mr. MANN. The extension carries an appropriation?

Mr. CARTER. The extension carries an appropriation of \$5,000, which would all be consumed within the 60 days after the passage of this act, as I am informed. Mr. FITZGERALD. Mr. Speaker, the proviso is:

Provided, That at the expiration of such time any classification, appraisement, or other work incident thereto remaining unfinished shall be completed by the Secretary of the Interior under rules and regulations to be prescribed by him, and the sum of \$5,000, to be paid out of the Choctaw and Chickasaw tribal funds, is hereby appropriated for such purpose.

Evidently that is appropriated for work to be done under the direction of the Secretary of the Interior and not by the appraisers

Mr. CARTER. The work is all done under the direction of the Secretary of the Interior, but after 60 days have expired there would no longer be any appraisers.

Mr. FITZGERALD. Then, what is the \$5,000 for?

Mr. CARTER. The \$5,000 is to be used within the 60 days within which the work is to be done. Mr. FITZGERALD. Why was the first appraisement re-

jected by the Secretary of the Interior? Mr. CARTER. That is a long story.

Mr. FITZGERALD. That is what is usually said by gentle-

men who do not wish to give any information.

Mr. CARTER. There were three appraisers appointed on April 15, 1912, and they proceeded with work until some time in the following October. Charges were preferred against them, and their removal was requested by the inspector. They resigned just before their trial. Then the appraisement that they had made was rejected on the ground that the Secretary thought that it had not been done fairly or that some undue influence had been used with the appraisers.

Was this resolution prepared by the department? Mr. MANN.

Mr. CARTER. It was.

Mr. MANN. I suppose that accounts for the provision in it that after the work is completed, it shall still proceed. [Laugh-

Mr. COOPER. Mr. Speaker, I would like to ask the gentleman from Oklahoma a question.

The SPEAKER. Does the gentleman yield?

Mr. CARTER. Yes.

Mr. COOPER. Mr. Speaker, I have not had the privilege of hearing the remarks of the gentleman from Oklahoma and I desire to ask only one question. I note that by the act of February 19, 1912, these appraisers were appointed, but that they did not enter upon their duties until August, 1913, about a year and a half afterwards.

Mr. CARTER. No; they entered upon the discharge of their

duties upon April 15, 1912. I do not know to what part of the resolution the gentleman refers.

Mr. COOPER. I am referring to the last clause of the preamble:

Whereas the appraisers appointed by the President under the provisions of said act of Congress approved February 19, 1912, entered on duty August 14, 1913.

And so forth

How did it happen that a law which was passed for the appointment of appraisers in February was not put into force until about a year and a half afterwards?

Mr. CARTER. Mr. Speaker, evidently the gentleman did not

hear my remarks.

hear my remarks.

Mr. COOPER. That is what I said.

Mr. CARTER. The first appraisers were appointed on April 15, 1912. They were removed. Then on November 25, 1912, other appraisers were appointed, and their terms expired on December 1, 1912. One of the old appraisers was reappointed, and two new ones were appointed on July 25, 1913.

Mr. COOPER. These is possible in the preamble to indicate

Mr. COOPER. There is nothing in the preamble to indicate

those facts.

Mr. CARTER. No; I notice there is not. Mr. STEPHENS of Texas. Mr. Speaker, if the gentleman will permit, the first appraisement was set aside by the Secretary of the Interior; hence these new appraisers had to take

up the whole matter de novo.

Mr. MANN. Mr. Speaker, referring to what the distinguished gentleman from Wisconsin [Mr. Coopers] has called attention to, I take it, if unanimous consent is given for the attention to, I take it, if unanimous consent is given for the attention to the consent is given for t consideration of the resolution and the resolution be passed, the gentleman from Oklahoma [Mr. Cabrer] expects to strike out the preamble?

Mr. CARTER. That is what we expect to do.
The SPEAKER. Is there objection to the present consideration of this House joint resolution?

Mr. BARTON. Mr. Speaker, I would like the gentleman

from Oklahoma to tell us the emergency that exists.

Mr. CARTER. Mr. Speaker, the emergency is this: The time when the appraisement should be completed has passed. Unless we pass this joint resolution to complete it within the next 60 days, the force will be disbanded, and it will cost some money to get them together again. They are very anxious to have this land appraised, so that the sales can begin at the earliest possible moment.

Mr. MURRAY of Oklahoma. Mr. Speaker, reserving the right to object, I want to give notice now that I do not intend in the future to let any more Indian legislation go through without objection. It occurs to me that a committee may have been called together and this matter gone over quickly and then presented to the House. I shall not object to this, but I give notice now that in the future I am going to object to any further Indian legislation that does not come before the House with committee action.

The SPEAKER. The gentleman from Oklahoma serves notice that he will object to any more Indian legislation without committee preparation. Is there objection to the present consideration of this House joint resolution? [After a pause.] The Chair hears none. The question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed and read

a third time, and was read the third time.

Mr. MANN. Mr. Speaker, a parliamentary inquiry. The SPEAKER. The gentleman will state it.

Mr. MANN. I take it that after the resolution is passed it will be in order then to strike out the preamble, else the ques-

tion would be on agreeing to the preamble.

The SPEAKER. The Chair thinks so. The question is on the

passage of the resolution.

The joint resolution was passed.

Mr. CARTER. Mr. Speaker, I move to strike out the pre-

The motion was agreed to.

# CHANGE OF REFERENCE.

Mr. HOUSTON. Mr. Speaker, I ask unanimous consent that the bill H. R. 9770 be changed in its reference from the Committee on Ways and Means to the Committee on the Territories. This is a bill changing the method-

The SPEAKER. Read the title, please.

Mr. HOUSTON. It is a bill to levy and collect an income tax on railroads in Alaska, and for other purposes. This is a tax that is collected and paid into the treasury of Alaska, and the bill properly belongs to the Committee on the Territories.

Mr. UNDERWOOD. Mr. Speaker, reserving the right to object, I desire to say that I think the bill belongs to the Committee on the Territories and not the Committee on Ways and Means, because it relates purely to Territorial matters, and the money that would be collected under this bill would go into the treasury of the Territory, and not to the Treasury of the United States, and therefore the Committee on Ways and Means would not have jurisdiction.

The SPEAKER. Without objection, the change of reference

will be made.

There was no objection.

#### LEAVE OF ABSENCE.

By unanimous consent, Mr. Hoxworth was granted leave of absence, indefinitely, on account of illness.

SUSPENSION OF NAVAL CONSTRUCTION PROGRAM.

Mr. HENSLEY. Mr. Speaker, I call up House resolution No. 298 and ask for its further consideration. The SPEAKER. The Clerk will report the resolution by

title.

The Clerk read as follows:

House resolution No. 298, to authorize the President to cooperate with the United Kingdom of Great Britain to the end that naval construction may be suspended for the period of one year.

Mr. SISSON. Mr. Speaker, I desire recognition on the resolution.

The SPEAKER. The gentleman is recognized for an hour. Mr. SISSON. Mr. Speaker and gentlemen of the House, I am not going to consume the hour. I want to state for the benefit of those Members who had prior claims, who were kind enough to give me opportunity to address the House at this time, that I thank them very much, but the reason I asked this courtesy was that the subcommittee on Appropriations for the District of Columbia, of which I am a member, is now in session, will begin work again at 2.30, and I desire to get back to that

I am very heartily in sympathy, gentlemen of the House, with this resolution. I do not think that anything is more cruel than war unless it is the burdens borne by the taxpayers in prepara-tion for war in time of peace. The human family has been afflicted with conflicts of the smaller tribal warfares up to great international strifes as far back as the pages of recorded history go. It would be an interesting document, indeed, if we could gather together all the millions of money that the human family has been called to expend in the settlement of differences by the sword. It would indeed make a more ghastly picture if you could take all of the maimed, the wounded, and dead that have been caused by the terrible conflicts of the past.

If the time shall ever come when we may beat our swords into plowshares and our spears into pruning hooks and peace on earth and good will toward men will prevail, it must come from the great nations made up of the Anglo-Saxon and white blood, who will take the lead and work out the plan and enforce it. It must be made up of men who, whether they believe in the Christian faith or not as a religion, do believe in the Christian philosophy of peace on earth and good will toward men. The time has come when the settlement of differences between nations ought not to be settled by war, because in the early days the question of who should rule and who should control was always for the special benefit of some particular family which was capable of organizing an army and intrenching itself in power and taking the reins of government in their own and in their family's hands, but that rule of government is gradually being banished from the earth, and in all the nations of the world the principle is being accepted that government ought to be instituted in every nation for the benefit of the governed. and that the people themselves should be consulted about what the government should be. In other words, all just powers of government spring from the consent of the governed is the principle now being accepted, and in order that you may obtain the consent of the governed the great American people for the first time in history laid down the doctrine that the proper way to ascertain what the people desired was to ascertain what the majority of the people desired, and that the minority quietly and peacefully submit to the will of the majority.

That being the theory of government, it ought to be within the power of an intelligent and civilized nation to be able to adjust international differences in the manner in which they

settle to a certain extent their differences at home.

The great evil that confronts us to-day is the race that is going on between the great nations of the earth in preparing to defend themselves against the encroachment of others. When, as has been asked in this House repeatedly, will that race ever end? As I stated once before on the floor of the House, if this policy shall continue on the part of the great nations of the world, then the nation that shall survive in this age of scientific warfare will be the nation with the longest purse string, with the greatest amount of meat, flour, and other material necessary to keep an army in the field.

Warfare presents an entirely different picture to-day from what it presented a few generations ago. A few generations ago a man with an ordinary poleax, an ordinary spear, with ordinary physical ability, even without much training, about equal to his neighbor in his ability to make a fight and in his ability to sustain himself. But the present conditions are such that the individual prowess amounts to nothing. would an army with such ordinary weapons, even, as we fought the Civil War with amount to in a conflict with the modern implements of war to-day—the gatling gun, the rapid-fire gun, and other engines of destruction now in use? So warfare is going to be largely a question of the nation that has the greatest amount of scientific equipment, of scientific means of warfare. That is extremely expensive, and the maintenance of an army now in time of peace, if you will investigate the record, costs about as much as it cost to keep the Union Army in the field in time of war. In other words, four years of our present expense, adding the expense of the fortifications, the Army and the Navy expenses, and multiplying the amount by four, will be just about the annual expense to the Government of the United States in maintaining the Union Army during its four years of warfare. So in peace the expense of maintaining machinery of war is such that it costs as much now to maintain the Army and Navy and the fortifications in time of peace as it did to keep that mighty army four years in the field in time of war.

When will it end? Battleships are increasing in size. Even since I have been a Member of Congress, for a period of six years, the battleships have increased in cost from \$8,000,000 or \$9,000,000 to \$15,000,000. And where will that end? In other words, if we continue this race in the naval program, it will be but a few years when the rapidly increasing expenditures of the Government will not only be a billion dollars an-

tures of the Government will not only be a billion dollars annually, but in the course of the next 10 or 12 years, at the same ratio of increase in the last 10 or 12 years, we will spend \$2,000,000,000 annually and have \$4,000,000,000 Congresses.

You all recall that some years ago, within the recollection of every man on the floor of this House, the newspapers headlined a billion-dollar Congress, and it was like a fire bell at night. Mr. Reed was Speaker, and we were spending a billion dollars in one Congress, or \$500,000,000 a year. You Republicans will remember how the changes were rung then all over the country against you. You will remember Mr. Reed's laconic reply, to the effect that we had a billion-dollar Government. was the only answer that could be made to the proposition. Now the Democrats are in power, and I am afraid, gentlemen of the House, that we will expend more money this year than has ever been expended in the history of this Government before in any one year. Perhaps it may be necessary and the people may be demanding it. but if that is true, we have wrongfully criticized the Republican Party, and we ought to apologize to them for charging them with spending money and being criminally extravagant in the administration of the affairs of this

But I do believe that by the adoption of this resolution you will have courage enough here in the House to say to the demand of the public press, that is under the control of the people who are being benefited by the expenditure of Government money, that such expenditures ought to be curtailed. I want to say that every time the Government expends its money along the line of any new developments there are thousands of men who get the benefit of that expenditure of public funds, and there are secured at once new advocates for more money to be taken out of the Federal Treasury for public improvement. And in consideration of the naval and military equipment of this country thousands of men are employed and millions of money invested in producing it, and great corporations are formed for the turning out of these implements of war, which are rewarded by enormous profits.

Let me give you an illustration of how the profits in this line of industry are greater when sold to the Government than when sold to private enterprise: Practically the same steel, except in thickness, that is sold to the commercial world at from \$60 to \$80 a ton costs the Federal Government from \$200 to \$600 a ton, and in some instances even higher. Now, that is entirely too much difference in the cost of steel.

The excuse that is given for this is that the Government demands better steel than the commercial world demands. As a matter of fact, the steel is of the same kind and character, as is shown by the testimony, the only difference being as to the texture and weight of the steel that is being handled at the time. This great profit that goes to the steel manufacturers of this country causes them to advocate more battleships. I do not know that there is a Member of this House who would act differently from the managers of these great steel industries if he himself were that manager and not the representative of the people on the floor of this House.

Therefore let us not criticize these business men too sharply and too severely if they are going into the open and dealing fairly with the Government, and if those who purchase the steel know what profit is being made. The censure ought to be with the Government more than with the Steel Trust or with those people who are manufacturing the steel. There is no doubt, however, but that they are exercising an influence, as has been charged, and have been able to control the public press. The moment Congress meets the machinery is set in motion by the people who make the steel and who make the equipment, and word is sent along the line to a great number of newspapers for the purpose of creating a war scare and de-nouncing every Member of Congress who does not vote for all of these great preparations for the Army and the Navy. If that be true, then indeed they are censurable. They are not patriotic. They are then converting the Government into a means of enabling themselves to increase their own private fortunes at public expense, and that is most culpable and out-rageous on the part of any man living under the folds of this flag that gives or should give to every man equal rights and no special privileges. [Applause.]

Now, along with this expenditure comes a large number of other expenditures, because I never saw a man on the floor of this House in my life who was the advocate of some certain great expenditure who was not willing to vote for the extravagances advocated by other fellows. I do not mean to say by that that there has ever been any direct combination. I do not mean to say that those men have ever gone and gotten together and agreed among themselves to cooperate, saying: "If you will vote for mine, I will vote for yours." But it is one of the necessary sequences of these great extravagances that when I, for example, want a certain thing for my district, when I want to buy my way back into Congress by the expenditure of public funds, whether it is a justifiable and businesslike expense or not, I can go back to my district and say to my people: "Here is what I have brought back to you; this is what I have taken from the Public Treasury, and this is being expended in your midst.'

That is becoming quite a popular doctrine in a great many of the congressional districts of the United States, and it is made to bear upon the question as to whether a man should or should not come back to Congress. As the gentleman from Tennessee [Mr. Garrett] said on one occasion on this floor, it is very significant to notice the difference between the way in which a man scans the record of a member of the legislature of his State and the way he scans the record of his Member in Congress.

Mr. Garrett said that the first thing a man says to the member of the legislature when that member returns to his home district is, with a look of criticism in his eye, "How much have you spent, and how much have you raised my taxes? My taxes last year were \$31.15. This year they are \$31.65, and I know that that addition to my tax list has been brought about by your extravagance in the legislature." And that member of the State legislature there loses a vote. But look at your Member of Congress when he comes swelling back home. His constituents walk up to him with greed in their eyes and say to him, "How much did you get? How much of the Public Treasury have you brought back home?" This is due to the present system of taxation, and if there is no other result that will grow out of the income tax, I hope to God it will cause people to begin to realize that when you pay money out of the Federal Treasury the taxpayer is the man who is really paying it, notwithstanding he may not know and can not locate it in the tax list.

Mr. SIMS. Mr. Speaker, may I ask the gentleman a question?

Mr. SISSON. You may.

Mr. SIMS. I think the gentleman is exactly right in his analysis of the causes that lead to these effects; but would it not be an intelligent remedy to provide some method of direct taxation for the purpose of collecting at least a portion of our Federal revenues so that the people might know they were pay-

ing \$15,000,000 for a battleship?

Mr. SISSON. It might not be amiss, and if the Federal expenses continue to increase I think the time will not be far

distant when, even though you put the tariff as high as my good friend from New York [Mr. Payne] would have it, or if you place it as low as my good friend from Alabama [Mr. Underwood] would have it, or place it at any figure you please, and then take the other sources of revenue as now fixed by law, it will be utterly impossible to arrange a tariff tax that will produce enough revenue to run the Government at the present great increase of public expenditures. And when that time is reached I will say to my good friend from Tennessee that in order to have these governmental activities maintained you will be compelled to resort to some system of direct taxation or increase enormously your internal-revenue taxes and your income tax.

But it would be desirable, indeed, if we could bring to the knowledge of every man in America the exact amount which he is compelled to pay for maintaining the Federal Government. Do you know that the greatest amount of good which a man receives as a result of taxation comes first from his county and his State? Of course the municipalities in the town confer direct benefits in the way of schools and streets and police protection; but the most of the benefit of Government in this country comes from the direct taxation imposed by the States and

municipalities.

The only direct service that the United States Government performs for all citizens is to bring them their mail, and for that service they pay 2 cents for every first-class letter. All the other money expended out of the Federal Treasury produces only indirect benefits save to the man who receives a salary as an officeholder or the man who collects money for public improvements. There are some people, who live directly up and down the rivers and on the harbors, who may get direct benefits from the improvement of the rivers and harbers, but the masses of the people get only indirect benefits from the expenditure of public money. And when you look at your expenses for maintaining your State and county governments you will be astounded when you realize that more than twice as much is expended by the Federal Government as is expended by all the municipalities and all the counties and all the States of this You will have to eliminate from that your publicschool expenses.

Now, before I conclude, let me say just a word in reference

to this resolution.
